2. The combination, in fire-extinguishers for using water charged with carbonic-acid gas, of the body or tank, A, the reservoir for acid, D, fixed within the tank, the high-water gauge B, and the collar N, with its cap, all substantially as and for the purposes set forth.

109,577.—Machine for Soldering Can-Caps. — William B. Bishop, Brooklyn, N. Y.

Claim.—1. The ring or cup-shaped soldering-tool G, for soldering the caps upon cans, substantially as herein shown and described.

2. The revolving table I, having also a vertical movement, in combination with the ring or cup-shaped soldering-tool G, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the adjustable elastic holder J K with the revolving table I, substantially as herein shown and described, and for the purpose set forth.

4. An improved machine for soldering can-caps, formed by the combination of the platform A, feet B, adjustable platform C, adjusting and supporting-rods D, furnace E, heater F, ring or cup-shaped soldering-tool G, weighted holding-rod H, table I, adjustable holder J K, shaft L, lever N, treadle P, gear-wheels Q and R, shaft S, and crank T, with each other, substantially as herein shown and described, and for the purpose set forth.

109,578, antedated November 12, 1870.—Composition for the Manufacture of Boot and Shoe-Heels.—Carl Boeking, Boston, Mass.

Claim.—The herein-described composition for the manufacture of boot and shoe-heels.

109,579.—Elastic Roller for Wringers, &c.—Augustus O. Bourn, Providence, R. I.

Claim.—The improvement in the construction of elastic rollers for wringing-machines and for other purposes, which consists in winding, so as to form a roller to be subsequently vulcanized, a sheet of ground rubber and cloth, C, (or, instead thereof, a sheet of rubber compound, which, when vulcanized, will become hard rubber,) in combination with a sheet of ordinary soft rubber, A, such two materials being disposed, with respect to each other, so as to form a roller, substantially as described, for the purposes specified.

109,580, antedated November 14, 1870.—Clothes-Pin. — George Bradley and Nelson A. Walker, Rockford, Ill.

Claim.—A clothes-pin cut from a single piece of wood, with a central enlarged slot, as set forth.

109,581.—Construction of Globes, Maps, &c., for Schools. — John De Witt Brinckerhoff and James Duthie, Morrisania, N. Y.

Claim.—The production of globes, maps, or charts having a surface with the configurations and lines inlaid or imbedded therein, by the process described or any other substantially the same.

109,582, antedated November 12, 1870.—Arm-Support for Keyed Instruments.—Leopoldin Buchberger, Chicago, Ill.

Claim.—Providing an arm-support for keyed instruments, with an adjustable bar, B, which is pivoted to the adjustable standards D and held in a fixed position by set-screws H H, so that, when the bar is either raised or lowered, its flat side may be presented to the arm of the operator, as set forth.

109,583.—Roller-Temple for Looms.—William H. Burns, Grafton, assignor to Jonathan Luther, Worcester, Mass.

Claim.—1. The fluted roller G, in combination with a toothed-roller, when arranged and operating as and for the purpose herein specified.

2. The arm B and stand A, having the corresponding slots E and F, and the spring J, or its equivalent, when combined and arranged as and for the purposes herein specified.

109,584.—Corn-Dropper.—Major Robert Wilson Caldwell, Jackson, Ohio.

Claim.—The combination of the valve G and case F of the springs L or O, substantially as specified.

109,585.—Hemmer and Feller for Sewing-Machines.—Cyrus Carleton, Brooklyn, N. Y., assignor to Wilcox and Gibbs Sewing-Machine Company, New York City.

Claim.—The folding-guide herein described, consisting of the elastic tongue a upon the plate A, the guiding surface d, and the gauge b, constructed and operating substantially in the manner and for the purposes described.

109,586. — Horseshoe-Bar. — Ebenezer Cate, Watertown, Mass.

Claim.—The above-described bar horseshoe iron, constituting series of blanks for horseshoes, the same being creased, and each blank having, along its middle part only, the rabbet G, forming the flange H, while the parts at and toward the ends forming the heels of the shoe are without said rabbet, and rectangular in cross-section, substantially as described and shown.

109,587.—Hydrant.—Elias Clampitt, Baltimore, Md.

Claim.—1. The reservoir or pliable material F, to hold the subsiding water when the issue of water is stopped.

2. The gum packing V around the stem T, to prevent direct access between the main and the reservoir F, also to raise the said stem T.

3. The hydrant-nozzle I, secured in the frame or casing by the stud a and plate b, and screwed into

the elbow of the delivery-pipe, all substantially as described.

4. In combination with the nozzle I, and as a means of operating the same, the handle J, slotted as represented, and secured to the frame or casing by means of the studs M, as described.

5. The yoke P R S, combined with the delivery-pipe G and reservoir F, as described.

6. The handle J, pivoted, as set forth, with an oblong slot, in combination with the nozzle and pipe, and a valve operated by a downward pressure derived from said handle, substantially as described.

109,588. — Burglar-Alarm. — Edward T. Clegg, North Harpersfield, N. Y.

Claim.—1. The burglar-alarm placed upon wheels, and constructed so that it will be discharged by the rotation of the said wheels, as set forth.

2. The rock-shafts D, carrying the hammers c, and geared together to move simultaneously, substantially as herein shown and described.

3. The spring F, combined with the rock-shafts D, guns C, for the purpose of throwing all the hammers at once, as set forth

4. The lever-pawl E, locking the shafts D, and connected with the supporting-wheels B of the platform, substantially as herein shown and described.

5. The sliding gun C, provided with racks f which mesh into toothed wheels g on the shafts D, substantially as specified.

6. The swinging gate H, connected with the hammer-shafts D, substantially as and for the purpose herein shown and described.

109,589.—Globe for Gas-Lights.—Charles Collier, Selma, Ala.

Claim.—The construction of globes for gas-lights, with the upper portion turned outward and formed into a horizontal flange or ring, the same being made double for securing the silvering between the plates for a reflector, substantially as herein shown and described.

109,590.—Combined Railroad-Jack and Pinch-Bar. — Matthew Grier Collins, Meadville, Pa.

Claim.—The fulcrum D, the foot or rail-plate G, the spring O F, in combination with the lever B, when the same are constructed as described, for the purposes set forth.

109,591. — Machine for Making Key-Boards for Wood Pavements.—Perley D. Cummings, Portland, Me.

Claim.—The combination of the saws S and T, rollers M' M' and N' N', with the converging cutters M and N, substantially as described.

109,592.—Filter.—George Curtis, Springfield, Mass., assignor to himself and E. Bigelow, same place.

Claim.—The perforated deflecting case, with button and sleeve, inclosing a percolating medium, the parts being contained within the case formed of the two parts, as set forth and described.

109,593.—Filter.—George Curtis, Springfield, Mass., assignor to himself and Edmund Bigelow, same place.

Claim.—1. The combination, in filters to be used in purifying water under a head or pressure, of the two sponges E and K, so arranged as to present to the water successive filtering media of unequal density, with the interposed deflector, and the flanch or rim S projecting inward from the inner surface of the deflector, substantially as and for the purposes set forth.

2. The combination, in filters for purifying water under a head or pressure, of the sponges E and K, so arranged as to present to the water successive filtering media of unequal density, the deflector, the flanch or rim S, the surrounding case F, the space H, and the surrounding box D, and the false bottom, substantially as and for the purposes set forth.

3. The combination, in filters for purifying water under a pressure or head, of a sponge, K, a deflector, and a rim or flanch, S, substantially as and for the purpose set forth.

109,594.—Combined Vise and Drill.—Otis Dean, Richmond, Va.

Claim.—As an improvement upon the combined vise and drill heretofore patented to me June 15 and October 18, 1869, the beveled guide-rib d, cast in one piece with the parts A and B, and the channel e, and perforations z in the movable jaw C, as set forth.

109,595.—Boiler for Preparing Paper-Pulp.—Lorenzo Dean, Fort Edward, N. Y.

Claim.—1. The arrangement, upon the bottom of a steam or hot-water cylinder A, and beneath the pulp-cylinder, of the detachable chamber G and valved pipe E F, to form a convenient means of testing the condition of the pulp, as set forth.

2. The arrangement, in a pulp-cylinder and with respect to auxiliary end chambers a^2 a^3, of the open channel-ways D, as and for the purpose specified.

3. The combination of perforated channel-ways D in the pulp-cylinder, with an outlet-pipe H at the bottom of the cylinder A, to promote a rapid discharge and change of the liquids, as described.

109,596.—Preparation of Straw for the Manufacture of Paper. — Lorenzo Dean, Fort Edward, N. Y.

Claim.—The method of preparing fibrous material for conversion into paper-pulp, by macerating the long straw between rolls and then saturating and soaking it in repeated and successive tepid waters, as and for the purpose described.

109,597. — Asphalt Pavement.—Edward Joseph De Smedt, New York, N. Y.

Claim.—The combination of hard and soft natural asphalts, such as the Trinidad, Cuban, Grahamite, or Albertite, and Mexican, or their equivalent natural asphalts, mixed with a suitable proportion of sand or pulverized stone, substantially as and for the purpose herein set forth.

109,598.—Hook Attachment for Seats.—Joseph A. Dixon, New York, N. Y.

Claim.—The pivoted hook B, having walls F F, pivot D, spring E H, sides c, and holding attachment c', all applied, in combination, to a seat-back, as and for the purpose described.

109,599. — Healing-Salve.—Robert Dobbins, Binghamton, N. Y.

Claim.—The invention of the manufacture or preparation of a compound, which is denominated Dobbin's healing salve, of the ingredients, in the proportions, and for the purposes set forth.

109,600.—Projectile.—Ellis Drake, Stoughton, Mass.

Claim.—1. A projectile or shell cast in one piece, with cross-grooves c c and d d, substantially as and for the purpose set forth.

2. In combination with a projectile or shell a series of expanding lugs, operated in the manner substantially as described.

3. A space formed at the base of a lug or button, whereby the same may be operated upon by the force of the explosion, and radially forced out or expanded, for the purpose specified.

109,601.—Apparatus for the Manufacture of Ozone.—Cleaveland F. Dunderdale, New York, N. Y.

Claim.—1. In combination with the apparatus

specified in the Letters Patent granted to me March 15 A. D., 1870, No. 100,736, or its equivalent, the use of points of suitable conducting material, wires, needles, or their equivalents, placed between the tubes or plates thereof, operating as and for the purpose as herein specified and described.

2. The passing of atmospheric air or oxygen through finely-divided streams or currents of electricity or magnetic fluids, for the purpose of converting the oxygen thereof into ozone.

3. The plates C, points or their equivalents G, the insulators D', the spaces, intersticos, or passages D, or their equivalents, with battery terminals E, combined and arranged substantially as herein specified and described, and for the purpose set forth.

109,602.—CASTER AND SPOON-HOLDER COMBINED.—Louis Evans, Pittsburg, Pa.

Claim.—The slotted radial caster-arms *d*, either in connection with the rings *e* or as a plain spoon-holder, substantially as described.

109,603.—THERMO-ELECTRIC BATTERY.—Moses G. Farmer, Salem, Mass.

Claim.—1. A thermo-electric battery, constructed so as to surround or inclose the source of heat, substantially as described.

2. A thermo-electric battery, with the pairs arranged in curved tiers, one above another, and compacted by cement, substantially as described.

109,604, antedated November 12, 1870.—REVERSIBLE-BUTT.—George W. Field, Lowell, Mass., assignor to himself and Robert H. Butcher, same place.

Claim.—The stand B, constructed as described, with hinging-hubs on opposite sides, ends, and edges, whereby the leaf A may be applied, and thus form a right or a left-hand butt, as described.

109,605.—LOG-GUIDE FOR CIRCULAR-SAW MILLS.—Benjamin Fitts, Toledo, Ohio.

Claim.—A log-guide for circular saw-mills, formed by the combination, with the stock A, sliding slotted plate B, lever D having its fulcrum at E, the pointer M and index-plate L, of the stop G and lever J, all said parts being constructed and relatively arranged as shown and described.

109,606.—FENCE.—Rodolphus J. Flanner, Plainfield township, Mich.

Claim.—A portable or stationary board-fence, composed of horizontal boards A connected by post B and brace C, and secured by means of foot-piece D and cap-piece E, substantially as described.

109,607.—MANUFACTURE OF ARTIFICIAL STONE.—William H. Foye, San Francisco, Cal.

Claim.—Artificial stone, formed of pulverized limestone or other calcareous rock, combined with asphaltum, the mixture being heated and subjected to hydraulic or other heavy pressure, and formed into blocks by means of molds, substantially as and for the purpose described.

109,608.—ELASTIC RUNNING-GEAR FOR CARRIAGES.—George E. Garretson, Russellville, Ky.

Claim.—1. The part M, combining a horizontal bearing for the springs C C, and a vertical connection for the king-bolt, when so constructed that the bearing and socket cannot be rocked independently of each other.

2. The loop E, when constructed of metal, adapted to rest directly on the springs or an elastic cushion upon the springs, and provided with arms *c' c''*, adapted to the support of different-shaped carriage-bodies, substantially as described.

3. The combination of the second leaf of the spring resting upon the first leaf, with their supporting-places or bearings, when constructed to operate together in case of the fracture of the lower leaf, substantially as described.

4. The described arrangement of the supplemental springs F G, when employed in addition to the main springs, for the purpose specified.

109,609.—GATE.—Elijah Gemberling, Elkhart, Ind.

Claim.—The combination, with the gate hinged so that it may rise and fall, as described, of the angle-plate or bar H, the hinged arm E, and the roller F, all substantially as specified.

109,610, antedated November 26, 1870.—POLISHING-MACHINE.—John Gooden, Lockport, N. Y.

Claim.—1. The sleeve B, fitted loose upon the shaft A, and arranged to adjust the polishing-blocks G, for larger or smaller cylinders, substantially as herein shown and described.

2. The combination of the expansion-blocks G with the sliding nuts E, screws H, wheels I *b*, sleeve B, and shaft, all arranged and operating substantially as herein shown and described.

109,611, antedated November 17, 1870.—APPARATUS FOR AGING WHISKY AND OTHER SPIRITS.—John P. Greeley, Boston, Mass.

Claim.—1. The vessels D, consisting of the tanks *d* and troughs *d'*, as and for the purpose set forth.

2. The vessels D, in combination with tube F, trough G, and tubes E *e*, substantially as described.

3. The chamber A, in combination with the flue B and door *a*, as shown.

4. The combination of the chamber A and refrigerating-chamber C.

5. The combination of chamber A, refrigerating-chamber C, vessels D, pipes E *e* F, flue B, and door *a*, arranged and operating substantially as described.

109,612.—ATTACHMENT FOR SEWING-MACHINES.—Franklin Thomas Grimes, Liberty, Mo.

Claim.—The rod *a*, provided at its ends with toothed arm *b* and toothed elastic *d*, in combination with the guiding-plate *f*, as and for the purpose set forth.

109,613.—COMBINED SEED-SOWER AND CULTIVATOR.—Henry L. Hall, Woodbridge, Iowa.

Claim.—The seed-sower and cultivator, having curved adjustable teeth constructed as described, and arranged in three or more ranks, in the manner set forth and shown.

109,614.—ANIMAL-TRAP.—William R. Hampton, Fairfield, Ill.

Claim.—The combination of the case A, spring D, shaft B, toothed wings C, and bait-lever *e*, when constructed and arranged to operate substantially as and for the purpose specified.

109,615, antedated November 26, 1870.—PHOTOGRAPHIC PRINT-CUTTER.—John Haworth, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the guide-strip E on the clamping-plate D, with the table E, for regulating the form of the print, substantially in the manner above described.

2. The combination of the revolving cutter F, shaft G, swivel-plate J, the sliding bar L, and center-pin K having a nut, O, the said parts being constructed, arranged, and operating in relation to each other and to the guide E, substantially in the manner and for the purpose set forth.

3. The combination and arrangement of the spring Q and rods R S, with the stand A and sliding bar L, substantially as and for the purpose above described.

109,616.—STEAM-GENERATOR.—John Houpt, Springtown, Pa.

Claim.—1. The primary condenser C and air-pump *c'''*, in combination with the valve *b''* and steam-passage-way B, the said parts being constructed and arranged to operate substantially as and for the purposes hereinbefore set forth.

2. The secondary chamber or evaporator D, in combination with the escape-steam passage-way B and the hot-water discharge-pipe *c*, the said parts being constructed and arranged to operate substantially as and for the purpose hereinbefore set forth.

3. The supplementary boiler G, furnace *g'''*, and pipe *g'*, in combination with the escape-steam passage-way B, when arranged substantially as shown in fig. 2, for the purpose hereinbefore specified.

109,617.—GARTER.—Henry A. House, Bridgeport, Conn.

Claim.—A coiled spring garter, the coils of which are on opposite sides of a common center, at which point the wires forming the coils cross, thus making fastening-eyes on both sides of said center, substantially as described.

109,618.—AUTOMATON ROPE-WALKER.—Henry A. House, Bridgeport, Conn.

Claim.—1. The combination of a balancing-pole with a walking-automaton, substantially as described.

2. The guide *e*, in combination with the balancing-pole and the walking-automaton, substantially as described.

3. The leg-sections D and P, jointed together, pivoted to the frame A, and actuated so as to make stepping movements by means of rods F, guide *g'*, and crank-wheel G, substantially as described.

4. The diagonal grooves in the soles of the feet of the automaton, substantially in the manner and for the purpose described.

5. The socketed pole-section *a*, attached to the hands of the automaton, in combination with the removable sections of the balancing-pole C, substantially as described.

6. The case B, constructed with recesses or slots *s s* and fastening *b*, in combination with the frame A of the walking-automaton, substantially as described.

7. The leg-sections F E, bowed inwardly in such manner that the feet of the automaton will step in the same line, substantially as described.

109,619.—ADDING AND SUBTRACTING-REGISTER.—Henry A. House, Bridgeport, Conn.

Claim.—1. The combination, with one or more concentric rings, which are numbered, toothed, and notched, and are interlocked periodically with each other in their forward movement, of the toothed setting-wheel G, and pawl Z, or pawls *s* and *s*, for reversing the movement of the rings, substantially as described.

2. The combination of the cams *e*, fixed disk C, hooked spring-pawl *e e'*, toothed rings J L, set-wheel G, and spring-pawl Z, or pawls *s s*, substantially as described.

109,620.—COMBINING KEYS WITH WATCHES.—Alfred Humbert, Philadelphia, Pa., assignor to himself and Gustavus Gigor, same place.

Claim.—The lug *d*, in combination with a groove formed in the pendant B, and the spring *h*, as shown and described.

109,621.—MANUFACTURE OF PAPER.—Carleton B. Hutchins, Ann Arbor, Mich.

Claim.—The fibrous ingredients, as set forth in the foregoing specification, for the manufacture of paper, as before named.

109,622.—WATER-ELEVATOR.—Timothy H. Hutchinson, Gorham, N. H.

Claim.—The combination and arrangement of the weighted bucket *a* and the water-tank *b*, when combined with the trencher *c* and device *g h y*, troughs *c e*, and pump *f*, arranged and constructed substantially as described, and for the purposes hereinbefore set forth.

109,623.—PILE-DRIVER.—Jacob Huy, Whistler, Ala.

Claim.—1. The combination of the grooved sills C, toothed carriages C' sliding therein, shaft D, provided with cog-wheels *e* gearing with the rack *k* of the carriages, connecting-rods *n*, and frame E, made in sections, which are hinged together, substantially as and for the purpose specified.

2. The sills *c* provided with the ways *d*, and combined with the carriages C' provided with the ribs *i* and friction-rollers A, substantially as and for the purpose described.

109,624.—PUMP.—Joseph Icard, Donaldsonville, La.

Claim.—A pump, consisting of two or more forcing and two or more lifting pumps, in combination with air-chamber J and pipes F F, said pipes and pumps being provided with suitable valves, and all arranged as and for the purpose set forth.

109,625.—FRUIT-JAR.—Charles G. Imlay and William L. Imlay, Philadelphia, Pa.

Claim.—A fruit-jar, provided with a locking shoulder, consisting of the double inclines B B, situated within its body, at the base of the neck, and with a cover having a locking bar, A, operating as shown and described.

109,626.—EMBELLISHMENT OF GLASS.—Elias Ingraham, Bristol, Conn.

Claim.—The process of embellishing upon glass plate, substantially as set forth.

109,627, antedated November 17, 1870.—HEATING-STOVE.—George B. Isham, Burlington, Vt.

Claim.—1. The arrangement of the case *a*, pipe B, base C, perforated bottom D, and plate E', substantially as shown and described

2. The combination of the base C, perforated bottom D, hollow cone E, and ash-receiver F, all constructed and arranged substantially as and for the purposes herein set forth.

3. In combination with the perforated bottom D and hollow cone E, the perforated plate E', operated by means of the lever G, substantially as and for the purposes herein set forth.

4. The grate H, constructed as described, with perforated bulge in the center, serrated edges, and a circular downwardly-projecting flange on its under side, said flange encircling the upper end of the hollow cone E, substantially as and for the purposes herein set forth.

5. The fire-pot I, constructed without a bottom, and having its sides pierced or slotted, and provided with strengthening-bars L L, in combination with the grate H, substantially as and for the purposes herein set forth.

6. The combination of the jacket or case A, base C, bottom D, plate E', cone E, grate H, fire-pot I, and cap K, all constructed and arranged to operate substantially as and for the purposes herein set forth.

109,628.—TRUSS-BRIDGE.—William Johnson, Lambertville, N. J.

Claim.—1. The eccentrics E E and K, in combination with post A pin B, and diagonals O O P, arranged in the manner and for the purpose specified.

2. The lock-stops S S and bolts F F F, when combined and arranged in the manner and for the purpose substantially as described and set forth.

109,629.—CULTIVATOR-PLOW.—Thomas F. Jones, Hicksford, Va.

Claim.—The arrangement of the stock A carry-

ing the arc F, and the plow or point, and wings K, with a hinged and adjustable beam C, all being arranged as and for the purpose herein described and represented.

109,630.—MACHINE FOR CUTTING, SCORING, AND CORNERING PAPER FOR BOXES. Jacob M. Keen, Philadelphia, Pa., assignor to himself and Charles C. G. Armeling, same place.

Claim.—1. The frame M, arranged in the uprights N and N', and provided with a cutting-knife O, scoring-knives P and P', rectangular-shaped knives U U, cross-pieces T and T', head-blocks V V, and screw-rods W W, all combined and operating in the manner and for the purpose herein specified.

2. The construction of the longitudinal pieces Y Y, cross-pieces *e e e*, bolts *f f*, and wooden strip *g*, arranged between the frames A and A' of the machine, in the manner and for the purpose set forth.

109,631.—PUMP.—Henry K. Kenyon, Steubenville, Ohio, assignor to himself and Jarecki, Hays & Co., Erie, Pa.

Claim.—1. The construction of pumping tubes, by combining with the working-barrel a series of segmental or U-shaped pipes, or a series of crescent-shaped pipes, either made as a part of the working-barrel or securely attached thereto, and with an arrangement of communicating ports for the inflow and outflow of the liquid, substantially as described.

2. A series or column of valves, four or more in number, arranged in the lower end of the working-barrel, stationary when the pump is in operation, in combination with a corresponding series of longitudinal side chambers with communicating ports, substantially as described.

3. A series or column of valves, Nos. 1, 2, 3, and 4, in combination with the head *b'*, diaphragm or cage-body *a*, and chambers *a' a² a³ a⁴*, substantially as described.

109,632. — SEWING-MACHINE. — Isaac W. Lamb, Northville, Mich.

Claim.—1. A sewing-machine, arranged to produce, with one single thread, a stitch, in which every new loop is first put around and then through the preceding loop, substantially as herein shown and described.

2. The carrier D, in combination with the looper C, having a hook, *d*, and latch *c*, when constructed and operating substantially as herein shown and described.

3. The latch-opener E, arranged in combination with the looper C, substantially as here shown and described, to operate as set forth.

4. The spring *f* formed on the latch-opener, for the purpose of holding the looper while the carrier advances, as set forth.

109,633. — ELECTRO-PLATING IRON AND STEEL WITH SILVER.—Alexander Lowe, Kingston, Canada.

Claim.—The process described, of plating iron with silver by first plating it with gold, with the solution of cyanide of potassium and battery, as described, and covering it with silver in the ordinary manner, as and for the purpose set forth.

109,634.—FEED MECHANISM FOR CARDING-MACHINES.—Walter A. Lawton, Providence, R. I.

Claim.—The stationary arms A A applied to the shaft B for holding the sliver down upon the apron of a carding-machine, substantially as herein shown and described.

109,635.—LIFTING-JACK.—Stephen C. Leonard, Oberlin, Ohio.

Claim.—The standards B C, shouldered lever D, standard F, catch G, spring K, and base A, when arranged to operate in the manner as described, and for the purpose set forth.

109,636.—FIFTH-WHEEL.—Joseph Le Roy, Marathon, N. Y.

Claim.—An iron platform or frame for wagons, composed of the bars A, B, C, and D, stay rods *a*, *b*, *c*, and *d*, draft-shackles G G, and with or without the fifth-wheel F, substantially as shown and described.

109,637.—PIER FOR BRIDGES.—Christian H. Lilienthal, Yonkers, N. Y.

Claim.—1. In combination with the metal case B, made in sections and joined together as set forth, the inner case H, for the purposes hereinbefore described.

2. In combination with the spile A the metal caps L and M, the former resting directly on the spile and case, as set forth.

109,638.—DEODORIZING THE AIR AND GASES IN FAT-RENDERING, BONE-BOILING, &c.—Alfred Lister, Edwin Lister, and Charles J. Eames, Newark, N. J.

Claim.—The apparatus and process above described, the method for disinfecting and deodorizing the gases produced by fat-rendering, bone-boiling, and by any other means, substantially as herein set forth.

109,639.—PUMP.—Charles Markley, New York, N. Y.

Claim.—1. The combination of the reservoir B, delivery-sluice C, valve D, and cushion E, with the cylinder A, as and for the purpose set forth.

2. The arrangement of the air-vessel F, in combination with the sluice C, valve D, reservoir B, and cylinder A, as and for the purpose set forth.

109,640, antedated November 19, 1870.—BOLT. — Felix G. McClelland, Attica, Ohio.

Claim.—The guard *d*, having the ends *g* and *e* constructed as described, when used in combination with the shaft *a*, provided with the groove *c* and convex recess *b*, for receiving the corresponding ends of the guard *d*, and with the head *f*, with or without the ring *h*, when the whole is arranged and operated in the manner and for the purpose hereinbefore specified.

109,641.—HAT.—John W. McGill, Washington, D. C.

Claim.—As an article of manufacture, a hat whose lower body portion or band point, and outer brim portion, one or both, are colored to imitate a band or binding, substantially as herein set forth and described.

109,642. — CHIMNEY-TOP. — Melville E. Mead, Darien, Conn.

Claim.—The chimney-top, formed by the hood A having sides or wings B B, and operated automatically by the weighted vane, substantially as specified.

109,643.—GAUGE FOR GANG-SAWS.—Oliver Carpenter Meigs, Dubuque, Iowa.

Claim.—The gauges, formed of a central and main piece of iron, combined with a steel plate on each side to prevent lateral friction, as set forth.

109,644, antedated September 17, 1870.—VEHICLE.—F. H. C. Mey, Buffalo, N. Y.

Claim.—The combination of wheel A B C with a pair of wheels and body to form the running-gear of a vehicle, in the manner shown and described.

109,645.—STEAM-GENERATOR.—Joseph A. Miller, Boston, Mass.

Claim.—1. The pipe B, arranged in courses, which are connected at the ends as set forth, the

front connections entering and being supported by the chamber A, as set forth.

2. The deflector shield C, applied to the upper end of each pipe B within the chamber A, substantially as and for the purposes herein shown and described.

109,646.—MANUFACTURE OF GLASS ARTICLES.—Charles A. Moore, Westbrook, Conn.

Claim.—The mode of blowing lamp-chimneys and cones, or two or more articles, together, with the view of separating them from each other, substantially as and for the object set forth.

109,647. — CLOTHES-DRIER. — William N. Moore and Alexander K. Moore, Neenah, Wis.

Claim.—The cap E, having lugs *a*, screw D, and reel-head F, in combination with the thimble C having slots *b*, and the post A, all constructed substantially as described, and for the purposes set forth.

109,648.—TOWEL-RACK.—Frederick Myers, New York, N. Y.

Claim.—1. The combination of the plate A, the grooves B B B, the lip or projection G, the rack C, and the ball D, so applied as to form thereof a towel-rack, substantially as shown and described.

2. The towel-rack above described, constructed, arranged, and operating as set forth.

109,649, antedated November 26, 1870.—METALLIC AND ELASTIC STAIR-PLATE.—Peter W. Neefus, New York, N. Y.

Claim.— The combination, with a perforated stair or floor-plate, A, of a plate, B, having projections thereon of elastic material, which extend through the perforations in A, substantially as herein specified.

109,650, antedated November 26, 1870.—METALLIC AND ELASTIC DOOR-MAT.—Peter W. Neefus, New York, N. Y.

Claim.—A new article of manufacture, consisting of a floor or door-mat, on which narrow, elastic ribs B, or projections of sufficient height to bend when subjected to pressure from the foot, are secured in a plate, A, of wood or metal, substantially in the manner shown and described.

109,651, antedated November 26, 1870.—STAIR AND FLOOR-PLATE.—Peter W. Neefus, New York, N. Y.

Claim.—The combination of a wood or metal stair or floor-plate with elastic studs 9, 15, 21, and 27, secured substantially in the manner shown and described.

109,652.—STEAM-GENERATOR.—Eugen Neumann, New York, N. Y., assignor, by mesne assignments, to Charles D. Tyler, Newark, N. J.

Claim.—The employment of slanting bridges or partitions, G G, in the interior shell of a steam-boiler, perforated and stayed with tubes of different diameters, through which the flame and heat pass while the water surrounds them, substantially for the purpose shown and described.

109,653. — HAND-POWER BALING-PRESS.—William R. Newman, Galesburg, Ill.

Claim.—1. The combination and arrangement of the cords T T', pulleys *n'*, A, and *m*, windlass P, follower F, beam H, and loop M, with the frame A, substantially as described, and for the purpose set forth.

2. The vibrating arms N N and tapering shaft P, when arranged relatively as described, and operating conjointly to secure the proper winding of the cords T T' on the shaft P, substantially in the manner and for the purpose set forth.

109,654.—CHURN-DASHER.—Floyd Ogden, Fisherville, Ky.

Claim.—The churn-dasher B, formed of perforated ring *e*, flanges *d d*, and ball *f*, combined as described, with the balanced metallic valve F, having unequal areas on opposite sides of the pivot *g*, for the purpose specified.

109,655.—SEWING-MACHINE.—John Palmer, Randolph, Mass.

Claim.—1. The pressure-foot feed-wheel K, when used in combination with an awl or needle to which a lateral motion is given coinciding with the feed of material while passing through the same, substantially as described.

2. The rotary throat-wheels *n* and *n*, arranged and operating as set forth, when used in combination with a pressure-foot feed-wheel, substantially as described.

3. The throat-wheel *n'* mounted upon the hinged plate V', substantially as described.

4. The adjustable sliding block R upon the lever E, and carrying upon opposite sides thereof the pins *k* and *l*, when used in combination with the levers Q and T, the rocker-shafts L and S, and the feed-wheel K and awl-bar J, in such a manner that the movement of the block R upon the lever E shall adjust both the movement of the feed-wheel K and the lateral motion of the awl-bar, J, whether said rocker-shafts pass one through the other, as shown, or are arranged in separate bearings, substantially as described.

109,656, antedated November 26, 1870.—COMPOUND FOR BATING HIDES AND SKINS.—Charles F. Panknin, Charleston, S. C.

Claim.—A bate, to be used in the treatment of hides and skins, composed of carbolic acid, muriate of ammonia, and alum dissolved in water, in about the proportions specified.

109,657.—COMBINED GARDEN TOOL.—Louis Perrot, Greenville, and Frank Perrot and Charles H. Bates, Appleton, Wis.

Claim.—The means of combining the rotating cultivator F and hoe B, consisting of the shank A, pivot *r*, frame I G H, spurs D, recess E, set-screw J, plate K, spring *s*, and screw *t*, substantially as described.

109,658.—ENAMELED CAST-IRON RETORT.—Thomas D. Phillips, Cassadaga, and Thomas S. Phillips, Buffalo, assignors to Benoni S. Brown and Thomas S. Phillips, Buffalo, N. Y.

Claim.—A retort, as a new article of manufacture, made of cast-iron, in two parts, A A', lined with porcelain on the inside and at the edges of the joint, and secured together with an interposed packing, *b*, as hereinbefore set forth.

109,659. — STEAM-WHEEL.—John Nicolaus Pommert, Greenfield, Ohio.

Claim.—The combination of the wheel, the case A, hollow shaft E, and the hollow reacting arms K I, when arranged to discharge the steam on the surface of the water, substantially in the manner described.

109,660.—MATCH FOR CIGAR-LIGHTERS.—William Porter, St. Stephen's Parish, Canada.

Claim.—The mode herein described, for protecting the friction-ends of matches, and also securing said ends together by means of gummed tissue-paper or its equivalent, substantially as specified.

109,661, antedated November 19, 1870.—SHUTTER-WORKER.—Charles A. Potter, Providence, R. I.

Claim.—The fixed lever A, the fulcrum-bar B

with a hook or stud at each end, and the lever G, all combined as set forth, and for the purpose of working a blind or shutter.

109,662. — CLOTH-CUTTING ATTACHMENT FOR SEWING-MACHINES.—William Edgar Prall, Washington, D. C., and Alden B. Rand, Staten Island, N. Y.

Claim.—The cutting-attachment, constructed as herein shown and described, when combined with and operated from the rotating wheel or shaft of the machine.

109,663.—SHOW-CASE.—Philip Price, West Chester, Pa.

Claim.—1. A case, B, containing ice or a freezing mixture, and arranged within a case, constructed as set forth, for the exhibition of perishable articles.

2. The combination of the upright B secured to a base, X, a show-case revolving round said upright, and an adjustable pivot, *a*, secured to said case and bearing on the upright, so that by adjusting said pivot the case may be raised from or caused to rest on the base, all as described.

109,664.—WATER-WHEEL.—Demmon Reynolds, Napanock, N. Y.

Claim.—The combination of the crown-plate A, flange B, guide-plates C C′, gates D, ring E E′, and pinion F′, all constructed, arranged, and operated substantially as shown and described.

109,665.—MANUFACTURE OF WRENCH.—John Richards, Philadelphia, Pa.

Claim.—The within-described manner of manufacturing wrenches from pieces stamped or punched from sheets of metal, combined as herein specified.

109,666.—SAFETY-SWIVEL.—Richard Richards, Albany, N. Y.

Claim.—The swivel A *a′* B *b′*, constructed substantially as herein shown and described, and for the purpose set forth.

109,667. — EARTH-CLOSET. — George W. Roberts, Wilmington, Del., assignor to himself and John H. Graham, same place.

Claim.—The combination of the movable seat N with the sliding platform G, valve L, spring M, and hopper E having the sleeve *b*, whereby the quantity of earth to be used and the time of passage is regulated, arranged to operate in the manner and for the purpose specified.

109,668, antedated November 26, 1870.—CLOTH-GUIDING ATTACHMENT FOR SEWING-MACHINES.—Simeon Rogers and Edwin K. Sperry, Fleming, N. Y.

Claim.—The combination of the curved spring E and the guiding-rollers I I with the plate A, gauge B, and spring-guides D, all constructed, arranged, and operating as described.

109,669. — MANUFACTURE OF ARTIFICIAL STONE.—James L. Rowland, Milwaukee, Wis.

Claim.—1. An artificial stone manufactured from quick-lime slaked with the smallest quantity of water introduced in the shape of steam or vapor, in combination with other materials, substantially as described.

2. An artificial stone manufactured from a hydrate of lime or hydraulic lime, or hydraulic cement, treated as described, and combined or not, substantially as described.

3. The mode of hardening artificial stone and other articles, materials, mixtures, or combination of materials, by the introduction of carbonic-acid gas, artificially produced, into a structure of a holding medium placed or built over or around the same, substantially as herein described.

4. The mode of hardening artificial stone in the shape of tubes, pipes, or such articles, by the introduction into them of carbonic-acid gas artificially produced, and holding it confined in such tubes, pipes, or other articles, substantially as described.

5. The mode of hardening walls, hollow or with flues, made of artificial stone, by the introduction of carbonic acid artificially produced, in the manner described.

6. The mode of hardening quick-lime, or hydrate of lime, or hydraulic lime, or hydraulic cement, by the use of carbonic acid artificially produced, substantially as described.

7. The hardening or maturing manufactured stone and other articles having for their base, or as a part or ingredient of their base or combining medium, hydraulic cement, by the use of carbonic acid artificially produced, substantially as described.

109,670.—RAILWAY-FROG.—John C. Rupp, Newark, Del.

Claim.—The bars D and E E′, combined with the frog C and with the rails A A′ B B′, substantially as and for the purpose herein set forth.

109,671.—COCK FOR CARBURETERS, &c.—Samuel Rust, Jr., Cincinnati, Ohio.

Claim.—A cock having the interior portion composed of brass, iron, or other hard metal, and the exterior of zinc or other metal or alloy fusible at a lower temperature than brass, substantially as and for the purpose herein described.

109,672.—BEE-HIVE.—William A. Ruth, Wyoming, Del.

Claim.—The slides A A, arranged in the grooves *k k* of the partition *b b*, and provided with stems *i* projecting outside the wall of the hive, as and for the purpose specified.

109,673.—PROPELLER.—James Salter, Williamsburg, N. Y.

Claim.—A flat fan, A, set in the hub B, and secured thereto by means of braces C, the said braces being provided with adjusting swivels D, constructed, arranged, and operating in the manner and for the purpose substantially as herein set forth, shown, and described.

109,674. — DOVETAILING-MACHINE. — John B. Schmid, Salem, Va.

Claim.—1. The arrangement, in a dovetailing-machine, of the laterally-swinging frames D D E E I, and the notched curved plates M M, with respect to a vertically-movable frame, B, as and for the purpose specified.

2. The socketed flanged block N and concave seat O, arranged with respect to rod K and crosshead I, as and for the purpose described.

3. The arrangement, upon a vertically-adjustable table, Q, and a horizontally-sliding table, U, of the equal-angled points *s*, and the table A′ having angular points B′ thereon, as and for the purpose specified.

109,675. — DOVETAILING-MACHINE. — John B. Schmid, Salem, Va.

Claim.—The arrangement, in a foot-power mortising-machine, of joint I, extension K, curved bar L, and clamping-bolt and nut, as shown in the drawing, and for the purpose described.

109,676.—ELEVATOR.—George Scott, New Orleans, La.

Claim.—1. In the elevator A, having catches a^1 secured thereto, moving over guides or ways *b b*, and operated by the springs *a a*, substantially as shown and described.

2. The combination, in the elevator A, of catches a^1 a^1, springs *a a*, lever a^2, bracket a^3, ropes B E, wheels C F, sheaves *c c*, and balance-weight D, substantially as shown and specified.

3. The combination of the brake G, lever *g*, pawl *d*, and cords *f f′*, as shown and described, and for the purpose set forth.

109,677.—CONFECTIONERY FOR DRUGGISTS.—August Seitz, Hoboken, N. J.

Claim.—As an article of manufacture, a caramel, B, formed with an irregular cavity in the center thereof, for the purpose specified.

109,678.—PUMP.—William Shearer, Atlanta, Ga.

Claim.—The combination of the cylinder A, caps D, plates E, diaphragms H H′, and the working-rod, the cylinder being provided with the passages, the plates E with the openings, and the cavities and the diaphragms with the valves, all substantially as specified.

109,679.—AGRICULTURAL CALDRON.—Ebenezer E. Sill and Alonzo H. Bennett, Rochester, N. Y.

Claim.—1. The arrangement in the furnace A of the two air-spaces *b* and *c*, separated by the intermediate lining D, the outer space being of greater extent than the inner one, and the two having a compound circulation of air, by means of the passages *d d f* and *d′ d′ f′*, the whole operating in the manner and for the purpose specified.

2. The shell C, constructed of such shape as to fit the open-topped furnace, and provided with the depending leg *m*, forming a water-space below the caldron, and having the opening *p* in front, in the manner and for the purpose specified.

3. The combination of the open-topped caldron C and jacket C′, formed as herein described, the said parts being arranged with the jacket-space h between the walls, and with the depending leg *m*, forming an extra water-space below the caldron, as herein described.

109,680.—GRAIN AND FRUIT-CLEANER.—Silas A. Slocomb, Philadelphia, Pa.

Claim.—1. The combination of the screen-cylinder C, when composed of the hinged sections, flanges E and E′, shaft S, and brush B, constructed and operating as and for the purpose set forth.

2. In combination with the bisected screen-cylinder, with its flanges and brush, as described, the removable case G, as and for the purpose set forth.

109,681.—AXLE FOR CARRIAGES.—Alfred E. Smith, Bronxville, N. Y.

Claim.—1. The groove G formed in the screw-nib C, in combination with the detent-pin J and series of holes H formed in the nut F, arranged and operating in the manner and form substantially as set forth.

2. The combination of the solid-headed or box-nut F with the screw-nib C of a wagon-axle, when the said nib is made of greater length than the depth of the cavity in the screw-nut, so as to make the bottom of the said cavity the bearing for the end of the nib to draw against, and thus obviate the formation of shoulders on the nib of the axle, and thereby weakening the same.

109,682.—SLEIGH.—Samuel S. Spear, South Weymouth, Mass.

Claim.—1. In the runners of a sleigh, pivoted to its body or to an independent frame connected therewith by means of tripedal braces C, substantially in the manner and for the purpose set forth.

2. The independent frame H, to which the pole or shafts are secured, in combination with a pair of runners pivoted to the frame H, the whole arranged and operating substantially as and for the purpose described.

3. In combination with a pair of runners pivoted as described, the braces *c c*, as and for the purpose set forth.

109,683. — CURTAIN-FIXTURE. — Thomas Stewart, Philadelphia, Pa.

Claim.—The construction and arrangement of the brackets B and B^1, provided with flanges *f* and *f′*, openings O, and pulleys P and P′, in combination with the bracket B^2, pulley P^2, roller R, and cords C, C^1, and C^2, so as to operate substantially in the manner and for the purpose specified.

109,684.—WHEEL-PLOW.—John E. Swallow, Hagerstown, Md.

Claim.—1. The coupling G, connecting the tongue and forward end of the plow-beam, and constructed with segmental racks G^2, in combination with the pinions H H, substantially as set forth.

2. The slotted plow-beam D d^1, in combination with the guide-bars C^2 *e*, sliding bolt D^1, provided with a sleeve, D^2 *d*, and means substantially such as described, to operate upon the sliding bolt to raise and lower the rear end of the plow-beam.

109,685. — WATER-WHEEL. — William A. Terry, Bristol, Conn.

Claim.—1. The combination of the disk C, provided with buckets *a*, with the slotted wheel-race B, combined and operating together, substantially as described and for the purpose set forth.

2. The combination of the wheel-race B, provided with its T-shaped slot A, disk C, stops *k*, buckets *a*, and arms *b*, the whole combined and operating together, substantially as described.

3. So combining the disk C and oscillating buckets *a* that said buckets, with their adjacent parts and the disk C, shall enter the slot in the wheel-race as one continuous solid piece, substantially as described and for the purpose set forth.

109,686.—APPARATUS FOR MARKING CLOTH.—Alfred Thomas, Hoboken, N. J.

Claim.—1. The combination of the table A with the pins G G, the rollers C and B, the clamp H, the pattern-sheet E, and roller F, when operated substantially as and for the purpose set forth.

2. The roller F, when combined with the pattern-sheet E, and operated upon the material, substantially as and for the purpose herein described.

109,687.—APPARATUS FOR MARKING CLOTH.—Alphonse Thomas, Hoboken, N. Y.

Claim.—The platform A, the lid F with the hooks H H and the clamp E, and pins *a a a a*, in combination with the pattern-sheet I, substantially as and for the purpose herein stated.

109,688.—RECORDING INSTRUMENT FOR THE ELECTRIC TELEGRAPH.—William Thomson, Glasgow, Scotland.

Claim.—1. The general arrangement of apparatus, substantially as described.

2. The capillary or small ink-siphon, kept in rapid vibration, substantially as described.

3. The arrangement of such apparatus so that an electric discharge may pass between the siphon and the surface to be marked, and so set up the requisite vibrations.

4. The arrangement of the receiving-coil, consisting of a small number of turns of fine wire suspended between strained threads or fibers in such a position that part of the coil is situate in a powerful magnetic field, substantially as described.

109,689.—AUTOMATIC STOVE-REGISTER.—John S. Toan, Rochester, N. Y.

Claim.—1. The combination of the two register-disks D E, the first automatic in its action through the medium of expanding-rod H, and the latter adjustable by hand, the whole arranged as described, and operating in the manner and for the purpose specified.

2. An automatic register for attaching to stove-pipes, &c., consisting of an ordinary circular register-disk weighted or made heavier on one side, and connected with an expanding-rod, the whole arrangement being such that when the rod expands the register will open of its own weight as herein described.

with a hook or stud at each end, and the lever C, all combined as set forth, and for the purpose of working a blind or shutter.

109,662. — CLOTH-CUTTING ATTACHMENT FOR SEWING-MACHINES.—William Edgar Prall, Washington, D. C., and Alden B. Rand, Staten Island, N. Y.

Claim.—The cutting-attachment, constructed as herein shown and described, when combined with and operated from the rotating wheel or shaft of the machine.

109,663.—SHOW-CASE.—Philip Price, West Chester, Pa.

Claim.—1. A case, B, containing ice or a freezing mixture, and arranged within a case, constructed as set forth, for the exhibition of perishable articles.

2. The combination of the upright B secured to a base, X, a show-case revolving round said upright, and an adjustable pivot, *z*, secured to said case and bearing on the upright, so that by adjusting said pivot the case may be raised from or caused to rest on the base, all as described.

109,664.—WATER-WHEEL.—Demmon Reynolds, Napanock, N. Y.

Claim.—The combination of the crown-plate A, flange B, guide-plates C C′, gates D, ring E E′, and pinion F′, all constructed, arranged, and operated substantially as shown and described.

109,665.—MANUFACTURE OF WRENCH.—John Richards, Philadelphia, Pa.

Claim.—The within-described manner of manufacturing wrenches from pieces stamped or punched from sheets of metal, combined as herein specified.

109,666.—SAFETY-SWIVEL.—Richard Richards, Albany, N. Y.

Claim.—The swivel A *a′* B *b′*, constructed substantially as herein shown and described, and for the purpose set forth.

109,667. — EARTH-CLOSET. — George W. Roberts, Wilmington, Del., assignor to himself and John H. Graham, same place.

Claim.—The combination of the movable seat N with the sliding platform G, valve L, spring M, and hopper E having the sieve *b*, whereby the quantity of earth to be used and the time of passage is regulated, arranged to operate in the manner and for the purpose specified.

109,668, antedated November 26, 1870.—CLOTH-GUIDING ATTACHMENT FOR SEWING-MACHINES.—Simeon Rogers and Edwin K. Sperry, Fleming, N. Y.

Claim.—The combination of the curved spring E and the guiding-rollers I I with the plate A, gauge B, and spring-guides D, all constructed, arranged, and operating as described.

109,669. — MANUFACTURE OF ARTIFICIAL STONE.—James L. Rowland, Milwaukee, Wis.

Claim.—1. An artificial stone manufactured from quick-lime slaked with the smallest quantity of water introduced in the shape of steam or vapor, in combination with other materials, substantially as described.

2. An artificial stone manufactured from a hydrate of lime or hydraulic lime, or hydraulic cement, treated as described, and combined or not, substantially as described.

3. The mode of hardening artificial stone and other articles, materials, mixtures, or combination of materials, by the introduction of carbonic-acid gas, artificially produced, into a structure of a holding medium placed or built over or around the same, substantially as herein described.

4. The mode of hardening artificial stone in the shape of tubes, pipes, or such articles, by the introduction into them of carbonic-acid gas artificially produced, and holding it confined in such tubes, pipes, or other articles, substantially as described.

5. The mode of hardening walls, hollow or with flues, made of artificial stone, by the introduction of carbonic acid artificially produced, in the manner described.

6. The mode of hardening quick-lime, or hydrate of lime, or hydraulic lime, or hydraulic cement, by the use of carbonic acid artificially produced, substantially as described.

7. The hardening or maturing manufactured stone and other articles having for their base, or as a part or ingredient of their base or combining medium, hydraulic cement, by the use of carbonic acid artificially produced, substantially as described.

109,670.—RAILWAY-FROG.—John C. Rupp, Newark, Del.

Claim.—The bars D and E E′, combined with the frog C and with the rails A A′ B B′, substantially as and for the purpose herein set forth.

109,671.—COCK FOR CARBURETERS, &c.—Samuel Rust, Jr., Cincinnati, Ohio.

Claim.—A cock having the interior portion composed of brass, iron, or other hard metal, and the exterior of zinc or other metal or alloy fusible at a lower temperature than brass, substantially as and for the purpose herein described.

109,672.—BEE-HIVE.—William A. Ruth, Wyoming, Del.

Claim.—The slides *h h*, arranged in the grooves *k k* of the partition *b b*, and provided with stems *i i* projecting outside the wall of the hive, as and for the purpose specified.

109,673.—PROPELLER.—James Salter, Williamsburg, N. Y.

Claim.—A flat fan, A, set in the hub B, and secured thereto by means of braces C, the said braces being provided with adjusting swivels D, constructed, arranged, and operating in the manner and for the purpose substantially as herein set forth, shown, and described.

109,674. — DOVETAILING-MACHINE. — John B. Schmid, Salem, Va.

Claim.—1. The arrangement, in a dovetailing-machine, of the laterally-swinging frames D D E E I, and the notched curved plates M M, with respect to a vertically-movable frame, B, as and for the purpose specified.

2. The socketed flanged block N and concave seat O, arranged with respect to rod K and crosshead I, as and for the purpose described.

3. The arrangement, upon a vertically-adjustable table, Q, and a horizontally-sliding table, U, of the equal-angled points *x*, and the table A′ having angular points B′ thereon, as and for the purpose specified.

109,675. — DOVETAILING-MACHINE. — John B. Schmid, Salem, Va.

Claim.—The arrangement, in a foot-power mortising-machine, of joint I, extension K, curved bar L, and clamping-bolt and nut, as shown in the drawing, and for the purpose described.

109,676.—ELEVATOR.—George Scott, New Orleans, La.

Claim.—1. In the elevator A, having catches *a′ a′* secured thereto, moving over guides or ways *b b*, and operated by the springs *c c*, substantially as shown and described.

2. The combination, in the elevator A, of catches *a′ a′*, springs *c c*, lever *a²*, bracket *a³*, ropes B E, wheels C F, sheaves *e e*, and balance-weight D, substantially as shown and specified.

3. The combination of the brake G, lever *g*, pawl *d*, and cords *f f′*, as shown and described, and for the purpose set forth.

109,677.—CONFECTIONERY FOR DRUGGISTS.—August Seitz, Hoboken, N. J.

Claim.—As an article of manufacture, a caramel, B, formed with an irregular cavity in the center thereof, for the purpose specified.

109,678.—PUMP.—William Shearer, Atlanta, Ga.

Claim.—The combination of the cylinder A, caps D, plates E, diaphragms H H′, and the working-rod, the cylinder being provided with the passages, the plates E with the openings, and the cavities and the diaphragms with the valves, all substantially as specified.

109,679.—AGRICULTURAL CALDRON.—Ebenezer E. Sill and Alonzo H. Bennett, Rochester, N. Y.

Claim.—1. The arrangement in the furnace A of the two air-spaces *b* and *c*, separated by the intermediate lining D, the outer space being of greater extent than the inner one, and the two having a compound circulation of air, by means of the passages *d d f* and *d′ d′ f′*, the whole operating in the manner and for the purpose specified.

2. The shell C, constructed of such shape as to fit the open-topped furnace, and provided with the depending leg *m*, forming a water-space below the caldron, and having the opening *p* in front, in the manner and for the purpose specified.

3. The combination of the open-topped caldron C and jacket C′, formed as herein described, the said parts being arranged with the jacket-space *h* between the walls, and with the depending leg *m*, forming an extra water-space below the caldron, as herein described.

109,680.—GRAIN AND FRUIT-CLEANER.—Silas A. Slocomb, Philadelphia, Pa.

Claim.—1. The combination of the screen-cylinder C, when composed of the hinged sections, flanges E and E′, shaft S, and brush B, constructed and operating as and for the purpose set forth.

2. In combination with the bisected screen-cylinder, with its flanges and brush, as described, the removable case G, as and for the purpose set forth.

109,681.—AXLE FOR CARRIAGES.—Alfred E. Smith, Bronxville, N. Y.

Claim.—1. The groove G formed in the screw-nib C, in combination with the detent-pin J and series of holes H formed in the nut F, arranged and operating in the manner and form substantially as set forth.

2. The combination of the solid-headed or box-nut F with the screw-nib C of a wagon-axle, when the said nib is made of greater length than the depth of the cavity in the screw-nut, so as to make the bottom of the said cavity the bearing for the end of the nib to draw against, and thus obviate the formation of shoulders on the nib of the axle, and thereby weakening the same.

109,682.—SLEIGH.—Samuel S. Spear, South Weymouth, Mass.

Claim.—1. In the runners of a sleigh, pivoted to its body or to an independent frame connected therewith by means of tripedal braces C, substantially in the manner and for the purpose set forth.

2. The independent frame H, to which the pole or shafts are secured, in combination with a pair of runners pivoted to the frame H, the whole arranged and operating substantially as and for the purpose described.

3. In combination with a pair of runners pivoted as described, the braces *e e*, as and for the purpose set forth.

109,683. — CURTAIN-FIXTURE. — Thomas Stewart, Philadelphia, Pa.

Claim.—The construction and arrangement of the brackets B and B¹, provided with flanges *f* and *f′*, openings O, and pulleys P and P′, in combination with the bracket B², pulley P², roller R, and cords C, C¹, and C², so as to operate substantially in the manner and for the purpose specified.

109,684.—WHEEL-PLOW.—John E. Swallow, Hagerstown, Md.

Claim.—1. The coupling G, connecting the tongue and forward end of the plow-beam, and constructed with segmental racks G², in combination with the pinions H H, substantially as set forth.

2. The slotted plow-beam D *d*¹, in combination with the guide-bars C² *e*, sliding bolt D¹, provided with a sleeve, D² *d*, and means substantially such as described, to operate upon the sliding bolt to raise and lower the rear end of the plow-beam.

109,685. — WATER-WHEEL. — William A. Terry, Bristol, Conn.

Claim.—1. The combination of the disk C, provided with buckets *a*, with the slotted wheel-race B, combined and operating together, substantially as described and for the purpose set forth.

2. The combination of the wheel-race B, provided with its T-shaped slot *h*, disk C, stops *k*, buckets *a*, and arms *b*, the whole combined and operating together, substantially as described.

3. So combining the disk C and oscillating buckets *a* that said buckets, with their adjacent parts and the disk C, shall enter the slot in the wheel-race as one continuous solid piece, substantially as described and for the purpose set forth.

109,686.—APPARATUS FOR MARKING CLOTH.—Alfred Thomas, Hoboken, N. J.

Claim.—1. The combination of the table A with the pins G G, the rollers C and B, the clamp H, the pattern-sheet E, and roller F, when operated substantially as and for the purpose set forth.

2. The roller F, when combined with the pattern-sheet E, and operated upon the material, substantially as and for the purpose herein described.

109,687.—APPARATUS FOR MARKING CLOTH.—Alphonse Thomas, Hoboken, N. Y.

Claim.—The platform A, the lid F with the hooks H H and the clamp E, and pins *a a a a*, in combination with the pattern-sheet I, substantially as and for the purpose herein stated.

109,688.—RECORDING INSTRUMENT FOR THE ELECTRIC TELEGRAPH.—William Thomson, Glasgow, Scotland.

Claim.—1. The general arrangement of apparatus, substantially as described.

2. The capillary or small ink-siphon, kept in rapid vibration, substantially as described.

3. The arrangement of such apparatus so that an electric discharge may pass between the siphon and the surface to be marked, and so set up the requisite vibrations.

4. The arrangement of the receiving-coil, consisting of a small number of turns of fine wire suspended between strained threads or fibers in such a position that part of the coil is situate in a powerful magnetic field, substantially as described.

109,689.—AUTOMATIC STOVE-REGISTER. — John S. Toan, Rochester, N. Y.

Claim.—1. The combination of the two register-disks D E, the first automatic in its action through the medium of expanding-rod H, and the latter adjustable by hand, the whole arranged as described, and operating in the manner and for the purpose specified.

2. An automatic register for attaching to stove-pipes, &c., consisting of an ordinary circular register-disk weighted or made heavier on one side, and connected with an expanding-rod, the whole arrangement being such that when the rod expands the register will open of its own weight as herein described.

109,690.—STRETCHING-FRAME.—John Tonner, Canton, Ohio.

Claim.—1. The stretching-frame A B C D, herein described, the same consisting of the bars A B and C D, having the slots *a b c d* cut therein, and united by the clamping-bolts E F, constructed with thumb-nuts and flattened stems, substantially as is herein specified.

2. The combination, with the frame-bars A B, of the legs G G hinged to said bars, and the braces H H pivoted to said bars and provided with the thumb-screws I, said braces being so arranged as to be secured either to the legs or the frame-bars by the thumb-screws I, and the several parts being arranged to fold together, substantially as specified.

109,691. — SIRUP-CAN. — Antony Tumler, New York, N. Y.

Claim.—The lever-valve G, spiral spring H, spindle K, knob M, stop L, can A, cover B, and well C, combined, arranged, and operating substantially as and for the purposes described and set forth.

109,692.—BUFFER AND CATCH FOR DOORS.—Andrew A. Veer, Delaware, Ohio.

Claim. — The adjustable buffer-head D or its equivalent, provided with a buffer-block, in combination with a base-plate and a catch, substantially as and for the purpose described.

109,693. — OIL-CAN. — Henry C. Warfel, Philipsburg, Pa.

Claim.—1. The combination with an oil-can of the plug A, spring C, and operating wire-pusher E, all arranged substantially as specified.

2. The pusher E of the plug-operating devices, arranged for actuating the air-valve M by means of hook P, simultaneously with plug A by means of spring C, all substantially as described.

109,694. — AWNING-FRAME. — Christopher Werner, Charleston, S. C.

Claim.—1. The rods D D, arranged to diverge from each other throughout their length, for the purpose of laterally bracing the awning-frame, as shown and described.

2. The combination of the pins F, arms B, bar or pipe C, eye-plate E, rods D D, pins G, screw-nuts I I, and studs H, all arranged as shown and described.

109,695.—ATMOSPHERIC CAR-BRAKE PIPES. George Westinghouse, Jr., Pittsburg, Pa.

Claim.—1. The pipes *a a'*, the latter having a packing-ring, *a''*, in its taper end, and the former a conical coat or rubber at its base, arranged in connection with the ring *n*, springs *m*, and head *o*, the latter having cut-away parts *o''*, substantially as described.

2. In combination with the valves of an atmospheric car-brake coupling, an interposed longitudinally-movable block or stem, whereby, when the couplings are united, the valves are unseated, substantially as described.

109,696. — VIOLIN. — Maurice W. White, Boston, Mass., assignor to himself and Ebenezer P. Cutter, same place.

Claim.—A violin or kindred instrument having the elliptical bracing *a b*, or its equivalent, applied in the manner and for the purposes hereinbefore set forth.

109,697, antedated November 19, 1870.—WASHING-MACHINE.—Levi H. Whitney, Washington, D. C.

Claim.—A suds-box of a washing-machine, having an inclined lid, in which the agitator has its bearings so that the arms of such agitator move in a diagonal plane, substantially as and for the purpose set forth.

109,698.—DANCING TOY.—George L. Wild and Louis P. Wild, Washington, D. C.

Claim.—1. The devices A B B C D and the automatic figures, whereby to transmit invisible musical vibrations to automatic figures and impart motion thereto, all combined and arranged substantially as herein shown and described.

2. In the body *a* of the puppet, as shown in fig. 4, the recesses *b b* and the springs M, with their turned-up ends *c c*, all arranged as and for the purpose set forth.

109,699. — MANGLING AND IRONING-MACHINES.—Stephen Williams, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the crank H, and gear-wheels D E G I with the rollers C J, and pivoted frame K L, substantially as herein shown and described, and for the purpose set forth.

2. The curved arms or bars K, and pivoted cross-bar L, in combination with the rollers C J, substantially as herein shown and described, and for the purpose set forth.

3. The cam P, in combination with the bed-plate A, frame Q L K, and rollers J C, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the lever V, horizontal rod or shaft U, crank-arm T, and slotted crank-arm S with each other and with the bed-plate A, cam P, frame Q L K, and rollers J C, substantially as herein shown and described, and for the purpose set forth.

5. The horizontal rod U, in combination with the slotted crank-arm S, for operating the device for raising the upper roller for the introduction of the cloth to be operated upon, substantially as herein shown and described.

109,700. — HORSE HAY-RAKE.—James E. Wisner, Friendship, N. Y.

Claim.—1. In combination with the wheels of the rake, the sliding rods J and lifting-bar E, the jointed bar L and pin M, substantially as described, for the purpose specified.

2. In combination with the wheels, the sliding rods J, jointed bar L, and sliding pin M, substantially as described, for the purpose specified.

3. The foot-lever N and stop O, in combination with the sliding pin M, jointed bar L, sliding rods J, and the wheels of the rake, substantially as described, for the purpose specified.

109,701. — HORSE OR MULE-SHOE.—John Wonderlin, Louisville, Ky.

Claim.—The shoe A, having a depression in the under side when made to cover the entire under surface of the hoof, and provided with toe and heel-calks, a hook, B, metallic band C, and tightening-nuts D, all substantially as herein described.

109,702.—BEE-HOUSE.—James W. Wood, Alden, Ill.

Claim.—The arrangement of the bee-house A, secured by a locked door, I, and having a central passage between inwardly-removable hives, said hives being accessible only to bees from the outside by means of apertures E, substantially as described.

109,703. — FASTENING FOR FRUIT-JARS.—Theodore F. Woodward, Winslow, N. J., assignor to Hay & Co., Philadelphia, Pa.

Claim.—The combination of the wire clamp D, constructed substantially as described, with the cover C having vertical grooves *a a*, and with the jar A having double inclines *f f*, substantially in the manner, and for the purpose set forth.

109,704. — GATE. — Jackson Wright, Versailles, Ill.

Claim.—1. The pivoted sway-beam M, arms O O, and block S, all combined, constructed, and applied to the fastening-bars to unlatch the gate, in the manner described.

2. The unlatching device M O O S, and the opening device V V C, combined, as described, with levers K K and rods Y Y, to unlatch and open the gate in quick succession, and by the same actuating force, as described.

109,705, antedated November 18, 1870.—SEWING-MECHANISM.—Josiah L. Young, San Francisco, Cal.

Claim.—1. The reciprocating-bar J, having pin *i* and pin I and washer, in combination with the slotted plate b^2, the guide-cam *b*, and the roller *d* for feeding the material, substantially as specified.

2. The combination with the cutting-blades A E, of the needle and looper, operating to cut and baste at one operation, as set forth.

109,706.—DRYING DISINTEGRATED FIBERS. William Adamson, Philadelphia, Pa.

Claim.—The process herein described of treating separated fibers.

109,707.—CARRIAGE-WHEEL HUB.—Simeon Atha, West Liberty, Ohio.

Claim.—1. The metallic shells or bands C C', each carrying its own separate and independent metallic mortises, substantially as described.

2. The flanges D D', formed with or secured upon the metallic shells or bands C C', when said shells or bands each carry its own separate mortised metallic plates *a a'*, substantially as described, for the purpose set forth.

3. The recesses or openings *e e* formed between the flanges D D' and the metallic shells or bands C C', substantially as described, for the purpose set forth.

4. The metallic shells or bands C C', with the mortised plates *a a'*, and flanges D D', in combination with the wooden hub or core A, substantially as described, for the purpose set forth.

109,708. — TRAVERSE MOTION FOR WINDING AND SPOOLING MACHINERY.—John E. Atwood, Mansfield, Conn.

Claim.—1. The combination of the differential wheels F and F', furnished respectively with the projection *e* and cam *f*, the pinion E, and the cam G, with the traverse-bar A, substantially as and for the purpose or purposes herein set forth.

2. The wire-conductors H, made double, in combination with the staples *g* and flattened interposed wires A, essentially as shown and described.

3. The sheet-metal thread-guides C, constructed of a bent or hollow form, and with a flat slotted base or end, substantially as specified.

109,709.—PULLEY-COUPLING.—John E. Atwood, Mansfield, Conn.

Claim.—The insertion of the keys *e e* in recesses *d d* in the shaft A and hub *b*, in such manner that they act as dowels to prevent the rotation of the one within the other, and to prevent the withdrawal of the shaft endwise from the eye of the pulley, substantially as shown and described.

109,710.—WASHING-MACHINE.—Bennett C. Bailey, Constitution, Ohio.

Claim.—1. The combination of the press-boards B and B', levers E E, links E^1 E^1, and cross-bar E^2, all arranged and operating substantially as set forth.

2. In combination with the elements enumerated in the preceding clause, the oscillating frame F F F^1, and links F^2 F^2, substantially as and for the purpose set forth.

3. The combination and arrangement of the press-board B, board D' hinged thereto, and stationary board D, the two boards forming a false bottom, substantially as set forth.

109,711.—GRATE-BAR.—Hosea Ball, New York, N. Y.

Claim.—The rocking grate-bars B, each provided at top with a number of transverse bars D constructed with convex upper surfaces eccentric to the pivots C, the whole being adapted to operate substantially as described.

109,712.—IRONING-BOARD.—Jacob H. Beidler, Adrian, Mich.

Claim.—The combination, with the board A, of the stationary under L-shaped piece B and fulcrum C, all as shown and described.

109,713.—GATE.—Robert T. Bowne, Fallston, Md.

Claim.—1. The lever K, pivoted at its center, in combination with the cords P Q and pulleys N O at the ends of the crank-rods L M, so that said lever may always be moved by a positive pull to operate the gate, as set forth.

2. In combination with the lever C or its equivalent, arranged to operate the gate B, as described, the latch F, constructed to operate substantially as set forth.

109,714. — TANNING COMPOSITION.—William B. Brittingham, La Fayette, Ind.

Claim.—1. A composition for preparing skins for the removal of the hair therefrom, consisting of the following-named ingredients, and substantially in the following-named proportions: Potash, three ounces; nitrate of potassa, one ounce; common salt, three ounces; lime, twenty ounces; water, ten gallons.

2. A composition for tanning leather, consisting of the following-named ingredients, and substantially in the following proportions: A strong decoction of bark, japonica, gambier, or cutch, added to potash or carbonate of potassa, two ounces; nitrate of potassa, four ounces; alum, two ounces; sulphate of zinc, one ounce; water, ten gallons.

109,715.—PLATE-LIFTER.—Heman P. Brooks, Waterbury, Conn.

Claim.—The herein-described plate-lifter, consisting of the three hooks *a d f*, the said hooks *a* and *f* being provided with springs for their adjustment, substantially in the manner herein set forth.

109,716.—RIDDLE FOR SEPARATING GRAIN. Matthew M. Cooper and James W. Donaldson, Fairfield, Cal.

Claim.—The riddle herein described, consisting of the frame A, the inclined planes B, the longitudinal plates or partitions C, and the longitudinal wires D, when combined and arranged to operate substantially as described, and for the purpose set forth.

109,717.—PADLOCK.—Joseph Corbett, Brooklyn, N. Y.

Claim.—1. The key, constructed with a thick bit, the steps of which have operating faces of varying curves, in combination with the ring-tumblers D and with a bolt so constructed that the said tumblers and bolt, or any two of them, will be adjusted or actuated by the contact of parts of the key not in one and the same radial plane.

2. The pivoted dog G, operated positively by a tusk or equivalent device on the bolt-shank, to lift the nose of the shackle and hold the bolt in its retracted position.

109,718. — SEAL-LOCK. — Joseph Corbett, Brooklyn, and Franklin W. Brooks, New York, N. Y., assignors to the American Seal-Lock Company, New York City.

Claim.—The sliding case D carrying a seal, E, and secured by a spring catch, G H, which operates independently of the lock or other fastening, and which cannot be retracted while the seal is in position without breaking the latter.

109,719. — HARROW-TEETH. — Squire W. Corbin, Bainbridge, N. Y.

Claim.—The combination of the inclined socket

A, tooth C, and spur or star-wheel D, all constructed and arranged substantially as and for the purposes herein set forth.

109,720.—Fly-Brush.—James E. Darnall, Washington, D. C.

Claim.—As an article of manufacture, the within-described fly-brush, composed of slitted sheets of paper, A, pasted together and folded over a string, B, by which they are secured to the handle C, in the manner set forth.

109,721. — Oscillating Piston-Engine.—James B. Davis and Seth M. Davis, Harrisonville, Mo.

Claim.—1. The combination and arrangement of the cylinder B, having an annular cavity, oscillating piston D, shaft B^2, gear-wheel B^3, wheels D D and their operative mechanism, shaft D^1, and fly or hand-wheel D^2, substantially as and for the purpose set forth.

2. The combination and arrangement of the disks D^3 and D^4, and valves C′ C″, substantially as and for the purpose set forth.

3. The combination and arrangement of the wheels D D, rods G G, and pawls E E, as and for the purpose set forth.

4. The construction and arrangement of the wheels D D, substantially as and for the purpose set forth.

109,722. — Packing-Box for Rotary Steam-Cylinders.—Samuel Deacon and John Russell, Lawrence, Mass.

Claim.—The nut D, adjusted on the cam E, and arranged to clamp the packing between two conical ends, substantially as herein shown and described.

109,723. — Electro-Magnetic Burglar-Alarm.—James Madison Dille, Coopertown, Pa.

Claim.—1. An electro-magnetic burglar-signal, constructed substantially as herein described, with two electro-magnets operating separate clock-works, one when the current is broken and the other when connection is made, as herein set forth.

2. The springs *e e* or *e′*, constructed and arranged as described, to form a connection, and also to break a current, substantially as and for the purpose herein set forth.

3. In combination with the electro-magnetic burglar-signal, as herein described, the spring *b*, post *d*, lever *c*, and key *w*, substantially as and for the purposes herein set forth.

4. A wire cable for conducting electricity, composed of two or more single wires, each covered with hot resin or its equivalent, forming a brittle coating, and twisted or braided together while said coating is still warm, and the whole then covered with an elastic or flexible coating, substantially as and for the purposes herein set forth.

109,724. — Concrete for Paving and Roofing.—Edward Duempelman, New York, N. Y.

Claim.—The process of sulphurizing of oil, by treatment with chloride of sulphur in the proportions named, which is to be subsequently added to pure asphaltum, in the manner and for the purposes above described and set forth.

109,725.—Machine for Cutting Sheets of India Rubber.—Charles A. Ensign, Naugatuck, Conn.

Claim.—1. The revolving cutter *a* and fixed cutter *d*, combined with the moving table C and endless band E so as to present the gum to the said cutters, in the manner described.

2. In combination with the revolving cutter *a*, fixed cutter *d*, and a device for feeding the gum thereto, the arrangement of the sheet T, to receive the said gum when cut, and operating in the manner described.

3. In combination with the revolving cutter *a*, fixed cutter *d*, and a device for feeding the gum thereto, the lever L, carrying the rod *n*, so as to disengage the sheet of gum from the fixed cutter, as substantially as set forth.

109,726.—Machine for Joining Irregular Seams in India-rubber Work.—Charles A. Ensign, Naugatuck, Conn.

Claim.—1. In combination with the fixed and stationary cutters F and I, the plate L and folder N, arranged so as to receive the strip of fabric, cut and double the said strip over the plate L, substantially as set forth.

2. In combination with the plate L and folder N, operating as described, the bed *a* and presser *b*, when arranged so that the strip folded upon the said plate may, by the turning of the plate, be laid upon the said bed, substantially as set forth.

3. In combination with the plate L, folder N, bed *a*, and presser *b*, arrangement of the sides W, operating to move the folder away from the said strip when laid upon the said bed, substantially as set forth.

109,727.—Railway-Car Brake. — Francis M. Finnell, Covington, Ky.

Claim.—The buffer E, rod G G′, and brake-lever I, arranged relatively as described, in combination with the link H^1 and spring-lever $H H^2$, connected by the cord or chain K to the brake-shaft, and operating substantially as set forth.

109,728.—Shoe.—John W. Fisher, Albany, N. Y.

Claim.—A shoe, made with the extended flaps B D formed substantially in the manner shown, so that the shoe may be convertible, at pleasure, into a buttoned or laced gaiter or shoe.

109,729.—Shoe.—John W. Fisher, Albany, N. Y.

Claim.—The within-described slipper, provided with the extended upper A and the flaps C C so that it may be used interchangeably as a slipper and as a shoe, substantially as set forth.

109,730, antedated November 19, 1870.—Faucet. — Oscar Hanks, Cincinnati, Ohio.

Claim.—The shell A *a*, tubular revolving-valves B *b*, and cam-handle C *c*, combined and operating substantially in the manner, and for the purpose specified.

109,731. — Breech-loading Fire-Arm.—John Hanson, Rastcliffe, near Huddersfield, England.

Claim.—1. The plug or rod with two heads, within a tube to be acted upon, in the manner and for the purpose hereinbefore described and shown in the accompanying drawing.

2. A tube for containing the coiled spring, and to serve as a guide for the closing-bolt to slide upon, in the manner hereinbefore shown and described.

3. The disk, with a projecting thumb-piece, and with a portion of the edge cut away, for retaining the arm at full cock, or for freeing it ready for the discharge, as hereinbefore shown and described.

109,732. — Air-Pump. — John F. Haskins, Fitchburg, Mass.

Claim.—1. The centrally-perforated disk-valve, in combination with a fixed central guide, formed substantially as described, in the part over which such valve moves in action, for the purpose specified.

2. The combination of the pump-barrel, chest, delivery-valve seat, delivery-valve, and pump or chest-head, when arranged substantially as and for the purpose set forth.

109,733.—Clothes-line Fastener.—Bryant B. Herrick, Decatur, Mich., assignor of one-half his right to John H. Wallace, same place.

Claim.—1. A cam *c*, working against a fixed counter, H, when said cam is pivoted to a plate or disk having a partial movement upon an eccentric pivot, *c*, whereby the interval between the cam and its counter may be increased or decreased at pleasure, substantially as and for the purposes herein set forth.

2. The combination of the projecting arm *k* and friction-roller *p* with the fixed counter H and swinging cam *c*, substantially as and for the purpose herein set forth.

109,734, antedated November 26, 1870.—Flood-Gate.—Nathaniel Hinckley, Marston's Mills, Mass.

Claim.—The troughed lever, carrying a float at one end and a tank at the other, and connected, to operating the gate at a point between the float and tank, substantially as shown and described.

109,735. — Safety-Tube for Lamps. — George M. Hopkins and John A. Straight, Albion, N. Y.

Claim.—The tube B, made of non-conducting fibrous material, and suspended within the reservoir of a lamp, in the manner and for the purpose described.

109,736.—Garter.—Henry A. House, Bridgeport, Conn.

Claim.—A garter or band composed of two or more wire coils, which are uncovered so as to afford ventilation, and which are tied together laterally at their ends by plates or pieces *a*, substantially as and for the purpose described.

109,737.—Garter.—Henry A. House, Bridgeport, Conn.

Claim.—1. An uncovered wire-spring garter or band, which has its adjoining springs connected and stayed at one or more points between its fastening ends, substantially as described.

2. A stay or stays, *b*, arranged within an uncovered wire-spring garter or band, substantially as described.

3. The clasp-plates, constructed with tongues *t t*, notched, as described, to receive and hold the ends of the springs A A, substantially as described.

109,738.—Fluting-Machine.—Arthur Y. Hubbell, Elmira, N. Y.

Claim. — 1. The right-angular roll-supporting frame G, provided with a slot through which the journal of the lower roller passes, and extended into the bed-plate of the machine, all substantially as and for the purposes herein set forth.

2. The combination of the upper roll-supporting frame G, its guide-pins *a a*, tension-spring and elevating device, with the outer main standard C, substantially as set forth.

3. The combination of the shaft I, its pin *i*, with the standard C having a hub, *b*, with incline or inclines *k* with a stop at each end for raising, lowering, and locking the upper roll and compressing and holding the spring H, all substantially as set forth.

109,739.—Package for Lard, Butter, &c. George M. Huntly, Grand Rapids, Mich.

Claim.—The within-described cylindrical package or nests of packages, whose sides are made of paper or pasteboard connected with a wooden bottom and a rabbeted wooden top, said sides, top, and bottom being coated with a solution of gum-arabic and glue on their inner sides, all as set forth.

109,740.—Friction-Clutch.—Walter W. Jerome, Samuel B. Alger, and Clinton H. Sage, Norwich, N. Y.

Claim.—The pivoted curved arms G, and adjusting-screws H, or equivalent, in combination with the slides D *d*, springs I I, sleeve E, hub B, and pulley C, substantially as herein shown and described, and for the purpose set forth.

109,741.—Rotary Plow.—Nelson T. Judd, Washington, D. C.

Claim.—1. The frame F, pivoted centrally on the axle B having a series of rotary plows mounted upon a transverse shaft at its rear end, and so arranged that, by adjusting its front end, the plows can be raised or lowered at will, substantially as described.

2. The arrangement of a series of gangs of rotary plows, substantially as described, whereby the plows of each gang may be adjusted to cut at any required depth, independently of the other gangs in the series, so that, while one side of the machine is lower than the other, the whole series of plows may be adjusted to cut at a uniform depth, as set forth.

3. The oscillating-frame F, having levers *m*, with their pins *n* and springs *l* attached thereto, in combination with the front frame or reach C having the screw G and inclines *p* thereon, and the sliding clutches *f* and wheels D, with the clutches *h*, all arranged to operate as and for the purpose set forth.

109,742.—Paper-Stock.—Morris L. Keen, Jersey City, N. J., assignor to himself and Samuel A. Walsh, New York City.

Claim.—1. The brown paper-stock herein described, made by the first process, and having the several qualities and peculiarities herein described.

2. The gray paper-stock, as produced from the brown by boiling the same in alkaline solutions, put up in any convenient form for sale or use.

3. The bleached paper-stock, as produced from the brown by boiling the same in alkaline solutions, and treating it with any bleaching materials.

109,743. — Separating Lead from the Precious Metals.—Solomon W. Kirk, Philadelphia, Pa., assignor to himself and William Bailey, same place.

Claim.—1. The process of applying black oxide of manganese, or any other material that will liberate oxygen at an incandescent heat, to melted lead, and forcing through the mass a stream of oxygen gas or atmospheric air, so as to separate the baser from the precious metals, substantially as described.

2. The process of forcing oxygen gas or atmospheric air through melted lead, so as to convert it with great rapidity into oxide of lead or litharge, for the purpose of separating the gold or silver that it may contain, substantially as specified.

109,744.—Fan Attachment for Rocking-Chairs.—Rudolph Knaffl, Nashville, and Theodore M. Schleier, Knoxville, Tenn.

Claim.—The combination of the fan-operating parts, consisting of rod L, spring M, cord I, and spring K, communicating between a relatively-fixed point on the stem D E and the floor, with which the foot of the rod is held in constant contact by the dominant spring M, substantially as shown and described.

109,745.—Ramming-Machine for Wood and other Pavements.—Arthur Livingston Lansing, Philadelphia, Pa., assignor to Henry Seymour Lansing, same place.

Claim.—1. A portable ramming-machine for wooden and other pavements, consisting, mainly, of a frame, A, supported upon two sets of adjustable propelling-wheels, B and C, arranged at right angles to each other, and carrying a weighted and guided ram, I, to which a vertical reciprocating motion is imparted.

2. The ram I, connected to and operated by a crank-shaft, J, the bearings of which are adjustable and capable of yielding vertically.

3. The said bearings or boxes *k* of the crank-shaft, arranged to slide in adjustable segmental frames M, and maintained in a proper position in the said frames between strong spiral springs *l*.

4. The frames M, adapted to and rendered adjustable, by set-screws or otherwise, in segmental guides L secured to or forming a part of the frame of the machine, and formed on a curve described from the center of the driving-shaft.

5. The combination of the ram I, operated substantially as described, with a swage, K, arranged beneath the ram, as specified.

6. The said swage, having projections or ribs *c* on its under side, adapted to the spaces between the blocks of a "Stow" or other pavement.

7. The said swage, adapted to guides in the frame of the machine, and capable of being connected to and raised with the ram, as set forth.

8. The disks H, hung to the frame of the machine, attached to the spindles of the propelling-wheels C, and connected together by rods *f*, so that they can be operated simultaneously, in the manner and for the purpose specified.

109,746.—DEVICE FOR CUTTING SCREW-THREADS AND FOR DRILLING METALS.—James W. Mahlon, Brooklyn, N. Y.

Claim.—The die-stock body A, detachable handles *f*, socket *a*, hollow body *h*, and the ratchet-and-pawl mechanism, jointly, the several parts being constructed and fitted to co-operate in the cutting of screw-threads, or drilling of metals to the extent and in the manner substantially as described.

109,747.—DEVICE FOR CLAMPING OR CUTTING OFF TUBES AND RODS.—James W. Mahlon, Brooklyn, N. Y.

Claim.—1. The combination of the stock A having a lip, *h*, on the one end, the clamping-plates J J' united by bolts and nuts, the clip *w*, side lugs *n n*, and bolt *s*, the whole arranged and operating substantially as and for the purpose herein set forth.

2. The improved machine herein described, adapted to the interchangeable uses of holding and cutting off pipe.

109,748.—COTTON-BALE TIE.—John F. Milligan, St. Louis, Mo., assignor to Joseph W. Branch, same place.

Claim.—In a tie-plate, A, substantially of this form, the improved entering-space here shown, composed of the transverse slots *a* and diagonal slots a^1, for the purpose set forth.

109,749, antedated November 21, 1870.—HEATING-STOVE.—Lyman Ayrault Morse, Battle Creek, Mich.

Claim.—1. In combination with the perforated top plate A and base plate B, the outer cylinder C and inner cylinder G, forming the chamber H, all substantially as set forth.

2. The combination of the perforated top A, hollow base B, cylinders C G, chamber H, lining I, draught-flue E, flue J, pipe K, bonnet L, and damper, all substantially as set forth.

109,750.—MACHINE FOR VARNISHING PENCILS.—Teile H. Müller and Henry C. Benson, New York, N. Y., assignors to Joseph Reekendorfer, same place.

Claim.—1. The pencil-compressing die or dies, placed in the varnish-vessel and below the level of the varnish, through which the pencil passes, substantially as and for the purposes set forth.

2. In a varnishing apparatus, substantially as described, the combination, with the stuffing-box at either or both ends of the varnish-vessel, of a gland or cover, held to the box and upon the packing contained therein by means of screws or equivalent holding devices, and springs interposed between said holding devices and the gland, for the purpose of compressing the packing as it wears, and thus maintaining an even pressure upon the pencil, substantially as shown and set forth.

109,751. — STATION-INDICATOR. — Louis Neike, Chicago, Ill.

Claim. — The name-plates D, secured to endless chains passing around rollers *c*, the journals of said plates having blocks *e* attached, and arranged to operate in connection with the guide *f*, all substantially as described.

109,752. — MANUFACTURE OF IRON AND STEEL.—Charles Motier Nes, York, Pa.

Claim.—1. The manufacture of wrought or cast-steel in a cupola, refinery, puddling, or other suitable furnace, by the use of the ore herein specified, in combination with pig or cast-iron, substantially as described.

2. The ore herein specified, for purifying cast-iron and restoring the qualities deficient in burnt-out iron, fitting them to be used as steel pig for the manufacture of steel therefrom, substantially in the manner set forth.

109,753.—NEEDLES AND THEIR CARRYING-ARMS FOR SEWING-MACHINES.—Charles Henry Palmer, New York, N. Y., assignor to A. F. Sawyer, William H. Sharp, Jacob Regensburger, Charles D. Carter, and Mary P. Carpenter.

Claim.—The arm E, having grooves F F, combined as described with the divided needle and the clamping device, for the purpose specified.

109,754. — WHEEL-HARROW. — Edwin R. Powell, Jeffersonville, Vt.

Claim. —1. The combination, with the sulky-frame A B C D and harrow proper G, of the truck E F, hinge-joints J *j* K, and chains H I M, constructed and arranged substantially as described and represented, for the purpose set forth.

2. The tooth *g*, composed of the cast point 1 4 6, steel mold-board 2, and bolt 3 5, constructed and arranged as represented and described, for the purpose set forth.

3. The axle-tree A, wheels B B, tongue C *c*, seat D, pulley-bracket P N O, and hand-lever L *l*, the whole constituting an improved sulky-frame, as constructed, combined, and arranged in the manner shown and described, for the purposes set forth.

109,755. — HARVESTER.—Solomon Rawson and Isaac Rawson, Almond, N. Y.

Claim.—The frames C and D, connected by means of the bows A A, angle-irons *c c*, and axle B, all these parts being arranged as shown and described, whereby a leverage is exerted on the frame D, as set forth.

109,756.—MACHINE FOR HEELING BOOTS.—Timothy K. Reed, East Bridgewater and Arza B. Keith, North Bridgewater, Mass.

Claim. — The combination, with calipering or grasping-jaws, of a heel-holding or presenting device, for accurately locating the heel to be nailed, substantially as described.

109,757.—MANUFACTURE OF PAINT.—Thomas C. Rice, Worcester, Mass.

Claim.—An improved paint, composed of coal-tar and Venetian red combined together, substantially as above described.

109,758. — WINDOW-SHADE. — William S. Rice, Biddeford, Me.

Claim. — The combination and arrangement of the joints *d*, rods *a*, joints *c*, cross-bar *m*, part *b*, cord *o* passing through the wall of the building, the pulley *i*, loop or loops *f*, and button or buttons *h*, all as described, to operate as set forth.

109,759.—CHURN.—Stacy Risler, Locktown, N. J.

Claim.—The arrangement of the standard B, boxes C C, hinged lids D D, provided with metallic plates *e e* and strips *h h*, diamond-shaped blades H H, attached to bottom of churn, and dasher-arm *b*, provided with similar-shaped blades B and handles for operating it, all as shown and described.

109,760.—APPARATUS FOR DRESSING MILLSTONES.—Henry Robinson, Lewisham, and John Smith, Carshalton, England.

Claim.—The flanged cone carrying the curved slide *h*, having the arc of a circle, of which it consists, struck from a point at a greater distance from its periphery than is the center of the millstone, in conjunction with the curved sliding bracket or saddle *u* carrying the radial arm *s*, by which means the cranks are made coarser or wider apart near the skirt of the stone than near the center thereof, as herein specified.

109,761. — WAGON-BRAKE.—James Robinson, Sedalia, Mo., assignor to George Scheer.

Claim.—1. The arrangement of the brake-shoe supporting-bars or levers herein shown, for moving under the box when released from the wheels and out again when applied to the wheels, substantially in the manner specified.

2. The combination, with the brake-lever for forcing the brakes upon the wheels and the brakes arranged to slide under and out from under the box, of the cranked slotted lever I, rod N, and forked lever O, all substantially as specified.

109,762.—INSECT-POWDER EJECTOR.—Solomon Rose and Nathan Goldsmith, Cincinnati, Ohio.

Claim.—The improvement in insect-powder ejectors, herein described, consisting of a detachable bottom, B, for the case A, and the arrangement of the elastic diaphragm E so as to be retained in place by a clamping-ring, F, whereby the parts constituting the device can be easily separated for repairs.

109,763. — MILK-STRAINER. — Patrick S. Ryan, Rutland, Vt.

Claim.—The milk-strainer herein described, provided with a rim, *a*, projecting inward, all around from its upward edge, at an angle, as shown, and the strainer-gauzes *b b*, at an inclination, with a sediment cavity, *c*, below them, substantially as and for the purpose set forth.

109,764. — EXCAVATOR.—Clinton H. Sage and Samuel B. Alger, Norwich, N. Y.

Claim.—In an excavating-machine having a boom arranged to swing vertically and horizontally, as described, a dipper, the arm of which is pivoted to the boom and operated by a rope or chain which passes over the outer end of the boom and the post the said dipper being pivoted at a point intermediate between the ends of boom, the whole constructed and operating as set forth.

109,765.—STEAM-GENERATOR.—Walter G. Savage, Knoxville, Iowa.

Claim.—One or more primary boilers, A, constructed as described, and connected to one or more secondary boilers, B, by a series of water-tubes, D D, the latter being surmounted by a dome, J, the primary boilers and pipes being incased, and all arranged and used as and for the purposes set forth.

109,766.—MANUFACTURE OF PAPER-PULP.—Charles B. Sawyer, Fitchburg, Mass., assignor, by mesne assignments, to William Pratt and Abby A. Williams.

Claim.—1. The vine of the potato, for the manufacture of pulp for paper and other like articles, as paste-board and papier-maché.

2. The tuber itself, in combination with the potato-vine, for the making of paper-pulp.

3. Either or both the above-named materials in combination with ordinary paper-stock, or with pulp made of other vegetable materials for the purpose of cheapening and improving the same.

109,767.—PAPER-TRIMMING MACHINE.—Josephus Fletcher Schuyler, Tiffin, Ohio.

Claim.—1. The arrangement of the feeding-rollers D D', springs *b b*, thumb-screws *d d*, lever *f*, and plate *e*, all substantially as shown and described, and for the purposes herein set forth.

2. In combination with the frame A, with its adjustable knife-rollers H H', the laterally-moving table B, operated by the lever C and carrying the trough E with its adjustable slide G, and the adjustable-yielding feed-rollers D D', all constructed and arranged substantially as set forth.

109,768.—ROAD-SCRAPER.—David L. Shepard, Foxborough, Mass.

Claim.—1. The scraper H, when attached to the beam I and brace J, and adjusted by means of the chain *c*, rod *b*, and pin A, in combination substantially as set forth.

2. The brake-rod M, the connecting levers *k l m n o*, and the spring N, in combination with the scraper H, substantially as and for the purpose set forth.

109,769.—FILLINGS FOR WOOD.—Theron R. Sherry, Newark, N. J.

Claim.—1. The improved filler for wood, composed of linseed-oil, India rubber, red lead, and raw umber, compounded in the manner and about in the proportion herein set forth.

2. The improved filler for wood, composed of India rubber, sugar of lead, whiting, and linseed-oil, compounded in the manner and about in the proportion herein set forth.

3. The improved filler for wood, composed of red lead, linseed-oil, India rubber, and whiting, compounded in the manner and about in the proportions herein set forth.

4. The improved filler of wood, composed of linseed-oil, India rubber, raw umber, red lead, sugar of lead, and whiting, compounded in the manner and about in the proportions herein specified.

109,770.—SCHOOL-DESK AND SEAT.—William A. Slaymaker, Atlanta, Ga.

Claim.—1. The fastening B, described, consisting of wedge-shaped projections having inclined sides and face, *b*, in combination with a socket correspondingly formed.

2. The projection c^3 and socket *y*, in combination with each other and with the projecting curve or incline c^2, upon the face of the side frame, when the socket is correspondingly carved or inclined, as described.

3. The seat-arm D, constructed as described, when movably hinged in the slotted bearings of the side frame, as set forth.

4. The combination of the projections c^2 c^3, sockets *y*, and wedge-key, when constructed and arranged as described.

5. The desk described, consisting of the floor-sockets, side frames, movable-hinged seat, back, top with hinged lid, board, and shelves, when combined as described, for the purpose set forth.

109,771.—DOOR-HOLDER OR CHECK.—Otto Sliker, Lincoln, Ill.

Claim.—The combination of the knob A, springs C C, and socket D, when the latter passes within the recess in which are the ends of the spring, when constructed and arranged substantially as and for the purposes herein set forth.

109,772.—PURIFYING AND REFINING OILS.—William M. Sloane, New York, N. Y.

Claim.—1. The method of purifying oils by agitating with any deodorizing agent, in a close vessel, under the action and pressure of steam, substantially as set forth.

2. The combination of the closed filter with the agitating vessel and steam-boiler, for the purposes set forth.

3. The combination of the condenser D with the agitating vessel B and steam-generator, as and for the purposes set forth.

4. An oil-refining apparatus, consisting of the agitating vessel B, condenser D, filter E, steam-boiler A, and pipes *f h h l*, combined and arranged substantially as and for the purposes set forth.

1. The method of refining and purifying oils by means of agitating, vaporizing, and filtering under the heat and pressure of steam, as set forth.

109,773. — PERFUMERY. — Gibeon Smith, Groton Junction, assignor to himself and Charles W. Bannon, Athol, Mass.

Claim.—A perfumery made of the ingredients in the manner substantially as herein set forth.

109,774.—WASH-BOILER.—Henry L. Sprague and Jacob N. Guyon, Tottenville, N. Y.

Claim.—1. The water and steam-tank B, provided with perforated tubes *a*, in combination with a clothes wash-boiler constructed upon or with the tank, substantially as and for the purpose set forth.

2. In combination with the above, the inside rim C, constructed in the manner and for the purpose as shown and set forth.

109,775. — UMBRELLA. — Mary Stephens, Philadelphia, Pa., assignor to Wright Brothers & Co., same place.

Claim.—A lined cover for umbrellas, &c., made by connecting the outer edge of the face and lining sections, folding such sections so as to conceal the seam, and then connecting the sections together at their straight edges, substantially as described.

109,776.—DUMPING APPARATUS.—Lyman B. Stilson and James G. Payson, Minneapolis, Minn.

Claim.—1. The combination of the carrying and dumping apparatus herein described with the bed or platform of a flat, substantially as and for the purpose specified.

2. In a dumping-box for railway cars, the circular ratchet-bars D, when constructed to operate substantially as and for the purpose mentioned.

3. The combination of the bars or tracks *v* and *g* with the rollers *e* and *y*, substantially as and for the purposes specified.

109,777. — BRICK-MACHINE. — Samuel H. Taylor, Jacksonville, Ill., assignor to himself and Le Grand Parker.

Claim.—1. The combination with the follower and the shaft L of the weighted lever A, cranked shaft H, cam K, and connections E F, all substantially as specified.

2. The mold-carriage mounted on the beam P, having the shoes Q arranged in the adjustable supports R, all substantially as specified.

3. The combination with the mold-carriage of the lever U and stop V, substantially as specified.

109,778. — BRICK-MOLD. — Samuel H. Taylor, Jacksonville, Ill., assignor to himself and Le Grand Parker, same place.

Claim.—A brick-mold, having hinged ends A A combined, as described, with handles, consisting of pawls E, tappets G, and plates H I, for the purpose of clamping the bricks and discharging them, at the time and in the manner described.

109,779.—VENTILATOR, ALARM, AND BILGE-PUMP FOR VESSELS.—William F. J. Thiers, New York, N. Y.

Claim.—1. The chambers A or C, connecting-pipe or pipes B or D, induction-port or ports E, and eduction-port or ports G, arranged to operate in combination, substantially as and for the purposes set forth.

2. The diagonal arrangement of the connected chambers or cylinders of the respective systems, to adapt them to be operated by either the pitching or rolling motion of the vessel, as set forth.

109,780. — PORTABLE FURNACE. — Charles Van De Mark, Phelps, N. Y.

Claim.—1. The construction of a portable heater with an inclosing holder, A, and interior fire-pot B, having an annular or equivalent space, *c*, between them, and an exit-flue, *k*, near the top thereof, so that, while the draught-air may be admitted from above the stove, it is introduced into the fire-pot at or near the bottom thereof, and the heat of combustion is directed upward through the same against the boiler or other heating utensil, substantially as and for the purpose herein specified.

2. The combination of the grate *d* with the holder A and fire-pot B, when provided with a handle, *e*, for shaking it, and arranged to operate substantially as herein set forth.

3. The valve-openings *g g g* in the bottom of the holder A, in combination with the inclosed fire-pot B, substantially as set forth.

4. The plate *w* in the fire-pot, arranged in combination with the exit-flue *k*, substantially as and for the purpose herein set forth.

5. The construction and arrangement of the flues *b* and *c*, valve *q*, apertures *l n*, and valve-plate C with its apertures *r s*, in combination with the boiler or heating-vessel D, substantially as and for the purpose herein specified.

109,781.—DIE FOR FORGING FIFTH-WHEEL HEADS.—Frederick Van Patten, Auburn, N. Y., assignor to himself, E. D. Clapp, and M. S. Fitch, same place.

Claim.—The two sets of dies, 1 2 3 4, formed in the die-plates A B, for finishing the heads of fifth-wheels ready for welding, substantially as herein shown and described.

109,782. — STUMP-JOINT FOR CARRIAGE-TOP BRACES.—Frederick Van Patten and Emerons D. Clapp, Auburn, N. Y., assignors to themselves and M. S. Fitch, same place.

Claim.—Improved stump-joints for carriage-top braces, constructed and formed or forged with dies, substantially as herein shown and described, as a new article of manufacture.

109,783.—STEAM-ENGINE.—Francis Wedge, Zanesville, Ohio, assignor to himself and Thomas Griffith, same place.

Claim.—1. The combination of the cold-water pump, the feed-water reservoir, the saddle which supports the boiler and covers the reservoir, and the cold-water pipe passing through the saddle into the reservoir, all these parts being constructed and operating substantially as hereinbefore set forth.

2. The combination of the boiler, the feed-water reservoir, and the saddles which form the cover of the reservoir and the support of the boiler, all these parts being constructed substantially as hereinbefore set forth.

3. The combination of the boiler, the feed-water reservoir, the working cylinder at one end of the reservoir and the feed-pump at the other, all these parts being constructed to operate substantially as hereinbefore set forth.

4. The combination of the feed-pump with the removable plate which forms the end of the feed-water heater, as set forth.

5. The feed-water reservoir, constructed as described, and supporting the forward end of the boiler.

6. The combination, with the feed-water reservoir, constructed as described, with a removable end plate, *e*, of the inclined transversely-divided feed-water pans constructed independently of the reservoir, as set forth, so that they, as well as the reservoir, may be accessible for repairs.

7. The combination of the cold-water pump, the reservoir, the feed-water pans, and the feed-pump, all these parts being constructed and operating in combination, substantially as hereinbefore set forth.

8. The combined throttle and regulating check-valve in the steam-dome, constructed and operating as set forth.

9. The combination of the horizontal boiler, the

main shaft mounted on top of the boiler, the working cylinder and its valve having its face radial to said shaft, both cylinder and valve being mounted on the feed-water reservoir, below the boiler, as set forth.

10. The combination, construction, and arrangement of the feed-water reservoir, the saddle in which the main shaft is mounted, the bar connecting the saddle and reservoir, the working cylinder, the guides of the cross-head, and the yoke supporting said guides, substantially as hereinbefore set forth.

11. The combination of the working cylinder, the tubular guides between which the cross-head works, the yoke which connects the guides with the engine-frame, and the screw-rods connecting the yoke, the guides, and the cylinder-head, as set forth.

12. The combination and arrangement of the working cylinder, the feed-water reservoir, the exhaust-pipe, and the feed-water steam-pipe leading from the exhaust-pipe to the reservoir, these parts being constructed to operate in combination, substantially as set forth.

13. The combination of the feed-water reservoir, the exhaust-pipe, and the automatically-closing overflow-valve, substantially as set forth.

14. The combination of the slotted strap, the flanged brasses, the flanged backing piece, the flanged gib and its bracket, and the tightening-wedge, its screwed spindle and jam-nuts, all these parts being constructed to operate in combination, as set forth.

15. The combination of the throttle-valve, the steam-chest, the steam-pipes, the ball-joints, and the through-bolts inclosed in the pipes, all these parts being constructed as described for joint operation.

109,784. — WATER-WHEEL. — George W. Werntz, Auburn, Ind., assignor to himself and Henry A. Shull, same place.

Claim.—1. The concentric series of buckets D^1 D^2, the lower ends of which are of greater width than are the upper ends, substantially as and for the purpose set forth.

2. The combination of the gates E E and F^1 F^2, when so arranged with reference to each other that either set may be used separately, or that they may be used in conjunction, substantially as and for the purpose set forth.

109,785.—HEATING METALLURGIC AND OTHER FURNACES.—James D. Whelpley and Jacob J. Storer, Boston, Mass.

Claim.—1. The process herein described for producing heat, by burning together pulverized fuel and carbonaceous and other gases in aid of combustion, substantially as set forth and described.

2. The combination of a gas-generator and of a machine for supplying pulverized fuel, with a puddling, heating, or other furnace, as set forth.

3. The combination of pulverized fuel, gaseous fuel, and hot-blast, so as to produce a flame of high temperature, and regulated as to character, as set forth.

4. The combination of a gas-generator, a machine for feeding pulverized fuel, and a hot-blast oven with a puddling or other furnace, substantially as described.

5. The process herein described, for producing heat of great intensity by burning pulverized fuel under pressure, as set forth.

109,786.—CASTING STENCH-TRAP.—James E. White, New York, N. Y., assignor to Louis A. Cauvet, same place.

Claim.—1. The groove *f*, formed on the line of union of the two sections or halves of the trap, by the projections along their edges, substantially as herein described, and for the purpose set forth.

2. The method of forming an opening with a screw-thread on its interior surface, in the lower curve of a cast-metal stench-trap, by the employment of a threaded core, adapted to be turned out, substantially as herein described.

109,787.—ELEVATOR.—Frank Wicks, Decatur, Ill.

Claim.—1. In a hay-elevating machine, the rope J J, in combination with the traveling pulleys K K, pulley I, and rope H, constructed, arranged, and operating in the manner and for the purpose herein described.

2. The within-described arrangement and combination of the rope J J, posts E, D, and R, and traveling pulleys K K, for the uses and purposes herein set forth.

3. In a hay-elevator, the within-described means and arrangement of ropes, traveling pulleys, and fixed pulleys, for changing the direction of the hay or weight to be raised and lowered, in the manner and for the purpose herein described.

100,788.—BAG-HOLDER.—Daniel S. Wing, Rome, N. Y.

Claim.—The combination, in a bag-holder, of the slotted standard A, lever-holder B, ratchet-bar D, latch E, and catch-pin F, when said parts are constructed and arranged for operation substantially as described, and for the purposes set forth.

109,789. — ANIMAL-TRAP. — Romanso E. Wood, Santa Cruz, Cal.

Claim.—The doors D and E, spring G, rod C, and bed-piece or frame A, and tube F, when combined, arranged, constructed, and operated substantially as described, and for the purpose set forth.

109,790.—MECHANICAL MOVEMENT.—Jacob Woolf, Burr Oak, Mich.

Claim.—An annular weight, H, controlled by holding device W of suitable construction, through the medium of one or more levers, I, and two or more cranks, G, substantially as set forth.

109,791. — DEVICE FOR MANUFACTURING METALLIC CARTRIDGE-SHELLS.—Edward A. Worthen, Springfield, Mass.

Claim.—The punch E and die D, constructed substantially as described, and operating in connection with each other in the manner, and for the purposes specified.

109,792. — HAND-STAMP.—Augustus Zantzinger, Louisville, Ky.

Claim.—In the combination of the bar *c*, ball *d*, socket *h*, and handle *f*, the elastic washers *i*, as and for the purpose specified.

REISSUES.

4,185. — ATTACHING SLEIGH-BELLS TO STRAPS.—William E. Barton, East Hampton, Conn.—Patent No. 46,623, dated March 7, 1865.

Claim.—1. A seat, *h*, of hard material, interposed between a sleigh-bell and its strap, substantially as and for the purposes set forth.

2. The metallic seat, having a recess conforming to the boss of the bell, a hole for the coupling-screw to pass, and holding-surfaces on the leather side to keep the seat in place, substantially as described.

3. In combination, the bell with the short boss and screw-hole, the metallic seat, strap, and coupling-screw, substantially as described.

4. In combination, the coupling-screw, flaring-washer, strap, metallic seat, and bell, substantially as described.

4,186.—Division B.—STEAM-GENERATOR.—American Gerner Boiler Company, New York, N. Y., assignees of Henry Gerner.—Patent No. 73,595, dated January 21, 1868.

Claim.—A return longitudinal fire-flue, F, within a direct longitudinal fire-flue H, each fire-flue being within a water-chamber, *a* and *c*, and all within the boiler, substantially as described.

4,187.—AUGER-HANDLE.—James M. Horton, Chicago, Ill., assignor to "The Miller's Falls Manufacturing Company," Miller's Falls, Mass.—Patent No. 35,856, dated July 8, 1862, reissue No. 2,229, dated April 17, 1866.

Claim.—1. The combination of the barrel A provided with a socket C, jaws B and D, and nut N, working on a screw for holding a boring-tool, substantially in the manner described and specified.

2. The socket C of the barrel A, having cavities *b b*, in combination with the jaws B D having curved ends to fit therein, to allow the necessary lateral movement in the socket without falling out, substantially as described and specified.

4,188.—VESSEL FOR BOILING.—Werner Krœger, Milwaukee, Wis., assignor to William Frankfurth, same place.—Patent No. 47,025, dated March 28, 1865.

Claim.—The band B, applied to tin vessels in the manner substantially as described.

4,189.—STONE-CHANNELING MACHINE.—Ebenezer G. Lamson, Windsor, Vt.—Patent No. 89,265, dated April 20, 1869.

Claim.—1. The segment *y*, pivoted concentrically with the frame that supports the cutters and engine, arranged to be operated by the engine and to impart motion to the feed mechanism, whereby the cutters may be adjusted at various angles without disconnecting or interfering with the operation of the feed mechanism, substantially as described.

2. The arrangement of the chain H and a weight, J', in the manner shown, for counterbalancing the weight of the machine when working up or down an incline, as set forth.

3. A stone-channeling machine, having its boiler supported on trunnions arranged lengthwise of the truck, so that the boiler will maintain its vertical position while the machine is working along the face of an incline, as herein described.

4. The adjustable supports B', in combination with the boiler and the main frame, whereby the boiler can be held suspended or permitted to rest stationary on the truck, substantially as described.

5. A stone-channeling machine, provided with two or more sets of cutters and engines for operating the same independently, in combination with the herein-described feed mechanism, whereby either engine may be made to feed the machine in either direction, substantially as set forth.

6. The arrangement of the shaft *a* with its screw *a*, and the axle E with its worm-wheel *y'* and the rack-bar B, whereby the worm-wheel *y'* is made to feed the machine along by engaging with the rack-bar, substantially as set forth.

7. The yielding pitman or device, consisting of the hinged arms E' and a spring arranged to hold said arms asunder, and having links or their equivalents for attaching them to the clamp or cutters, substantially as described.

4,190.—SCHOOL-DESK.—Charles H. Loomis, New Philadelphia, Ohio.—Patent No. 104,472, dated June 21, 1870.

Claim.—1. The top G of a school-desk, provided with the recess K and clamp L to receive and hold an ink-stand, as described.

2. The combination, with a desk-top, G, of the lipped plate H I, supported on a vertically-adjustable bar, C, as described.

3. The vertically-adjustable bar C, combined as described, with laterally-adjustable bar E and tubular stand B, for the purpose described.

4,191.—SKATE-FASTENING.—Harshaw Scott, New York, N. Y., assignee of Henry Pickford.—Patent No. 16,653, dated February, 17, 1857.

Claim.—1. A skate in which the connection to the sole is made by means of a flange-headed projection and slot or recess at one end, and a projecting plate and recess or their equivalent at the other, substantially as described.

2. In fastening the skate to the sole, the combination of the flange-headed projection with a slot or recess, both constructed and operating substantially as described.

DESIGNS.

4,493.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—1. The design for the tablet A, with its foliated ornaments.

2. The design for the tablet B, with its central ornaments *k*.

3. The design for the ornamented borders *e* and *f* of the tablets A and B.

4. The stripe or bar *h*, forming the outline of both of the tablets A and B, and connecting the same together, as shown and described.

5. The design for the foliated ornaments *m* in the angles between the tablet B and its border *f*.

6. The design for the spots *p*, arranged within the border *f*, as described and represented.

7. The design for the whole pattern, including the tablets A and B, their borders *e* and *f*, the bar *h*, spots *p*, and the ornamentation described.

4,494.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—1. The design for the ornamented central medallion A, as shown and described.

2. The design for the tablets B bounded by the ornamented stripes D.

3. The design for the ornamented tablets C bounded by the stripes D, as described and represented.

4. The design for the ornamented stripes D, arranged at right angles to each other, as shown and described.

5. The design for the entire pattern, including the medallion A, tablets B and C, and ornamented stripes D.

4,495.—SADDLE-TREE.—John T. Million, Fayette, Mo.

Claim.—A saddle of the design and form shown and described.

4,496.—CLOCK-FRONT.—Nicholas Müller, New York, N. Y.

Claim.—The whole design for a clock-front, as herein shown and described.

4,497.—SAW.—Edward Rhodes, Philadelphia, Pa., assignor to Henry Disston & Son, same place.

Claim.—The design for the cutting-edge of a saw, as illustrated in and by the accompanying drawing.

4,498.—WATER-COOLER STAND.—Charles C. Savery, Philadelphia, Pa.

Claim.—The design for a water-cooler stand, having an enameled top, A, and drip-cup holder C, as represented and described.

4,499.—MEDAL.—Theodore R. Timby, Tarrytown, N. Y.

Claim.—The design for medals, substantially as above set forth.

4,500.—DRESS-TRIMMING.—Robert Werner, Hoboken, N. J.

Claim.—The central ruffles V, border ruffles *b b*, and trimmings *a*, combined, to form a design for ruffled trimmings.

TRADE-MARKS.

78.—LEATHER-DRESSING.—C. L. Hautha-way & Sons, Boston, Mass.

79.—WHISKY.—Hoffheimer Brothers, Cincinnati, Ohio.

80.—CIGAR.—William S. Roose, Washington, D. C.

81.—CIGAR.—William S. Roose, Washington, D. C.

82.—DEVILED ENTREMET.—William Underwood & Co., Boston, Mass.

ISSUE OF DECEMBER 6.

PATENTS.

109,793.—KNITTING-MACHINE AND NEEDLE.—Austin W. Allen, Indianapolis, Ind.

Claim.—1. The combination, with the reciprocating sliding frame and pivoted yarn-carrier, of the slotted adjustable springs *s s*, to hold the yarn-carrier back when the motion of the sliding frame is reversed, substantially as specified.

2. In combination with the thimble F, having an angular slot, *w w*, and projection *v*, the thumb-nut G, having the groove *x* and stop *t*, and arranged to close tightly on the edge of the thimble, substantially as specified.

3. Knitting-machine needles, having the heels of the shanks square or diamond-shaped, to correspond with the inclination of the cam-slots, as specified.

109,794.—CLOTH-WINDING MECHANISM FOR LOOMS.—William A. Arnold, Rockport, Mass.

Claim.—The combination and arrangement of the hooked guides or guide-weights E E, as described, with the sand-roller B, the cloth-roller C, and frame of a loom, all being substantially as explained.

109,795.—LUBRICATOR.—Charles Dudley Austin, Newcastle-on-Tyne, England.

Claim.—1. The improved lubricator hereinbefore described, and illustrated in fig. 1 of the accompanying drawing, that is to say, a lubricator in which a tube closed at its upper end is mounted on the discharge-tube, the outer tube being of such size as to leave a small space between it and the said discharge-tube, so that the oil shall ascend between the said outer tube and the said discharge-tube, and descend through the latter to the surface to the lubricator.

2. The several modifications of the said lubricator hereinbefore described, and illustrated in figs. 2, 3, 4, and 14 of the accompanying drawing, by means of which modifications the outer tube of each lubricator is so adjusted relatively to the inner tube as to regulate the flow of oil.

3. The combination and arrangement of parts constituting the improved lubricator for steam-cylinders, hereinbefore described, and illustrated in fig. 15 of the accompanying drawing, that is to say, a lubricator in which the arrangement of tubes described acts in combination with a flat valve worked by means of a screwed spindle, as and for the purpose described.

109,796.—VALVE-COCK.—Robert Berryman, Boston, Mass.

Claim.—The arrangement and combination of the two connected valves, K L, with the spindle, the seat-tube, and the case B, provided with the induction and eduction-passages D E, the whole being constructed, and the valve and seat-tube being furnished with ports or passages *a*, as hereinbefore explained.

109,797.—CAR-COUPLING.—Henry Blanchard, Jr., Boston, Mass.

Claim.—The forked lever D, the spring E, and the catch C, arranged, constructed, and combined with the draw-bar A or B, and for use with the double-hooked shackle-bar G, in manner substantially as explained.

109,798.—BELT-FASTENER.—Samuel S. Bolton, Big Rapids, Mich.

Claim.—The belt-stay B, when constructed as herein described, for the purpose set forth.

109,799.—BEDSTEAD-JOINT.—Lewis G. Bradford, Plymouth, Mass., assignor to himself and Nathaniel H. Morton, same place.

Claim.—The joint A B, when the same is made by inserting a plate, C, made as described, in the rail, and connecting the same with the mortise *h k* and pin D in the post A, substantially as described, and for the purpose set forth.

109,800.—CURTAIN-FIXTURE.—John G. Brothwell, Wolcottville, Conn., assignor to Turner, Seymour & Judds, same place.

Claim.—The lever *l* and projecting block *o*, arranged to move between the bracket *k* and the wheel *i* in the manner specified, so that the contact of the wheel *i* with the side of the lever *l* shall tend to move the pawl-block *o* into contact with the ratchet-teeth of the wheel *i*, as and for the purposes set forth.

109,801.—SASH-LOCK.—Erastus L. Brown, Norwich, N. Y.

Claim.—The circular case D, provided with the diaphragm *c*, the slot *f*, the opening *b*, and the yoke *h*, all cast in one piece, and combined with the bolt *j*, substantially as described and shown, and for the purposes set forth.

109,802.—APPARATUS FOR EVAPORATING BRINE AND OTHER LIQUIDS.—James Buchanan, Detroit, Mich.

Claim.—1. The steam-generator A, constructed in the form of a pan, as shown, of two shells, *a b*, and stayed as described, so that the same will be a steam-generator and an evaporating-pan, as and for the purposes herein set forth.

2. In combination with said steam-generator, the steam-pipes B, connecting the sides of the generator with the steam-drums C and the connecting steam-pipes D, by means of which free communication is had between said steam-drums, as and for the purposes set forth.

3. In combination with said steam-drums and the pan, when constructed as described, the coil of pipe E, as and for the purposes set forth.

109,803.—BRICK-MACHINE.—Cyrus Chambers, Jr., Philadelphia, Pa.

Claim.—1. The knife K, clamped at such an angle with cut-off arm A that the edge of the knife shall come in contact with the clay-bar in a line coinciding with the plane of the upper surface of the bar, as described.

2. The knife-clamp L, constructed and adjusted as set forth, and operating to hold the knife in the manner specified.

3. The arrangement and combination of the cam C, its recess R, and curved edge E, with the spring-arm R', roller *r'*, and projecting jaws *j j*, in the manner and for the purpose stated.

4. The combination of the roller *r'*, jaws *j j*, and cam C, for the purpose of keeping the roller in its proper relation to the cam in all positions of the latter, as set forth.

109,804.—COTTON-BALE TIE.—William Chambers, New Orleans, La.

Claim.—The tie A, when provided with slots formed as shown at B and C, and a slit D entering the slot C in such a manner as to produce the point E, as herein described, for the purpose set forth.

109,805.—TINSMITHS' FURNACE.—Michael Conner, Plymouth, Mich.

Claim.—The construction of a tinsmith's furnace, vapor burning, wherein the cylinder A, dome B, reservoir C, pipe D, stop-cock E, burner F, muffle G, and supporting plate H, are arranged and operating in the manner and for the purpose set forth.

109,806.—CIRCULAR-SAW JOINTER.—Elijah H. Corbin, Winchester, Ind.

Claim.—In combination with the adjustable loop-block C, the springs E E, adjusted by means of the thumb-screws *b b*, substantially as and for the purpose herein set forth.

109,807.—STEAM-GENERATOR.—Leffert Ryerson Cornell, Flatbush, N. Y.

Claim.—The arrangement hereinbefore described, in combination with each other, of the boilers B B, arched pipes D D, steam-drum E, and furnace F, the arched portion of the pipe D being inclosed within the furnace, substantially as hereinbefore set forth.

109,808. — RAILWAY RECLINING-CHAIR.—John P. Curry, New York, N. Y.

Claim.—1. The combination of the slides D with the slots cut in them at E, and the lever F with the button or set-screw in it at G, and the levers H and I or their equivalents, the foot-rest K, and the pendulums L, substantially as and for the purpose hereinbefore set forth.

2. The combination of the revolving base, the center pin P, the India-rubber pad or cushion R, the metallic cup S, the arms T, and the rubber casters V, substantially as and for the purpose hereinbefore set forth.

109,809, antedated November 26, 1870.—NUT-LOCK.—Milo A. Cushing and Otis R. Glover, Ottawa, Ill.

Claim.—The spring dog X Y, formed of a single piece of steel, and constructed, applied, and operating substantially as described.

109,810.—WASHING-MACHINE.—Henry Dickinson, Marlborough, Conn.

Claim.—The oblong box *b* with the blocks *c*, cap *l*, and thumb-screw *m*, with its gearing, shafts, and crank, to give motion, in combination with the frame *a*, chain and staples *h* and *g*, the whole constructed and arranged substantially as and for the purpose set forth.

109,811. — REFRIGERATOR.—Hermann F. Eberts, Detroit, Mich., assignor to himself, Daniel Y. Howell, Toledo, Ohio, and Thomas S. Sprague, Detroit, Mich.

Claim.—The annular ice-receptacle D, constructed substantially as described and shown, in combination with the box A, arranged to operate as set forth.

109,812. — CULTIVATOR.—Abraham Eshleman, Martinsville, Pa.

Claim.—The arrangement of two sets of shovels S, adjustable oblique beams B, and cross-beams A A, when constructed and operating as herein described, and for the purposes set forth.

109,813.—BARREL SAFETY-VALVE OR VENT.—Benjamin Franklin Evans, Newburyport, Mass.

Claim.—The barrel safety-vent, as composed of the screw body A, chambered and nicked as set forth, the notched screw D, the spring C, and the headed and slotted plug B, all constructed, arranged, and to operate together, as explained.

109,814.—HAND-STAMP.—Daniel W. Fish, Brooklyn, N. Y.

Claim.—1. The detachable stamping apparatus, when provided with a reversible self-inking die-plate, in combination with the bed or platform B, substantially in the manner shown, and for the purposes described.

2. In combination with the reservoir A and distributing-pad *g*, the ink gauge *h*, constructed and arranged to operate substantially in the manner and for the purposes set forth.

109,815. — PERPETUAL BRICK-BURNING KILN.—William Gilbert, Detroit, Mich.

Claim.—1. In progressive burning-kilns, the gutters J, filled with sand, in combination with the downward-projecting flanges I of the platform L of the truck P, and with the perforated water-pipe M, when arranged and operating substantially as and for the purposes herein set forth.

2. The platform L, provided with upturned flanges K, containing sand, ashes, or other non-conductors of heat, and with the down-turned flanges I, constructed and arranged substantially as described and shown, and for the purposes set forth.

3. In brick-kilns, constructed as herein set forth, the perforated water-pipe M, for the purposes designated.

4. A progressive burning and cooling-kiln, composed of a series of furnaces, A, cooling chamber H, railway-track G, water-tank N, gutters J, perforated pipes M, and flues C D *s*, and provided with suitable gates, all arranged relatively to each other, and operating substantially as and for the purposes herein described.

109,816, antedated November 25, 1870.—SEWING-MACHINE FOR MAKING PUFFING.—Edward D. Gird, Syracuse, N. Y.

Claim.—1. The guide-roller E^2, the rod M, the spring rod L, and guide-rollers 8^2, when arranged as described, and used in connection with each other, for the purpose set forth.

2. The shifting device, consisting of the crank L^1, reciprocating brake T^4, link G^7, and pivoted shipper D^7, when operating together for the purpose specified.

3. The double-hammer B^1, composed of the T-shaped piece a^1 s^1, and lipped cap *b*, for turning a hem on each edge of the narrow strip, as set forth.

4. The adjustable spool-rocks C^4 E^4, in combination with the rod T^9, for governing the tension of the needle-threads, as set forth.

5. The combination, with sewing mechanism, of the hemmer, constructed to turn both edges of a narrow strip, and secured to the presser, a feeding mechanism and a tacking mechanism, substantially as described.

109,817.—WAGON-TONGUE SUPPORT.—Albert F. Gue, Eastmanville, Mich.

Claim.—The combination, in a wagon-tongue supporter, of the jack A, the eye-bolts *b'* secured by the nuts *b*, the rod *d*, the eye-bolts *a* secured to the axle B, and the spring E, secured to the tongue C by means of the bolt *b* having a suitable nut, all constructed and arranged substantially as shown and described.

109,818. — SHUTTER-FASTENER.—Theodore Hair and James Wood, Norristown, Pa.

Claim.—The key F, with its square shoulder, its round portions, and feathers, when combined with a square opening in the shutter-bolt and a round one in the staple, in the manner and for the purpose substantially as shown and described.

109,819. — SNOW-PLOW. — Cornelius F. Hornbeck and William J. Carns, Slaterville, N. Y.

Claim.—1. The plow-car A, with a single or double track on the top of it, the platform-car E, and unloading hood or plow H, operating together, substantially as described.

2. The just-named plow, when further combined with the anterior road-attachment E', substantially as set forth.

3. The arrangement of the rack L on the platform-car, and the pinion B' on the shaft of the wheels B, the cord M and lever M', and the stops or cams required for these parts, for the purpose of moving and controlling the platform-car E on the main car A, substantially as set forth.

4. The whole, consisting of the platform E and anterior hinged part E', hood-plow H, rack and pinion L, and cord M, combined and arranged so as to operate substantially as set forth.

109,820. — DEVICE FOR FREEZING FISH, MEATS, &c.—Daniel Y. Howell, Toledo, Ohio, assignor to himself, Thomas S. Sprague, and Hermann F. Eberts, Detroit, Mich.

Claim.—1. The employment of sheets of metal, arranged in pairs in a suitable box, in connection with a freezing-mixture, substantially as described, and for the purpose set forth.

2. The arrangement, within the box A, of the sheet-metal plates B and blocks C, D, and E, substantially as and for the purposes herein set forth.

109,821.—BOX FOR PACKING FRUIT, PROVISIONS, &c.—George M. Huston, Putnam, Ohio.

Claim.—The employment of an outer box or other receptacle, in combination with an inner perforated receptacle, the latter receptacle being made of such a size as to leave a space or chamber between it and the inner walls, top, and bottom of the outer receptacle or casing, for the reception of preservers, substantially as described.

109,822.—FEED-CUTTER.—William Hutchins, Paw Paw, Mich., assignor to himself and George G. Hutchins, same place.

Claim.—The combination of the toothed upper feed-roll J, tumbling-rod Q, with universal joint *d d*, sliding plates I, stirrups K, lever L, and weight C, with the lower corrugated feed-roll G', all constructed and operating substantially as described and shown, for the purposes set forth.

109,823. — HEAD-REST FOR CAR-SEATS. — Edward M. Judd, New Haven, Conn.

Claim.—The head-rest A with the end-bars *i*, connected by the slot *g* and pins *l* with the seat-back, in combination with the teeth 4 and notches 3 to retain the head-rest in position, substantially as and for the purposes set forth.

109,824.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. As a new article of manufacture, a jelly-glass having a rectangular mouth, beaded on two opposite sides or more, whether such beading be continuous on each side or broken, substantially as set forth.

2. A jelly-glass having a rectangular mouth, and beaded as specified in the preceding claim, in combination with a cap made with lips on two opposite sides or more, whether each such lip be broken or continuous, substantially as set forth.

109,825. — TOOL FOR FORMING SCREW-THREADS ON GLASS JARS.—William M. Kirchner, Pittsburg, Pa.

Claim.—1. The plug *a*, surrounded through the whole or a part of its length by an annular flange, *a'*, so as to leave an annular space, *a''*, between, the inner face of the flange *a'* being threaded, substantially as and for the purposes set forth.

2. In connection with plug *a*, flange *a'*, and stem *d*, the arrangement of wrench-plate *g* with its apertures *h h'* and spring *s*, substantially as set forth.

109,826.—HAIR-SPRING OF WATCHES, &c.—Calvin Kline, Brooklyn, N. Y., assignor to himself and George E. Hart, Newark, N. J.

Claim.—The adjustable pendent-spring for time-keepers herein described, having a reversed curve of small radius, with a sufficient length of spring beyond it, as shown by A^4, to allow the adjustment to be made on material having the ordinary curvature, all substantially as and for the purposes herein set forth.

109,827.—POCKET-BOOK.—Julius Lehman, New York, N. Y.

Claim.—The within-described improved pocket-book, having separate compartments A B attached together near their centers and tops, and adapted to spread apart at their lower edges, substantially as and for the purposes herein specified.

109,828.—SEWING-MACHINE.—T. A. Macaulay, Northampton, Mass.

Claim.—1. The combination, with disk *a* and wing *a*, supported on projection a^3, of the pins and links for operating the needle-bar, substantially as described.

2. The combination, with the presser-bar, of the adjustable block *y*, lever *u*, link *v*, and guides *x* a^4 a^5, all substantially as and for the purpose described.

3. The device *t n s*, for raising and lowering the feed-wheel, when constructed as described, and combined with the table and feed-wheel, as set forth.

109,829. — STEAM-BOILER. — William B. Mack, Detroit, Mich., assignor to Divie Bethune Duffield, same place.

Claim.—The construction and arrangement of the mud-chamber F with its pipe L and the blow-off cock E, the openings *i i* and flange G, and its combination with the conducting or circulating-pipes B and C, substantially as and for the purposes hereinbefore set forth.

109,830. — CAR-COUPLING. — Stephen Mahurin, Liberty, assignor to himself, James W. Singleton, and William A. Richardson, Quincy, Ill.

Claim.—1. The combination and arrangement of the coupling-bars *a* and *b* with the projections *g* and *d*, for the uses and purposes substantially as herein shown and set forth.

2. The coupling-bar, fig. 5, provided with the draw-rod E and levers D and G, in combination with the projections *d* and *g*, arranged and operated for the uses and purposes herein shown and described.

109,831.—SAUSAGE-STUFFER.—Jacob Mickley and John E. Hartman, Cashtown, Pa.

Claim.—The improvement in sausage-stuffers, consisting of the screw C swiveled to the plunger G, and formed with crank D, in combination with the receiver E, hinged at the side of one end to the supporting-table A, all constructed and operating as herein described.

109,832.—WAGON-BRAKE.—Jacob Mickley and John E. Hartman, Cashtown, Pa.

Claim.—1. A brake-bar, adapted to slide within slots or guides attached to or formed with a rack or sills of wagons, when said bar is located behind the rear wheels, and operated by an endless screw, substantially as described.

2. A bar, N, secured to a body or running-gear of a wagon in such a manner as to support an endless screw, which operates a brake-bar carrying a spring, located in the rear of the hind wheels, substantially as described, for the purpose set forth.

3. The bar N, provided with a nut-casing, within which works an endless screw, swiveled or otherwise attached to a brake-bar carrying brake-shoes or blocks, and acting in conjunction with a spring in reference to the rear or hind wheels of a wagon, substantially as described, for the purpose set forth.

109,833.—VARNISH FOR COATING PHOTOGRAPHIC NEGATIVES.—Johan Wolfgang Morgenstier, Sheboygan, Wis.

Claim.—The varnish for coating photographic negatives, composed of the ingredients, and in or about the proportions herein set forth.

109,834.—DOOR-LATCH.—Wallace T. Munger, New Britain, Conn., assignor to P. & F. Corbin, same place.

Claim.—The hook *m*, within the lock-case and upon the stem 2 of the button or knob *l*, said stem passing through the lock-case and bolt, and, when turned, causing the hook *m* to engage with or disengage from the stud *r*, as and for the purposes set forth.

109,835. — TREADLE FOR SEWING-MACHINES.—Alfred Nielson, Brooklyn, N. Y.

Claim.—1. The crank-lever C, having a cam or stop, E, on its shank or inner edge, substantially as described, in combination with a pulley-wheel, A, having a countersunk ledge, G, or equivalent device, in or upon its face, substantially as set forth.

2. The crank-lever C, having the cam E thereon, as set forth, in combination with the stationary axis B of the pulley-wheel A, when projecting beyond the face of the pulley-wheel so as to form a fixed bearing for the cam E to jam against to stop any backward motion of the pulley-wheel, as hereinbefore described.

109,836. — WASHING-MACHINE. — Luke B. Osgood, Shelby, Mich.

Claim.—The construction of a cylindrical revolving wash-boiler, when it and the journals on which it revolves are equally divided in two parts, that easy access may be had to the contents of the boiler, as specified.

109,837. — CORN-PLANTER. — George Paddington, Waubeek, Iowa.

Claim.—1. The combination of the harrows K, constructed as described and shown, the vertical shaft L, cranks M, handle M', and frame A, all arranged as and for the purposes set forth.

2. The arrangement, with the frame A, of the hangers C', spring-bars D' D'', provided with marking-teeth E' F', when said spring-bars are operated with the gauge G', secured to the axle A, as set forth.

109,838.—STOVE-PIPE THIMBLE.—James D. Pierce and John B. Smith, Milwaukee, Wis.

Claim.—1. A stove-pipe thimble, with the head raised in a rounded or ogee-form, with the air-holes on the inside or the highest part of the curve, substantially as described.

2. A stove-pipe thimble-head, with a square indentation, K, for the inner band F to lap over, substantially as and for the purpose described.

109,839.—GRAIN-SEPARATOR.—Hiram Raymond, Tecumseh, Mich.

Claim.—The raddle C, in combination with the raddle B, when constructed, arranged, and operated substantially as described and shown, for the purpose set forth.

109,840. — WASHING-MACHINE. — John G. Raymond, Rondout, N. Y.

Claim.—The combination of the rubbers E and D, bar C, tub A, handle B, cleat *b*, and slot *i*, constructed as described, and operating as and for the purposes set forth.

109,841, antedated November 30, 1870.—BUR-MILL.—Samuel G. Rollins, Boston, Mass., assignor to Wigg, Rollins & Co., same place.

Claim.—The arrangement of the fixed stone H, the supporting cylinder D, and the adjusting device *d e* E Y T, constructed substantially as described, and for the purpose set forth.

109,842.—CARRIAGE-AXLE AND AXLE-YOKE. Samuel Rowell, Amesbury, Mass.

Claim.—1. The above-described axle-iron, rolled solid, with one flat and one rounded side, substantially as described, as a new article of manufacture.

2. In combination with solid axle-iron, rolled with one flat and one rounded side, the axle-yoke C, provided with lugs or flanges E, fitted to the rounded side of the axle-iron.

109,843.—WAGON-BRAKE.—George W. Sanborn, Gilmanton, N. H.

Claim.—The combination of the brakes B *b b* and the hinge-lever A A A, attached, by the rope E, to the yoke, substantially as and for the purpose hereinbefore set forth.

109,844.—MACHINE FOR STAMPING, PRESSING, AND POINTING HORSESHOE NAILS.—Frederick Sandham, Montreal, Canada.

Claim.—1. The trade-mark stamping die J and the body-compressing die K, in combination with the rotating dial C and surrounding bed B, substantially as described.

2. In combination with the elements of the first claim, the cutter-wheel M, arranged and operating substantially as described.

109,845, antedated November 26, 1870.—LAST FOR BOOTS AND SHOES.—Samuel W. Shorey, Chicago, Ill.

Claim.—1. The plates E E and bolt F, when arranged between the longitudinal sections A D and B C, for the purpose of adjusting the relative positions of the heel and toe-sections, substantially in the manner described, and for the purpose specified.

2. The bolt F, plates E E, strips J J J' J', bolts G and H, when combined and arranged with a last divided into the four sections A B C D, substantially as described and for the purpose specified.

109,846. — SHAFT-COUPLING. — William Smeed, Rochester, assignor to himself and Glen & Hall Manufacturing Company, Brighton, N. Y.

Claim.—1. The shell A, provided with a socket or blind eye, as at *a'*, adapted to receive and support one end of the pin *c'*, to which are attached the remaining parts of the coupling, substantially as described.

2. The shell A, provided with bosses *a a'* upon its inner surface, for the purpose of maintaining the ring C in a central position, as set forth.

3. The shell A, provided with the dovetailed groove, in combination with the sliding plate D, for securing the pin C' in the perforation at *a*, and the blind eye at *a'*, substantially as set forth.

109,847.—MILKING-STOOL.—George Smith, Syracuse, N. Y.

Claim.—1. The sliding clamp C, connected to an extension, *b*, which is applied to a vibrating seat, B, substantially as described.

2. The spring *f*, applied between the vibrating seat-extension *b* and the clamp C, substantially as described.

109,848.—APPARATUS FOR THE MANUFACTURE OF GAS FROM HYDROCARBONS.—James H. Smith, Newark, Ohio.

Claim.—In an apparatus for generating gas from liquid hydrocarbons, the combination of the retort B, distributing-pipe D P, and tar-box T B, all arranged and operating substantially in the manner and for the purpose specified.

109,849.—BUCKLE.—George E. Stedman, Boston, Mass.

Claim.—The improved locking-buckle, having its lock-case pivoted to the frame and the tongue projected from the said case and movable with it, as described.

109,850.—PILE FOR BEAMS.—Joseph Stokes, Trenton, N. J.

Claim.—The improved pile for the stem or web of a beam, composed of the two flange pieces *c c'*, the flanges of the one being turned toward those of the other, the filling-bars interposed between said flanged pieces and the wedges by which said flanged pieces and the filling-bars are fastened together, substantially in the manner described.

109,851.—MACHINE FOR COUNTERSINKING THE HOLES IN BUTT-HINGES.—Lucius P. Summers, New Britain, Conn., assignor to P & F. Corbin, same place.

Claim.—A vertically-moving slide, carrying the hinges or other articles to be bored or countersunk, and presenting the same to the revolving tools, in combination with reciprocating fingers that move the articles along progressively, substantially as and for the purposes set forth.

109,852.—BED-BOTTOM.—Charles Valkmar, New York, N. Y.

Claim.—A bed-bottom, composed of the plain slats or bars A, two steel fulcrum bars B, and the rope C, the slats or bars A extending alternately from the opposite ends of the bed-frame, so forming two opposing sets, the two steel bars B producing the elastic or spring fulcrum, one steel bar to each set of slats, all the slats to be united and balanced by means of the rope C, substantially and for the purpose hereinbefore set forth.

109,853. — SUSPENDER. — Joseph Warren Wattles, Canton, Mass.

Claim.—A suspender-button strap, having a layer of thin sheet metal interposed between two layers of cloth or leather, in the manner and for the purpose set forth.

109,854.—MACHINE FOR TRUSSING BARRELS.—Peter Welch, St. Louis, Mo.

Claim.—1. The compound trussing-arms H H^1 H^2 H^3, composed of two branches pivoted together at *e*, and adjusted by the screw S, in the manner described.

2. The trussing-fingers *t* and *s*, constructed as described, and united to the trussing-arms and rests by ratcheted surfaces, collars, and set-screws, in the manner and for the purpose specified.

3. The rests N, sliding and adjusting in grooves in the bed-plate P, in the manner set forth, and provided with the trussing-fingers *s*, as stated.

4. The combination of the treadle T, lever L, cross-arms X, and trussing-arms H H^1 H^2 H^3, in the manner and for the purpose described.

5. The combination of the worm W, driven as stated, with the worm-wheel W', threaded shaft F, nut G, and arms H H^1 H^2 H^3, in the manner and for the purpose set forth.

109,855.—SPRING HINGE.—William Wells, Cleveland, assignor to himself and John Wrigleworth, Mentor, Ohio.

Claim.—The combination, in a single or double spring hinge, of the unincloased spring C, loose adjustable regulating-collar D, pintle E A, and the leaves, all constructed and arranged substantially as herein described.

109,856.—LANTERN.—Hiram Jacob White, Boston, Mass.

Claim.—1. The air-supplying guard D, as composed of the foraminous-sided annular chamber *d*, the mouth-piece *f*, and the chamber *g*, constructed and arranged substantially as specified.

2. The combination and arrangement of the guard D, substantially as described, with the lamp-body or reservoir A, and the burner C, applied together, as set forth.

3. The combination of the metallic dished guard B and the elastic lantern frame, as explained, with the glass lamp-body A, the burner C, and its chimney, as described.

4. The lantern frame I, as made, with shoulders *h h* to two of its elastic hooked bars, F F, and grooves *l l* to the other two, G G, such being for receiving the ring H, as set forth.

5. The dome, as made, with the chimney-receiver or mouth *m*, and also with the foraminous sides, arranged to flare in manner as explained and represented.

109,857. — PROCESS OF SEPARATING THE HAIR FROM THE WARP IN HAIR-CLOTH.—David Whiteley, Providence, R. I.

Claim.—The process of applying sulphuric acid and heat to hair-cloth, for the purpose of separating the hair from the warp in hair-cloth, substantially as above described.

109,858. — WIRE-FENCE. — Bartholomew Wilson and Franklin P. Grimes, Dayton, Ohio.

Claim.—1. The posts A, provided with the anchors B and with the brace-arms C and *c*, all constructed from one piece of metal, substantially as and for the purpose specified.

2. The swinging boards K, suspended from and in combination with the panels of a wire-fence, substantially as and for the purpose set forth.

109,859. — TREE-PROTECTOR. — Blaney L. Alley, Salem, and Thomas W. Shapleigh, Cambridgeport, Mass.

Claim.—The new manufacture of tree-protector, as described, composed of the strip A grooved as explained, and the double-fringed belt B arranged therewith in manner, and fixed thereto by means substantially as specified.

109,860. — CLOTHES-DRIER. — Charles R. Anderson, St. Louis, Mo.

Claim.—The bars J J', frames I I, cords G H, pulleys E F, ring K, and stud M, all arranged substantially as and for the purpose specified.

109,861, antedated December 3, 1870.—CORPSE-PRESERVER. — R. C. Andrus, Poughkeepsie, N. Y.

Claim.—The corpse-preserver, consisting of the ice-case B, hollowed out upon the top for the reception of the head of the corpse, and the ice-chest C, hollowed out upon its under side to fit over the chest and body of the corpse, both cases being supported by the base-board A, and all arranged as described, for the purpose specified.

109,862.—DRAIN-TILE MACHINE.—Henry F. Baker, Centreville, Ind.

Claim.—1. The matrices B C, provided with the vertical re-entering corners *e* and the vertical recesses *h*, and having their end walls and partition notched to suit the form of channel required, as specified.

2. The combination of the mold A, having the notched end walls *f* and notched partition *d*, with the channel-cutter H having the shouldered guides *i i*, substantially as specified.

3. The combination of the mold A, having the notched end walls *f* and notched partition *d*, with the finisher L, shod with the plate *b'*, bent to suit the form of the channel, and provided with the guiding ears *e*, as specified.

109,863.—HAY-TEDDER.—Orville A. Benton, Amenia, N. Y.

Claim.—The gear-wheels *e f g*, for rotating the tines E on their axes, irrespective of their rotation with and around the axis of the reel, in combination with crank *g*, whereby their points may be raised or lowered in passing over the ground, as essentially as specified.

109,864. — ATTACHING LAMP-FOUNTS TO BRACKETS, CHANDELIERS, &c.—George Bohner, Chicago, Ill.

Claim.—1. A screw-ferrule, constructed in such a manner as to connect a lamp-fount or reservoir to an ordinary bracket or chandelier, substantially as herein described, for the purpose specified.

2. The metallic screw-ferrule D, constructed as described, with one end contracted to fit upon the ordinary screw-pin of a lamp-bracket or chandelier, for the purpose specified.

3. The nut or block G, constructed as described, to connect the cylindrical lamp-ferrule to the screw-pin of a lamp-bracket or chandelier, as herein set forth, for the purpose specified.

109,865.—APPARATUS FOR CLEANING AND POLISHING COPPER.—James H. Brookmire, St. Louis, Mo.

Claim.—1. The stationary cylinder E, having semi-cylinder heads h h', forming feed and discharge-chambers I I', center shaft F, spirally-arranged beaters and polishers *f*, when arranged in combination with the frames B and A, substantially as set forth.

2. The pulley G, extension shafts F^1 F^2, center shaft F, beaters *f*, cylinder E, frame B, bracket C, and screw D, when arranged adjustably in combination with the frame A, substantially as set forth.

109,866. — FRICTION-ROLLER. — William Brown, Portsmouth, England.

Claim.—1. The collar D, provided with beveled faces *c c* upon the shaft C, in combination with a series of tapering rollers playing between the beveled faces of the collar and the thrust-blocks, substantially as described, for the purpose set forth.

2. The conical rollers *b b*, arranged within the recess or channel of the thrust-blocks, and bearing against the beveled faces *c c* of the collar D upon the shaft C, said shaft having its bearings upon the thrust-blocks B B, the whole combined, arranged, and operating substantially as herein shown and described.

3. The thrust-blocks B, secured together by pins and keys, and mounted upon a shoe, A, as described, in combination with the collar D, formed with beveled faces *c c*, and secured upon the shaft C, with a series of conical-shaped rollers interposed and playing within the recess or channel *a*, and bearing against the beveled faces *c c* of the collar, the whole constructed and arranged substantially as set forth.

109,867, antedated November 25, 1870.—ICE-AX AND PICK.—John N. Bunnell, Unionville, Conn.

Claim.—The ax and pick, composed of the taper blade A, of steel plate, the slotted and shanked stock B, handle C, and the rivet *a*, constructed as herein described.

109,868, antedated November 26, 1870.—COMBINED RULE, BEVEL, SQUARE, AND DIVIDER.—George G. Burgess, Grafton, Ohio.

Claim.—A folding rule, in combination with the square and bevel attachment, holding by means of the binding-screw *g*, the combined calipers and dividers, the whole being constructed and arranged to operate together, substantially in the manner as shown and set forth.

109,869. — INSECT-DESTROYER. — Thomas Byrne, New York, N. Y., and Deidrich Strunk, Lavaca county, assignors to themselves and J. J. Schott, Lavaca county, Texas.

Claim.—The combination of the vessel A, lamp B, and chimney D, formed as shown, with the conical reflector *c*, and inverted conical transparent deflector *b*, placed base to base, when arranged as described, for the purpose specified.

109,870, antedated November 20, 1870.—JOURNAL-LUBRICATOR.—James A. Cowles, Chicago, Ill.

Claim.—1. The curved plate A, having the bent down parts B B, when employed in a journal lubricator in combination with the matting E E, attached to the parts B B, and extending down into the oil, substantially as and for the purpose described.

2. In combination with the curved plate A, constructed with the terminal lugs C C, the coiled spring D, arranged as described, and connected to the plate by the parts C C, substantially as and for the purposes specified.

3. The combination and arrangement of the coiled spring D with the wicking E E, when the latter is attached to the bottom of the curved spring, substantially as shown and described.

109,871.—BUCKLE.—Lorenzo Dow Cowles, Romeo, Mich.

Claim.—The frame C, with one end bent upward, with its cross-bar *b* and the hooked sliding bar A, all constructed as shown and described.

109,872. — SEASONING AND PRESERVING WOOD.—Charles Massey Cresson, Philadelphia, Pa., assignor to American Wood Protection Company.

Claim.—The treatment, substantially as herein described, of timber with liquid applications while the said timber is being heated.

109,873. — SEASONING AND PRESERVING WOOD.—Charles Massey Cresson, Philadelphia, Pa., assignor to American Wood Protection Company.

Claim.—The treatment of wood, substantially as described, by a combined shower of liquid and current of warm air.

109,874.—TREATING AND RECOVERING THE LIQUIDS USED IN SEASONING AND PRESERVING WOOD.—Charles M. Cresson, Philadelphia, Pa., assignor to American Wood Protection Company.

Claim.—The recovery and utilizing, substantially as described, of liquids employed in seasoning timber.

109,875.—BREAD-PAN.—William H. Daggett, South Vineland, N. J.

Claim.—1. The bread-pan A, in combination with the top A', when furnished with their respective plates *b* and *c*, in the manner and for the purpose substantially as set forth.

2. The plates *b*, when supplied with rings C and tongues *a*, in combination with plates *c*, when constructed with openings I and projections *x*, the whole constructed and operating substantially as specified.

109,876.—FOLDING-CHAIR.—Isaac N. Dunn, New Haven, Conn., assignor to the New Haven Folding-Chair Company, same place.

Claim.—1. In a folding chair, the arrangement of the seat F, secured to the legs B, both in front and in the rear of the pivot, substantially in the manner set forth.

2. In a folding chair consisting of the crossed pivoted legs A B, the arrangement of the bar D upon the rear legs to bear against the forward legs when the chair is open and form a support to retain the chair in an upright position, substantially as described.

3. In a folding chair consisting of the crossed pivoted legs A B, and having the seat secured to the legs B, as described, the rear legs extended up and combined with the strap H, connecting the upper end G of the rear legs with the forward legs

above the seat, substantially as and for the purpose specified.

109,877, antedated November 23, 1870.—LOCOMOTIVE HEAD-LIGHT.—Samuel M. Davies, Chicago, Ill.

Claim.—1. The shells A and B, made with a continuous winding thread, substantially as and for the purpose described.

2. The shells A and B, made with a continuous winding thread, and with ribs V V V V, substantially as shown and described.

3. The combination and arrangement of the small bearing H, large bearing F, intermediate packing I, shell C adapted to fit and support the bearings, shaft or stem D, handle L, and ratchet-wheel E, when the several parts are constructed in the manner and employed for the purpose set forth.

109,878. — ROTARY ENGINE.—William A. Davis, Salem, Ohio.

Claim.—1. The engine, constructed with a cylinder, A, two heads with convex faces and ports, a slotted plate moving in diagonal grooves, and a piston, all substantially as set forth.

2. The combination of the cylinder A, plates B, heads C, with their ports *b d*, and the piston E, all constructed and arranged as described, to operate substantially as and for the purposes herein set forth.

109,879. — INSULATOR FOR TELEGRAPH-WIRE.—Manuel De Montufar, New York, N. Y.

Claim.—A telegraph-insulator, composed of the divided cylinder and the outer and inner sheaths, when they are constructed and arranged as and for the purpose specified.

109,880.—CASING T'S FOR OIL-WELLS.—Julius C. Dickey, Titusville, Pa.

Claim.—The casing T for oil-wells, when the parts A and B are constructed and joined together in the manner and for the purpose described.

109,881.—PROCESS FOR MAKING CONCAVE CIRCULAR SAWS.—Thomas S. Disston, Philadelphia, Pa., assignor to himself and Henry Disston & Son, same place.

Claim.—The process of manufacturing concave circular saws by the whole series of operations described and in the following order, namely, cutting the teeth and central opening in a circular plate of steel, heating said plate, compressing the same between heated dies, hardening it, and then tempering between heated dies, as set forth.

109,882.—POST-MARKING STAMP-CANCELING MACHINE. — Charles E. Donnellan, Indianapolis, Ind., assignor to himself and McCord & Wheatley, same place.

Claim.—1. The combination of the elastic stop K, compensating holder I, wires J, and series of cams H, placed on vertical shafts, with spaces between the cams, substantially as and for the purposes herein set forth.

2. The guide-wires J, elastic stop K, and elastic rotating cams H, in combination with the pressure-rolls D F, type-wheel B, and friction conducting-wheel C, substantially as and for the purposes herein set forth.

3. The receiving device, consisting of the friction conducting-roll L, compensating holder M, and adjustable stop N, arranged substantially as set forth.

109,883.—STEAM-BOILER.—George S. Dubois, Jersey City, N. J.

Claim.—1. The furnace front herein described, covering the entire area of the furnace A, and provided with means for admitting and controlling the admission of air, as specified.

2. The open-front furnace A, constructed as specified, with a water-bar, D', connecting the water-legs, and adapted to receive and to serve with my removable front G H and its connections, as herein specified.

109,884. — HARNESS-OPERATING MECHANISM FOR LOOMS.—John C. Duckworth, Pittsfield, Mass.

Claim.—1. The arrangement, in combination with the leaves of heddles, of a double series of vertical angular heddle-levers, placed at the side of the loom on bearings which are parallel to each other and to the side of the loom, and moving toward and from the side of the loom, the vertical arm of each lever of each series of heddle-levers being connected with a leaf of heddles, and the horizontal arms or toes of each lever of each series acting upon the corresponding horizontal arms or toes of the opposite series, substantially in the manner and for the purposes hereinbefore described.

2. The arrangement of the pattern-chain, horizontal hooked jacks, and vertical or upright heddle-levers, pivoted at the side of the loom, so as to move toward and from the loom, and connected with the leaves of heddles, substantially as described, the gist of the arrangement consisting in bringing the pattern-chain directly in contact with the horizontal hooked jacks in said combination beneath the same, each jack having a hook on its upper and a hook on its lower edge, at one end, and at its other end attached to the heddle-lever, or to a projection thereof, so as to lift the jacks or allow them to be depressed by the action of the protuberances and depressions of the pattern-chain without intervention of hinged toes, as formerly practiced.

3. The arrangement of the pattern-chain relatively to the reciprocating knives, or lifters and depressers, the horizontal hooked jacks, hinged at one end to vertical or upright heddle-levers, each jack at its other end having a hook on its upper and a hook on its lower edge, such heddle-levers arranged at the side of the loom so as to move toward and from the loom, and connected with the leaves of heddles, and said upright heddle-levers, the gist of the arrangement being that the pattern-chain is placed directly in contact with the lower side of the jacks, and between the hooks of jacks, which engage with the reciprocating knives and the point where the jacks are hinged to the side levers, or a projection therefrom, whereby the jacks are elevated or depressed to engage with the knives, by comparatively small rings or protuberances upon the pattern-chain.

4. The arrangement of pattern mechanism, horizontal hooked jacks, and upright heddle-levers, the gist of the arrangement consisting in such heddle-levers being arranged at the side of the loom so as to move toward and from the loom, the jacks being hinged to such heddle-levers above their fulcrums, and arranged horizontally outside of such heddle-levers perpendicularly to the side of the loom, or nearly so, each jack at its other end having a hook on its upper and a hook on its lower edge, the pattern-chain being placed directly in contact with the lower side of the jacks and outside of such heddle-levers, and the drum which carries the pattern-chain being located beneath the jacks and above the fulcrums of such heddle-levers, whereby convenient access to the jacks and pattern mechanism is obtained, and also room for a considerable length of pattern-chain to be suspended vertically from the drum without obstruction, and, at the same time, direct action of the pattern-chain upon the jacks is secured, substantially as described.

109,885, antedated November 26, 1870.—WATER-WHEEL. — William H. Elmer, Berlin, Wis.

Claim.—1. The casing A and chutes B B, constructed as described, and formed in one, both the upper and lower parts of the chutes being beveled, as shown, substantially as and for the purposes herein set forth.

2. The combination of the casing A, chutes B B,

gates C C, pins *b b*, arms D D, wheel E, rack H, and pinion *d*, all constructed and arranged as described, substantially as and for the purposes herein set forth.

109,886.—Iron Culvert.—Moody G. Freeman, Wenona, Ill.

Claim.—1. The arch B, grooved longitudinally at its edges, in combination with the side pieces A A, provided with tongues to fit in said grooves on the arch, and secured by bolts, substantially as shown and described.

2. In combination with the arch B and side pieces A A, constructed and joined together as described, the bands or ribs C C, encircling the arch, and their ends fastened in staples *e e* on the side pieces, substantially as and for the purposes herein set forth.

109,887.—Saccharifying Mash for Grain. Charles H. Fringe, Centreton, Mo., assignor to himself and Charles Braches, same place.

Claim.—The application to water, for converting grain into mash, of a combination of sixteen parts of muriatic acid and one of phosphoretic acid, applied in the proportion of about three ounces to every bushel of grain, to operate preliminarily on the starch, as described.

109,888.—Bee-Hive.—James W. Gladding, Normal, Ill.

Claim.—1. A honey-box, formed of sections G G, each with a wire-guide, A, and placed side by side within the covering H, which completely incloses said sections so as to form a whole, substantially as herein set forth.

2. The arrangement of the hive A, frames B C D, with the disconnected wire-guides *a b*, honey-box G H, with guides A, cap J, and catches S, all substantially as shown and described.

109,889.—Spring Bed-Bottom.—Charles Glenn, Allegheny City, Pa.

Claim.—The slats *b* and *c*, forming one piece or united at the middle, in combination with stripe *d*, arranged transversely between, forming a spring bed-bottom, substantially as described.

109,890. — Breech-loading Fire-Arm.—Charles Green, Rochester, N. Y., assignor to Charles Parker, Meriden, Conn.

Claim.—1. The lever pivoted to the tang in the manner substantially as described, and combined with the bolt which secures the barrel, so that, through the operation of the said lever, the barrel may be locked or released, substantially as set forth.

2. The hooked piece on the barrel, and correspondingly hooked-shaped bolt, combined so as to draw and hold the barrel to the recoil-plate, substantially as set forth.

109,891.—Water-Wheel.—Mahlon Gregg, Rochester, N. Y.

Claim.—1. The compartment inclosed by the partitions F, between the chute-case A and the flume-bottom, whereby ready access may be had to the lower parts of the wheel, for the purposes set forth.

2. The annular gate C, operated from below the wheel in such a manner as to permit it to revolve with the wheel, for the purposes set forth.

109,892.—Window-Frame.—William H. Griffin, Springfield, Mass.

Claim.—A window-hinge, consisting of the swinging jamb A, double hinges B and C with their flanges *b* and *c*, the parts being constructed and arranged substantially in the manner and for the purpose shown and described.

109,893.—Cotton-Plow.—Thomas Guice, Mount Andrew, Ala.

Claim.—The plows *a a'*, and double-winged plows C C, each constructed and both sets relatively arranged in the particular manner shown and described, whereby they are adapted to cut a furrow with a vertical side, and to scrape along each side of the cotton-plant row or ridge, and clean the furrow of loose dirt.

109,894.—Mold and Cone for Metallic Castings.—William Hainsworth, Allegheny, Pa.

Claim.—Pulverized coke treated with sour beer, fire-clay water, or other similar fluid, as a material for molds or cores for casting metals, as specified.

109,895.—Medical Compound.—Orrin F. Harris, Norwich, Conn.

Claim.—The composition of matter composed of the ingredients aforesaid, in substantially the proportions aforesaid, to be used as a remedy for the disease called the piles.

109,896.—Pump.—William Hartley, Durand, Ill.

Claim.—1. The chamber B, constructed specifically as described, and arranged as and for the purpose set forth.

2. The combination of the chambers B and A, when constructed as described, and arranged relatively to each other, as and for the purpose set forth.

3. The combination of the chambers A, B, and C, and ram A', when the parts are constructed specifically as described, for the purpose set forth.

4. The ram A', with its packing *a'* and spiral spring *a²*, as and for the purpose set forth.

109,897.—Cotton-Press.—William Haynie, Memphis, Tenn.

Claim.—The combination of the standard A with the levers B fulcrumed in the stirrup C, the pulling-lever H, provided with the pawl G, and the piston P of the cotton-press herein described, all constructed and arranged as shown, for the purpose set forth.

109,898.—Collar for Circular Saws.—James B. Heald, Milford, N. H.

Claim.—The combination, with the collar B, ring F, and points E, of the steel washer I, and spring G, substantially as and for the purposes set forth.

109,899.—Canal Lock.—George Heath, Annapolis, Md.

Claim.—1. The chain *a'*, pulleys *d e s*, and self-closing tumble-gate B, in combination with the spur-wheels *t r*, pawl *p*, clutch *f'*, and hand-wheel H, all arranged and operating substantially in the manner shown and described.

2. The gravitating pulley *e* in combination with the tumble-gate B and its chain *a'*, substantially as described.

3. The combination, with the buoyant self-closing tumbling-gate B, of the releasing clutch *f'*, or both the releasing clutch *f'* and the pawl *p*, and suitable intermediate mechanism for lowering the gate, substantially in the manner described.

4. The combination of crab-lever *h h*, rods *n* and *g*, rack *w'*, and toothed lever L, with the valve *c* of canal-lock platform C, substantially in the manner shown and described.

5. The arrangement of two or more crab-levers on the same shaft, and extending rods vertically up from and horizontally out from said levers, and connecting each of said rods with its own independent rack and toothed-lever, and with its own independent valve, all in such manner that a series of valves on the canal-lock platform C may be separately or successively opened or closed from one side of the lock, as set forth.

109,900.—Sawing-Machine.—Daniel Heller, Milton Centre, Ohio.

Claim.—1. The combination of the pivoted beam G, pins or rests I, pins or handles J, pivoted bar L and strap M, with each other and with the frame A B C D E F, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the slotted arm N, adjustable pivoted bar O, and pin R, with the other parts of the machine, substantially as herein shown and described, and for the purpose set forth.

109,901.—Coffee-Pot.—Louis Hildenbrand, Michigan City, Ind.

Claim.—The coffee-steamer, composed of the vessels A B, intermediate case C, and pipes *e g*, all arranged to operate substantially as herein shown and described.

109,902.—Faucet.—Jacob Hills, Haydensville, Mass.

Claim.—In the faucet, as described, the combination and arrangement of the sleeve D, as explained, and its guide-slots *n n*, with the valve C and its guide-lugs *g g*, key E, the screws *f q*, the body A, and the cap B thereof, all being as set forth.

109,903, antedated November 26, 1870.—Machine for Beating and Cleaning Hair.—George P. Holloway and William J. Huey, Portland, Ind.

Claim.—1. The construction of the cylinder D, it having the projecting pins E E and apertures D' D', substantially as and for the purpose set forth.

2. The combination of the shaft B, the disk G, key H, and cords F F, substantially as and for the purpose set forth.

3. The arrangement of the disk G, key H, shaft B, and cords F F, substantially as and for the purpose set forth.

109,904.—Direct-acting Steam-Engine.—William Davis Hooker, San Francisco, Cal.

Claim.—1. The valve F, with its cams or arms G and J, in combination with the main and auxiliary valve and main piston of a direct-acting engine, substantially as herein described.

2. The valves *f* and passage *i* in the piston N, together with the ports *a a'* and the auxiliary valve M, substantially as and for the purpose described.

3. In combination with the valve F and the valve M, the ports *c*, to arrest and cushion the main piston at the end of its stroke, substantially as herein described.

109,905.—Hay-Press.—Henry C. Hunt, Indianapolis, Ind.

Claim.—1. The combination of the rack-bars *a a*, dogs M M, and lever N, provided with pins *b b* and bar O, substantially as and for the purposes herein set forth.

2. The combination of the bale-box A B C with its doors D D and top H I, the follower K L with dogs M M and guides *d d*, and the lever N with pins *b b* and metal bar O, all substantially as and for the purposes herein set forth.

109,906. — Stop-Valve. — Charles Emery Hutson, Commerce, Mo.

Claim.—1. The rotary valve B, having projecting arms *b*, incline *b'*, and cutting-edges *b²*, when arranged in combination with the stem C and valve-shell A, substantially as and for the purpose set forth.

2. The stem C, having projecting arm *c*, incline *c'*, spring *e*, chamber *d*, to operate the valve B, and arranged in combination with the valve-shell A of cylindrical form, and having circular slot *c¹*, substantially as set forth.

109,907.—Tire for Traction-Engines.—Oliver Hyde, Oakland, Cal.

Claim.—1. An elastic tire for the wheels of traction-engines, when said tire is composed of elastic blocks B secured in succession around the tire A, substantially as and for the purpose above described.

2. The flat-headed bolt C, with its lower end bifurcated and spread apart so as to form a key, in combination with the countersunk holes in the blocks or equivalent device, substantially as and for the purpose above described.

3. The T-shaped projections *a* on the tire A, in combination with the corresponding grooves in the blocks B or equivalent device, substantially as and for the purpose described.

109,908. — Lubricator for Steam-Engines.—Francis Jackson, Wigan, assignor to William Prosser, Manchester, England.

Claim.—1. A tube or tubes, placed concentrically around the central tube *h*, through which steam is admitted, and in combination with a valve or valves, substantially as shown in fig. 2, and for the purpose set forth.

2. The method of increasing the condensation of steam, and, consequently, the displacement of the oil by means of the metallic casing *k*, adjustable upward and downward, substantially as set forth.

3. The employment of the valve or disk *v*, to prevent the escape of any oil in cases where a vacuum is created in the steam-pipe or steam-chest, substantially as set forth.

4. The plug *m*, with holes bored in it, in combination with the tube *h*, for the removal of the condensed water from the cup, substantially as set forth and illustrated in fig. 3.

5. A lubricator, as shown in fig. 4, with two chambers, one above the other, to be successively filled, substantially as and for the purpose set forth.

6. The perforated tube *m*, with a solid end, *b*, acting as a valve, the said tube communicating with the upper chamber, and the valve being between the two chambers, substantially as and for the purpose set forth.

7. The tube or tubes placed concentrically around a central tube, *h*, in combination with the aforesaid valve *b*, and without any opening in the side of the cup, substantially as and for the purpose set forth.

8. The upright tube, valves, and cotton-wick, substantially as shown in fig. 5, and for the purposes set forth.

109,909. — Base-burning Fire-place Heater.—Julius Jaeger, Tompkinsville, N. Y.

Claim.—1. The combination of the feed-cup P, pipe *b'*, and water-vessel O, substantially in the manner shown and described.

2. The oval air-pipes *a'*, arranged in the combustion-chamber of a heater in oblique positions toward each other, as and for the purpose set forth.

3. The back flues H, upper side flues G, apertures A, lower side flues C, and central back flue D, in combination with the combustion-chamber of a heater, constructed and arranged substantially as described.

4. The doors *d'* in the vertical partition *p*, in combination with the front part J and back part K of a fire-place heater, constructed substantially as set forth.

5. The grate F, formed with hub *l* encircling the shank of the cone I, in connection with the pin *i* passing through said shank, and with the rock-shaft K, on which the cone is mounted, substantially as and for the purpose described.

109,910.—Sawing-Machine.—Per Johnson, Columbia, Cal.

Claim.—1. The body A, provided with the rigid legs H, folding legs H', and driving or carrying-wheels B, substantially as and for the purpose described.

2. The peculiar combination herein described for operating the saws G, consisting of the wheels *d* and *e* and pitmen *h*, together with the parallel guide-rods *f f* and horizontal bar *g*, the whole constructed and operated as herein described.

109,911.—Wind-Wheel.—John H. Kimble, Samuel Kimble, and George W. Kimble, Fox Lake, Wis.

Claim.—The combination of the collar I, lever M, cylinder p, rods r r, and shaft L, substantially as and for the purposes herein set forth.

109,912.—Lathe.—Samuel U. King, Windsor, Vt.

Claim.—1. In combination with the upper feed-roller E and its operative mechanism, and with the cutter-head B and the guide-levers C C C and cutter E thereof, as described, a mechanism, substantially as specified, (or its equivalent,) combined with the lower feed-roller, and to operate with each for contracting the guide-levers and knife upon the stick, by rotary motion imparted to the lower feed-roller by the stick while being fed along by the upper feed-roller, as explained, the said mechanism consisting of the ring D, the bent lever L, the annulus K, the levers G' H', the helical groove n, the catch I, collar o, springs p' r, worm k, and worm-gear i, all arranged as specified.

2. The combination, as described, for effecting contraction of the guide-levers and cutter by the action of the stick on the lower feed-roller, while such stick may be in the act of being fed along by the upper feed-roller.

109,913.—Wrench.—Christian Knisely, Chicago, Ill.

Claim.—The plate a, when arranged between the plate m and the eccentric head of the lever E, substantially as described

109,914.—Revolving Fire-Arm.—Charles J. Linberg and William J. Phillips, St. Louis, Mo.

Claim.—1. The barrel stock, pivoted on an axis parallel with the axis of the cylinder, for opening to disengage the cylinders, and having the cavity in the side for receiving the spindle C when closing with the cylinders, all substantially as specified.

2. The locking-plate M, arranged with the barrel-stock H and the projecting ratchet-teeth O, substantially as specified.

3. The two cylinders arranged in connection for alternate use, and provided with the inclosed needles R, arranged and operating substantially as specified.

4. The annular nipple-chamber e, formed by the grooves or recesses in the adjacent end of the cylinders A and B, and closed by the flange d fitting in recess a, as shown and described.

5. The turning-pawl P, lever Q, bar V, and hammer-arm, all combined and operating substantially as specified.

6. The combination, with the locking-lever U, having the beveled head h and slide-bar V, of the headed spring f, all substantially as specified.

109,915.—Miter-Box.—Charles F. Linscott, Chicago, Ill.

Claim.—The metallic miter-box, constructed as described, with the guide-cuts or slots B and C, as herein set forth and shown, for the purpose specified.

109,916.—Combined Hand Seed-Drill and Cultivator.—Samuel D. Lucas, Winterpock, Va.

Claim.—1. A bottom-perforated and shaking seed-box, F, combined with a pan-shaped receiver, E, placed thereunder to collect the scattered seed and converge them toward the discharge-tube D, as described.

2. The combination, with the dropping-mechanism of a seed-planter, of the following instrumentalities, viz., the plow O to open the furrow, the pulverizers P to comminute the soil which is to be turned on the seed, the coverers M, and the concave ridge-roller L, when all are arranged as described.

109,917.—Putting up Pomatum.—Elard Ludde, New York, N. Y.

Claim.—A package, for pomatum and other articles, composed of a sheet-metal box stamped up or spun without solder, and provided with a shoulder to receive a top of tin-foil, which is secured in position by turning in the top edge of the box, as herein shown and described.

109,918.—Ironing-Table.—James H. Mallory, La Porte, Ind.

Claim.—In combination, the board A, legs C, spring D, arm E, shoulders a a, legs B, and key F, substantially as specified and shown.

109,919. — Churn. — Chelton Matheny, Greensburg, Ind.

Claim.—1. In combination with the described elements A B B' E E f G g H J K k L, the pivoted and gravitating arm M, with its roller N, for the purpose herein explained.

2. The pivoted yoke or loop P Q Q' and the eccentric clamps R r R' r', constructed, combined, and arranged as represented and described, for the purpose set forth.

3. The dash apparatus J j v v' U u u' W' w w', when arranged to operate as herein explained.

109,920. — Flock-Machine.—William McAllister, Lawrence, Mass.

Claim.—1. The reversible bed H and knives I, when constructed and operating substantially as and for the purposes described.

2. The feeding mechanism above described, consisting of the hopper and the spiked feed-rollers, revolving in opposite directions, and having their spikes interlapping.

3. The reducing-chamber above described, that is, when provided with an inlet to receive the flock, and an outlet whose dimensions are controlled by an adjustable cover, for the purpose of retaining the flock a longer or shorter time, as and for the purposes above described.

109,921.—Piano Action.—Frazee B. McGregor, Pontiac, Mich.

Claim.—The combination of the key C, blocks D and H, hammer E, lever F, fulcrum G, and combination-bar I, all constructed and operating substantially as and for the purposes herein set forth.

109,922. — Padlock.—William McIntyire, New York, N. Y.

Claim.—The tumbler-bolt B, with its rounded nose b and stop c, in combination with the shackle D, and with the reciprocating bolt C, with its inclined recess e and shoulders d and f above and below said recess, substantially as herein shown.

109,923.—Corn-Planter.—Noah Mendenhall, Greensburg, Ind.

Claim.—The combination of the box F, cut-off G, slide H, rod h, lever I, rock-shaft J, spring K, agitator M attached to lever I, and trigger L, all arranged, constructed, and operated in the manner and for the purpose set forth.

109,924.—Washing-Machine.—Samuel S. Middlekauff, Hagerstown, Md.

Claim.—1. The cylinder B, having the springs f and e arranged as described, in combination with the rollers b, or their equivalent, all mounted in a suitable box or body, A, as set forth.

2. The rock-shaft o, having the lever p and arm r attached, in combination with the cross-bar m and vertical rods l, connected by the springs s to the sliding journal-boxes k, having the cylinder-shaft C mounted therein, substantially as described.

109,925, antedated November 26, 1870.—Water-Wheel. — Mordecai Millard, Franklin, Ohio.

Claim.—The endless belt of buckets E, of larger

circumference than the wheels D E, in combination with the bridge M and inclines O, or their equivalents, operating conjointly in the manner and for the purpose substantially as described.

109,926.—Turbine Water-Wheel.—Ransom Monroe, Hendrick's Creek, Pa.

Claim.—1. The water-wheel A, whose diameter is greater at the bottom than at the top, provided with spiral issues B B, relatively larger at the top than at the bottom, thus preserving the outer periphery of the buckets in a perpendicular line, substantially as and for the purpose set forth.

2. The wheel A, provided with shoulder k, in combination with coverings d d and key-bars e e, all arranged as and for the purpose set forth.

109,927.—Thill-Coupling.—Francis B. Morse, Plainville, Conn., assignor to himself and H. D. Smith & Co., same place.

Claim.—1. A carriage-shackle, in which the ribs a a are constructed and arranged in internal angles to be imbedded into the pad D, in the manner and for the purpose specified.

2. The thill-iron F and eye E, combined with and united by the sleeve I, with or without the inclined stud d, substantially as herein set forth.

109,928.—Apparatus for Dressing and Furrowing Millstones.—James Lee Norton, London, England.

Claim.—1. The combination, with the grooved staff a, provided with the saddle b, cross-slide d, jointed carrier h, adjusting slide i, screw-shaft e, of the star or ratchet-wheel and jointed pawl f, substantially as shown and described, and for the purpose of dressing the face of a millstone.

2. The combination, with the staff a, provided with the saddle b, cross-slide d, jointed carrier h, screw-shaft e, star-wheel, and jointed pawl f, of the inclined axis or spindle r, provided with pulley r', pulleys s', on upright standards attached to the ends of the staff and the driving-belt or cord, substantially as and for the purpose specified.

109,929. — Cast-Iron Plow. — John K. Odell and William S. Little, Deckertown, N. J., assignors to G. W. Coe, same place.

Claim.—The one-piece cast-iron beam and standard A B, having flanges b b^1 d^1 e^1 and sockets b^2, combined with brace F, mold-board E, share D, C^2, and land-side C, as and for the purpose described.

109,930. — Coupling for Earth-boring Augers. — Thomas Orchard, Lincoln, Cal.

Claim.—The coupling and locking device, consisting of the bar b, the slots c c and d, and the pin e, substantially as herein described.

109,931, antedated November 26, 1870.—Metallic Cartridge.—William I. Page, East Boston, Mass.

Claim.—1. A metallic cartridge having its shell formed with a series of corrugations, a a, an internal annular shoulder or perforated diaphragm b, and a fulminate-chamber b', constructed and arranged substantially as described, and provided with powder, ball, and fulminate, applied thereto in manner as set forth.

2. A metallic cartridge-case, as formed with an internal annular shoulder or perforated diaphragm b, and a fulminate-chamber b', substantially as and for the purpose set forth.

3. A metallic cartridge-case, as formed with the corrugations a a and the annular shoulder or diaphragm b, as and for the purpose set forth.

4. A metallic cartridge-case, as formed with a perforated diaphragm b, arranged in manner and for the purpose set forth.

109,932.—Car-Coupling.—Jay R. Palmer, Mariposa, Cal., assignor to himself and James H. Hatch.

Claim.—In combination with the bumper, divided vertically, the wedge-shaped tongue i and levers m and p, to enable the brakeman to open the coupling either from the platform or side of the car.

109,933.—Shoe-lacing Hook.—Alphonso Patten, Biddeford, Me., assignor to himself and Robert W. Rumery, same place.

Claim.—As a new manufacture, the lacing-fastening, as made with the dents and in other respects as hereinbefore described, and as represented in the accompanying drawing.

109,934.—Corn-Plow.—Elwood Phillips, Centreville, Ind.

Claim.—A one-horse cultivator, having a horizontally-curved beam, to admit of the horse and driver walking on the same side of the row of corn, the beam near its rear end being bifurcated downward, and on the extremities of which are pivoted the standards of the shovels, for the purpose of giving to the latter a lateral motion in the arc of a circle, substantially as herein set forth.

109,935.—Skate.—Alfred C. Platt, Sandusky, Ohio.

Claim.—1. In combination with a skate, the overshoe A, provided with the stays b b and hollow heel I, and secured by the straps B B, arranged substantially as and for the purposes herein set forth.

2. The arrangement of the straps B B, substantially as shown and described, in combination with the strap or pad E and cord a, for the purposes set forth.

3. The elastic ankle supports b b, tightened by means of the heel-strap D, substantially as and for the purposes herein set forth.

4. In an overshoe, combined with a skate, the hollow heel I, having an opening in its front for the passage of the spurs d d, substantially as and for the purposes herein set forth and described.

5. The plate J, provided with one or more racks, e, constructed and applied in combination with the device C, substantially as and for the purposes herein set forth.

6. The device C, constructed as described, with spurs d d, teeth f f, levers or arms h h, and spring k, substantially as and for the purposes herein set forth.

7. The combination of the device C and straps B B, arranged and tightened, substantially as herein set forth.

8. The combination of the plate J, device C, and straps B B, all constructed and arranged substantially as and for the purposes herein set forth.

109,936.—Corn-Planter.—Henry G. Porter, Hopkinton, Iowa.

Claim.—The arrangement of the cylinder A, bung B, brush b, cap C, slide D, guide d, and spring E, substantially as shown and specified, and for the purpose set forth.

109,937.—Halter.—Robert Porter, Ottumwa, Iowa.

Claim.—The slotted castings C, H, and H', constructed as described, and used for connecting the different straps of a halter, substantially as herein set forth.

109,938. — Washing-Machine. — Samuel Post and Henry D. Martin, Ypsilanti, Mich.

Claim.—The construction and combination of the metallic plate A' with the braces or frame K K, segmental gear H and G, shaft E, pinions G' G'', upright shaft H', strap I, rubber M, tub D,

cover F, with frame A B C, and lever J, all as shown and described, and for the purpose set forth.

109,939.—Letter-Box.—Albert Potts, Philadelphia, Pa.

Claim.—1. A letter-box composed of two parts, which are provided with inwardly-projecting ears, and connected by bolts or pins fitted through said ears, substantially as herein shown and described.

2. A letter-box made of spherical form, with a door near the bottom and insertion-slots near the top, substantially as herein shown and described, for the purpose specified.

109,940.—Coke-Furnace.—Thomas Price, Steubenville, assignor to himself and James Cruthers, West Newton, Ohio.

Claim.—1. The cradle E, placed into the coke-furnace to serve as a grate and conveyer for the coal, substantially as herein shown and described.

2. The coke-furnace A, provided with the curved smoke-channels *a a*, as specified.

3. The furnace H, arranged in line with the furnace A, to receive the cradle containing the coke, substantially as herein shown and described.

109,941.—Buckle.—Francis Puetz, Buffalo, N. Y.

Claim.—The buckle A and metal strap B, constructed and arranged as described and operated, as and for the purposes set forth.

109,942.—Apparatus for Cooling Soda-Water and other Liquids.—Alvan Davis Puffer, Boston, Mass.

Claim.—1. An apparatus for cooling liquids, in which the liquid to be cooled is first conducted through pipes immersed in the ice-water accumulating from the ice-meltings before entering the pipes cooled directly by the ice, substantially as herein shown and described.

2. An apparatus for refrigerating liquids, composed of two clusters or coils of cylinders or pipes, one of which receives a reduction of temperature directly from the ice, and the other from the ice-water which results from the melting of said ice, in the manner and operating substantially as herein explained.

109,943.—Wagon-Seat Fastening.—John Calvin Rankin, Mount Vernon, N. Y.

Claim.—The herein-described wagon-seat fastening, composed of the bar *a* provided with the curve *b c d*, and attached to the seat, as shown, to strengthen the same, and the socket E *d'* made with curved projections *e e'*, between which the end of the bar *a* passes and is held, all the parts being constructed and arranged as herein set forth and shown.

109,944.—Marine Engine.—W. B. Reaney, Chester, Pa.

Claim.—1. The arrangement of the air-pump and the supplementary shaft E, its eccentrics F, and crank G, as set forth.

2. A feed-pump, having its barrel arranged partly within the air-pump and its bucket-rod connected to the air-pump bucket-rod, all substantially as described.

109,945.—Corn-Sheller.—George W. Reisinger, Harrisburg, Pa., assignor to William A. Middleton and Eugene Snyder, same place.

Claim.—The within-described corn-sheller, consisting of the sliding jaws E E, provided with the teeth *e e* and hooked projections *d d*, the rubber bands or springs G G, curved foot H, and cap-box A, all constructed and arranged to operate substantially as set forth.

109,946.—Scrubbing-Brush.—Ralph Rockwell and Zora B. Custer, Petroleum Centre, Pa.

Claim.—The brush-stock B held in dovetailed grooves of the board A, and prevented from lateral displacement by the socket D entering the recess *b*, as shown and described.

109,947.—Skirt.—Hugo Schultz, Paris, France.

Claim.—1. A crinoline-skirt, based upon the form or frame made by the metallic wire or band *a*, disposed as described.

2. In combination with the band *a''*, the bands *b f* and *i i i*, for adjusting the set of the crinoline-skirt, as described.

109,948.—Apparatus for Pitching and Coating Barrels, Casks, &c.—Louis Schulze, Baltimore, Md.

Claim.—1. The grate-bars, with the device for cleaning the same, substantially as described.

2. The furnace, with opening or openings so as to remove the cinders or ashes, substantially as described.

3. The combination of the frame A with the grate-bars and device for cleaning the same, substantially as described.

109,949, antedated November 25, 1870.—Wrench.—Eliphalet S. Scripture, Brooklyn, E. D., N. Y.

Claim.—The pawl A, B, and F, the regulating-slip *d i*, and screw E, when combined and applied to the sliding head of a pawl and notch-slide wrench, substantially in the manner and for the purpose set forth.

109,950.—Elevator and Distributer.—Thomas Shanks, Baltimore, Md.

Claim.—The machine herein described, consisting essentially of the base *o*, the column *t*, the platform *s*, arranged at right angles with the lower platform *o* and projecting at one end so as to rest upon the wall of the building, the revolving aprons *m e*, the connecting-gear *n v w k l*, and the operating wheel or drum *a* at the foot of the vertical apron, all constructed and adapted to operate together, for the purposes specified, in the manner substantially as herein described.

109,951, antedated November 28, 1870.—Direct-acting Engine.—Sidney F. Shelbourne, New York, and Charles E. Emery, Brooklyn, N. Y.

Claim.—1. The combination of a main valve, provided with the chamber L, a throttle-valve, *a*, and a valve-seat, provided with the passages or ports F and K, whereby the quantity of steam admitted to one end of the cylinder may be regulated as desired, and independently of that admitted to the other, substantially as herein specified.

2. The combination and arrangement of the valves *a*, *b*, and *c* with each other, the main steam-pipe H, and cylinder ports F and G, substantially as described.

3. The throttle-valve *d*, arranged in passage *f*, and constructed and operating substantially as described.

109,952.—Pocket-Alarm.—Calvin W. Simonds, Boscawen, N. H., assignor to Hollis Towne, same place.

Claim.—1. A pocket-alarm, composed of a case, A, adapted to be attached to the pocket, and a shackle F, for attachment to a pocket-book or other article, the case containing a bell, B, a hammer, D, and mechanism adapted to retain the said shackle from accidental withdrawal, and cause the forcible withdrawal of the same to trip the hammer and sound an alarm, all substantially as herein shown and described, for the purpose specified.

2. In a pocket-alarm, substantially as herein described, the brake E, as and for the purpose set forth.

109,953.—Beveling the Edges of Circular Plates of Metal.—William H. Singer, Pittsburg, Pa.

Claim.—The rolls C C, in combination with the swinging frame F, rotatory disks *e f*, and the lever L, or its equivalent, substantially as described.

109,954.—Alarm-Lock.—Thomas P. Sink, Fairton, N. J.

Claim.—The combination of a double-barrel gun with a door-lock, and with the trigger *c* in contact with the key-hole, as herein described, and for the purpose set forth.

109,955.—Pump.—John B. Sivertson, Chicago, Ill.

Claim.—1. The arrangement upon the plate Q, with relation to each other, of the segmental gear S, internally-toothed rim T, beam W, and the pump-brake, substantially as described.

2. The water-base A, constructed as described, to support the cylinders, and form the case F, containing the valve-chamber H and water-way I, in rear or upon one side of said cylinders, substantially as and for the purpose specified.

3. The valve B', having its packing secured in place by means of the plate *c'*, screw *f''*, and nut *g'*, and hinged to the piston in such a manner as to permit vertical play at the hinge, substantially as described, for the purpose specified.

4. In combination with the case F, the cover L, having the central covered opening, and adapted for removal, in the manner described, to permit access to the valve-chambers H and water-way I, as and for the purpose specified.

109,956.—Wagon for Loading Timber.—Jacob Skeen, Mound City, Ill.

Claim.—1. The fifth-wheel I I', constructed and connected substantially as described and shown, for the purposes set forth.

2. The combination of the tongue J and the fifth-wheel I I', both being constructed and arranged substantially as described and shown, for the purposes set forth.

3. The stakes N, provided with blocks O, and constructed, arranged, and operating substantially as described and shown, for the purposes set forth.

4. The skids R R', provided with plates S and cars t, constructed substantially as described and shown, for the purposes set forth.

5. The means employed in turning the front wheels under the wagon, consisting of the fifth-wheel I I' and the rails D and plates M, the two latter provided with the beveled recess *r*, all constructed and arranged substantially as described and shown.

6. The means employed for changing and regulating the length of the wagon, consisting of the rails D provided with holes *u*, the caps F provided with holes *u'*, the pins *v*, and the hind-axle block C, all constructed and arranged substantially as described and shown.

7. The combination of the plate E, the cap F, the straps G, and the hind-axle block C, all constructed and arranged substantially as described and shown, for the purposes set forth.

109,957.—Sleigh-Brake.—Henry W. Smith, Rainsburg, Pa.

Claim.—1. The spring G, provided with the ratchet H, and attached to the fender or other suitable place on the sleigh, substantially as and for the purposes herein set forth.

2. The spring levers B B, constructed as described, and pivoted at any suitable place to a sleigh, in combination with the brakes C C, hooks *a a*, and arms *b b*, substantially as and for the purposes herein set forth.

3. The combination of the cross rock-shaft D with its arms *d d*, and lever E, with the brakes C C and levers B B, all substantially as set forth.

109,958.—Cork-Screw.—John A. Smith, Brooklyn, N. Y.

Claim.—The combination, with the screw C, of the handle, composed of the revolving part A and the rigidly-attached part or arms B, substantially as herein described.

C P O——60 70

109,959.—Combined High and Low-water Indicator.—Levi F. Smith, Philadelphia, Pa.

Claim.—1. In combination with the hollow casing G, the float N, hollow arm O, hollow journal P, indicator V, lever T, fulcrums *f g*, and whistle-valve *e*, all constructed to operate substantially as set forth.

2. The fulcrums *f* and *g*, arranged within the casing G, and operating with the lever T, substantially as and for the purposes herein set forth.

3. In combination with the casing G, float N, arm O, journal P, and indicator V, lever T, and fulcrum *f g*, the nut R, valve *a*, nut S, and spring *b*, all constructed to operate substantially as set forth.

109,960.—Shifting Shovel-Plow.—Adam Snyder, Packard, Ohio.

Claim.—1. The arrangement of the ring E, internally-notched ring F, stop-piece or catch G, and shovel D, with the standard B, as and for the purpose specified.

2. The arrangement of the forked bar H, lever I, ring J, plow D, rings E and F, with the standard B, substantially as herein shown and described, and for the purpose specified.

109,961.—Box for Packing Bottles.—Joseph Jones Solomon, Philadelphia, Pa.

Claim.—A packing-box for bottles, having a partition with openings for the reception of the bodies of the bottles, and a divided partition with openings for the reception of the necks, substantially as described.

109,962.—Door-Spring.—William H. Stafford, New York, N. Y.

Claim.—The horizontal sliding rod C, spiral spring *b*, curved plate *d*, and roller *e*, (hung in arm *f*,) which projects over upon the inner end of plate *d*, all combined and arranged to operate in the manner described.

109,963.—Direct-acting Engine.—William J. Stevens, New York, N. Y.

Claim.—1. The combination of the auxiliary cylinder, rocking-lever, and main valves of a direct-acting steam-engine, substantially as and for the purpose herein specified.

2. The combination of the regulating-chamber with the auxiliary cylinder, rocking-lever and main valves of the main cylinder in a direct-acting steam-engine, substantially as herein specified.

3. The arrangement of the steam-chest of the auxiliary cylinder, between said auxiliary cylinder and the steam-chest of the main cylinder, substantially as and for the purposes herein specified.

4. The combination of the adjusting-wheel M and swivel *w* with the lever K and connecting-rod *s* and valve O, substantially in the manner and for the purpose herein specified.

109,964.—Drawer-Handle.—Caspar A. Stock, New York, N. Y.

Claim.—The notch D and shoulder *a* of the shank A, combined as described, with the pivoted and cup-ended handle F G, for the purpose specified.

109,965.—End-Gate for Wagons.—Roderick F. Stocking and Calvin P. Greene, Lawn Ridge, Ill.

Claim.—The combination of the hinges *a a*, constructed and arranged as described upon the gates C C and sides of the wagon, with the bolt or fastener *n* and the removable platform D, the whole arranged substantially in the manner and for the purpose as herein shown and set forth.

109,966.—End-Gate for Wagons.—Roderick F. Stocking and Calvin P. Greene, Lawn Ridge, Ill.

Claim.—The combination of the hinges *c c*, constructed and arranged, as described, upon the plat-

form and bottom end of the wagon, with the metallic stripe *d d* and spring-hooks *e e*, the whole arranged substantially in the manner and for the purpose as herein shown and set forth.

109,967.—HORSE-POWER.—Lorenzo P. Teed, Mechanicsburg, Pa.

Claim.—1. The levers or sweeps K L, and brace-rods O, constructed and arranged in connection with each other and with the wheel or drum to which they are attached, substantially as herein shown and described, and for the purpose set forth.

2. The hooked bars T, in combination with notched bands U attached to the outer ends of the hubs of the wheels A D, and the staples *b'* attached to the rear axle B to receive and hold the stakes V V', substantially as herein shown and described.

3. The frame E that sustains the power with the axles B C, in combination with the staple G, king-bolt H, and lever-nut I, with the forward axle C and the frame E, substantially as herein shown and described, and for the purpose set forth.

4. The rotary seat R, in combination with the spindle S, about which the levers or sweeps K L revolve, substantially as herein shown and described, and for the purpose set forth.

109,968. — STOVE-GRATE. — John Merritt Thatcher, Bergen, N. J.

Claim.—1. The concavo-convex grate G, adapted to a stove or heater, and arranged to be operated substantially in the manner described.

2. The said grate or semi-sphere G, in combination with a movable or fixed outer grate, F.

3. The said grate G, so hung to a movable outer grate that both can be operated by a single crank or key, substantially in the manner described.

109,969.—COAL-SCREEN.—Edward Thomas, Shickshinny, Pa.

Claim.—1. A coal-screen, made in successive steps, each step divided by tapering spaces into bars tapering in the opposite direction, substantially as specified.

2. A coal-screen, composed of a succession of alternating T-shaped bars and downwardly-flaring spaces, arranged in steps, and separated by offsets *c*, substantially as shown and described.

109,970.—BURGLAR-ALARM.—James Harry Thorp, New York, N. Y.

Claim.—The keeper D, slotted and grooved as described, in combination with the grooved sliding plate *a* and wire *b*, said wire connecting with a burglar-alarm, substantially as and for the purposes herein set forth.

109,971.—ALARM-ATTACHMENT.—James H. Thorp, New York, N. Y.

Claim.—The combination of the enlarged keeper or nose C with cross-slot F, hinged lever G with angles *x y z*, and the door-bolt B, all constructed and operating substantially as set forth.

109,972.—WATER-WHEEL.—Josiah Turner, and Stephen Woodward, Sunapee, N. H.

Claim.—The endless chain and buckets, flaring laterally, each of which buckets has, at its open end, a transverse segmental spout, resembling a hood, when the bucket is upright, in combination with the discharge-table, substantially as herein set forth.

109,973.—CLEVIS FOR SLED.—John Van Antwerp, Cleveland, Minn.

Claim.—The clevis A, jointed as at *a a*, in combination with a key B, fitted to lock and unlock its opening and closing arms or portions *b b*, substantially as specified.

109,974.—POTATO-DIGGER.—Nicholas Vandenburgh, Schuylerville, N. Y.

Claim.—1. In combination with the perforated cylinder I with its heads H H, the rakes *e f*, slots *d*, rods A, and cams J K, all constructed and operating substantially as set forth.

2. The bonnet L, with its flanges *m m* and the extensions M M, in combination with the cylinder I with its rakes and heads, and the cam-boards E E, all substantially as set forth.

3. In combination with a potato-digger, the scraper O and oscillating rake-teeth *n n*, constructed and arranged substantially as and for the purposes herein set forth.

109,975. — FIRE-EXTINGUISHER. — William P. Van Deursen, Cincinnati, Ohio.

Claim.—1. In the described connection with the gas-generating chamber A, the acid-chamber F, substantially of the form described, when constructed to be opened at the upper end from the outside and top of the chamber A, and at the lower or discharging-end from the side of the chamber, as described, and for the purpose specified.

2. The acid-chamber F, when constructed of lead, and fitted with lead-lined cap H J and lead-discharging valve I, as described, and for the purpose specified.

3. In the described combination with the acid-chamber F and valve I K, the sleeve L, as and for the purpose described.

4. The chamber A B C D E, acid-chamber F H, valve I K, and sleeve L, combined and arranged substantially in the manner and for the purpose specified.

109,976.—FIRE-EXTINGUISHER.—Jacob B. Van Dype, Covington, Ky.

Claim.—1. The cartridge, consisting of the case or cup B, provided with the center tube D and external tubes *b b*, constructed and arranged in combination with the acid bottles H H, in the manner and for the purpose herein set forth and described.

2. The cartridge-cap C, provided with the tubular screw-extensions *c' c''*, the upper portion of the extension *c''* being beveled on its interior, so as to form the packing-chamber *m*, and provided with the screw-cap M, all arranged and operating as herein set forth and for the purpose described.

3. In combination with the cap C, the screw-plunger E, constructed and arranged as herein shown, for the purpose of operating the stoppers of the acid bottles by means of the stirrup F and thumb-screw *e*, in the manner described.

4. The acid-proof stoppers G, consisting of the lead shells J, screw-bolts *j*, and rubber plugs or cores K, connected and operating with the stirrup F, in the manner and for the purpose herein set forth and described.

5. The convex top *a* of the reservoir A, that it may serve as a funnel, to assist in filling the same and admit of the apparatus being stood on its head to protect the cartridge from being disturbed, as herein shown.

109,977.—CARRIAGE-WHEEL LUBRICATOR.—Samuel S. Vollum and William H. Green, New York, N. Y.

Claim.—The combination of solid cap D, solid dist C, cup A, and pipe B, each constructed and relatively arranged as and for the purpose specified.

109,978.—MACHINE FOR POLISHING COFFEE.—Charles C. Warren and James B. Baldy, Toledo, Ohio.

Claim.—1. The combination of cylinders B C, rotated in the same direction, with coffee-bags placed on and in the interval between the exterior surfaces of said cylinders, as and for the purpose described.

2. The combination, with the surface-working cylinders B C and coffee-bags resting in the intervals between them, of the frame D *h*, to prevent any undue lateral movement of the bags, as described.

3. In combination with the textile cylinder containing the coffee to be cleaned, the plates *d*, constructed as described, and applied as shown, for the purpose specified.

4. The coffee-cleaning and polishing apparatus herein described, consisting of the frames A and D, the textile cylinders, cross-bars *b*, rollers B and C, belt *e*, and pulleys *f g*, constructed and arranged to operate substantially as described.

109,979.—TWINE-HOLDER.—Rodolphus L. Webb, New Britain, Conn.

Claim.—The combination, with the divisions A B of a twine-holder, of the hooked lugs C with the slotted inclined ears D, substantially as described.

109,980.—STEAM-PUMP.—George M. Weinman, Columbus, Ohio.

Claim.—1. The hollow piston-head E, provided with lugs *h h* and ports *k k* and *n n*, substantially as and for the purposes herein set forth.

2. In combination with the hollow piston-head E, constructed as described, the square piston-rod G, substantially as and for the purposes herein set forth.

3. The combination of the steam-cylinder A and steam-chest B, when provided with steam-channels *c c'* for operating the piston, and channels *m m* for exhausting the valve, substantially as herein set forth.

4. The hollow valve C, provided with steam-inlet *b*, channels *i i*, ports *d d'*, and passage *f*, and operating within the steam-chest B, substantially as and for the purposes herein set forth.

5. The combination of the cylinder A, steam-chest B, hollow valve C, with steam-inlet *b*, channels *i*, ports *d d'* and passage *f*, the channels *c c'* and *m m*, hollow piston-head E with lugs *h h*, ports *k k* and *n n*, and the main exhaust D, all constructed and arranged to operate substantially as and for the purposes herein set forth.

109,981.—LANDAULET CARRIAGE.—Edward Wells, New Haven, Conn.

Claim.—1. The top, consisting of the two parts E F hinged together, and the part E hinged to the door-post, so that the said parts and post fold together, substantially in the manner described.

2. In combination with the folding top E F and the post C, the front posts D D, constructed and arranged to fold down across the front, substantially in the manner set forth.

109,982. — MODE OF SETTING TIRES ON WHEELS.—Aaron O. Wheeler, St. Augustine Depot, Ill.

Claim.—The combination, with an ordinary divided nut and conical screw, of a plate, C, beveled internally, and thickened toward the center, to clasp the ends and under side only of the felly, and to form a strong and secure joint, which will not yield to lateral torsion or allow the wheel to be twisted out of a true vertical plane.

109,983, antedated November 26, 1870.—FRUIT-BASKET.—George H. White, Huntington, N. Y.

Claim.—The basket made of strips A, strengthened at top by the wooden hoop C, and bound over the top and hoop by the metal strip F, as described.

109,984.—CANAL WASTE-WAY AND SLUICE-GATE.—Andrew Jackson Whitney, Harrisburg, Pa.

Claim.—In combination with the segmental gate C and radial arms C' C', or their equivalents, the center pins E E, guides or ways D D, and adjusting-screws F F, substantially as herein described.

109,985. — COMBINED GRAIN HARVESTER AND BINDER.—John H. Whitney, Rochester, Minn.

Claim.—1. The rake R, provided with the arm *p*, arranged to work in the guide *h'*, extending around the rear end of the track of the rake, said guide being located, in relation to the wheel F, substantially as described, whereby the rake is feathered, and caused to rise vertically, or nearly so, until it is lifted clear of the grain, substantially as set forth.

2. In combination with the gatherer G, the hinged plates L, arranged to operate substantially as described.

3. The combination of the compresser *f* with the gatherer G, constructed and operating substantially as described.

4. In combination with the platform I having an opening for the wire-carrier Q, the hinged or yielding plate N, with its operating spring *u'*, arranged to operate as set forth.

5. In combination with the yielding plate N, the pin *t*, or its equivalent, for guiding the wire to the twister, as described.

6. The wheel *v*, in combination with the plate *u*, arranged in relation to the twister, substantially as described, for holding the wire, as set forth.

7. The combination of the pivoted levers *p'* and *t*, connected by the rod *r'*, with the knife *x* and pawl *w* arranged to be operated by the cam on wheel *v*, substantially as described.

109,986.—BEE-HIVE.—Robert A. Williams, Colusa, Cal.

Claim.—The hopper C, in combination with the removable shoe D, channeled or grooved as described, for the purpose of protecting the entrance from the inroads of moth, substantially as above described.

109,987.—MACHINE FOR POINTING NAILS.—Harry A. Wills, Vergennes, Vt., assignor to National Horse-Nail Company, same place.

Claim.—1. The rotary frame C, provided with cams *e e i i* and arms *l l*, in combination with the gauge-clamp and hammers of a nail-pointing machine, substantially as herein shown and described.

2. The gauge F, secured to a rock-shaft, G, and combined with the cams *e e* on the rotary frame C, and with the spring *f*, to operate substantially as herein shown and described, gauging from the point, as specified.

3. The clamp H, arranged on the arm I, in the manner described, and combined with the gauge F and hammers J, substantially as specified.

109,988. — HOISTING-MACHINE. — Nicolaus Wonlarlarsky, St. Petersburg, Russia.

Claim.—1. The beam *d*, suspended from a tripod, *a*, guy-ropes *r*, carriage *k*, and lifting-tackle *t s*, substantially as and for the purpose set forth.

2. The beam *d*, formed with two cheeks upon the bar a certain distance apart, connected by the yoke *g* with suspension-hooks *e*, through which the carriage *k* passes, substantially as set forth.

3. In combination with solid beam suspended from a tripod of a carriage, the wheels of which are connected by a stirrup partly encompassing the beam, substantially as and for the purpose set forth.

4. The apparatus for lowering, hoisting, and transporting, substantially as herein shown and described.

109,989.—WATCH-CASE.—Alfred A. Wood, Charlotte, Mich.

Claim.—The combination of the stud-pin *c*, or its equivalent, and the stay-spring *b*, with the catch-spring *a* of a watch-case, substantially as specified.

109,990.—COMPOUND FOR TREATING MALT LIQUORS.—William Zinsser, New York, N. Y.

Claim.—A compound for treating malt liquors, made of the ingredients herein specified, and mixed together substantially in the manner set forth.

109,991. — MANUFACTURE OF SUGAR OR SIRUP FROM SWEET POTATOES.—Charles Delamarre, New Orleans, La., assignor to himself, John A. Thurber, and Robert R. Benson, same place.

Claim.—1. Sweet potatoes, for the making there-

from of sugar or sirup, by means of malted barley, as described and specified.

2. The process by which saccharine is extracted from sweet potatoes and converted into sugar or sirup, as described and specified, or any other process substantially the same.

109,992.—AQUATIC TOY.—Amos W. Hart, Washington, D. C., assignor to himself and William M. Tileston, same place.

Claim.—1. The combination, with a toy representing an aquatic bird, of a steering or guiding-plate, *f*, attached thereto at its front end, substantially as shown and described.

2. The combination, in a toy representing an aquatic bird, of the legs *b b*, crank-shaft *c*, and train of wheels A B, substantially as shown and described, and for the purpose specified.

3. The combination, in a toy representing an aquatic bird, of the legs *b b* and train of wheels A B with the train *g p*, crank-shaft *c*, and compressible air-reservoir *k*, substantially as and for the purpose specified.

4. The combination, in a toy representing an aquatic bird, of a rubber tube, or other membrane impervious to water, with the flange *e* and leg *b*, substantially as and for the purpose specified.

REISSUES.

4,192.—MANUFACTURE OF PLATED METAL BRACELET.—John Barclay, Bergen, N. J.—Patent No. 94,064, dated August 24, 1869.

Claim.—The improved manufacture or bracelet, as made with the turned parts or beads E E, arranged with respect to the plates C D, in the manner substantially as represented and described.

4,193.—SLEEPING-COLLAR.—Levi Dederick, New York, N. Y.—Patent No. 103,026, dated May 17, 1870.

Claim.—1. The sleeping-collar A, as described, and for the purpose set forth.

2. In combination with the sleeping-collar, the separate, adjustable, and looped straps B B', substantially as described, for the purposes set forth.

4,194.—HARVESTER-RAKE.—Hiram H. Scoville, Oakland, Cal., assignor of one-half interest to Joseph A. Scoville.—Patent No. 23,513, dated April 12, 1859.

Claim.—1. The stationary cam F, on or in which the rear end of the lever H operates, for directing the movement of the rake K in combination with the crank E, these parts being constructed substantially as described, and operating as and for the purposes set forth.

2. The combination of cam F, crank E, standard I, and rake-lever H, with rake attached, constructed, and operating substantially in the manner and for the purposes set forth.

4,195.—TREENAIL.—Nathaniel L. Tomlinson, Mystic Bridge, Conn.—Patent No. 78,554, dated June 2, 1868.

Claim.—A treenail, made in sections of varying diameters, substantially as herein shown and described.

DESIGNS.

4,501.—LAMP-CHIMNEY CLEANER.—Emeline T. Annis, Mount Morris, N. Y.

Claim.—The design for a lamp-chimney cleaner, as shown.

4,502.—DRAWER-PULL.—Nelson Merriam, West Meriden, Conn.

Claim.—The design for drawer-pull herein described, consisting of the peculiar-shaped connection between the head and socket, as herein described, and shown in the accompanying illustration.

TRADE MARKS.

83.—CHOPPING-AX.—Bostticher, Kellogg & Co., Evansville, Ind.

84.—UMBRELLA AND PARASOL.—Dawes, Fiske & Fanning, New York, N. Y.

85.—TOILET-SOAP.—Deniker & Melville, New York, N. Y.

86.—BROOM.—Richard W. English, Buffalo, N. Y.

87.—XXX BROOM.—Richard W. English, Buffalo, N. Y.

88.—XX BROOM.—Richard W. English, Buffalo, N. Y.

89.—WHISKY.—Frieberg & Workum, Cincinnati, Ohio.

90.—WHISKY.—C. P. Moorman & Co., Louisville, Ky.

91.—CORN-PLANTER.—Popo & Baldwin, Quincy, Ill.

92.—CIGAR.—Rawson & Philbrick, Key West, Fla.

93.—LINIMENT.—Ridenour, Coblentz & Co., Springfield, Ohio.

94.—UMBRELLA AND PARASOL.—James T. Smith, New York, N. Y.

95.—BAKING-POWDER.—Thompson & Steele, Chicago, Ill.

EXTENSIONS.

GEORGE C. TODD, of Lynn, Mass.—Letters Patent No. 16,128, dated November 25, 1856.

"Improvement in Edge-Keys."

Claim.—A turned or circular edge-key, constructed substantially as described, and for the objects specified.

JONATHAN P. GROSVENOR, of Lowell, Mass. Letters Patent No. 16,144, dated December 2, 1856.

"Improved Method of Clamping Cutters in the Cutter-Heads for Planing-Machines."

Claim.—Connecting the collars with each other or with the core-blocks, by means of tongues and grooves, in the manner substantially as described, for the purpose set forth.

ISSUE OF DECEMBER 13.

PATENTS.

109,993.—CARRIAGE-SPRING.—David S. Abbott, Ischua, N. Y.

Claim.—In combination with a carriage or wagon-body, a sulky, or seat, the bar D (either with or without the braces E) and the spring J, when the same are combined and arranged to operate substantially as and for the purposes herein shown and described.

109,994.—PUMP-PISTON.—Joseph D. Alvord, Bridgeport, Conn., assignor to James Wilson, same place.

Claim.—A double-acting pump-piston, provided with valve B B' and passages C, D, and D', so arranged that the said valves are caused to open alternately in the same direction regardless of the direction in which the piston may be traveling, substantially as specified.

109,995.—HOLDER FOR SILK, &c.—Benjamin A. Armstrong, Jersey City, N. J., assignor to himself, James P. Brainerd, New Haven, Conn., and Leonard O. Smith, Philadelphia, Pa.

Claim.—The quill A, and wire B or its equivalent, arranged substantially as and for the purposes herein set forth.

109,996.—SAFETY-VALVE.—Jasper Armstrong, Brookfield, Mo.

Claim.—The valve A, spring E, stem B, yoke M, casing G, cylinder O, and regulating-nut N, arranged and operating substantially as and for the purposes described.

109,997.—BRICK-MACHINE.—James M. Austin, Georgetown, Mo., assignor to Isaac Turner, same place.

Claim.—1. The combination of the press-follower, the operating wheels F of the carriage, pins H, slotted plates G, levers K, and connecting-rods M, substantially as specified.

2. The combination with the mold-box and pressing-case of the grate-bars or plate P, and the detachable plates T, the said plates having the holes arranged in the order substantially as specified.

109,998.—CAT-HEAD ANCHOR-STOPPER.—William Henry Barker, Windsor, Nova Scotia.

Claim.—The novel combination of the box A, the cap C, (working on the hinge made by knob K,) the projection E, and the pin G, the lever N, secured to box A by screw-bolt M, and the pin R fitting into the hole D, all working together substantially in the manner and for the purposes described.

109,999.—SHOVEL-PLOW.—Isaac A. Benedict, West Springfield, Pa.

Claim.—The combination, with a pair of wings, D D, of arms E E pivoted to the foot of brace B' turning upwardly in an arc-slot upon the top bolts F F, and slotted at G G to allow the bolts H H to slide thereon, to lift, expand, and contract said wings, all as described.

110,000.—LET-OFF AND TENSION MECHANISM FOR POWER-LOOMS.—Erastus Brigham Bigelow, Boston, Mass.

Claim.—1. The combination, with a whip-roll and a lever-arm co-operating together as described, to increase the tension on the warps at the beat of the lay and diminish their tension when the shed is formed, of an adjustable spring connected with the lever-arm, to increase or diminish the operative force of the arm, independently of its movement.

2. The combination, with a vibrator and spring, constructed and arranged as above described, whereby the tension on the warps is increased to withstand the beating-up of the cloth and diminish when the shed is made, of a let-off mechanism, substantially as described, for delivering out the warps, the action of this let-off being determined by said vibrator and spring arrangement at the time the lay beats up the cloth.

110,001.—CARPENTER'S VISE.—George F. Bissell, Oneonta, N. Y.

Claim.—1. The coiled spring E, in combination with the ends of the braces B B', substantially as and for the purpose described.

2. The joint *b c*, constructed in the two braces B and B', substantially as and for the purpose described.

3. The combination of the spring E, braces B B', and friction rollers D D, with the jaws of a vise, substantially as and for the purpose described.

110,002.—SELF-LUBRICATING AXLE.—George P. Blaisdell, North Easton, Mass.

Claim.—The combination of screw-plug E, provided with vent or channel F, annular reservoir C, and wick D, all arranged and operated substantially as described.

110,003.—STEAM-HEATER.—Edward Bourne, Pittsburg, Pa.

Claim.—Such a construction, combination, and arrangement of parts constituting a low-pressure steam apparatus for warming buildings as that the opening and closing of the air-vents of the radiators will be done automatically, that is, by the rising and falling of a hydrostatic column, actuated by the fluctuating or varying pressure of steam in the generator.

110,004.—CLEANER AND GRINDER FOR CARDING-MACHINES.—Leander W. Boynton, Hartford, Conn.

Claim.—The arrangement, on the same shaft or sleeve, and for operation by the same devices, of the card-cleaner and grinder, made interchangeable as regards their action on the cylinder of the engine, substantially as specified.

110,005.—GAS-LAMP.—J. Hamilton Brown, New York, assignor to himself and Charles E. Ball, Jamaica, N. Y.

Claim.—1. The non-conducting partition J, in combination with the space H, substantially as and for the purposes set forth.

2. The arrangement of the valves E and F with the pipe D and chamber A, substantially as herein shown and described.

3. The pipes G and I, for the purpose of admitting air into the oil-chamber, in combination with the heating space H, substantially as shown and described.

110,006.—ADJUSTABLE SHACKLE FOR CARRIAGE-SPRINGS.—John Bullard, North Hyde Park, Vt.

Claim.—An adjustable shackle for carriage-springs, constructed and applied substantially as herein described.

110,007.—TOOL-CHEST.—George F. Card, Piper City, Ill.

Claim.—1. A tool-chest, provided with a cover formed of the parts B B' D I, and the seat G H, combined and arranged substantially as specified.

2. In combination with the parts B B' D I, and seat G H, the clamp-support K, clamp L M, cord P, and treadle, all substantially as specified.

110,008.—EXHAUST-VALVE.—William A. Carns, Malden, Mass.

Claim.—1. The arrangement of the valve F on the tube G, supported and guided by the spindle I, and operating in the chamber A, substantially as and for the purposes described.

2. The cone H on the valve-tube G, by means of which the exhaust-nozzle is closed as the valve rises, substantially as and for the purposes described.

110,009.—WATER-WHEEL.—Daniel W. Case, Garden City, Minn.

Claim.—1. The arrangement of the buckets with the central discharges S and the vertical discharge T, all substantially as specified.

2. The wheel-shaft, the extension A of the wheel-case, the inverted conical seat or cavity B, and the blocks F and screw-plug D, all arranged substantially as specified.

110,010.—Stamping-Mill or Crusher.—George F. Case, Windsor, Vt., assignor to himself and Milan C. Bullock, same place.

Claim.—The within-described stamping or crushing-machine, having the stamper M operated from a crank, C', through elastic connections, G^1 G^2, or their equivalents, substantially as and for the purposes herein set forth.

110,011.—Hay and Cotton-Press.—Nathan Chapman, Hopedale, Mass.

Claim.—1. The levers H, provided with pulleys I and I', when so arranged that the follower is raised, lifted out, and moved off from the top of the box by operating the ropes J, substantially as described.

2. The combination of the props h and h' with the gripes b and b', substantially as and for the purposes specified.

110,012. — Woven Fringed Fabric. — Peter Cocker, Philadelphia, Pa., assignor to himself and William L. McBride, same place.

Claim.—A woven textile fabric, having an independent fringe woven on and to it during the process of weaving, as above described.

110,013.—Table.—George J. Congle, Chippewa Falls, Wis.

Claim.—The grooved castings E, plates F G J, and hook-hinges I, combined as described, with legs B, rails C, and leaves D, for the purpose specified.

110,014.—Corn-Cutter.—Henry V. Corbett, Allendale, Mich., assignor to George W. Amigh, same place.

Claim.—A knife for cutting corn-stalks, adapted to be applied to and operated by the foot, substantially as described, for the purpose specified.

110,015.—Feed-Regulator. — William T. H. Daniels, Bellville, Ohio.

Claim.—The oscillating feed-board C, operated by the spring E or its equivalent, in combination with the box or hopper A, substantially as set forth.

110,016.—Alarm Attachment for Clocks. Joseph H. Davis, Chillicothe, Mo.

Claim.—The wire link D provided with the hook-shaped arm c, which supports it on the tube B, for the purpose of connecting the clock mechanism with the alarm attachment, as set forth.

110,017.—Coffee-Roaster.—Noah Davis, Boston, Mass.

Claim.—1. The arrangement and combination of the series of foraminous vapor-receiving and eduction-chambers A with the outer casing G and heads C C of the drum.

2. The combination and arrangement of the series of steatite plates or bars E with the series of foraminous vapor-receiving and eduction-chambers A, the outer casing G, and heads C C of the drums, all being substantially as described.

3. The combination and arrangement of the flanges e with the series of vapor-receiving and eduction-chambers A, the outer casing G, and heads C C of the drum, as set forth.

4. The arrangement and combination of the dotted plates e and the rings f f with the coffee-roasting drum.

5. A coffee-roasting drum, as made of iron, coated with a plating of silver arranged on its inner surface, or such part or parts thereof as, while the drum may be in use, may be exposed to the acid evolved from the coffee.

110,018.—Inking Apparatus for Printing-Presses. — Fred. Otto Degener, Brooklyn, E. D., N. Y.

Claim.—1. An ink-distributing table or surface of or for a printing-press, having a reciprocating intermittent rotary motion, substantially as specified.

2. The combination, with the ink-distributing table A, of the ratchet-wheel B, the pitman C, the toothed sector D, and the pinion E, essentially as shown and described, and for the purpose or purposes herein set forth.

110,019.—Land-Roller.—George C. Dolph, West Andover, Ohio.

Claim.—1. The supports F F, constructed and operated as described.

2. The combination of the roller R, the supports F F, the catch S, and the tongue B, when constructed as described, for the purposes set forth.

110,020.—Hinge.—Rudolf Drahota, Philadelphia, Pa.

Claim.—A hinge, consisting of the leaf A' having a hollow spiral projection, a, the leaf A, and the pin b, with its spiral projection a' adapted to the projection on the leaf A', and connected to the leaf A, as specified.

110,021. — Trumpet for Spinning-Machines. — George Draper, Hopedale, Mass.

Claim. — The silver-trumpet, as constructed in two parts, A B, provided with the guides b b d d and the means of connection and adjustment, all substantially as specified and represented.

110,022. — Rotary Engine. — Richard Dudgeon, New York, N. Y.

Claim.—1. The combination, substantially as before set forth, of two cog-wheels, the cheek-pieces, and the entry-port, arranged to admit steam, as described.

2. The combination, substantially as before set forth, of the two cog-wheels, the cheek pieces, and two ports, arranged as described.

3. The combination, substantially as before set forth, of the two cog-wheels, the cheek-pieces, the entry-port, and the exterior casing.

110,023.—Machine for Mixing the Materials to form Artificial Stone, &c. Josiah S. Elliott, Boston, Mass., assignor to "The Union Stone Company," same place.

Claim.—1. The slotted diaphragm, which divides the cylinder into two or more parts, constructed substantially as and for the purposes described.

2. The knives, made in two parts, of socket and blade, substantially as and for the purposes described.

3. The spiral spring, substantially as and for the purposes described.

110,024. — Breech-loading Fire-Arms.—William H. Elliot, New York, N. Y.

Claim.—1. The combination of mechanism herein described, or its equivalent, whereby the breech-block is forced back and forth to open and close the chamber by the alternate backward movements of the hammer, as set forth.

2. The combination of the double pawl e and e' with a hammer and breech-block, for the purpose of opening and closing the chamber, substantially in the manner described.

3. The combination of pawl e with the hammer and breech-block, when operated by spring l, or its equivalent, to open the chamber at each alternate backward movement of the hammer, as specified.

4. The combination of pawl e' with the hammer and breech-block, when operated by spring l, or its equivalent, to close the chamber at each alternate backward movement of the hammer, as set forth.

5. The combination of spring l, pawls e and e', hammer d, with its catches s and s', when said spring operates to throw said pawl back and forth from one catch to the other, substantially as specified.

6. The combination of spring l with pawl e and e', and breech-block b, when said spring serves the double purpose of operating the pawl and holding the breech-block in position, substantially as specified.

7. The combination of parts herein described, or their equivalents, whereby the backward sweep of the hammer for opening the chamber is extended beyond the points at which the next backward sweep begins for closing the chamber, as set forth.

8. The catches s and s', when arranged as specified in relation to the center around which they move during the manipulation of the arm, as herein set forth.

9. The combination and relative arrangement of parts, by which each alternate backward movement of the hammer is limited to less than full-cock in its movement for opening the chamber, substantially as described.

110,025.—Medical Compounds and Apparatus for Making the Same.—Peter Fahrney, Chicago, Ill.

Claim.—1. The medical compound, composed of the ingredients and prepared by the process, substantially as herein described.

2. The percolators, each constructed as described, of the cylindrical vessel provided with the main bottom D, perforated false bottom E, short tube F, and siphon H, as herein set forth and shown, for the purpose specified.

3. The medicine composed of the ingredients herein described, producing a combined alterative and cathartic, in the form of a fluid extract.

110,026.—Door-Stop.—William H. Fahrney, Rockford, Ill., assignor to himself and John Donaldson, same place.

Claim.—1. Securing spring detent K to stop C, by means of ferrule N, substantially as hereinbefore shown and described.

2. The ferrule N, with slotted projections P P to receive the screws s s, as and for the purpose herebefore shown and described.

110,027. — Manufacture of Paints. — Frederick W. Gerdes, Allegheny City, Pa.

Claim.—1. Argillite or argillaceous slate, in combination with white lead or oxide of zinc, in the manufacture of paints, substantially as set forth.

2. The combination of argillite or argillaceous slate, Prussian blue or other equivalent blue pigment, white lead or zinc-white, and linseed-oil, so as to form a blue paint for oil-casks and other articles, substantially as set forth.

110,028.—Pipe-Coupling.—George C. Germain, Cuyahoga Falls, Ohio.

Claim.—The application of a canvas wrapping C, saturated in some adhesive water repellant, to the sections A B of an iron or clay pipe, for the purpose of forming a tight joint, as described.

110,029.—Machine for Mixing "Batch" for Glass.—William T. Gillinder, Philadelphia, Pa.

Claim.—The combined arrangement of the case B, shaft A, and their respective attachments, b'' and c', constructed and operating together, substantially as and for the purpose hereinbefore set forth and described.

110,030.—Mode of Attaching Boot and Shoe-Heels.—Benjamin Giroux, Chicago, Ill.

Claim.—The central plate E, in combination with the central boss C, braces D, metallic rim B, and the fastening screws g, substantially as described, for the purpose specified.

110,031.—Hand-Stamp.—Edward S. Goodman, New Orleans, La.

Claim.—The shoulders and notched plates K N, elastic bed R, flanged ring S T, and anvil U, when all are combined, constructed, and arranged, as and for the purpose described.

110,032.—Tympan-Sheet for Printing-Presses.—John Gorman, Portland, Me.

Claim.—The process of saturating or smearing the tympan sheet with any oleaginous or greasy substance, when prepared as described, if required for the purpose of preventing blurring and offsetting, as set forth.

110,033. — Washing-Machine. — Dewitt Clinton Harlow, Hannibal, Mo.

Claim.—The heads A B, cylinder C, bed D, concave E, shaft I, gear-wheels H and J, and spring K, arranged to operate substantially as and for the purposes herein shown and described.

110,034.—Device for Driving Sewing-Machines.—Abraham W. Harris, Providence, R. I.

Claim.—1. A pawl, in combination with a loose band-wheel, E, and the crank-shaft A and treadle, the whole arranged and operating in the manner substantially as described.

2. The combination of the elastic rolls N with the band E' and the driver J.

110,035.—Piston-Rod Packing.—William Hartley, Rockford, Ill.

Claim.—The combination, with the packing-cylinder C and piston-rod, of the sectional metallic rings D, E, and F, and the springs S and T, all substantially as specified.

110,036.—Nautical Alarm.—John F. Haskins, Fitchburg, Mass.

Claim.—Combined in portable form, a reservoir, an air-pump located within said reservoir, a vibrator, and means for controlling the passage between it and the reservoir, arranged as shown, and for the purpose set forth.

110,037.—Mode of Attaching Composition Heels to Boots and Shoes.—Charles H. Helms, Poughkeepsie, N. Y.

Claim.—The heel A, arranged as described with the dovetail block B, the latter being molded into the former so as to be immovable therein, and afford a firm-bearing surface to the sole without the intervention of rubber, while presenting a material that readily holds nails, screws, or other fastening device.

110,038.—Core for Castings.—John Herald, Unadilla, N. Y.

Claim.—The metallic sand-holder B, arranged for application between the hook and shank of a hook-shaped plate or article to be cast, substantially as herein shown and described.

110,039, antedated December 1, 1870.—Culinary Vessel.—Richard M. Hermance, Troy, N. Y.

Claim.—1. The tube D, with perforated plate E and rim G, substantially as and for the purposes herein set forth.

2. The combination of the kettle A with its central tube C, loose tube D, plate E, and rim G, all substantially as and for the purposes herein set forth.

110,040. — Lubricator.—Milan Hinman, West Stockbridge, Mass., assignor to himself and Robert M. Stone, Des Moines, Iowa.

Claim.—The oil-cup G, oil-reservoir B, pipes C D, and stop-cocks E F H I, combined as described, with the steam-pipe A, to furnish a small and absolutely steady stream of oil

110,041.—Semi-rotary Valve.—Josephus F. Holloway, Cleveland, Ohio.

Claim.—1. The combination of the bolt or connecting-bar F, in connection with the sleeve G, and the nuts J and K on either side of the flexible plate H, substantially as and for the purpose herein before set forth.

2. The combination of the flexible plate H, in connection with the connecting-bar F and the loose sleeve G, substantially as described, and for the purposes set forth.

110,042. — Refining and Decolorizing Sirups and other Liquids, and Material for the same.—Duane Hull, Brooklyn, N. Y.

Claim.—1. The process herein described, for purifying sirups, spirits, oils, and other liquids, consisting in treating them with carbonized iron-ore prepared and used substantially as herein set forth.

2. The new composition herein described, called carbonized iron-ore, produced by treating iron-ore by means of any suitable carbonizing material, and then cooling, granulating, and preparing the same so as to be used for filtering and purifying sirups and other liquids, as set forth.

110,043. — Burglar-Alarm.—Marshall J. Hunt, Rising Sun, Md.

Claim.—1. In combination with the spring-trigger D, the plug *m*, for making a connection between said trigger and the outer door G, and so as to set and let off said trigger by the closing and opening of said door, substantially as described.

2. In combination with the trigger, door, and plug, the sleeve *n* around said plug, to prevent the latter from being reached and held from the exterior of the door should it be bored for that purpose, substantially as described.

3. In combination with a spring-trigger set and let-off, as herein described, the hinged-lever E, and the escape-levers *e f* resting thereon, for the purpose of letting off by one operation two alarms remote from each other, as and for the purpose described and represented.

110,044.—Steam-Jet Boiler-Tube Cleaner.—Roland C. Hussey, Milford, assignor to himself and Augustus O. Corbett, Boston, Mass.

Claim.—The combination of the tube D B with the central piece A A′, and the spiral *a a¹ a²*, arranged substantially as described, and for the purpose set forth.

110,045.—Tuck-creasing Attachment for Sewing-Machines. — John C. Jensen, Chicago, Ill.

Claim.—The spring marker-arm E, constructed as described, and attached to the base B, the said arm being made rigid at its outer end and having secured to such rigid portion the two inclined spring fingers F, when combined with the spring arm G operated by the needle-arm or bar, and having the lateral projection thereon bearing on the outer and rigid portion of the arm F, which bends near its center, and thereby causes the outer finger F to first bear on and move the cloth against the inner spring finger, thereby effectually preventing deflection of the cloth from the guiding-edge, as herein set forth and shown.

110,046.—Cultivator.—Freeman C. Jewell, Rahway, N. J.

Claim.—1. A cultivator-frame, formed of the bars B and upwardly-curved cross-bars A, the arms C D E, and rods F, when constructed and adjusted together as described.

2. The beams G, slotted bars H, and the plow-standards, combined with a vibratory frame A B C D E F, to adjust the pitch of the plows, as described.

3. The slotted and bent plow-beams, having their rear slotted parts thickened or flanged, in combination with the rods F, slotted bars H, and the standards of the plows I, substantially as herein shown and described, and for the purpose set forth.

4. The upper ends of the standards of the plows I, constructed substantially as herein shown and described, to adapt them for attachment to the slotted beams G, substantially as herein shown and described, and for the purpose set forth.

5. The arms D E F, crank-arms J, bowed axle K, lever L, bar M, and catch N *n¹ n²*, when all are combined and adjusted together, as and for the purpose described.

110,047.—Churn.—John W. Jordan, Lexington, Va.

Claim.—A churn-dasher, consisting of the lazy-tongs frames B, provided with the perforated boards and connected to the cage and working-rod, substantially as specified.

110,048.—Printing-Ink.—Julius Kircher, Cannstadt, near Stuttgart, Würtemburg.

Claim.—A compound, formed of ten parts of peroxide and six parts of protoxide of iron, prepared as specified, and applied in a solution of varnish to form printing-ink.

110,049.—Glassware and Metal Stem-connection. — Charles Louis Knecht, St. Clair, and Thomas Adams, Stow township, Pa.

Claim.—1. As a means of uniting together end to end two parts of a glass or metal manufacture, a wire spiral, *d*, rigidly or removably attached to the end of one part, in combination with a threaded stem or peg on the contiguous end of the other part, substantially as described.

2. The arrangement of wire spiral *d*, threaded pegs *c*, and socket *e*, substantially as described.

110,050. — Loom.—William Samuel Laycock, Sheffield, England.

Claim.—1. The combination of the studs *x x¹* and catches *y y¹* with the jaws of the shuttle, substantially as shown and described.

2. The combination, with the slide *p*, needle *s*, lever *r*, spring *r²*, lever *b¹* on shaft *b*, lever *b²*, and link *b³* of the tumbler-lever *t*, all arranged and operating as shown and described.

3. The combination of the plate *w*, sliding bar *p*, and weft-selector, with weft-stop lever *u¹* and spring *u²*, as and for the purpose shown and described.

110,051. — Buhl-Saw.—Thomas Leavitt, Everett, assignor to "Sonenta Wood-Carving Company," Boston, Mass.

Claim.—In combination with the saw and saw-frame, the plates *f* and the clamp-pins *g*, either with or without the splines, all substantially as shown and described.

110,052. — Cartridge-Cap Extractor.—John Logan and Daniel W. Eldredge, Boston, Mass.

Claim.—A cap-extractor, made with a tube, *c*, and a plug, *e*, combined and arranged substantially as described, so that, by relative movement produced between said parts, a cap received and withdrawn by application of the tube, as set forth, will be discharged therefrom.

110,053.—Chair.—Charles R. Long, Louisville, Ky.

Claim.—The mode herein shown and described of attaching the seat to the legs of a chair, substantially as set forth.

110,054. — Purifying Benzine. — George Lupton, Indianapolis, Ind.

Claim.—The within-described process for purifying benzine for illuminating purposes, substantially as and for the purpose set forth.

110,055, antedated November 26, 1870.—Lamp-Burner.—George Lupton, Indianapolis, Ind.

Claim.—A new article of manufacture, consisting of a lamp-burner, constructed as herein described, that is, with a tube for the wick extending to near the bottom of the oil-reservoir, a cap for securing the same to the lamp, a device for raising the wick, and two cones for deflecting and reflecting the rays of light, as and for the purpose set forth.

110,056. — Mold for Making Glassware.—James B. Lyon, Pittsburg, Pa.

Claim.—1. A two-part mold for pressing glassware, in which the two halves of the mold are arranged on sliding ways, or a bed or platform, and in opening and closing are caused to move directly to or from each other in straight lines.

2. An eccentric and yoke, arranged in connection with each or either half of a two-part glass-mold, whereby such half of the mold shall be caused to open and close on the other half.

3. A sliding frame, carrying at one end one-half of a two-part mold, and at the other end an eccentric shaft, which eccentric is arranged, in connection with the other half of the mold, to open and close both.

4. The arrangement of an eccentric or cam, operative against one-half of a two-part mold, with connections therefrom to the opposite half, for the purpose of holding the two well together when the pressing is being done.

110,057.—Velocipede.—Henry A. Maltby, Brownsville, Texas.

Claim.—1. The four cranks C C and D D on axle, combined with foot-stirrups P P and slotted levers Q Q, arranged to operate as and for the purpose described.

2. The combination of the caster-wheel spindle, provided with the seat, and arranged relatively thereto, to receive the body of the operator, and be turned thereby for steering, substantially in the manner described.

110,058. — Hair-Restorative. — Allen C. Maxfield, Biddeford, Me.

Claim.—The above-described compound of ingredients, in the proportions named, for the purposes specified.

110,059.— Life-Raft.—David McFarland, New York, assignor to A. M. Ingersoll, Brooklyn, N. Y.

Claim.—1. The cylinders A A, two or more, composed each of a series of air and water-tight sections, *a*, connected together by a rod, B, provided with screw-nuts *c* at its ends, substantially as shown and described, and for the purpose specified.

2. In combination with the air and water-tight sections *a* of the cylinders A A, the transverse pieces C, fitted or connected to the cylinders in the manner substantially as and for the purpose set forth.

3. The detachable bars *e*, to which the rowlocks *f* are secured, in combination with the fixed strips *d* on the cylinders A A, arranged substantially as and for the purpose specified.

4. The combination of the cylinders A A, constructed in sections *a*, the transverse pieces C, thwarts E, and removable rowlock-bars E, all arranged substantially as and for the purpose set forth.

110,060.—Belt-Splice Point-Finisher.—John Cummings McLaren, Montreal, Canada.

Claim.—1. The combination of the grooved bed A, guide F, and the clamping-lever H, substantially as specified.

2. The combination of the lever I and spring fulcrum L with the grooved bed A B, guide F, and clamping-lever H, substantially as specified.

3. The improved cutting-tool, consisting of the knife Q and stock R, constructed and arranged substantially as specified.

4. The combination of the cutting-tool Q R with the grooved bed A B and clamping-lever H, substantially as specified.

110,061.—Field Corn-picking and Husking-Machine. — George Meader and Charles Meader, Prairie Centre, Ill.

Claim.—In a field-operating corn-picker and husker, the spirally-grooved husking-rollers H in combination with the spiral elevator L, when said parts are constructed substantially as described, and arranged to operate in the manner specified and shown.

110,062.—Liquid Meter.—Charles Moore, New York, N. Y., assignor to José F. De Navarro, same place.

Claim.—The combination of the tubular slide-valves K K′, formed with a piston-head at either end of them, the cylinders or boxes L M and L′ M′ with their ports *m n m′ n′*, the chambers or passages H H′ C D C′ D′, the exhaust-chamber or passage E, and the cylinders A A′ with their pistons F F′, for operation in concert with or through a crank-shaft, G, substantially as specified.

110,063.—Truss.—Charles Morrill, New York, N. Y.

Claim.—A hernia truss, consisting of the horizontal bar B and the pads A, connected by the bars E, C, and D, or their equivalents, all being struck up from a single piece of metal, and provided with a strap or other suitable means for holding the same in proper place upon the body of the wearer.

110,064.—Apparatus for Dressing and Furrowing Millstones.—James Lee Norton, London, England.

Claim.—1. The combination of the curved staff or base, the slide *c* to traverse upon it in a circular course, the vertical axis *d*, and the arm *e* supporting the cutting-point, substantially as described and shown by the drawing.

2. The combination of the template *g* to govern the course of the tool, with the lever *f*, arm *e*, axis *d*, and slide *c*, substantially as described and shown by the drawing.

110,065.—Animal-Trap.—Ebenezer Oliver, New York, N. Y.

Claim.—1. The door B, constructed to swing inward, and provided with a spring, C, to close it, in combination with the body A of a round wire trap, substantially as herein shown and described, and for the purposes set forth, whether provided with a wire tube, *b²*, or not.

2. The pivoted platform E, catch F, and bait-hook G, in combination with the spring door B C, substantially as herein shown and described, and for the purpose set forth.

3. The pivoted loop D, in combination with the spring door B C, substantially as herein shown and described, and for the purposes set forth.

4. The combination of the ordinary entrance-tube *b²* with the inwardly-swinging spring door B of the trap, substantially as herein shown and described, and for the purpose set forth.

110,066.—Hitching-Post.—Wilson S. Owings, Pan Handle Post Office, West Va.

Claim.—A hitching-post, *a*, having mounting-steps *d*, constructed substantially as described.

110,067.—Bobbin-Winder for Sewing-Machines. — John L. Patch, Charlestown, assignor to himself and E. F. Tilden, Boston, Mass.

Claim.—The friction-wheel G, worm I, worm-

wheel J, cam K, link L, guide-plate M, spring k, and thread-guide N, all constructed and arranged as specified.

110,068.—ELASTIC MANE-TURNER.—Chamberlayne Phelps, Clayton, N. Y.

Claim.—1. The adjustment of a horse's mane by means of cords A A', arranged substantially as described and set forth.

2. The mane-turner and adjuster, consisting of the elastic cords A A', provided with holders b c d, and with loops or rings S S, substantially as set forth.

110,069, antedated December 9, 1870.—CHAIN-CLUTCH.—Hiram Pitcher, Fond Du Lac, Wis., assignor to himself and H. & G. O. Trowbridge, same place.

Claim.—1. In combination with a wheel, pulley, drum, windlass, or other revolving body, the cinch A, constructed, arranged, and operating substantially as described.

2. The chain-clutch, provided with trunnions at its inner end, and pivoted so as to be self-adjusting, as shown and described.

110,070. — DEVICE FOR ATTACHING THE SHANK TO MINERAL AND COMPOSITION BUTTONS. — Charles L. Potter, Providence, R. I.

Claim.—That improvement in the means for fastening shanks to mineral and other like buttons which consists in combining a cross-bar, b, with a base-plate, a, to which latter the shank is attached, both cross-bar and plate being secured to the button-head, substantially as described.

110,071.—COMBINED LOCK AND LATCH.—Francis M. Ranous, Yreka City, Cal.

Claim.—The pivoted stop J, pivoting-pin K, pivoted disk L, provided with a thumb-piece, knob, or handle M, pin N, and curved slot a^2 in the plate B of the case A, in combination with the arm H h', of the sliding hook-latch C c', substantially as herein shown and described, and for the purpose set forth.

110,072, antedated December 10, 1870.—BASKET FOR TILE-GRINDERS.—Peter C. Reniers, Pittsburg, Pa.

Claim.—1. In combination with a revolving table, A, the bearers B' B', arranged so that the basket may rest thereon, clear of the table, but so that the tile in the basket may come in contact with the face of the table, substantially as described.

2. One or more slotted bars, a, adjustable up and down on the posts D, substantially as described.

3. The slotted guide-rest b, in combination with the slotted bar a and side rail C, and so arranged as to be capable of a vertical or oblique adjustment, as shown in fig. 1.

4. The clip d, carrying in one side the adjustable gauge e, when used in connection with the bar a of a tile-grinding basket, substantially as set forth.

5. The slotted bar f, working loosely on its posts D, as a carrier for a tile-frame, in combination with collars w, so set as to stop the downward motion of the tile and arrest the grinding action at the proper point.

6. The tile-frame, consisting of plate f^3, from which flanges u project over the bar f, inclined rests w^2 and w^3, and an outer bar, t, all arranged substantially as set forth.

7. The central slotted rail l, vertically adjustable in the end posts E, as a carrier for the devices which engage the tile and hold them in vertical position while being ground.

8. A plunger, s, forced outward by a spiral spring, s^2, and released from its hold on the tile by a lever, s^3, all arranged in an adjustable bloct, m, substantially as described.

110,073.—DEVICE FOR TRIMMING CYLINDRICAL BRUSHES.—Arthur G. Risley, Utica, N. Y.

Claim.— The device described, consisting of the base-plate A, the stationary center n, and the movable center o, with its flexible bar m, for holding the brush, in combination with the shears, as described, the whole being connected, combined, and operating substantially as herein set forth.

110,074.—LEATHER FOR NECK-YOKE FOR CARRIAGES. — Henry Sanders, Utica, N. Y.

Claim.—The neck-yoke holder above described, consisting of an oval metal ring surrounded by leather stitched in the manner specified, and having an oval opening for the tongue end, so as to allow lateral play to the same, all substantially as shown and set forth.

110,075, antedated December 9, 1870. — MACHINE FOR CUTTING CORKS. — Eilert O. Schartan, Philadelphia, Pa.

Claim.—1. The box C, provided with slotted bottom and end pieces, adjustable back a, and guide-bars b b, all substantially as and for the purposes herein set forth.

2. The combination of the pitman E', bent lever J', T-shaped lever M, rod N, and weighted lever O, all constructed and arranged as described to operate the knife D, substantially in the manner and for the purposes herein set forth.

110,076.—CORK-MACHINE.—Eilert O. Schartan, Philadelphia, Pa.

Claim.—1. The circular knife N, provided with pulley P and journaled upon slide Q, substantially in the manner and for the purpose described.

2. The combination of the poppet head E, shaft F, slide-rest G, and lever H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. The combination of the circular knife N and adjustable slide-rest Q, all constructed and arranged to operate substantially as and for the purpose herein set forth.

110,077.—TYPE-SETTING MACHINE.—William Stephenson Shipley, Jersey City, N. J.

Claim.—1. The type-setting machine, provided with air-channels, so that the types or characters are moved by means of air-channels, as set forth.

2. The cylindrical-grooved blocks B, applied under the type-holders A, to receive the types in their grooves and to form air-channels, as set forth.

3. The curved tube I, applied to the cylindrical type-holders B, to constitute a continuation of the air-channel formed by their grooves, as set forth.

4. The combination of the grooved cylindrical blocks B with the keys H, so that they will be moved to convey the type from the holder A to the air-channel, as set forth.

5. The pivoted plate S that is moved by the cam s, substantially as described, for the purpose of setting up the types in rows, as set forth.

6. The combination of the lever P and rods l h with the bell-crank j and crank-shaft O, and with the plates L and K, substantially as herein shown and described.

110,078. — SASH-LOCK. — Christian Sholl, Mount Joy, Pa.

Claim.—The spring F, permanently secured upon the bolt d^2, in combination with the plates E and D d^1, and projecting thumb-piece H, all the parts being arranged and constructed to operate together as shown and described, and for the purpose set forth.

110,079.—MORTISING-MACHINE.—William H. Sible, Harrisburg, Pa.

Claim.—1. As an improvement upon the machine described in my patent, No. 94,140, the combination therewith of the ratchet-wheel L' and pawl m, in the manner herein described.

2. The combination of the treadle E, spring I, bar G, box H, block J, screw K, toothed wheel L, and pawl n, all constructed and arranged to operate substantially as and for the purposes herein set forth.

110,080. — PLOW-CLEVIS ATTACHMENT. — Henry C. Sieverling, Carrollton, Ill.

Claim.—An attachment for plow-clevises, composed of rigidly-attached perforated bars B B^2, braces C C^1, and ferrule C^2, with pin and link D D^1, secured to the plow-beam, and applicable to an ordinary clevis, A', all constructed, arranged, and operating substantially as herein described.

110,081.—PROCESS OF REMOVING EARTHY MATTERS FROM BRONZE AND OTHER CASTINGS.—Michael Smith, Somerville, Mass., assignor to Russell & Erwin Manufacturing Company, New Britain, Conn.

Claim. — Fluoric, fluo-hydric, or hydro-fluoric acid, or the chemical equivalent thereof, for the purpose of softening and removing burnt clay, sand, or other earthy matter adhering to metallic castings, substantially as described.

110,082.—SAFETY-VALVE.—Henry F. Snyder, Williamsport, Pa.

Claim.—1. The combination of the casing A and its contained safety-valve, and guiding and operating means within the strainer G, adapted to prevent any possible access of flame from the exterior to pass the valve, as specified.

2. The perforated cap I i, in combination with the casing A and its contained safety-valve, and guiding and operating means, as specified.

3. The combination of the screw-cap I i, flange I', metallic strainer G, valve D D' d, steadiment E E^1 E^1, and casing A, constructed as represented, and adapted to serve relatively to the casing B and tank A, as and for the purposes herein set forth.

4. The stop-cock K, arranged relatively to the safety-valve D, spring C, and strainer G, as and for the purposes herein specified.

110,083. — BASE-BURNING STOVE. — Israel Snyder and Peter C. Garrett, Cedar Rapids, Iowa.

Claim.—1. The combination of shell D, cylinder B, and open-work fire-pot A, with a detachable cap U T, constructed and applied, as and for the purpose specified.

2. The arrangement, transversely across the upper part of the cylinders B D, of a shaft R and eccentric Q, for the purpose specified.

3. The combination of fire-pot with a close cylinder B, having draught-door S immediately under the outlet pipe, as set forth, and for the purpose described.

4. The combination of the plates L with the cylinder B D, constructed and arranged substantially as described.

5. The upwardly-converging plate T, combined with a funnel or coal-guide U having its lower edge projecting through the former, whereby an open annular space or combustion-chamber is formed above the fire, as and for the purpose described.

110,084. — MANUFACTURE OF ALUM AND FERTILIZERS FROM MINERAL PHOSPHATES.—Peter Spence, Newton Heath, Manchester, Great Britain.

Claim.—The mineral phosphates, containing alumina for the manufacture of alum, and the residual liquors from the said manufacture of alum, for conversion into and as artificial manures or fertilizers.

110,085, antedated December 9, 1870.—HEAD-BLOCK FOR SAW-MILLS. — Franklin J. Staley, Indianapolis, Ind., assignor to Long, Joseph & Carter, same place.

Claim.—The ratchets C, keyed to the setting-shaft B, dinks D, with their arms R, pawls r, and segmental cog v, pinion F, and lever G, all arranged to operate substantially as set forth.

110,086. — JOURNAL-BOX. — Edward H. Stearns, Erie, Pa.

Claim.—1. The described detached Babbitt-metal lining B of a journal-box, in a saw-mill, having the projection described on its under side to fit into a corresponding slot in the box itself, for the purpose of preventing both lateral and endwise motion, substantially as and for the purpose set forth.

2. The water-chamber W, with its bed C formed as described, having the oblong slot q for the reception of the said projection on the Babbitt-metal lining, and perforated with holes K K K, and the cap A with its screw-bolts and screw-holes, by means of which the box is closed and made fast over the journal, substantially as and for the purpose described.

3. The oil-chamber D, situated with reference with the journal, as described, so that the weight of the oil therein will force the same through the oblong openings n n, described, against the journal, on a level with its longitudinal center, substantially as and for the purpose described.

4. The shaft F, bed-piece I and G, and nut H, in combination, as an adjustable bearing for a journal-box, constructed and arranged substantially as described.

110,087.—STENCH-TRAP.—Daniel C. Stillson, Charlestown, Mass.

Claim.—The combination, with the main discharge pipe of a sink, of an auxiliary pipe, D, or duct, and a stop-cock, B, so formed and arranged that by turning the latter in one direction, a "water-seal" shall be formed, while, by turning it in the opposite direction, the liquid forming such seal shall be discharged through the main pipe in manner and for the purpose set forth.

110,088. — CAR-COUPLING. — Augustus F. Street, Zanesville, Ohio.

Claim.—The draw-head A, with the chamber C, openings E, shoulder L, and slide I, and, in combination therewith, the link B, the whole constructed and arranged to operate substantially as and for the purposes herein shown and described.

110,089, antedated November 26, 1870.—METHOD OF UNITING WOOD.—John A. Thompson, Auburn, N. Y.

Claim.—The method herein described, of uniting wood in various forms by metal tongs, where water-tight joints are required.

110,090.—TELEGRAPHIC RELAY.—Benjamin Birdwood Toye, Toronto, Canada.

Claim.—1. The lever armature b, without a cross-bar, its lower or flat part being acted on directly by the cores, and arranged in the manner and for the purpose hereinbefore set forth.

2. The safety-adjuster C, consisting of the bar g, its special spring K, the stop-piece h, and adjusting thumb-nut l, in combination with the spiral spring f and bar b, in the manner and for the purpose specified.

3. The auxiliary adjuster or cut-off D, with switch i and knobs j j', with wires 1 2 running to the helices a a', so that more or less of the magnetism in the spools or cores may be cut out and the resistance on the wire reduced, as hereinbefore set forth.

4. The combination and arrangement of the relay as a whole, consisting of spools a a', vertical armature b arranged between arms d d', safety-adjuster C, and auxiliary adjuster D, arranged substantially as and for the purpose hereinbefore set forth.

110,091.—TREE-PROTECTOR.—Charles Henry Trumbull, Marion, N. Y.

Claim.—The tree-protector A, constructed and applied substantially as and for the purpose set forth.

110,092, antedated December 9, 1870.—ALARM-TILL.—Cyrus Tucker and William H. Tucker, Indianapolis, Ind.

Claim.—1. The combination of the three armed levers E, the reversible tumblers C, and catch B, when arranged substantially as set forth.

2. The combination of the spring N and bell-lever J with the hinged catch B, all arranged substantially as and for the purpose set forth.

110,093. — RAILWAY AXLE-BOX. —James Wardrobe, Charles D. B. Fisk, John F. Curtis, and George Fetley, Carlin, Nevada.

Claim.—The oil-chamber casing A, combined as described, with a bearing, D, shorter than the journal, and flanged at d', and a plate, E, having flanges e^1 and projection e^2, for the purpose of preventing the wear of the journal-collars on the end of bearing, and of allowing the bearing to adjust itself, without much friction, to the journal as it turns on a curve.

110,094. — EXTENSION LADDER.—Thomas Watson and Charles Perry, Brooklyn, N. Y.

Claim.—1. The combination of the double system of guys with the members of the ladder, all operating substantially as described.

2. The combination of the double system of guys with the inclined bars b b and c c, substantially as described.

3. The combination of the double system of guys with the members of the ladder and inclined bars b b and c c, operating substantially as described.

4. The arrangement of ways and clip-pieces on and between the members of the ladder, substantially as described.

5. The inclined connecting-bars b b and h h at the front portion of the rear truck, and the bars c c and g g, in combination with the members of the ladder, substantially as described.

6. The arrangement of the reel on the front truck, as described.

7. The arrangement of the members of the ladder relatively to the base and rear truck and to the axle thereof, as described.

110,095. — DOUBLE-TREE FASTENER.—Decatur Worst, South Bend, Ind., assignor to himself and Joshua Lafflin, same place.

Claim.—The double-eyed link, arranged as fastener for whiffletrees, substantially as herein shown and described.

110,096. — BARREL. — James W. Weston, New York, N. Y.

Claim.—A barrel, made of lamina of wood rolled up to shape, with the grains of the respective laminæ crossing each other, and connected by glue or adhesive material, and the heads introduced within the cylindrical ends, substantially as set forth.

110,097.—PATTERN FOR MEASURING AND LAYING OUT GARMENTS.—Fannie Wetmore, Chicago, Ill.

Claim.—The front and back patterns, figs. 1 and 2, shaped and graduated as described and shown, for the purpose specified.

110,098, antedated November 28, 1870.—ROLLER-SHAFT FOR WRINGERS — Levi H. Whitney, Washington, D. C.

Claim.—A rubber roller, the shaft A of which is constructed with perforated and slotted longitudinal ribs A^1 a and transverse ribs A^2, substantially as set forth.

110,099. — FAUCET.—Franz Wiesenhofer, Fremont, Ohio.

Claim.—A slotted reciprocating plate, C, and projecting pin b, combined with an eccentric on the tubular end of a spigot, as and for the purpose described.

110,100. — WEIGHING-WAGON.—George A. Wilcox, Chicago, Ill.

Claim.—1. The arrangement of the lever or steelyard I, with its attachment to the wagon or cart-box at a point above the center of gravity of the same, for suspending it for weighing, as specified.

2. The combination of the wagon-box E, having the tube or well-hole F, with the standard H, supported upon the running-gear, and the lever or steelyard I, substantially in the manner and for the purpose set forth.

3. The combination of the wagon-box E, the tube F, standard H, steelyard I, lever L, and pivoted bar M, substantially as and for the purpose set forth.

110,101.—SCHOOL-DESK.—Elijah Wilson, New Brighton, Pa.

Claim.—1. A school-desk, pivoted between the slides c, and provided with stops e and e^1 for holding it in either a vertical or horizontal position, in combination with boxes b^2, in which the slides operate forward and back, such boxes being vertically adjustable on the posts a, all arranged substantially as described.

2. The seat-back f, carrying a folding seat, g, and vertically adjustable by means of sleeves f' and hook or flange-joints i i', substantially as described.

110,102. — MANUFACTURE OF EMERY-WHEELS. — John F. Wood, Boston, Mass., assignor to "The Union Stone Company," same place.

Claim.—1. Emery-wheels, having their centers of artificial stone, substantially as and for the purposes described.

2. The process of manufacturing emery-wheels having the central part of artificial stone, substantially as and for the purposes described.

110,103.—FRICTION-BLOCK FOR ATTACHING CULTIVATOR AND OTHER TEETH.—William Workman and Jason Hitchcock, Ripon, Wis.

Claim.—The friction-block B, formed with the wings b b and the intermediate socket f, and shoulders g and h, in combination with a tooth-shank, C, substantially as described.

110,104.—HEATING-STOVE.—Thomas Young, Montreal, Canada, assignor to Ives & Allen, same place.

Claim.—1. The novel combination of the fire-pot a, combustion-chamber b, corrugated and perforated ring c, projecting edge c', perforations d, ring e, drum e', openings f and g, door h, stove-pipe i, division-plate k, flange k', and damper l, all working together substantially in the manner and for the purpose described.

2. The novel combination of the corrugated ring c with perforations d and edge c', substantially as described.

110,105. — CHEESE-PRESS. —Robert Allen, Cleveland, Ohio.

Claim.—In the cheese-press herein described, the arrangement of the standards C D, grooves b, lugs c, follower K, hinged levers H F, standard L, and pins e f, when all constructed and arranged as described.

110,106.—BARREL CHAMFERING AND CROZING-MACHINE.—Truman M. Annis and Thomas B. Luce, Linden, Mich.

Claim.—1. The arrangement of the shaft D, crank E, cog-wheel G, pinion d, fly-wheel H, pinion e, cog-wheels I J, shaft K, and cams L L, all substantially as shown and described.

2. The arrangement of the platform C, rods a a, and spiral springs b b, in combination with the cams L L upon the shaft K, said shaft being revolved by means of the gearing herein described, as and for the purposes set forth.

110,107.—WAGON.—Ephraim Ball, Jr., Canton, Ohio.

Claim.—1. The rear hounds D D, constructed of L-shaped iron, and attached to the rear axle, substantially in the manner herein described.

2. The front hounds I, constructed as described, of T-shaped iron, and attached to the front axle, substantially in the manner herein set forth.

3. The standards M, constructed as described, and fastened to the bolsters E E, substantially as set forth.

4. A double or single-tree, made of T-shaped iron, with a loop or socket, i, in the center, substantially as set forth.

110,108.—PRESERVING SWEET POTATOES.—Hedgemon T. Basye, Dyersburg, Tenn.

Claim.—1. The combination of an inner crib, A, of slats and spaces a, with an inclosing-case, B, having a communicating air-chamber, c, between them, in the manner and for the purpose herein described.

2. In combination with an inner crib, A, of slats and spaces a, and a surrounding communicating chamber, c, an inclosing-case, B, having an inner and an outlet air-chamber, d and e, and a separating non-conducting chamber, D', in the manner and for the purpose herein described.

110,109.—MACHINE FOR TILLING OR CULTIVATING.—Henry Belmont, Romford, England.

Claim.—1. An improved cultivating or digging-machine, constructed substantially as described, having a number of strong forks, f f f f, fixed in a frame, d, which is suspended within another frame, c, upon the arms of crank-axles b b of carriage-wheels a a, arranged so that at each turn of the wheels with the machine moving forward the forks f f are, by means of the crank-axles, forced into and brought out of the ground to break up the soil.

2. The digging-forks f f, in combination with the suspended frame d and the crank-axles b b, arranged and operating as and for the purpose described.

3. The cultivating-machine, so constructed as to allow the use of interchangeable parts, as described.

110,110. — STEAM-JET PUMP. — Albert J. Blakslee and Garner C. Williams, Du Quoin, Ill.

Claim.—A stem, D, arranged within the steam and water-passages, substantially as described.

110,111.—MEAT AND VEGETABLE-CUTTER.—George E. Bringman, Philadelphia, Pa.

Claim.—1. The revolving plate B, in connection with a meat-deviling device, as and for the purpose set forth.

2. The box E, provided with pins a a, tubes b b, and springs d d, in combination with the revolving plate B, all arranged substantially as and for the purpose described.

110,112. — REFRIGERATOR. — Andrew J. Chase, Boston, assignor to himself and Perrin C. Drisko, Boston, (Highlands,) Mass.

Claim.—1. The refrigerator as made or provided with the aprons D and F, the inclined plane I, the trough H, and air-passages E G, arranged within the box A, in manner substantially as described.

2. The refrigerator as so made, and as having the ventilating-pipe K arranged in it in manner and to operate as set forth.

110,113.—BRICK-PRESS.—James F. Clark, Morenci, Mich.

Claim.—1. The grooved beam E and plunger G, moving between the guides H H, and operating in combination with the post d, rod e, pins i i, movable back J, and box I, substantially as and for the purposes herein set forth.

2. The combination of the bed A, posts B B, levers C D, joint b, beam E, plunger G, guides H H, box I, and movable back J, all constructed and arranged to operate substantially as and for the purpose herein set forth.

110,114.—STEAM-PIPE COUPLING FOR RAILROAD-CARS.—Joseph Conner, Philadelphia, Pa.

Claim.—1. The combination of the pipe A, tubes D D', and hollow cylinder F, having inclined grooves f f, the said parts being constructed and arranged in relation to each other substantially in the manner and for the purpose above described.

2. The connection of the cylinder F with the tube D' by means of male and female screws, which run in an opposite direction to the inclined slots f f of the cylinder, whereby a combined leverage is obtained in coupling the cars, substantially as described.

3. The combination of the hollow nut P with the pipe N, arranged and operating in relation to the conical nut E on the outer end of the tube D, as above specified.

4. The combination of the follower Q, having pins n n, with the pipe M, arranged and operating in relation to the inclines f f of the cylinder F, substantially as and for the purpose above set forth.

5. In combination with pipes A and N, tubes D and D', cylinder F, and follower Q, the pipe A' and intermediate hollow links, constructed and arranged as and for the purpose above described.

110,115. — BUCKLE. — Eugene P. Corwin, Washington, Ill.

Claim.—The combination of the serpentine lever B and cam-lever C with the sides A and bar D, the last being provided with a biting surface, z, as specified.

110,116.—BOAT-DETACHING APPARATUS. — John C. Cottingham, Philadelphia, Pa.

Claim.—The arrangement of the body B, hook H, shank K, lugs L, trip-lever T L, and pulley D, all constructed and operating as and for the purpose specified.

110,117.—CAR-AXLE-BOX COVER. — David Cowley, Erie, Pa.

Claim.—The cover B, in combination with the chamber D and spring E, when the same are constructed and arranged as and for the purposes set forth.

110,118.—FURNACE FOR BURNING SHAVINGS.—Lucius Crandall, New York, N. Y.

Claim.—The basket-grate c at the lower end of the hopper m, and within the casing a, in combination with the draught-regulators k, register l l, and flues e f, substantially as and for the purposes specified.

110,119.—HEAD-BLOCK.—Perley M. Cummings, Cincinnati, Ohio, assignor to himself and Joseph D. Clark, Erie, Pa.

Claim.—1. In connection with the notched knee A, the reciprocating bar F E E' and toggle-joint pawls C C' C'', the latter being kept in gear by springs, as described, and for the purpose specified.

2. In connection with the elements of the preceding clause, the spirally-grooved shaft J K and arms L, as and for the purpose described.

110,120.—PIANO-FORTE ACTION.—Willard G. Day, Baltimore, Md.

Claim.—1. The combination of the keys F, provided with the regulators b and pivoted jacks a, with the keys E provided with the ledge c, constructed substantially as described, and for the purpose set forth.

2. The combination of the upper and lower keys E and F, with the jack *a* pivoted to the former and between their front ends, as and for the purpose set forth.

3. The key-frame G, having its rear end attached to, and arranged to slide laterally upon, its connections, and its front end provided with a catch-pin, *h*, in combination with the opening *i* provided with the notches *m* in the front side of the case of the instrument, substantially as and for the purpose set forth.

4. In combination with the key-frame G arranged to move laterally, and having its keys F provided with the pivoted jacks *a*, the cross-bar *o*, as and for the purpose set forth.

110,121. — ASPHALT ROAD AND PAVEMENT.—Edward J. Desmedt, New York, N. Y., assignor to Grahamite Asphalt Company, same place.

Claim.—The combination of grahamite petroline with grahamite albertite, or any hard asphalt, and the same combined with sand, powdered limestone, or any like substance, all substantially as specified.

110,122.—OAT-CLEANER.—Simon Dickens, Jr., Milwaukee, Wis.

Claim.—An oat-cleaner, constructed with the upper and lower sieves A and B connected together, substantially as described.

110,123. — GROOVING-TOOL.—Joseph Dill, Grand Rapids, Mich.

Claim.—The grooving-tool A, constructed and operating substantially as herein shown and described.

110,124.—MACHINE FOR SEPARATING COCKLE FROM WHEAT.—William G. Douglas and Hugh Thomas Douglas, Warrenton, Va., and John Milton Reed, Omaha, Nebraska.

Claim.—1. The combination of the cotton or linen covering with a gum or other yielding roller or rollers, when the former is prepared and applied to said yielding surface as herein described, and for the purposes specified.

2. The cotton or linen covering for cockle-separating-rollers, coated with rubber cement, for producing an adhesive separating surface to said covering, as herein set forth.

3. The separating-rollers E, provided with the covering *c* and grain-guards *d*, as described.

4. The combination of the cockle-rollers E, constructed substantially as described, with the fluted feeding-roller C, pressure-roller F, stripping brushes D, and thin flexible or tremulous sheet-metal conductor *e*, for the purpose herein set forth.

110,125.—COFFEE, TEA, AND SPICE-CAN.—James M. Earle, Springfield, Mass.

Claim.—As a new article of manufacture, a coffee or spice-can having the two lids *a a* hinged to the piece *c*, all constructed and arranged substantially as and for the purpose herein described.

110,126.—HOE.—James Fairley and Alfred Fairley, Birmingham, England.

Claim.—1. A blade for hoes or other implements, having a nick, *f*, and slot *e*, in combination with a tenon, e^1, and slots $e\ e'$, on a socket, B, substantially as shown and described, for the purpose specified.

2. The socket B, when provided with a recessed and slotted bit, substantially as described, for the purpose specified.

110,127. — BUNG-ELEVATOR. — David F. Fetter, New York, N. Y.

Claim.—The bung-extractor described, formed by the construction and combination of the levers herein described, of which lever A is made to serve as a rocking fulcrum with a sharp point, and lever B has a curved blunt point overlapping lever A, in the manner specified.

110,128.—CUT-OFF FOR CISTERNS.—Frank Fischer, Quincy, Ill.

Claim.—The rectangular sectional supply-pipe A, having the automatic hinged valve *b* F, guide G, and float *d*, and strainers *f e*, substantially as and for the purposes specified.

110,129.—NOTES, CHECKS, &c., TO PREVENT ALTERATION.—Charles Folsom, New York, N. Y.

Claim.—1. The combination of a table of figures, letters, lines, or other characters, representing amounts, written, printed, lithographed, or otherwise placed on any document, with the signature thereto, substantially as herein described, and for the purpose set forth.

2. As an improvement in bank-notes, checks or other similar papers representing value, placing upon that portion of the same designed for the signature a table of figures, lines, letters, or characters representing amounts so arranged that the signature may be written thereon so as to indicate substantially the value of the same, as herein described.

110,130.—COAL-BARGE.—Lawrence F. Frazee, Jersey City, N. J.

Claim.—1. A series of compartments supported upon columns above the spar-deck, and made, arranged, and operated substantially as described, for the purpose specified.

2. In combination with the said elevated compartments, made, arranged, and operated as aforesaid, an elevator arranged in relation thereto, as shown and described, for the purpose specified.

110,131.—GRAIN-THRASHER AND SEPARATOR.—Henry Gill, Mansfield, Ohio.

Claim.—1. The inclined shoe *m*, having its rear end supported by the adjustable strap *c*, substantially as set forth.

2. The bent arms H, provided with the pin *l*, said arms being pivoted to the stationary bars *s*, and operated by the vibrating bars *y*, as herein described.

3. The arrangement of the slotted lever C, with its operating wheel P and elbow-lever *g* and connecting-rod *d*, for operating the shoe D, as set forth.

4. The combination in a thrasher of the inclined chute G, with its endless carrier F and the adjustable chute *n*, when arranged as described, whereby the grain from the cylinder and that from the shaker shall all be delivered from the chute *n* to the shoe D, as set forth.

5. The combination of the hinged detainer arms I, stationary bars *s*, and vibrating carrier bars *y*, all constructed and arranged to operate substantially as described.

6. The crank-shaft R, having the loose pulley P' and clutch *i* mounted thereon, with the lever E, arranged as described, whereby the shaker and shoe D are thrown out of connection with the driving-power while the cylinder and fan are permitted to continue their motion, as set forth.

110,132.—TREADLE FOR SEWING-MACHINES.—James W. W. Gordon, Newport, Ky.

Claim.—The cushion, strap, or spring, combined with the treadle, for the purpose of drawing down the knee of the operator, substantially as herein shown and described.

110,133.—HARROW.—James M. Harper, El Paso, Ill.

Claim.—In a wheeled straddle-row cultivator, the harrow attachment herein described, when constructed with a front shovel-plow, B, and side metal bars or plates *a a*, substantially as and for the purpose specified.

110,134.—COTTON-SEED HULLER.—Jackson Harrington, New London, Conn., assignor to himself, Ralph Wheeler, and Jonathan Dart, same place.

Claim.—1. The cutter-head B, provided with one or more double-edged cutters C, fastened by the V-shaped end *o*, and screws F, substantially as herein shown and described, for the purposes set forth.

2. The adjustable knives D D, forming the bottom of the hoppers G G, in combination with the cutter-head B, when constructed and arranged substantially as herein shown and described, for the purposes set forth.

3. The combination of the shell A, provided with the bars S, with the cutter-head B, knives D D, and hoppers G G, all constructed and arranged substantially as herein shown and described, for the purposes set forth.

110,135.—HAY-ELEVATOR AND CONVEYER.—Thomas E. Haymond, Morris, Ill.

Claim.—The arrangement, with relation to the carriage B and track A, of the sliding metal frame F, latches *a*, sheave D, and rope G, as herein described, for the purpose specified.

110,136.—WELL-TUBING.—George W. Hemenway, Elmira, N. Y.

Claim.—In combination with the cylinder A, having its inlet and outlet orifices at or near its upper end, the strainer F, valve G, and removable top and bottom C, all constructed and arranged to operate substantially in the manner and for the purpose specified.

110,137. — CLOTHES-DRIER.—Israel Hogeland, Indianapolis, Ind.

Claim.—1. The side-beams A A, grooved on their inner sides, and provided with slats D' D', in combination with the guide-bar G and line E, when constructed and arranged substantially as and for the purpose specified.

2. The combination of the side-beams A A, slats D' D', cross-bars B B, castings C C, props D D, guide-bar G, line E, and lock-bar H, when constructed and arranged substantially as shown and described.

110,138, antedated December 3, 1870.—GRAIN-BINDER.—Albert S. Hoyt, Winona, Minn.

Claim.—1. The combination of the compresser-arm *z*, provided with the counter-weight *x* and hinged arm *y*, with the arm *w* provided with the lever *t*, and the wheel E provided with the pins *t'* and *t''*, when said parts are arranged to operate substantially as set forth.

2. The hinged concave or grain-receiver H and arm *a'*, in combination with the cam-wheel *u*, when arranged to operate substantially as and for the purpose set forth.

3. The shield *z*, in combination with the curved frame A, to permit the machine to pass over the bundles without injury, substantially as described.

110,139.—FARMER'S BOILER.—Joseph H. Hunter, Pennington Point, Ill.

Claim.—The combination of the outer and inner tanks A C, water-indicator E G, strips L J', and steam-conductors K D, constructed and arranged as set forth.

110,140.—BRAKE FOR SEWING-MACHINES.—James W. Jacob, Jeffersonville, Ind., assignor to himself and John J. O'Donnell, same place.

Claim.—1. The friction-brake, constructed substantially as described, in combination with and adjustable on the slotted hanger A, for the uses and purposes set forth.

2. In combination with the above, the thumb-piece L, for removing the brake from or bringing it in contact with the fly-wheel W.

110,141.—VEHICLE.—John Jack, Tiskilwa, Ill.

Claim.—The within-described buggy or carriage, composed of the elliptical springs placed parallel with the axles, the box with concave on its under side, the brace A, hinged joints B B, and the curved bar extending from the rear spring under the box, and connected by the joint D to the rear brace C, all constructed substantially as set forth.

110,142. — HARROW. — David L. Jaques, Hudson, Mich.

Claim.—In a folding harrow, the arrangement of the transverse rotary tooth-bearing bars B, the connecting-bar *c*, pawl *e*, and ratchet *z*, and the combined runner and guide-blade D, substantially as shown and described.

110,143.—PILE FOR ARMOR-PLATES.—Joshua Jeavons, Sheffield, England.

Claim.—The manufacture of armor-plates and other heavy forms of malleable iron and steel from piles composed of layers of rabbeted, dovetailed bars, with scarfed joints, in combination with top and bottom large molds, as herein shown and described.

110,144. — NEEDLE-SETTER FOR SEWING-MACHINES. — Jacob Karr, Washington, D. C.

Claim.—The needle-setter, consisting of the self-closing pincers, both limbs of which are made elastic and provided with the finger-pieces H and H', the gauge-point or stud D, the groove C, and adjusting-head, all as described.

110,145.—CLOTHES-DRIER.—James W. Kenning, Quincy, Mich.

Claim.—In combination with the standard A, the removable socket H, pulley K, and the block *e*, provided with arms D and lifting apparatus, as described, when the several parts are constructed and arranged to operate substantially as specified.

110,146. — MECHANISM FOR OPERATING SHUTTLE-BOXES IN LOOMS.—Lucius J. Knowles, Warren, Mass.

Claim.—1. The combination, with each cam for operating the boxes, of a ratchet with half the number of teeth there are steps in the cam, and two oscillating pawls, each of which will move the ratchet forward a distance equal to one-half the length of the ratchet-tooth, serving, the one to raise, and the other to lower, the boxes, substantially as shown and described.

2. In combination with the cams, ratchets, and pawls, operating together, as claimed in the preceding clause, the compound lever, for raising and lowering the drop box, composed of two levers, pivoted one to the other, and actuated by their several cams in the manner set forth, the cams and levers being constructed and arranged as specified, so that the range of movement of one of the levers shall be double that of the other, to admit of the discounting operation herein described.

3. The combination of the spurs or projections 5 and 6 on the pawls 1 and 2, with the loops or hooks on the pawls 3 and 4, substantially as shown, and for the purposes described.

4. The combination and relative arrangement of shafts E F, ratchets G K, cams H L, pawls 1 2 3 4, arms N, and connections *b b c c*, substantially as and for the purposes set forth.

5. The combination and relative arrangement of the levers P R, cams H L, ratchet-wheels G K, and arm N, with shafts E F, pawls 1 2 3 4, rod S, and connections *b b c c*, substantially as and for the purposes set forth.

110,147. — SIDE-SADDLE TREE. — Andrew Lawrence, Louisville, Ky.

Claim.—The cantle or seat B B, when turned from a solid piece of wood, and secured to the tree

by means of screws or rivets, substantially as and for the purpose herein set forth.

110,148, antedated December 6, 1870.—Cover for Tea and Coffee-Cups.—Joseph Leach, New Harmony, Ind.

Claim.—As a new article of manufacture, the concave perforated cover B, provided with ledge or rim *a* and openings *b d*, substantially as and for the purposes herein set forth.

110,149.—Cotton-Renovating Machine.—James B. Lyons, Milton, Conn.

Claim.—1. The combination of the receiver G, air-pumps C C, retort H, barrel J, and door L, when arranged to operate substantially as and for the purposes described.

2. The combination of the sliding valve L closing the barrel J, the piston *l*, vertical cylinder M, connecting-pipe *m*, and retort H, for the purpose of suddenly liberating the contents of the barrel J by means of the compressed air in the retort, substantially as specified.

110,150.—Spring Seat for Vehicles.—Wait Mead, Francis D. May, and Rufus L. Hoyt, Chestertown, N. Y.

Claim.—The spiral spring C and straps D D, when arranged as described, and used in combination with a wagon-body, A, and elliptic springs B B, substantially as and for the purposes herein set forth.

110,151.—Gearing for Machinery.—Thomas M. Millett, Sr., Savannah, Ga.

Claim.—1. The wheel F, carrying the endless screw A working in nut-castings within a regulating-box, as shown and described, said screw being adjustable by means of wedges or gib and key, all combined and arranged as herein shown and described.

2. In combination with the foregoing, the multiplying gear-wheel K, with its coiled spring, as shown and described.

110,152.—Milk-Carrier.—Lewis Morris, Havre de Grace, assignor to himself and George W. Baker, Aberdeen, Md.

Claim.—1. The arrangement, with the can-body *a* and cover *b*, of the links A, bar *k*, and screw-bolt *n*, substantially as shown and described, for the purpose specified.

2. The improved milk-carrier, formed by the arrangement, with the can *a*, of the lining *d*, cover *b*, bar *k*, links A, screw-bolt *n*, standard *r*, and padlock, or other equivalent fastening device, substantially as shown and described.

110,153.—Wood Pavement.—William S. Morse, Washington, D. C.

Claim.—1. A wooden pavement composed of blocks beveled from base to top, and having reverse bevels in the lower portions thereof, and fitted together, substantially as shown and described.

2. A wooden paving-block, beveled from base to top, and having a reverse bevel in the lower portion thereof, substantially as shown and described.

110,154.—Wrought-Iron Column.—John W. Murphy, Philadelphia, Pa.

Claim.—In the construction of a wrought-iron or steel column, shaft, or post, the combination of the series of plates A and the series of X-formed or four-flanged ribs B, placed and riveted together, as herein described and represented.

110,155.—Flour-Packer.—Addison H. Nordyke, Richmond, Ind.

Claim.—1. The method herein described of packing flour, by holding the platform which sustains the package stationary while the flour is packed in a supplemental cylinder within the package, substantially as set forth.

2. The combination of the stationary cylinder E with the platform C, sustained during the packing operation by the catch-bar D D′ and keepers 1 and 2, arranged to operate substantially as set forth.

3. The platform C, constructed and arranged as described, in combination with the strap *y* and weight Y, used in connection with the flanges G G and supplemental packing-cylinder E, operating in the manner and for the purposes herein set forth and described.

4. The herein-described mechanism for releasing the platform C from its keepers simultaneously with throwing the wheel L out of gear to stop the packing operation, consisting of the cross-head H, cord *j*, pulley P, weighted cord *j* O, tappet-rod Q *s*, trigger T, lever M, connecting-rod *l*, brake U, wedge V, and catch-bar D D′, all arranged relatively to one another, as set forth.

5. The combination of the packing-shaft F G, cross-head H, cord *j*, pulley P, weighted brake U *u*, and weighted cord *j* O, substantially as and for the purpose set forth.

6. The shaft *i*, the drum Z, and the scroll-pulley W, in combination with the lever X and its spring *m* and wedge *n*, when used as and for the purposes set forth.

110,156.—Lubricator.—Thomas J. Nottingham, Cincinnati, Ohio.

Claim.—In the described connection with the chambers A B, the valves D E, operating as described, and for the purpose specified.

110,157.—Coal-Grate.—Ira Pickard, Lena, Ill., assignor to himself and James W. Slaght, same place.

Claim.—The rocking-grate bar B, having the groove *b*, solid ends b^1, web b^2, central ribs b^3, and hook *c*, combined with the notched supporting-ledges a^3 and rocking mechanism D E F, substantially as shown and described.

110,158.—Steam-Boiler.—Patrick Quinn, South Newmarket, N. H.

Claim.—1. A combustion-chamber placed between tubes in a tubular upright boiler, and having the flames admitted into it both through the bottom and sides of the boiler, substantially as herein set forth.

2. A hollow perforated drum, provided with hollow arms or pipes, and placed within the combustion-chamber of a steam-boiler, the hollow arms or pipes communicating with the outside air, substantially as and for the purposes herein set forth.

3. A feed-water pipe, so arranged as to conduct the feed-water through the boiler and combustion-chamber and deliver at the bottom of the boiler, substantially as and for the purposes herein set forth.

110,159.—Sash-Balance.—Charles R. Rand, Dubuque, Iowa.

Claim.—The device for balancing sash, consisting of the case A, having the small pulleys C and D and the large pulley E mounted therein in the relative positions shown and described, and also having in its front face the openings *b* and *c* for the passage of the cord and insertion or removal of the small pulleys, as set forth.

110,160.—Anti-Friction Boxes for Axles.—William O. Reid, Vienna, N. C.

Claim.—The arrangement of the flanged rings *b*, balls *b* and *c*, and tape *k*, with relation to the flanged and rabbeted pipe-box *a* and the axle journal, all constructed to operate as and for the purpose specified.

110,161.—Compound for Bating Hides and Skins.—Louis F. Robertson, New York, N. Y.

Claim.—1. A compound for bating hides and skins made of saw-dust, water, and ammonia, mixed together, substantially in the manner herein set forth.

2. A compound for bating hides and skins made of blood and ammonia.

3. A compound for bating hides and skins made of blood, saw-dust, and ammonia.

4. A compound for bating hides and skins made of saw-dust, blood, urine, water, and ammonia, mixed together, substantially in the manner herein specified.

110,162.—Implement for Removing Corns, Bunions, &c.—Charles L. Roorbach, St. Clair, Pa.

Claim.—1. A composition of matter, forming a body with a roughened surface, for rubbing or filing corns, &c., and thus exterminate them.

2. The improved corn-file herein described, produced by the combination of a body of wood or other material as a base, and a coating compound of the character described, all substantially as set forth.

110,163.—Material for Bearing-surfaces in Machinery.—John Schieder, New York, N. Y.

Claim.—A compound for bearing-surfaces of machinery, prepared substantially as described.

110,164.—Straw-Cutter.—Valentine J. Shryock, Folsomville, Ind.

Claim.—The combination, with the face-plate D, of the circular guide I, balance-wheel J, and the blade or blades H, separate from the balance-wheel and revolving within the circular guide, all being constructed to operate substantially as set forth.

110,165.—Sand-papering Machine.—Samuel F. Smith, Indianapolis, Ind., assignor to Osgood, Smith & Co., same place.

Claim.—The lever I and connecting-bar J, in combination with the hinged standard F and swiveled bearing E and pulley D, as and for the purpose specified.

110,166.—Self-acting Valve or Cut-off for Liquid Cans.—Heman S. Snow, West Meriden, Conn.

Claim.—A self-acting valve or cut-off, consisting of the valve D, composed of ears *d*, plate d^1, and weight d^2, arranged to operate substantially as set forth.

110,167.—Fruit and Vegetable-Parer.—Henry Soggs, Columbus, Pa.

Claim.—1. The combination of the loose sleeve *d* with the guard A, as and for the purposes specified.

2. The groove H, in combination with the guard A and the sleeve *d*, all constructed as described, and for the purposes set forth.

110,168.—Spoke-Shave.—George N. Stearns, Syracuse, N. Y.

Claim.—The spoke-shave herein described, consisting of stock A, gauge *e e*, constructed, arranged, and operating substantially as described.

110,169.—Water-Wheel.—Ralph Stinson, Whitesville, Mo.

Claim.—1. The buckets C, forming the outline of the wheel, in the form of a frustrum of a cone inverted, said buckets being secured to the base-plate A and annular rim B by means of the recessed seats *e* and the curved shoulders *f*, in the manner described.

2. The inclined buckets, having their outer sides of curves of a radius about half that of the inner sides, and arranged so that the sides having the least radius will form, with its contiguous bucket, enlarged openings at their receiving-ends and narrow outlets, in the manner and for the purpose described.

3. The hub D of the cone A, made with an angular tapering seat, and the end of the driving-shaft F of corresponding shape, for the purpose of suspending the wheel upon a self-locking and supporting-seat without fastening, as herein shown and described.

4. The arrangement of the cone K so as to form a continuation of the base-plate A and be inclosed by the hub I of the feeder, to produce a centrifugal action of the water upon the buckets and to insulate the vertical shaft from the water, as described.

5. The feeding-openings H, arranged tangent to the hub I of the feeder, in the manner and for the purpose described.

6. The register, having tangent openings, in combination with the tangent openings of the feeder, in the manner and for the purpose described.

7. The arms of the tangent openings and the arms of the feeder, inclined in the same direction on one of their sides only, so as to direct the water into the wheel and upon the buckets, in the manner described.

8. The buckets C, arranged upon a conical base-plate A, substantially as described, with a feeder constructed with tangent openings arranged within the diameter of the upper ends of said buckets, as described.

9. The combination and arrangement of the conical base-plate A, the annular rim B, buckets C, the angular suspending and locking-seat E of the wheel, the frustrum of a cone, K, the feeder and register, with their tangent openings, the several parts being constructed, arranged, and operating in the manner herein described.

110,170.—Fence.—William W. Sullivan, Liberty, Ind.

Claim.—The combination of the sections or panels A B C, perforated ears D, stakes E, and rails G, all constructed and arranged substantially as and for the purposes herein set forth.

110,171.—Shuttle-operating Mechanism for Looms.—Enoch P. Terrel, West Liberty, Ohio.

Claim.—1. The spirally-grooved cylinders H, operating the levers through which the pickers are operated, when constructed substantially as described, so that no change in the direction of their revolution will in any way interfere with the continuous operation of the parts.

2. The cylinders H, provided with the double-spiral cams I, double projections J, and wings N, substantially as and for the purpose herein described.

3. The combination of the vertical levers R and their pickers, connected by cords, as described, so that the same lever which throws the picker forward in one shuttle-box retracts the picker in the other shuttle-box at the same time, the other lever being entirely inactive during this movement.

4. The combination of the cylinders H, constructed substantially as described, and levers O and R, with springs V, cord W *b e*, and wheels *c d*, to operate the pickers, substantially as set forth.

110,172.—India-rubber and Combination Hose.—William A. Torrey, Mont Clair, N. J.

Claim.—1. The improved mode herein described for strengthening and reinforcing the ends of hose, by applying thereto any suitable fabric or material in the manner set forth.

2. The combination, with vulcanized hose, of a reinforcing or strengthening fabric or material having its threads or strands at right angles to the axis of the hose so as to prevent expansion, as set forth.

3. The improved hose herein described, having its ends reinforced and strengthened in the manner described.

110,173, antedated December 3, 1870.—Bridge.—Marshall Turly, Council Bluffs, Iowa.

Claim.—The combination of the abutments A B

C D, arch E, central rod G, and side-rods H H, all constructed and arranged as described, substantially as and for the purposes herein set forth.

110,174.—UPHOLSTERING-SPRING.—Henry C. Velie, Poughkeepsie, N. Y.

Claim.—A spring, A, having its ends bent to form stars *a a'*, as herein shown and described.

110,175.—MECHANICAL MOVEMENT.—William Walker, Odin, Ill.

Claim.—The auxiliary pitman B, with its spring *d* arranged and operating at the side of the main pitman A, substantially as and for the purposes herein set forth.

110,176. — NAIL-EXTRACTOR. — Wesley G. Ward, Fayette, N. Y.

Claim.—A nail-extractor, A, consisting of a single piece of metal curved, as herein shown and described, with a claw, B, at one end for insertion under the head of a nail, and a head, D, at the other for the application of a hammer, as set forth.

110,177.—PUMP.—Wesley G. Ward, Fayette, N. Y., assignor to himself and Abram M. Flickinger, same place.

Claim.—The combination, in a lift-pump, of a trap-valve, C, and valveless piston-head E, of less diameter than the bore of the pump, substantially as herein described.

110,178.—NECK-TIE SUPPORTER.—William A. Wicks, Baltimore, Md.

Claim.—A scarf-supporter, consisting of the flexible attaching-strap B and a suitable retaining-clasp secured to the scarf, through which the strap passes, and in which it is adjustable to fixed positions, as described.

110,179.—MACHINE FOR MAKING COUPLING-PINS.—Charles H. Williams, Cleveland, Ohio.

Claim.—The above-described machine for making coupling-pins for railroad cars, provided with the dies H^1 and H^2 for flattening the handle, and the dies Q and K^1 and K^2 for forming the head or collar, and the dies V and V^2, and the dies T^1 and T^2, and the punch V^4 for necking the handle and punching the hole in it, substantially as described.

110,180. — MOP-HEAD. — Lewis Williams, Arlington, Vt.

Claim.—1. The bail C, each side thereof being formed with a circular spring, *g*, substantially as set forth.

2. In combination with the above, the lever *d*, when constructed and operated substantially as specified.

110,181.—WASHING-MACHINE.—George L. Witsil, Philadelphia, Pa.

Claim.—1. The elastic weighted diaphragm C, in combination with a tub or vessel in which clothes are to be washed or cleaned.

2. The combination of the weighted diaphragm C^1, shaft B^1, and rollers B, substantially as and for the purpose specified.

3. The combination of the block to which the center of the diaphragm is attached, the diaphragm C, the cross-bar A^1, and the vertical shaft B^1, substantially as shown and described.

110,182.—PUMP.—Henry E. Wolcott, Elbridge, N. Y., assignor of two-thirds of his right to Russell B. Wheeler and Ezekiel B. Hoyt.

Claim.—1. The valves A A', constructed as described, for the purpose set forth.

2. The valves A A', pipes C C', tin-block valves B B', flaring-mouth cylinders D and D', and chambers G G', combined and arranged to operate substantially as set forth.

110,183. — WAGON-BRAKE.—Jacob Wölfle, Cincinnati, Ohio, assignor to the Union Omnibus and Wagon Manufacturing Company, same place.

Claim.—The combination and arrangement of the pivoted levers D D' E E', links F F', and rod H, the levers D D' carrying the rubbers C C', and the whole being connected and operated substantially in the manner and for the purpose specified.

110,184.—MACHINE FOR BENDING PLOW-HANDLES.—Jacob Woodburn, St. Louis, Mo., and Samuel F. Smith, Indianapolis, Ind., assignors to Osgood, Smith & Co., Indianapolis, Ind.

Claim.—1. The handle-strap, composed of the parts *a r i s*, harness rod T, and straining block V, all constructed and arranged as shown and described, and for the purpose set forth.

2. The handle-strap *a r i s*, in combination with T-head F, strap *s*, the former B, and key G, all constructed, combined, and arranged as shown and described, for the purpose specified.

110,185.—MECHANICAL MOVEMENT.—Jacob Woolf, Burr Oak, Mich.

Claim.—The combination of the two movements, running in opposite directions, with their levers interlocking automatically, in manner substantially as described.

110,186.—PEN.—George Washington Woolley, Washington, D. C.

Claim.—In combination with a pen provided with suitable fastening, the fountain attachment shown in figs. 1 and 2 of the drawing, substantially as and for the purposes hereinbefore set forth.

REISSUES.

4,196.—TUCK-CREASING DEVICE FOR SEWING-MACHINES.—James Bolton, Chicago, Ill., assignor to The Singer Manufacturing Company.—Patent No. 46,871, dated March 21, 1865.

Claim.—1. The creasing tuck-marker hereinbefore described, consisting substantially of the spur, the fork, and the stock, all permanently connected so as to constitute a removable attachment for sewing-machines.

2. The combination of the arm of the movable member of a tuck-marker with a movable bracket, by which the said arm may be connected with a reciprocating member of the sewing-machine, substantially as before set forth.

4,197.—INKSTAND.—Samuel Darling, Providence, R. I.—Patent No. 51,931, dated January 9, 1866.

Claim.—1. An inkstand, having a reservoir arranged to be rotated upon its bed or stand, and having a dipping-cup on one side of its center of rotation, when the ink is caused to be at the proper height in the dipping-cup by revolving the reservoir, substantially as described.

2. An inkstand, having a dipping-cup, the lower part of which is smaller than the pen, and having also an ink-containing cavity or recess in the bottom of the reservoir, under the dipping-cup, substantially as and for the purpose described.

4,198. — METALLIC ROOFING. — Seymour Hughes, Hudson City, N. J.—Patent No. 103,887, dated June 7, 1870.

Claim.—1. The roofing sheets A, clipped at the corners to receive the lozenge-shaped joint-pieces B, as set forth.

2. The water-proof fabric C, interposed between the plates A B of a metal roof, to permit expansion and contraction of said plates, as set forth.

3. A roof having longitudinal and transverse projecting joints between the several pieces when the intersections of the said joints are covered by the piece B, in the manner described.

4,199. — BIT-STOCK. — Levi J. Gunn and Charles H. Amidon, Greenfield, Mass., assignees of A. C. Moore.—Patent No. 16,931, dated March 31, 1857.

Claim.—1. The stock or tool-holder herein described, consisting of the barrel A, provided with screw-thread C, socket B, and nut E, constructed, arranged, and operating in the manner described and specified.

2. The barrel A, provided with socket B and screw-segment C, in combination with the slotted nut E, constructed and operating in the manner described and specified.

4,200.—GEARING FOR MOWING-MACHINES. Joel V. Strait, Litchfield, Ohio.—Patent No. 95,950, dated October 19, 1869.

Claim.—1. The combination of clutch K and pinion-wheel H with the ratchet spur-gear G and pawled fast-collar J on shaft F, substantially as shown and set forth.

2. The combination of wheel B, having the concentric gears C D E thereon, and arranged on shaft A, with the pawled fast-collar J, ratchet spur-gear G, and clutch and gears H K I, arranged on shaft F, all operating together in the manner set forth.

4,201. — FURNACE FOR BURNING BONE-BLACK AND OTHER SUBSTANCES.—Adam Weber, New York, N. Y.—Patent No. 65,457, dated June 4, 1867.

Claim.—1. The columns A', having cast upon their upper ends the plates *s s*, in combination with the angle-plates *p p*, supporting the fire-bricks *q q*, the bed-plates *a a*, and ash-pan L, substantially as described, for the purpose specified.

2. The arrangement of the inclined partitions *h h* between the single retorts D D, and cast upon them, and between the fire-spaces *k k* and *m m* in the rear of said retorts, substantially as described, for the purpose specified.

3. The horizontal fire-flues K K' and dampers *n n*, in combination with the retorts, substantially as described, for the purposes specified.

4. The hanging rods *s*, extending in sections from front to rear under the coolers, and suspended from the plate *a* by means of the hanger *d*, arranged to support a series of retorts, as herein set forth, for the purpose specified.

5. The suspended iron ash-pan L, in combination with the furnace C, substantially as described, for the purpose specified.

6. The flanges *v*, cast upon the upper ends of the lower sections of the retorts E, arranged in such a manner as to form partitions between the upper retorts and lower retorts E and E', substantially as described, for the purpose specified.

7. The combination, with the walls G and the retorts, of the projections *w*, substantially as specified.

8. The retorts, made either in one or more parts, inclosed at the sides, tops, and bottoms, in a furnace having the openings at the top and bottom for the supply and discharge of the substance subjected to the action of the heat therein, and arranged on posts or other supports, affording access to the discharge-openings beneath, all substantially in the manner described.

4,202. — COMBINED INDIA-RUBBER AND STEEL SPRINGS.—The National Spring Company, New York, N. Y., assignee of Erastus T. Bussell.—Patent No. 10,280, dated November 29, 1853; extended seven years.

Claim.—The combination of a column of rubber or its equivalent, whether solid or hollow, with a spiral metallic spring, when the said spring is arranged external to and surrounding the rubber, substantially as and for the purposes specified.

DESIGNS.

4,503.—FRAME FOR A PAPER-BAG MACHINE. Charles F. Annan, Boston, assignor to himself and Herbert S. Merrill, Cambridge, Mass.

Claim.—The design for the frame-work of a machine for making paper bags, herein shown and described.

4,504.—BASE OF A HOT-AIR FURNACE.—Robert Boyd and James C. Hart, Rochester, N. Y.

Claim.—The design for the base of a heating-furnace, as herein described and illustrated.

4,505. — SCYTHE. — Charles P. Crossman, West Warren, assignor to himself, D. Frank Hale, and Sidney Sanders, Chicopee, Mass.

Claim.—A scythe-blade, designed substantially as above specified.

4,506.—BROOM.—Richard W. English, Buffalo, N. Y.

Claim.—The design for a broom, as herein described and shown.

4,507.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the medallions A, with their borders *a* and *b*, and interior ornament *c*.

2. The design for the ornamentation B, as shown and described.

3. The design for the continuous stripe C, arranged in respect to the medallions A, as described and represented.

4. The design for the whole pattern, including the medallions A, ornamentation B, and stripe C.

4,508.—CARPET-PATTERN.—William Mallinson, Halifax, England, assignor to W. & I. Sloane, New York City.

Claim.—The design for a carpet, as shown.

4,509.—CARPET-PATTERN.—William Mallinson, Halifax, England, assignor to W. & I. Sloane, New York City.

Claim.—The design for a carpet, as shown.

4,510.—COAL-BOX.—Robert W. Newbery, New York, N. Y.

Claim.—The design for a coal-box, as shown.

4,511.—COAL-BOX.—Robert W. Newbery, New York, N. Y.

Claim.—The design for a coal-box, as shown.

4,512.—CENTER-PIECE FOR CEILINGS.—Joseph Woolman Reeves, Philadelphia, Pa., assignor to W. H. French, same place.

Claim.—1. The central ornamental medallion *a*.

2. The ornamental molding *b*.

3. The paneled belt *d*.

4. The ornamented scalloped border *f*.

5. The whole design as illustrated in and by the accompanying drawing.

4,513.—CENTER-PIECE FOR CEILINGS.—Joseph Woolman Reeves, Philadelphia, Pa., assignor to W. H. French, same place.

Claim.—1. The central ornamental medallion *a*.

2. The ornamental molding *b*.

3. The ornamented spaces *e*, within the oval beading *d*.

4. The design, as a whole, exclusive of the borders.

4,514.—SHOW-CASE.—Robert Jordan Roberts, New York, N. Y.

Claim.—1. The design or configuration of a show-case, as shown.

2. The design of the ornamental post, and shelves *e e*, within the show-case, as shown.

4,515.—COOKING-STOVE.—John R. Rose and Edward L. Caley, Philadelphia, Pa., assignors to "Armstrong Company," Port Deposit, Md.

Claim.—The design for cook-stoves, as shown.

4,516.—BRACELET.—Theron I. Smith, Attleborough, Mass.

Claim.—The design for a bracelet, consisting of the raised central band B and edge moldings *a*, of contrasting color, substantially as herein described and shown in the drawing.

4,517.—HOE.—Barna T. Stowell, Quincy, Ill.

Claim.—The design for a hoe, as herein shown.

4,518.—WOVEN FABRIC.—Royal C. Taft, William B. Weeden, and James W. Taft, Providence, R. I.

Claim.—The design for fancy cassimeres, consisting of the herring-bone stripes A, continuous lines *a*, and broken or mottled lines *b*, substantially as shown and described.

4,519.—WOVEN FABRIC.—Royal C. Taft, William B. Weeden, and James W. Taft, Providence, R. I.

Claim.—The design for fancy cassimeres, consisting of the broken lines *a a*, the line stripes A, and spotted stripes B, substantially as shown and described.

4,520.—WOVEN FABRIC.—Royal C. Taft, William B. Weeden, and James W. Taft, Providence, R. I.

Claim.—The design for fancy cassimeres, which consists in the corded stripe C and the broken or mottled line stripes *a a*, substantially as shown and described.

4,521.—PLOW-SHARE.—Richard Henry Taylor, Lincoln, Va.

Claim.—1. The above-described design or pattern for plow-shares, substantially as set forth.

2. The contour or joint B C D E, or the equivalent thereof, for fitting the mold-board, substantially as set forth.

TRADE-MARKS.

96.—RAZOR-STRAP.—Benjamin F. Badger, Everett, Mass.

97.—WAGON-AXLE.—D. Arthur Brown & Co., Fisherville, N. H.

98.—ROOT AND HERB BITTERS.—Flint & Co., Providence, R. I.

99.—MEDICAL COMPOUND.—George C. Furber, Yreka, Cal.

100.—BROOM AND BRUSH.—L. Y. Gardiner & Co., Amsterdam, N. Y.

101.—WHISKY.—W. A. Gaines & Co., Frankfort, Ky.

102.—WHISKY.—W. A. Gaines & Co., Frankfort, Ky.

103.—WHISKY.—W. A. Gaines & Co., Frankfort, Ky.

104.—WHISKY.—W. A. Gaines & Co., Frankfort, Ky.

105.—LEATHER.—George F. Page and Charles T. Page, Franklin, N. H.

106.—CIGAR, SNUFF, AND TOBACCO.—Lorin Palmer, New York, N. Y.

107.—OIL.—Charles Pratt, New York, N. Y.

108.—CUTLERY.—Robert J. Roberts, New York, N. Y.

EXTENSIONS.

WILLIAM N. WHITELEY, of Springfield, Ohio.—Letters Patent No. 16,131, dated November 25, 1856; reissue No. 1,203, dated June 25, 1861; reissue No. 1,614, dated February 2, 1864.—Division A.

"Improvement in Harvesting-Machines."

Claim.—1. The combination of the main frame of a harvesting-machine with the main ground and driving-wheels, pinion shaft on the frame, the sector-plates *f f'*, and the sliding or adjustable boxes *g g'*, or their equivalents, so that the attendant of the machine can both vary the distance of the frame from the axle of the driving-wheel and its distance from the pinion-shaft, while the axle remains in said sliding boxes in which it revolves, for the purposes set forth and described.

2. In combination with the sector-plate *f*, a projecting lip for the shipper's fulcrum-pin, substantially such as is shown and described, for the purposes specified.

3. Retaining the pinion on its shaft by means of the shipper, or its equivalent, by which said pinion is thrown in and out of connection with its clutch-pin, substantially as shown and described, for the purpose stated.

4. So connecting or combining the driver's seat of harvesting-machines with the front end of the frame of the same, (when used for reaping,) that when the driver is on his seat his weight will do either, raise and hold up the rear end of the wheel-frame, (to which the cutting apparatus is connected,) or both the rear end of the frame and the center of the finger-bar, for the purposes specified.

WILLIAM N. WHITELEY, of Springfield, Ohio.—Letters Patent No. 16,131, dated November 25, 1856; reissue No. 1,203, dated June 25, 1861; reissue No. 1,615, dated February 2, 1864.—Division B.

"Improvement in Harvesting-Machines."

Claim.—In combination with a harvester's platform, which is behind its cutting apparatus, an automatic rake, having its outer end moved faster over said platform than its inner, by a crank and pitman, providing said crank with suitable mechanism, so that the driver on his seat can lock the crank to or release it from its shaft or driving mechanism, so as to make the rake remove the gavels from the platform more or less often while the machine is in motion, and make the gavels a proper size for binding into sheaves where the grain is thin on the ground.

Extended by Act of Congress, Approved July 7, 1870.

JOHN TYLER, of West Lebanon, N. H.—Letters Patent No. 15,309, dated July 8, 1856; reissue No. 3,015, dated June 30, 1868.

Improved Water-Wheel.

Claim.—1. The curved bucket-head *c*, when the said head is combined with the series of segment-shaped buckets *d d*, substantially in the manner herein set forth.

2. The segment-shaped buckets *d d*, when the said buckets are formed with and project from the concave surface of the curved bucket-head *c*, substantially as herein set forth.

3. The combination of the buckets *d d* with the bucket-head *c*, when the said buckets are located in positions tangential to the inner guiding circle *e*, substantially as herein set forth.

4. The combination of the scallop-edged rim *f* with the lower edges of the series of buckets *d d*, substantially as and for the purpose herein set forth.

5. The combination of the elevated cover D with the curb of my improved water-wheel, when the said cover is so proportioned as to receive and sustain the upper bearing-box of the shaft of the wheel, substantially as herein set forth.

6. The combination of the detachable gate-box B with the mouth of the water-way of the water-wheel, all substantially in the manner and for the purpose herein set forth.

THEODORE T. WOODRUFF, of Philadelphia, Pa.—Letters Patent No. 16,160, dated December 2, 1856.

"Improvement in Railroad-car Seats and Couches."

Claim.—1. In combination with the movable frame *g* and the fixed frame *f*, substantially as described, the employment of the movable seats at the ends of the several divisions, substantially as described, to give the required number of seats when the couches are not used for the purpose of reclining, as set forth.

2. Converting the back of the side seats into an elevated couch, as set forth, by connecting the upper or back edge of said back to the side of the car, or to the partitions *e e* by hinged joints, or other equivalent means, and holding it up in the required elevated position by means of catches or other equivalent means, as described, in combination with the movable frame *g* and fixed frame *f*, or any equivalent therefor, as described.

3. The manner of connecting the upper or fourth couch with the car, substantially as described, so that it may be let down to be used as a couch, or thrown up to the roof of the car when not required to be used, as set forth.

4. In combination with the said upper or fourth couch the hinged or suspended step, substantially as described, for the double purpose of a step to give access to the said upper couch when used as such, and as a means of securing said couch when thrown up out of the way, as set forth.

THEODORE T. WOODRUFF, of Philadelphia, Pa.—Letters Patent No. 16,159, dated December 2, 1856; reissue No. 1,439, dated March 17, 1863.

"Improvement in Railroad-car Seats and Couches."

Claim.—1. Connecting and combining the two opposite sets of cross seats of a railroad-car with additional frames to form the required length of cushioned surfaces to form couches in each compartment, substantially as described.

2. Combining and connecting the backs of opposite cross seats of a railroad-car, when elevated to a horizontal position, to constitute an elevated couch or couches, substantially as described.

3. Combining with the backs additional frames, substantially as described, to form the required length of couch, and thereby avoid the necessity of making the backs of an inconvenient height when used as backs to the seats.

4. Connecting the backs of opposite cross seats, when elevated to a horizontal position, to form an elevated couch or couches, substantially as described, in combination with the opposite cross seats arranged so as to be convertible into couches, substantially as described.

5. Forming an elevated couch, above the couch formed by the backs of seats, by a series of hinged frames, substantially as described.

JAMES APPERLY and WILLIAM CLISSOLD, of Dudbridge, England.—Letters Patent No. 18,883, dated December 22, 1857; antedated December 4, 1856.

"Improvement in Machinery for Preparing Fibrous Substances for Spinning."

Claim.—The means herein described for conducting the roping or sliver from one preparing-machine to the other, and laying the roping or sliver in parallel lines on the feed-bands, aprons, or tables of preparing machines.

ISSUE OF DECEMBER 20.

PATENTS.

110,187.—PLANTER AND CULTIVATOR.—Solomon Bacher, Edina, Mo.

Claim.—The combination, with the covering teeth *x x* of a seed-planter, of the downwardly-projecting cutters Y Y, arranged directly in front thereof, as and for the purpose specified.

110,188.—LAMP-WICK.—Philander Baker, Chicago, Ill.

Claim.—The lamp-wick, composed of the metallic core B and pervious covering, when constructed so as to operate substantially as shown and described.

110,189.—PACKING CAUSTIC ALKALIES.—William Henry Balmain, St. Helen's, Great Britain, assignor to the Greenbank Alkali Company, and said Company assignor to George T. Lewis, Philadelphia, Pa.

Claim.—1. The process of putting up caustic alkali by packing the same in a granulated or pulverized state, and without admixture with other materials, in cases or packages, as set forth, for the purpose specified.

2. Cases or packages of granulated or pulverized caustic alkali prepared as described.

110,190.—APPARATUS FOR GENERATING CARBONIC ACID.—Wallace H. Bate, East Somerville, Mass.

Claim.—1. A hollow valve-plug, *b*, and spindle C, with its aperture *d*, in combination with an acid-chamber, A, and alkali-chamber, B, operating substantially in the manner and for the purpose set forth.

2. The pressure-gauge I, in combination with a hollow valve-plug, *b*, and spindle C, acid-chamber A, and alkali-chamber B, substantially as and for the purpose described.

110,191.—SMUT-MILL.—J. Adam Benzing, Jr., Oswego, N. Y.

Claim.—1. The combination of the case E provided with the openings *b* and corrugations *d*, with the fan H, shaft C, all constructed and arranged substantially as described and shown for the purposes set forth.

2. The combination of the disk F, the spiders F', the bottom E', the beaters G, and the shaft C, all constructed and arranged substantially as described and shown, for the purposes set forth.

110,192, antedated December 17, 1870.—CANE-JUICE EVAPORATOR.—John S. Blymyer, Mansfield, Ohio.

Claim.—1. Constructing the concentrator B with

inclined sides *c c*, and transverse ledges *d d* reaching from side to side and joining the inclined sides, with juice-passages *e e* around alternate ends of the ledges, said passages being formed by carving out a portion of the wood appropriately, substantially as illustrated and explained.

2. In combination with a cane-juice evaporator, in which the juice is evaporated in a continuous transverse current, a heater and defecator, having hollow corrugations developed upward from the general level of the bottom, and not extending to either side or end, substantially as shown and described.

3. In combination with a cane-juice evaporator, in which the juice is evaporated in a continuous transverse current, a finisher, arranged upon a lower level, substantially as and for the purpose explained.

4. In a compartment evaporator in which the juice is provided to flow continuously from one compartment to another, the double gate *i*, with openings *o*, constructed and arranged substantially as herein described, and for the purpose specified.

110,193.—APPARATUS FOR PITCHING BARRELS. — James W. Brady, Baltimore, Md.

Claim.—1. An apparatus by which melted pitch is injected into barrels, casks, &c., to pitch the interior of the same, substantially as described.

2. An apparatus by which melted pitch, combined with a hot blast, is injected into barrels, casks, &c., to pitch the interior of the same, substantially as described.

3. In an apparatus for pitching barrels, casks, &c., a furnace having its cover constructed to form the pitch-kettle, substantially as described, for the purpose specified.

4. In combination with the furnace and kettle, the pitch-pipe M and the hot-blast-pipe and nozzle, substantially as described, for the purpose specified.

5. In combination with the hot-blast nozzle L, the pitch-pipe M, substantially as described, for the purpose specified.

6. The flanged plates Q R, constructed as described, to connect the sections of pipe, substantially as set forth, for the purpose specified.

7. The door G, constructed as described, and applied to the furnace and its cover, in the manner set forth, for the purpose specified.

110,194. — REVOLVING CANNON.— Eduard Brehm, Jersey City, N. J.

Claim.—A disk E, having a cam-shaped edge, and several single-nippled sets of cartridge holders, combined, as described, with a spring hammer, G, which automatically locks the said disk and explodes the cartridge, in the manner set forth.

110,195.—SEAL-LOCK.—Benjamin Briscoe, Detroit, Mich.

Claim.—The herein-described seal-lock, composed of the segments A B hinged together, as shown, the former provided with the slotted lug A′ and the latter with the flattened extension B′, perforated for the reception of one or more leaden rivets C, as and for the purpose set forth.

110,196.—FANNING-MILL.—Levi Bronson, Buffalo, N. Y., assignor to James Braley, same place.

Claim.—1. The arrangement of the spring E with the inner shoe B, hanger *d*, and slots *e e′*, when constructed substantially as shown and described.

2. The skeleton head D upon short shaft C, provided with the adjusting holes *b b′*, combined with the inner shoe B, constructed substantially as set forth.

3. The combination and arrangement of the inner shoe B, screw-conveyer F, bent fingers *g g* attached to the head of the inner shoe, the whole constructed substantially as and for the purpose described.

110,197.— PEW-SHELF.—David Buchanan, Philadelphia, Pa.

Claim.—The combination of trunnioned shelf A B, brackets D, arms C C, and spring catch H, when arranged on the rear of a side, F, which supports the seat F, for the purpose specified.

110,198, antedated December 9, 1870.— VISE.—Isaiah Byrd and Turner Byrd, Jr., Calvin township, Mich.

Claim.—1. The treadle I, when provided with a supplementary lever, I′, pivoted thereto, and operating in the manner described, and for the purpose set forth.

2. The construction and arrangement of the treadle I, rope J, levers E and F, and spindle D, with relation to each other and the ratchet H, and any suitable vise, as and for the purpose set forth.

110,199, antedated December 10, 1870.— IMPLEMENT.—Joseph W. Calef, Boston, Mass., assignor to himself, Harvey King, and Augustus Peabody Hutchinson, same place.

Claim.—The implement composed of a hatchet, a hammer with a forked nail-claw, a screw-driver, a pair of forceps, and a scraper, constructed substantially as and for the purposes described.

110,200.—CLEVIS.—David M. Castle, Constantine, Mich.

Claim.—1. The collar *e* upon the clevis *f*, substantially as and for the purposes herein set forth.

2. In combination, the collar *e* and clevis *f* with a ring, *d*, substantially as and for the purpose specified.

110,201, antedated December 17, 1870.— BARREL-FILLER.—Seth C. Catlin, Cleveland, Ohio.

Claim.—1. In combination with an automatic barrel-filler the tripping-lever L, with the shoulder *m*, the adjustable spring-hook U, spring T, and setting-rod X, arranged, in connection with the lever P and float G, to operate substantially as and for the purposes described.

2. The self-adjusting drop-valve I, substantially as and for the purposes described.

110,202, antedated December 16, 1870.— LIQUOR-THIEF AND MEASURE.—Seth C. Catlin, Cleveland, Ohio.

Claim.—1. The combination of the globe A, tube E, and valve C, when the same are arranged to operate substantially as and for the purposes herein shown and described.

2. A liquid measure or thief, consisting of a tube open at both ends and connected with a valve-receptacle, for the liquid to be tested or measured, as shown and described, all arranged to operate as specified.

110,203.—KITCHEN AND HOUSEHOLD SINK.— Ernest George Chormann and Edward McLaughlin, Philadelphia, Pa.

Claim.—A kitchen or household sink composed of the sink-basin A A A A, the draining-rack B, the saddles C C C C, the shoulders *a a a a*, the strainer D, the reservoir E, the plug F, the outlet G, and the receptacle H, and their several equivalents, combined, arranged, constructed, and operating in the manner and for the purposes substantially as described.

110,204.—CAR AND OTHER SPRINGS.—John W. Cochran, New York, N. Y.

Claim.—A car-spring consisting of two or more concentric spiral springs, one within the other, the central rubber-spring G, constructed to act also as an air-cushion, and the dividing-cylinders D and E, all arranged and operating substantially as shown and described.

110,205.—EJECTOR.—Hugh Coll, Millvale Borough, Pa.

Claim.—1. The inner head *d*, open at its rear end so as to leave an unobstructed opening around the steam injection-pipe for the passage of such pieces of solid matter as may be brought up by the water, such inner head *d* being connected to the outer head *a* by means of radial arms *a′*, all arranged substantially as described.

2. The nozzle-piece *m*, abutting against and in combination with the inner head *d*, substantially as and for the purposes set forth.

110,206.—GALVANIC BATTERY.—Daniel McFarland Cook, Mansfield, Ohio.

Claim.—1. A cup or cell A for a galvanic battery, constructed substantially as described, and for the purposes set forth.

2. Two or more similar elements, combined in the manner and for the purpose specified.

110,207. — CORN-PLANTER. — Richard B. Corson and Henry Corson, Henry County, Mo.

Claim.—The feed-boxes B B, feed-wheels W W, shanks R R, sliding shoes S S, wheels H H, frame P, scrapers K and X, and the wheel E having metal bars N N, said parts being arranged relatively one to the other and to the frame A, in the manner described, for the purpose hereinbefore specified.

110,208. — STOPPING-MECHANISM FOR LOOMS.—James Cowngill, Philadelphia, Pa.

Claim.—The combination of the sliding bar A with the brake C and frog D of a loom, so as to be operated by the picker-staffs *b″ b‴*, substantially as and for the purpose hereinbefore set forth.

110,209.—VEHICLE.—Charles Daniel, Brownsville, Mo.

Claim.—The improved device herein described for preventing the swaying of wagon-bodies, consisting of the rod H, secured at its rear end, in connection with one of the springs, and pivoted at its front end to the upright bar F, which is pivoted at G, and arranged to work freely at its upper end, as shown and described.

110,210, antedated December 17, 1870.— POWDER-FLASK.—Franklin E. Darrow, Bristol, Conn., assignor to Darrow Manufacturing Company, same place.

Claim.—As a new article of manufacture, the herein-described flask, constructed mainly of rawhide, substantially as described.

110,211, antedated December 14, 1870.— TRANSPLANTING-IMPLEMENT. — Azahel Davis, Lowell, Mass.

Claim.—1. The combination of the jointed bar E and rods C D, with blades A B affixed, as described.

2. The combination of the arm H and guide G and the guide curve F, with the rods C D, with blades A B affixed, as set forth.

3. The combination of the jointed bar E, and guide G, and guide curve F, with the rods C D, and blades affixed, when made substantially as described, and for the purpose set forth.

4. The jointed bar E, the guide G, and guide curve F, and the rods C D, and blades A B affixed, in connection with the forked follower L, when made substantially as described, and for the purpose set forth.

110,212. — MOTIVE-POWER APPARATUS. — Thomas Davis, Detroit, Mich.

Claim.—The combination of the wedges D with a bar-link chain, C, constructed as herein described, and a series of fixed or stationary friction-rollers, B B′, arranged in the frame A, when operating in the manner and for the purpose substantially as herein set forth.

110,213. — SECTIONAL IMAGE. — Benjamin Day, West Hoboken, N. J.

Claim.—The sectional image or bas-relief, each section of which is made, upon its upper surface, to represent a feature or detail of the whole, in combination with a binding-plate provided with a beveling orifice, all arranged and operating substantially as described.

110,214.—CAR-COUPLING.—John C. Dearborn, Candia, N. H.

Claim.—The combination, in a coupling-link support, of the block C with or without the lug *c*, arms D D, guides E E hinged to the arm F, and operated by the means and in the manner substantially as set forth.

110,215.—LUBRICATOR.—Joseph L. Dickinson, Dubuque, Iowa.

Claim.—The tube C, with the orifice L and valve D, the stem G and valve F, and the thumb-screw J, with the stem K, in combination with the reservoir A, arranged to operate substantially as and for the purposes herein shown and described.

110,216. — PORTABLE LOADING AND DUMPING-MACHINE.—William D. Dorsey, Decatur, Ill.

Claim.—1. The combination of the windlasses W *w*, chains C *c* and C′ *c′*, levers L *l*, ratchet-wheels R *r*, and pawls E *e*, substantially as and for the purpose hereinbefore set forth.

2. The box B, with the devices for loading and dumping, substantially as above set forth and described.

110,217. — WATER-FILTER. — Joseph W. Dougherty, Chicago, Ill.

Claim.—1. The improved water-filter, consisting of the hollow cylinder A, perforated pipe E, fitting-cases G, the supply and exhaust-pipe connections, and the nozzles F and L, all combined, substantially as specified.

2. The cases G and hollow cylinder A, arranged for removing and turning the cases, substantially as specified.

110,218.—MACHINE FOR BEAMING YARNS OR WARPS. — George Draper, Hopedale, Mass.

Claim.—1. The combination as well as the arrangement of the mechanism for effecting rotary motion of the yarn-beam, the same consisting of the cone-drums *u v*, the belt *t*, and the gears *w x z a′* and their shafts, with the mechanism for gradually moving the belt *t* from the smaller to the larger end of the drum *v*, such consisting substantially of the train of gears *i′ h′ g′ f′*, the cone-drums *d′* and *b′*, the endless belt *c′*, the train of gears *l m n o p*, the shafts *k c′* and *q*, the screw *r*, and the belt-shifter *s*, and with the compound motion as described, composed of the gears *a b*, the pulley *c*, the endless belt *d*, the pulley *e*, the shaft *f*, and the gears *g*, *h*, and *i* applied together and to the shaft *k*, and the yarn-guide roller C, in the manner as described and represented.

2. The combination of the screw *m′* and the belt-shifter *n′*, or their mechanical equivalents, applied to the belt *c′*, with the mechanism for effecting rotary motion of the yarn-beam, the mechanism for gradually moving the belt *t* from the smaller to the larger end of the drum *v*, and with the compound motion, as described.

3. The combination of the wedge *r′*, lever *s′*, bracket *t′*, and rod *q′*, with the lever *p′*.

4. In combination with the mechanism for effecting the engagement and disengagement of the gears *w* and *x*, and, with the gears *o p*, of the mechanism for moving the endless belt *t* along the drum *v*, a mechanism, substantially as described, or its equivalent, for effecting the simultaneous en-

gagement or disengagement of the said gears *o p*, such mechanism consisting of the wedge *r'*, lever *s'*, bracket *t'*, and the rod *q''* applied to the lever *p'* and the gear *o* in manner and so as to operate and be operated essentially as hereinbefore explained.

110,219.—SHELL-FUSE.—James Eggo, Jersey City, N. J.

Claim.—1. The improved fuse for rifle-shells herein described, composed of the screw-stock A, closed at its outer end, the hollow screw-plugs B and C, tubular bar D, short tube E, and wire F, all relatively constructed, arranged as shown and described.

2. The safety-pin G, passing in through the closed outer end of the stock A, with its inner end resting against the end of the plunger C, substantially as herein shown and described, and for the purpose set forth.

110,220.—EXTENSION TABLE.—Thomas C. Ellison, Albany, N. Y.

Claim.—In combination with an extension table, the shaft *h*, gears K J J, screw-shaft S, and sleeves G and H, when arranged substantially as and for the purpose set forth.

110,221.—FENCE-POST.—Robert M. Filson, Willsborough, N. Y.

Claim.—The stone fence-post, recessed on its face, and provided with the metal rod B and eye-bolts *d*, substantially as herein shown and described.

110,222.—HYDRAULIC MINING APPARATUS. Frank H. Fisher, Nevada City, Cal.

Claim.—The swiveled-jointed nozzle and pipes A B D E, combined, as described, with the lever F working through slotted post *f*, strap *i*, lever *e*, and pawl and ratchet *j k*, for the purpose specified.

110,223.—CUT-OFF VALVE-GEAR.—George W. Fisher and Hugh Reid, St. Louis, Mo., assignors to Gerard B. Allen & Co., and Hugh Reid, same place.

Claim.—1. The slotted rod D, with its arms E E' and *k k' k'' k'''*, and cam-rod B, with its plate C, arranged for joint operation with each other and the valves and main shaft of the engine, and constructed and operated as and for the purpose shown and specified.

2. The slotted rod D, with its arms E E' and *k k' k'' k'''*, and cam-rod B, with its plate C, and air-cylinder M, arranged for joint operation with each other and the valves and main shaft of the engine, and constructed and operated as and for the purpose shown and specified.

3. The rod K, having a right and left-hand screw and adjustable tappets P P', in combination with the cam-rod N and the eccentric on the main shaft of the engine, and constructed and operated as and for the purpose shown and specified.

4. The slotted rod D, with its arms E E' and *k k'*, &c., cam-rod B with its plate C, rod K, having a right and left-hand screw and adjustable tappets P P', arranged for joint operation with each other and the valves and main shaft of the engine, and constructed and operated as and for the purpose shown and specified.

5. The slotted rod D, with its arms E E' and *k k'*, &c., cam-rod B with its plate C, rod K, having a right and left-hand screw and adjustable tappets P P'', and air-cylinder M, all arranged for joint operation with each other and the valves and main shaft of the engine, and constructed and operated as and for the purpose shown and specified.

110,224.—HAY-ELEVATOR.—Robert Furnas, Friendswood, Ind.

Claim.—1. The traveler C, having two upper branches, each provided with a roller, *a*, a sheave, *b*, and bale, *c*, all constructed substantially as described and shown, and arranged as and for the purpose set forth.

2. In combination with the traveler C, constructed as described and shown, the rails A and A', the hand-rope D, the hoist-rope G, and the pulleys E and H, all constructed and arranged substantially as described and shown, for the purposes set forth.

110,225, antedated December 9, 1870. — WARPING-MACHINE.—Jacob Furrer, New York, N. Y.

Claim.—1. The movable collar *r*, clamped to the rod *m*, and forming a gauge to set the parts, in combination with the frame *l*, reed *h*, screw *n*, and reel *k*, as and for the purposes set forth.

2. The friction-strap applied to the wheel *w* to give a uniform tension to the warps as they unwind from the reel *k*, in combination with the screw *n*, roller *v*, and warp-beam *t*, the parts being arranged as specified, so that the reel *k* can be removed without affecting the tension-strap, as set forth.

110,226. — HAMES-FASTENER. — Anthony Gale and Henry R. Johnson, Shelby county, Ky.

Claim.—1. The sliding-link connections C C, the hinge-joints F F, and the set-screws D D, in combination with the arch or circle-piece B provided with the ring E, all constructed, arranged, and operating substantially as herein described.

2. The combination of the links G G having slots H, and connected to the hames A by hinge-joints M, the key K, and plate I with pins J, all constructed and arranged to operate substantially as described.

3. The links L L provided with holes N, and secured together by the pin O and guard-pin P, all constructed and arranged substantially as described.

110,227.—STAMP-CANCELER.—John Goldsborough, Philadelphia, Pa.

Claim.—The combination of the movable case C, a series of printing-disks or types, an inking-band passing below the type, one or more vibrating plates, with serrated edges, and the devices described for operating said plates, causing them to strike and traverse the face of a stamp while the latter is held against the cushion by the type.

110,228, antedated December 9, 1870.—TOY GUN.—John Goodale, Boston, Mass.

Claim.—The combination, in a toy gun, of the hammer *d* and projection or catch *k*, with the ejector A, provided at its rear end with a hook, which, when the ejector is pushed back, catches over the projection *k*, and, when the hammer falls, is disengaged from the said projection so as to permit the ejector to move forward independently of the hammer, as shown and set forth.

110,229.—APPARATUS FOR THE MANUFACTURE OF VINEGAR.—Theodore Grundmann, Cincinnati, Ohio.

Claim.—1. The frame B set up in a vinegar apparatus and provided with cross-bars *c*, for supporting the several layers of loose straw or other material, substantially as herein shown and described.

2. A vinegar apparatus consisting of layers of loose straw or other loose material, for a proper distribution of the liquid, as set forth.

3. The pivoted trough C, provided with the adjustable weight *i*, to be made self-dumping, substantially as herein shown and described.

110,230. — COOKING-STOVE. — William Hailes, Albany, N. Y.

Claim.—1. The depressed water-reservoir C, having a vertical flue arranged in direct relation to the back wall of the stove, and with the concave shelf B, in combination with the rim or skirting *d* and studs *f*, substantially as described.

2. The rim *d*, made of one piece, in the form of a skirting, with a bridge, *g'*, and with pipe-collar, in combination with a depressed reservoir, C, and vertical flue, *e*, as shown and described.

3. The bridge *g'* of flange *d*, when it is tapered on opposite sides of its pipe-collar, as described, for the purpose set forth.

110,231.—TUMBLER-WASHER.—Albert Hallowell, Lowell, Mass., assignor to Gustavus D. Dows, Calvin Dows, and George S. Cushing.

Claim.—In connection with the water-delivering pipe, provided with a perforated cap or top, substantially as described, the upward-seating valve *g*, having a projecting rod, *m*, when arranged and operating in the manner and for the purpose specified.

110,232.—BARREL.—Thomas Hanvey, Elma, N. Y.

Claim.—The two-ply barrel, the heads of which are composed of two or more thicknesses, in combination with the hoops or clamps *a a a*, arranged on the outside, and secured to the barrel by screws *c c*, said screws forming the rests for the heads, the whole constructed substantially as and for the purpose set forth.

110,233.—REPEATING CANNON.—James H. Hedrick, Wythe county, Va., assignor of one-third his right to J. B. Barrett, same place.

Claim.—1. The combination of the cylinder G, having a light circular, hexagonal, or many-sided rim, with curved arms and a central eye, and between each arm one or more rows of six or more perforations, a less number, for the reception of cartridges, with spring to hold cartridge in place, when all constructed and arranged as shown, for the purposes specified.

2. The magazine L, provided with the springs *m* and grooves *h*, and bar *o*, for the purpose herein described

3. The combination of shaft E, provided with the cams or tappets *i*, with the hammers N and springs K, when arranged substantially as shown.

4. The combination of the cam F, upon shaft E, with the cylinder G, when operating as shown, for the purpose set forth.

5. The arrangement of the shaft E, cranks H, connecting-rods or links *f*, cross-bar *k*, and rammers I, substantially as shown, for the purpose set forth.

6. The combination and arrangement of the frame A, box B, barrels *l*, cylinder G, and magazine L, with the hammers N, cams *i*, shaft E, connecting-rod F, cross-bar *k*, and rammers I, all constructed and operating substantially as shown and described, for the purpose set forth.

110,234.—FENCE.—William D. Hillis, Elgin, Ill.

Claim.—The improved fence herein described, consisting of the rods *a a*, plates *b b*, wires *f f*, posts A A, pickets *d d*, cap-rail *h*, and straps *i i*, each constructed and arranged as specified.

110,235. —WASHING-MACHINE.—Alexander Hilton, Strathroy, Canada.

Claim.—The arrangement and combination of the box A, frame B, corrugated drum C, crank D, slots F F, journal-boxes G, rollers H H', apron I, rod K, slots L, and hooks M, when each part is constructed substantially as described, and operating as and for the purpose set forth.

110,236.—SAW-MILL.—Jacob R. Hoffman, Fort Wayne, Ind.

Claim.—1. The weighted lever D, in combination with the adjustable fulcrum-screw *d'*, and auxiliary frame B carrying the upper saw-pulley C, all constructed and arranged to operate substantially as described.

2. The hand-temper screw-shaft E, having stop-nut *b''*, in combination with the boxes *c'' c'*, shaft *e*, and upper saw-pulley C, all arranged to operate substantially in the manner and for the purpose described.

3. The plate *f*, having projections *f' f''*, and temper-screws *f' f''*, in combination with the frame B, carrying the shaft *e* and saw-pulley C, constructed and arranged substantially in the manner and for the purpose described.

110,237.—MACHINE FOR PREPARING FIBERS FROM SISAL-GRASS AND LIKE SUBSTANCES.—George E. Hopkins and William B. Shedd, Boston, Mass.

Claim.—1. The movable scraper N and stationary scraper M, constructed and operating in connection with each other, substantially as herein shown and described, to clean the fibers as the crushed leaves or stalks are drawn between them.

2. The combination of the crushing-rollers B, scrapers M N, rubber rollers H, and revolving brush K, with each other and with the frame A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the endless apron R with the revolving brush K, rubber rollers H, scrapers M and N, and crushing-rollers B, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the rack or frame X, spring E', shaft Y, ratchet-wheel Z, and pawl D', with the band B', and endless apron R, substantially as herein shown and described, and for the purpose set forth.

110,238. — HOISTING APPARATUS.—Henry H. Hunt, Saratoga Springs, N. Y.

Claim.—The application, in hoisting-machines, to the endless chain D, of an automatically-reversible yoke L pivoted to a cross-bar M, and hung on the outside of the chain, as described, for the purpose of enabling the hods to be carried up or down upon the same yokes and without any manipulation.

110,239.—SHELF-BRACKET AND CLOTHES-HOOK. — Henry E. Hutchinson, South Brooklyn, N. Y.

Claim.—An improved combined shelf-bracket and clothes-hook A B C, constructed and operating substantially as herein shown and described, and for the purpose set forth.

110,240.—FOOT-REST AND BOOT-JACK COMBINED.—David H. James, Cincinnati, Ohio.

Claim.—1. A foot-rest, composed of the parts A and E, and made adjustable as to height and position, substantially as described.

2. In combination with the foot-rest, the staple C and the recess D, substantially as and for the purposes set forth.

110,241, antedated December 15, 1870.—LAMP-BURNER.—Walter Proctor Jenney and George Washington Taylor, Fairhaven, Mass.

Claim.—1. The deflectors *n n*, applied on the inside of the shell at the base of the slot *o*, and arranged in relief from the wick-tube, in combination with the air-space between the ring *h* and the collar D, substantially in the manner shown and described.

2. The combination of the specified deflectors *n n* with the shell A *a b o*, such shell being of the form herein described.

3. The device C, constructed with a collar, *p*, curved spring fingers *e e*, and air-passages *i*, in combination with the ring *h*, shell A *a b o*, and the chimney N, all in the manner and for the purpose described.

4. The chimney-holding and retaining device C, with the spring fingers *e* formed on it in such manner that the base of the slots between the fingers forms air-passages, both inside and outside of the

lamp-chimney, when such chimney is placed around the burner, substantially as described.

5. The arrangement of the flanged shell upon the flanged diaphragm G and under the springs *e*, substantially in the manner described, so that the shell may be readily detached when necessary.

110,242.—HOODED GARMENT.—Ambrose Keating, Boston, Mass., assignor to Benjamin T. Stephenson, same place.

Claim.—The described new or improved manufacture of hooded garments, in which the hood has its opening or mouth in, through, and down the cape, all as set forth and represented.

110,243.—TOOL FOR FORMING MOUTHS OF GLASS JARS.—Goveneur M. Keeffer, East Birmingham, Pa., assignor to himself and William H. Barry, same place.

Claim.—1. The plug *a*, having a screw-thread or inclines, *b*, for forming a like thread or inclines in the mouth of the jar, and a shoulder, *c*, for making a seat in the mouth of the jar for the reception of a gasket, substantially as described.

2. The threaded plug *a*, with its shoulder *c*, in combination with a plate, *d*, rigidly attached to said plug, and revolving therewith, substantially as described.

3. The threaded plug *a*, with its shoulder *c* and plate *d* rigidly attached thereto and revolving therewith, in combination with the rod *e* and swivel *f*, substantially as set forth.

110,244.—PRINTING-PRESS.—John W. Kellberg, Philadelphia, Pa.

Claim.—1. In a perfecting printing-press, printing without intermission from a continuous roll, so combining and arranging the various cylinders that the paper shall be in continuous contact with their convex surfaces until cut into sheets for delivery, so as to avoid the necessity of using any carrying tapes, belts, gripers, or bridges, substantially as shown and set forth.

2. The roll of paper *b*, in combination and rolling contact with the first impression-cylinder B, as and for the purposes substantially as described.

3. An air-blast, substantially as described, for the purpose of removing the rear end of the sheet from the reach of the gripers in seizing the forward end of the roll.

4. Two delivery apparatus, one running at a faster speed than the other, as and for the purposes substantially as described.

5. A circular serrated knife, for slitting or perforating the sheet, operated as and for the purposes substantially as described.

110,245.—BLOTTING-PAD.—Augustus Burr Kellogg, Buffalo, N. Y.

Claim.—1. In a blotting-pad having wedge-shaped notches *a a'* in each end, and corresponding wedges *c c'* fitting therein, the elastic band *d* and recesses *e e'* on top, by which the wedges are retained in place, for the purpose hereinbefore set forth.

2. In combination with the block A and band B, the band C, to fit on the hand between the thumb and fore-finger, so as to retain the pad on the ball of the hand and to prevent slipping, as hereinbefore specified.

110,246.—HARVESTER-DROPPER.—Thomas W. S. Kidd, Springfield, Ill.

Claim.—1. In combination with the dropper E, the means employed for imparting thereto a vertical and semi-rotary horizontal movement, consisting of the shaft F, the sleeve H provided with the slot A, the stud *f*, the guide I provided with the stop *z*, the levers K and N, the swiveled block M, and the connection *a*, substantially as shown and described.

2. In combination with the dropper E, the means employed for tilting the same downward at its rear end, consisting of the false head O provided with the slots *e* and springs P, and hinged to or upon said dropper, the lug R, and recess S, substantially as shown and set forth.

110,247.—MODE OF BALANCING CYLINDERS, PULLEYS, &c.—William Kitson, Lowell, Mass.

Claim.—A balancing tube, *b*, provided with plugs or stopples *d*, and applied to the cylinder or pulley, as shown and described, whereby such cylinder or pulley may be balanced by the tube *b* or by additional balancing material *c*, in the manner and for the purpose specified.

110,248.—SASH-HOLDER.—Andrew J. Kramer, Marion, Iowa.

Claim.—The combination of rod *a*, bolt *b*, and spring *c* with lever C, when said lever is slotted and curved and holds the bolt withdrawn, in the manner described.

110,249.—CLAY RETORT FOR THE MANUFACTURE OF GAS.—Frederick C. Krauss, New York, N. Y., assignor to Samuel A. Walsh, same place.

Claim.—1. A clay-retort, having a vitrified or non-porous portion within or between two clay surfaces, substantially as and for the purposes set forth.

2. In the construction of clay retorts, the use of kaoline, silica, and feldspar, combined substantially in the proportions, and placed within the body of clay, substantially as and for the purposes set forth.

110,250.—SEWING-MACHINE.—Lebbeus W. Lathrop, Poughkeepsie, N. Y.

Claim.—1. The combination, with the needle, of the two loop-spreaders, constructed and operated as described, to spread and hold the loop for the passage of the spool of locking-thread and its carrier, as specified.

2. The combination, with the shafts B and M, of the disk or a crank, N, connecting-rod L, bell-crank K, and pin I, all constructed and arranged substantially as specified.

3. The combination of the tubes O P, radial plates U, and grooved arm V, constituting the spool-carrier, all substantially as specified.

4. The combination, with the spool-carrier, of the fixed rod *z*, detachable rod *y*, and the guide *z*, substantially as specified.

5. The combination, with the spool-carrier, of the oscillating and reciprocating arms *g h*, sleeve *i*, and spirally-shaped way *j*, substantially as specified.

6. The combination of the spool-carrier, the oscillating and reciprocating driver, and the loop-spreaders, all substantially as specified.

7. The combination, with the needle and the loop-spreaders, of the looper 1, when constructed, arranged, and operating substantially in the manner described.

8. The combination, with the looper-stock 2 and lever 7, of the sliding bar 6, friction-roller 5, bell-crank 3, connecting-rod 4, and spring, all substantially as specified.

9. The driving-shafts M and M', the one gearing with and driving the loop-spreaders, the spool and the looper, and the other connected with and driving the needle-operating devices, and both connected together by the stud 25 and projection 24, and operating in the manner described, for shifting the motion of the machine for working forward or backward, all the said devices being combined substantially as specified.

110,251.—ADJUSTABLE PLOW-JOINTER.—John M. Leonard, Marshall City, Mich.

Claim.—The combination, in an adjustable plow-jointer, of the point A, the mold-board B, the shank C, and the standard D, wherein the mold-board B is pivoted to the lower end of the shank C by the bolt *a*, and the shank C is provided with the slots *c*, and secured to the standard D by the bolt *d*, and

the several parts named are constructed and arranged substantially as described and shown.

110,252.—MACHINE FOR FILLING OR STARCHING WOVEN FABRICS.—Thomas Lewis Livsey, Bury, Great Britain.

Claim.—1. The roller *b*, revolving in a trough and carrying the cloth through the starch or filling material, in combination with a revolving brush, *g*, and a doctor-plate, *f*, acting on the surface of the cloth while it is in close contact with the roller, substantially as described.

2. The trough *c*, its agitator *e*, and roller *b*, in combination with the brushes *g h h*, heaters *i*, and fan, all arranged and operating as specified.

110,253.—HOSE-COUPLING.—Conrad Locher, Oroville, Cal., assignor to himself and George C. Perkins, same place.

Claim.—The combination of the parts A and B, thimbles C and D, and the hose ends, the thimble C being provided with orifices for admitting the water beneath the hose end to form a water-tight packing, as described.

110,254.—CAR-SEAT LOCK.—Adam Lœffelholz and Anton Prier, Milwaukee, Wis.

Claim.—The notched bolt G, having slot M and pin S, and the cam-spindle N, having pin thereon, combined with a spiral spring, K, working in a case, P, as described.

110,255.—TIGHTENING-STRAP FOR BARRELS.—Samuel Macferran, Philadelphia, Pa.

Claim.—1. The shield K, arranged and operating in relation to the tightening-screw H, substantially in the manner and for the purpose above described.

2. The combination of the shield K with the stud G, whereby the ends of the strap D are held in position, substantially as above set forth.

110,256.—CULTIVATOR.—Isaac B. Mahon, Dunkirk, Ohio.

Claim.—The arrangement, in a cultivator, of a bi-branched pivoted beam C' C' and detachable guides D', as set forth, for the purpose of enabling the fifth plow A' to be readily removed or lifted up simultaneously with the other plows.

110,257, antedated December 15, 1870.—CULTIVATOR.—Isaac B. Mahon, Dunkirk, Ohio.

Claim.—1. The combination of clip E and washers G F with braces D D and wheels B B, as and for the purpose described.

2. The curved connecting-bar I', perforated as set forth, combined with a pair of pivoted cultivator-beams I J, for the purpose of rendering the latter susceptible of adjustment with respect to each other in a vertical direction.

110,258.—BASE-BURNING STOVE.—Henry C. March, Limerick Station, Pa.

Claim.—1. In a base-burning stove, the arrangement of the air-chamber D surrounding the fire-pot, upper hot-air chamber F', and connecting-tubes F, all substantially as described.

2. The door G, having at its lower edge a central projection, *m*, of the form described, in combination with the stove-body, having recesses *m'* and projections or lips arranged below said recesses, as specified.

3. The two sets of staples *d d'*, arranged within the base of the stove, as set forth, in combination with the grate and its hooks, or their equivalents, as described.

4. The bearings *e e' e''*, arranged as described, in combination with the adjustable rod L and the hinged grate, as set forth.

5. The supplementary reservoir H', having a flange, *g*, adapted to lugs *g'* of the reservoir proper, as set forth.

6. The valve *s*, covering the reservoir, in combination with the apertures *t*, forming a communication between the top of the stove and chamber M.

7. The valve *s*, arranged substantially as described, and as shown in fig. 10 of the drawing, in respect to the apertures *u*.

8. The combination and arrangement, substantially as described, of the annular valve *j*, apertures *i*, damper *k*, and pipe *k'*.

110,259.—MODE OF BALANCING SHAFTS.—Henry Martinson, Hawksville, Canada.

Claim.—The balance for cylindrical bodies, composed of the springs C C and bearings *a a*, and combined with the jointed driving-shaft, substantially as herein shown and described.

110,260.—FLIER FOR SPINNING.—Thomas Mayor, Providence, R. I.

Claim.—That improvement in fliers which consists in a tube or its equivalent, constructed as described, which forms an extension of the neck downward below the junction of bows B B, where it is provided with a delivery-orifice, substantially as herein described.

110,261.—PLATFORM WEIGHING-SCALE.—Richard J. McKeone, Inverness, Mich.

Claim.—1. The arrangement of the bars A, short arms F, points E, long arms G, and lever I, all substantially as specified.

2. The combination, with the bar L, of the weighted levers N N', links R, and rings O, substantially as specified.

110,262.—MACHINE FOR BENDING WOOD.—John McMichael, Philadelphia, Pa., assignor to Wright Brothers & Co., same place.

Claim.—The grooved cylinder A, constructed as herein specified, in combination with the standard S, clamps *c c c*, spring levers L L L, screw-bolts *b b b*, and operating substantially as and for the purpose set forth.

110,263.—CLOTHES-PIN.—William Miller, Boston, Mass.

Claim.—The wooden jaws A B, beveled at C, hollowed at D, and squared at E, combined as described with the non-corrosive spring F, having legs G and coil H, for the purpose specified.

110,264.—CARTRIDGE.—Richard R. Moffatt, Brooklyn, N. Y.

Claim.—1. The within-described process of manufacturing consumable cartridge-shells, substantially as and for the purpose herein specified.

2. The combination of the combustible packing-wad F with the combustible shell or case A and the non-combustible base or gas-check B, substantially as and for the purpose herein set forth.

110,265.—METALLIC CARTRIDGE.—Richard R. Moffatt, Brooklyn, N. Y.

Claim.—A cartridge with one or both faces of the priming fulminate-pocket roughened, substantially as and for the purpose set forth.

110,266.—PERCUSSION-PRIMER FOR CARTRIDGES.—Richard R. Moffatt, Brooklyn, N. Y.

Claim.—The anvil of a percussion-cap or primer, when composed of a consumable material as herein described, and applied in a liquid or plastic state, substantially as and for the purpose specified.

110,267.—BOBBIN-WINDING AND NEEDLE-SHARPENING ATTACHMENT FOR SEWING-MACHINES.—Richard R. Moffatt, Brooklyn, N. Y.

Claim.—A bobbin-winding attachment, substantially as herein described, the portion thereof carrying the driving-wheel being made hollow, and provided with a clamp to hold a needle, substantially as and for the purpose set forth.

110,268. — MODE OF APPLYING MOTIVE-POWER TO MACHINERY. — Richard R. Moffatt, Brooklyn, N. Y.

Claim.—Giving continuous motion to a wheel, screw-propeller, &c., by means of a piston which passes through or works in the hub or axis of the wheel, substantially as and for the purpose herein set forth.

110,269.—CAR-COUPLING.—James C. Morris, Greeneville, Tenn.

Claim.—The hooks *c*, springs *d*, and triangular bolt *e*, furrowed in V-shape in its rear side, all constructed and arranged as specified.

110,270.—MACHINE FOR MAKING CIGARS.—Robert Neisch, Allentown, Pa.

Claim.—1. The wheel D b^1 c^1, pinion *q*, arbor *p*, pinion O, rolls *i j*, and pinions *n n*, combined as described, with the apron K, for the purpose specified.

2. The disk D b^1 c^1, combined, as described, with pinion *q*, shaft *p*, pinion *u*, wheel V, shaft H, and spur-wheel *w*, for the purpose of moving the rack I forward in one direction, as set forth.

3. The disk D d^1, combined, as described, with pinion a^1, shaft *z*, pinions *y x*, shaft H, and pinion *w*, for the purpose of moving rack I in a backward direction.

4. The disk D b^1 c^1 d^1, combined with the forwardly-moving train of mechanism, having the partially-toothed wheel V and the backwardly-moving train of mechanism, all as specified, for the purpose of reciprocating the rack I, in the manner described.

5. A cigar-mold formed of a fixed lower frame, *g*, and hinged upper frame *h*, combined, as described, with the conical rolls *i j*, endless apron K, and spring-roll *l*, to form a cigar-shaping device, operating as described.

6. The combination, with the hinged two-part mold *g h*, of lever G, operated by a cord, e^1, a lever, J, and a cam, f^1, as described, for the purpose of clamping and allowing the mold to open at the times and in the manner described.

7. The end plate *m*, applied to the cigar-pointing molds, for the purpose of finishing the point of the cigar, substantially as herein shown and described.

8. The segmental, partly-conical block g^2, applied to the lower part of the mold, for forcing the entire bunch into the heading cavity, as set forth.

9. The carrier L, combined, as described, with a pair of rotary-fan spreaders, M P, placed in frames g^1 g^1 at the ends thereof, and middle spreaders N O, as and for the purpose described.

10. A rotary spreader for cigar-making machines, formed of roller h^1, with soft-felt wings j^1, and hung in a hinged frame, i^1, to be operated in the manner described.

11. The combination, with frame i^1, of yoke l^1, cord m^1, lever n^1, cam O^1, and lever p^1, on shaft C, for the purpose of raising the spreader M at the time and in the manner described.

12. The roller h^1 and frame i^1, combined, as described, with pulley b^1, cord u^1, attached to frame A, and spring V^1, for the purpose of causing the wings of fans to spread the wrapper on the carrier, and to be automatically prepared for a succeeding operation, as set forth.

13. The combination, with a rotary spreader, of the projecting blocks w^1, fitted into the supports g^1 g^1, for the purpose of graduating the distance to which the said spreader may be dropped.

14. The spreaders N and O, combined with the reciprocating carrier L, substantially as herein shown and described.

15. The cushioned spring platform R, applied to the cutter Q, for holding the wrapper smooth upon the carrier, substantially as and for the purpose herein shown and described.

16. The flat spreader N, combined, as described, with hinged frame z^2, cord y^1, lever z^1, pivoted catches c^2 b^2, and cams c^3 d^2, for the purpose of raising and lowering the said spreader.

17. The paste-roller f^2, provided with projections where it is to receive and apply paste, substantially as herein shown and described.

18. The intermittently-reciprocating cutter Q, combined, as described, with the sectional elastic platform R and grooved carrier L, for the purpose of cutting the wrapper on the end of cigar after the said wrapper has been pasted.

19. The sliding frame s^1, holding the paste-roller f^2, and operated by the cord b^3 and spring d^3, substantially as herein shown and described.

110,271.—STAVE-JOINTER.—John Newman, Cleveland, Ohio, administrator of the estate of Samuel Newman, deceased.

Claim.—1. The combination of the foot-treadle T, its connecting rods and spring-lever clamp-jaws R, with the adjusting reciprocating lugs M upon inclined part of bed plate H, constructed and arranged to operate in the manner and for the purpose described.

2. The combination of the hand-lever Q, rock-shaft O, arms N, pivoted links P, and sliding lugs M, constructed and operating in the manner and for the purpose described.

3. The combination of the hand-lever L, shaft K, connecting links J, reciprocating bed H carrying the stave A and its clamping devices, with the revolving planing cylinder B having knives F, constructed and operating in the manner and for the purpose described.

110,272. — MUSIC-STAND.—James Newton, Hanover, N. H.

Claim.—The combination and arrangement of the legs *f* f^1 f^2, of the described shape, the tube or standard *a* with the screw *k* attached, the rod *b* supporting the desk *d*, and the drop *h*, all combined and arranged for the purpose and in the manner hereinbefore set forth.

110,273, antedated December 9, 1870.—CORSET-CLASP AND SPRING. — Peter H. Niles, Boston, Mass.

Claim.—1. The double-acting corset-clasps, having the orifices *d d'*, and connected by the right-angled slots *e*, substantially as described.

2. A corset-spring, having graduated corrugations *a*, when the corrugation is situated at the center curve of the spring, substantially as described.

110,274. — FURNACE-STOVE. — James Old, Pittsburg, Pa.

Claim.—1. A rotating grating, *n n'*, the outer ring of which has air-passages, *s s*, in combination with air-passages leading thence to an annular chamber, *g'*, between the fire-pot *f* and stove-shell *b*, substantially as described.

2. A ring, *c*, the upper end of which forms a part of the stove-grating, when combined therewith so as to operate, by a direct vertical or vertical and rotary motion, in agitating the fire, substantially as set forth.

3. The ring *c* and ash-pit *a*, the one having an arrangement of lugs and the other a corresponding arrangement of inclines, for securing a vertical and intermittent rotary motion of the ring, substantially as described.

4. The circular rotating grate *n n'*, in combination with the devices of the last foregoing claim, arranged substantially as set forth.

5. In a cast-metal stove-top, *d*, a reverberatory tile, *h*, hung on supporting-lugs *i*, substantially as described, so as to leave an open chamber above as well as below such tile, and thereby secure the maximum radiation of heat.

110,275. — PREPARATION OF COD-LIVER OIL.—Michael O'Reilly, New York, N. Y.

Claim.—A compound, formed of equal parts of cod-liver oil and rendered fat, mixed at a temperature of 180° Fahrenheit, as described.

110,276.—VAPOR-BURNER.—Jason J. Palmer, Pittsburg, Pa.

Claim.—1. The T-shaped spreader B, constructed with a base-portion, *c'*, and guard-wings *c c*, in combination with the perforated nipple *a* and the spreader A, substantially as described.

2. The elongated rivet *g*, serving as a heater, and also as a means of securing the spreader B to the nipple *a*, substantially as described.

3. The spreader B, the spreader A, the nipple *a*, and the cup A^1, constructed and combined substantially as described.

110,277.—MANUFACTURE OF COLORS AND THEIR APPLICATION TO FABRICS.—Alfred Paraf, New York, N. Y., assignor to Edward S. Renwick, trustee, same place.

Claim.—1. The manufacture of colors for printing and dyeing fibrous and textile articles, of coloring matter, and a color-liberating salt, substantially as before set forth.

2. The process of applying colors to fibrous and textile articles by means of the coloring matter and a color-liberating salt, substantially as before set forth.

110,278.—COTTON-PRESS.—Isaac N. Patten and Eli W. Long, Shelby county, Tenn.

Claim.—1. The combination and arrangement of the screw B, nuts *b b*, toggles *c c*, levers *a a*, brace *e*, and platen D, substantially as shown and described.

2. The combination and arrangement of the screw B, nuts *b b*, toggles *c c* and *d d*, levers *a a*, brace *e*, platen D, braces *f* and *g*, and rods *h*, substantially as shown and specified.

110,279.—HARVESTER-RAKE.—Henry Pease, Brockport, N. Y., assignor to himself and Henry W. Seymour, same place.

Claim.—1. The adjustable yoke E, supporting the reel, in combination with the stationary reel-post B, tubular sleeve C, and driving gears D^2 D^3.

2. In combination with the wheel D and rake-carrier H, the tubular clutch J provided with arms *j*, which serve to connect the rake with the bevel-wheel and sleeve, substantially as set forth.

3. The hooks *i* on the rake-arm, in combination with the ears or hooks j^2 on the shipping-clutch, for preventing the rake from being thrown out of gear in its backward or return movement, as described.

4. The spring-catch *g*, in combination with the rake-arm I and carrying-wheel D, for locking the rake-arm down during its passage over the platform, as described.

5. The tripping-standard *g'*, in combination with the spring-catch *g*, arranged and operating substantially as described.

110,280.—ROCK-DRILL.—Charles Peck, New Haven, Conn., assignor to himself and Milo Peck, same place.

Claim.—1. The mechanism for automatically regulating the feed in drilling-machines, consisting of the rod G, with the arm N, and the cam O, and the vibrating lever I, constructed and operating substantially in the manner herein described and specified.

2. The mechanism for disconnecting the feed, consisting of the collar K on the screw-shaft, the collar L, and the pin *e*, constructed and operating substantially as described and specified.

3. The mechanism for automatically stopping the feed of the drill at any point, consisting of the adjustable stop J, and the rod G with its stop *u*, constructed and operating substantially in the manner herein described and specified.

110,281.—GANG-PLOW.—Thomas Peppler, Hightstown, N. J.

Claim.—The gang-plow, composed of the square axle A, adjustable box C, caps *c c*, movable pendants D D, the double joints or jaws E E, constructed for the purpose herein set forth.

110,282. — COOKING-STOVE.—Joseph Pratt and James H. Wentworth, Boston, Mass.

Claim.—1. The arrangement of the removable hearth *a* with the air-chambers *b*, as and for the purposes hereinbefore set forth.

2. The projections *e e*, for the purpose of accommodating the pipes *d d* leading to the water-front *c*, substantially as described.

110,283.—CUTTER FOR PLOWS.—George F. Pykiet, Fairfield, Ill.

Claim.—The cutter G G, having its curved end resting upon the point F of the plow, beveled along its upper edge on one side and aligned with the landside on the other, as and for the purpose described.

110,284. — SPRING-BED BOTTOM.—James Henry Quackenbush, Luddington, Mich.

Claim.—The ribs C, provided with shoulders E and the elastic strap F, in combination with the head and foot-boards of a bedstead, and the bottom slats D, when arranged to operate as herein set forth.

110,285, antedated December 9, 1870.—BOOT-CRIMPING MACHINE.—John Rausch, Huntington, Ind.

Claim.—The combination, with a crimping-board D, of a lever B B, constructed as shown in fig. 1 of drawing, and provided with set-screws C E, as and for the purpose described.

110,286. — CHAMBER-VESSEL. — Vernon Rhodes, Memphis, Tenn.

Claim.—As a new article of manufacture, the chamber-vessel *a*, provided with the partition *b*, substantially as described.

110,287.—CONSTRUCTION OF ORNAMENTAL-HEADED PICTURE-NAILS. — Thomas C. Richards, New York, N. Y.

Claim.—The attachment of the body A to the shank B by means of the metallic back D and nut C, in the manner substantially as described.

110,288. — LINIMENT FOR THE CURE OF RHEUMATISM. — Archibald A. Riddick, Franklin, Va.

Claim.—The liniment prepared of the ingredients in the proportions and manner substantially as herein set forth and described.

110,289. — INJECTOR. — Charles F. Root, West Springfield, Mass.

Claim.—An injector, consisting of the case C, having the flanges F and G and ribs T T, &c., and check-valve S, with its spout L, in combination with the nozzles K, V, and O, the parts being arranged and constructed substantially in the manner and for the purpose shown and described.

110,290.—COMBINED COTTON-PLANTER AND GUANO-DISTRIBUTER. — John E. Ross, Greenesborough, Ga.

Claim.—1. In planters and guano-distributers, the beam A, arched over the center to receive therounder the seed-hopper, and having a vertical projection to support the horizontal pinion M, as shown and described.

2. The horizontal pinion M, having a crank-pin attached thereto, and arranged upon a vertical stud of the beam, combined as described, with a stirring device, N O P R, for the purpose specified.

3. The bottom-slotted and curved hopper Q S S, combined with vibrating fingers R, (to separate the seed and keep up a steady discharge current,) and the narrow guide-spout T, to converge the seed to the center of furrow, as described.

110,291. — FANNING-MILL. — Frank Sauer and John Coerver, Waterloo, Ill.

Claim.—The fan B, shaft C, driver F, pulleys D, cranks R, hangers G, connecting-rods I, belts E and P, and conveyer M, when said parts are construct-

ed, combined, and arranged for operation, substantially as and for the purpose described.

110,292.—FAUCET.—Matthew Scrannage, Medford, and Wallace H. Bate, East Somerville, Mass.

Claim.—The combination of the cap C with its recess *k*, the spindle *b*, packing *l*, and washer *m*, all constructed and applied to a cock, substantially in the manner and for the purpose set forth.

110,293.—SPRING FOR BEDS, SOFAS, &c.—John Sears, Cortland, N. Y.

Claim.—The spring C, with screw-point D and cap H, in combination with the base A, with concave W and cone R, as shown and described.

110,294.—VALVE FOR ENGINES.—William C. Selden, Brooklyn, N. Y., assignor to Adam Carr, Paterson, N. J.

Claim.—The secondary valve *n* and passage-ways through it, substantially as described, in combination with the steam-valve *m*, pistons *p*, cylinders *g g'*, and steam and exhaust-ports, arranged substantially as and for the purposes set forth.

110,295.—HOOP-RACKING MACHINE.—Russel M. Shaner, Genoa, Ohio.

Claim.—The combination of the channeled bench, pusher, inclined plane, rollers G and H, and the vertically-reciprocating frame and foot-lever, all substantially as specified.

110,296.—CHURN.—John Shappell, Lynnville, Pa.

Claim.—The arrangement of the frame A A B, removable box F, bars I I', gear G' D, shaft C, bar L, shaft G, and dasher H, as and for the purpose set forth.

110,297, antedated December 16, 1870.—PUMP.—Nathaniel P. Sheldon, San Francisco, Cal.

Claim.—1. The segmental cylinder or barrel, in combination with the oscillating plunger or piston, substantially as herein described.

2. In combination with the segmental cylinder, the air-chamber or condensing-chamber inclosing the plunger or piston, substantially as herein described.

110,298.—STEAM-GENERATOR.—George W. Shields, Louisville, Ky.

Claim.—The arrangement of the chamber *e*, pipes *h*, *k*, *o*, *p*, and *q*, boiler A, and pipe *m*, as specified.

110,299.—PRESS FOR FORMING SOLES FOR PACKS.—Warren G. Slater, Hart, Mich.

Claim.—The combination of the divided block A provided with the opening B, the bolts C, and thumb-nuts *b*, with the follower D, when constructed and arranged substantially as described and shown, for the purpose set forth.

110,300.—SLIDE-VALVE.—James Smart, Stratford, England.

Claim.—1. The construction of a slide-valve having ports or openings on two opposite sides, through which the steam is admitted to the interior of the valve, or through the ports on one side only, the said valve being formed with a chamfer on one or both such sides, substantially as described and illustrated by the accompanying drawing.

2. The construction and arrangement of the hollow steam chamber, against which the slide-valve works.

3. The arrangement of a hollow facing, against which the slide-valve works, for the purpose of adjustment and draining.

4. The combination of the slide-valve, steam-chamber, and hollow adjustable facing, substantially as described and illustrated.

110,301.—GRAIN-SCOURER.—Austin Smith, Valmont, Colorado Territory.

Claim.—1. The spiral brush C and concave screen E, combined with the spiral flange D, arranged as and for the purpose described.

2. The rotating scouring-brush and concave screen combined with a spirally-flanged shaft H I arranged thereunder, in the receiving-chamber, as and for the purpose described.

110,302.—CULTIVATOR.—Peter E. Smith, Scotland Neck, N. C.

Claim.—1. The lifting-arms M, sliding upon an independent shaft L, combined with the adjustable axle B C, to enable the distance between the cultivators to be graduated without detaching any of the parts.

2. The perforated spring-bar R, applied, as described, to an independent rock-shaft, L, the arms M, for the purpose of enabling said arms and shaft to be secured at any desired point of adjustment.

110,303.—TYPE-CASTING MACHINE.—William Spang, Philadelphia, Pa.

Claim.—1. The arm B and sliding head A, constructed as herein described, and arranged on the oscillating frame C, as shown, so that the arm will cause the head to move perfectly parallel in the grooves in which it is retained, and thus producing a direct motion for tripping the matrix-lever and opening or closing the mold.

2. The construction and arrangement of the arm B, rod F, sliding head A provided with a block, J, and rod, E, matrix-lever D provided with the adjustable box I, and friction-wheel W, as and for the purpose herein specified.

110,304, antedated December 8, 1870.—COTTON-PRESS.—Noah W. Speers, Memphis, Tenn.

Claim.—1. The combination of the frame A and follow-block G with the double rack E E and worm-wheel B, all constructed and arranged substantially as described, and for the purpose set forth.

2. The combination of the windlass J with eccentric rollers K K, band N, lever L, ropes I I I P, and doors M, all arranged as herein shown and described, and for the purposes set forth.

110,305.—COOKING-STOVE.—David Stuart and Lewis Bridge, Philadelphia, Pa., assignors to David Stuart and Richard Peterson, same place.

Claim.—1. The plates of the stove, the half-plate *f*, and projection F, adapted to each other, as described, so that the said half-plate and projection may be fitted to the stove, or detached from the same and replaced by a whole plate, as set forth.

2. The guard *k*, consisting of projections extending upward from the rear of the plate *d*, as described.

3. The combination of the guards *k k'* and the fine *e*, as set forth.

110,306.—BILLIARD-TABLE.—Isaac N. Swasey, Yonkers, N. Y.

Claim.—The frame A, top B, cross-rails F, and saddles G, combined, as described, to prevent warping, winding, and twisting from heat and moisture.

110,307.—MOLD FOR CASTING UNDER PRESSURE.—John Blake Tart, Fairhaven, Mass.

Claim.—A mold for casting metal under pressure, constructed in the manner substantially as herein described, and for the purposes set forth.

110,308, antedated December 8, 1870.—LAMP-CHIMNEY.—George W. Taylor and Walter P. Jenney, Fairhaven, Mass.

Claim.—A lamp-chimney, in which the base portion *c'* is cylindrical, and in which two of the sides converge from the point *y* to the point *x*, and there terminate in vertical flat sides which extend to the top, the opposite or narrow sides of the chimney having a curved swell, and all the chimney above the point *y* being elliptical in form, as herein shown and described.

110,309.—CANT-HOOK.—Waldy Tetro, Northampton, Mass., assignor to Union Nut Company, Unionville, Conn.

Claim.—The combination of an ordinary iron crow-bar, A, adjustable and removable socket-sleeve C, and the hook D, the whole combined and operating together, substantially as and for the purpose described.

110,310.—PAD FOR CORSETS.—Mary P. R. Tilton, Trenton, N. J.

Claim.—A circular-projecting fabric, B, and quilted stays or pads C, combined, as described, with the corset A, to form a bust which will not press upon the body, but leave a ventilating-space between it and the bosom of the wearer.

110,311.—COTTON-SEED AND CORN-PLANTER.—Isaac A. Towers, Quincy, Fla.

Claim.—1. The cutter J and shoe K, combined and arranged with the dropping device, as shown and described.

2. The rake or stirrer V, in combination with the hopper F and spiked or toothed dropping-cylinder E, and connected with the ground-roller Q by the connecting-rod W, two-armed shaft X Y Z, connecting-rod A', and crank B', substantially as herein shown and described, and for the purpose set forth.

3. The pivoted coverers N O P, constructed, arranged, and operating in connection with the furrow-opener J K, roller Q, and seed-dropping device of a planter, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the roller F' and lever G' with the belt D' and pulleys C' E', attached to the ground-roller Q, and the dropping-cylinder of a planter, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the adjustable plate H with the spiked or toothed cylinder E, frame C, and bottom of the hopper F, substantially as herein shown and described, and for the purpose set forth.

6. The stationary brush I, secured to the frame C in the rear of the toothed or spiked cylinder E, substantially as herein shown and described, and for the purpose set forth.

7. The combination of the beam A, draft-iron B, frame C, handles D, bars S, hopper F, toothed cylinder E, pulley C', belt D', pulley E', grooved roller Q, crank B', connecting-rod A', two-armed shaft X Y Z, connecting-rod W, rake or stirrer V, adjustable plate H, and stationary brush I, conductor-spout G, furrow-opener J K, and pivoted coverer N O P, with each other, substantially as herein shown and described, and for the purpose set forth.

110,312.—HEATING-STOVE.—Alvah Traver, Troy, N. Y.

Claim.—1. The bent or siphon-tubes G or their equivalent, with inlet-orifices, dampered or not, extending from or through the bottom-plate of the stove, along the fire-box on either its inner or outer surface, entering into the outlet-draught chamber F, and in combination therewith, all constructed, arranged, and operating substantially as described and set forth.

2. The tubes G, bottom-plate B, damper U, outer walls of stove A, combustion-cover N, pipe-collar O, perforated cover N^2, single or double, and outlet-damper R, as constructed and arranged, all in combination and operation substantially as described and set forth.

3. The combination of the top-plate C, walls A, dome E, perforated cover N^2, pipe-collar O, and chute N^3, when constructed and arranged as described and set forth.

110,313.—BOILER-FURNACE.—Thomas Vicars, Sr., Thomas Vicars, Jr., and James Smith, Liverpool, England.

Claim.—1. The combination of the ratchets *k*, vibrating pawl *j*, and adjustable guard *l*, arranged to operate relatively to each other and to the reciprocating rod *h*, and to means for moving fuel into or within a furnace, substantially as herein specified.

2. The combination of the hopper *e*, shaft *d*, eccentrics, straps, and rods *c*, pushers *f*, sliding grate-bars, shafts *m m*, and the adjustable guard g^4, pawl g^5, impulse-pallet g^2, and ratchet-wheel g^3, for imparting motion to the said shaft *m* and to the shaft *d*, all operating substantially as herein described, for the purpose specified.

3. The damper *s*, arranged and operated as represented relatively to the grate or grates *n*, so as to render available for combustion either the whole surface of the grate or only the front portion, at will, as specified.

110,314.—THERMOMETER.—John D. Ward, Baltimore, Md., assignor to himself and William F. Jones.

Claim.—The combination of the plate *c*, provided with the bulb-guard *e*, and inscribed with a suitable scale, as described, with the thermometer-plate *b*, and arranged so that either scale may be readily used, and the mercury-tube *a* is incased as specified.

110,315.—SPARK-ARRESTER.—Jason Weidman, John Major, and John J. Sample, Pittsburg, Pa.

Claim.—1. The imperforate double-pipes *i i'*, arranged in and extending through the greater part of the height of a locomotive smoke-chamber, the inner one being of a uniform or nearly uniform diameter through the greater part of its length, and the chamber *s*, between the pipes *i i'*, opening at both ends into the smoke-chamber, substantially as described.

2. The perforated cones *c c'*, one in the upper part and the other in the lower part of a locomotive smoke-chamber, arranged with an imperforate pipe connecting them in the line of draught, the latter being surrounded with one or more draught-pipes *i'*, substantially as described.

110,316.—ADJUSTABLE SQUARE.—Samuel F. Wesner, Camden, N. J., assignor to himself and James Foster, Jr., same place.

Claim.—The combination of the two pairs of articulating-plates C C' with the square A and bar B, substantially as and for the purpose hereinbefore set forth.

110,317.—LEACH FOR TANNING.—William Thomas Harris Wharton, Fayetteville, Tenn.

Claim.—1. The leaches A, B, C, and D, provided with false perforated bottoms, and connected together by means of the pipes *e e e e*, substantially as described.

2. The trunk T, arranged at or near the top of the leaches A, B, C, and D, and communicating with the same through the medium of the pipes *h h h h*.

3. The leaches A, B, C, and D, formed with the hydrants O O O O, and the additional hydrants P P P P, the latter of which are provided with stops or gates, and operating in connection with the trunk T, substantially as described.

4. The main trunk S, supporting the leaches A, B, C, and D, and communicating with the same through the pipes or tubes *l l l l*, for the purpose described, substantially as set forth.

5. The junk J, provided with an orifice to receive the main trunk S, which supports and communi-

cates with the leaches A, B, C, and D, substantially as and for the purpose described.

110,318.—FEEDING MECHANISM FOR COTTON-OPENERS, &c.—William Edward Whitehead, Miles Platting, England.

Claim.—1. The combination of the rods D, beams E, plates C, and shell-plate I with the feed-roller B and the weighting and shifting devices F G, all constructed and arranged substantially as described, and for the purpose specified.

2. The combination of the plates C, rods D, and beams E with the weighting and shifting devices F G, all constructed and arranged substantially as described, and for the purpose specified.

110,319.—PUMP-BOX.—Anthony S. Whitehouse, Ashland, Mass., assignor to himself and Edward W. Southworth, same place.

Claim.—A valve-box, forming the inverted frustum of a cone, in which a conical filter is placed with its apex near the valve at the top, said valve having its attachment to the upper part of said box, all substantially as shown and described.

110,320.—HORSE-POWER.—John W. Wilcox, Macon, Ga., assignor to himself and John S. Schofield, same place.

Claim.—The combination of the main driving-wheel D, flanged pinion E, grooved shaft *e*, and bevel-wheel G, provided with a feather-key, *g*, when constructed and operating as and for the purpose described.

110,321.—STEAM-GENERATING APPARATUS.—Morris Wood, Chillicothe, Ill.

Claim.—A shallow boiler, A, whose whole bottom J is over the fire, combined, as described, with a coil, D, having a perforated supply-pipe, E, parallel with and very near to the said bottom J, for the purpose of generating steam at a low pressure for cooking, distilling, or other purposes.

110,322.—FRUIT-PARER.—Leander S. Woodbury, South Antrim, N. H., assignor to himself and David F. Hunt, same place.

Claim.—The combination and arrangement, as shown in the drawing, and as hereinbefore described, of the following operative parts or instrumentalities, viz: The fork A, arbor B, lever C, beveled sector D, pinion E, spur-gear F, pinion G, paring-knife H, stock I, rod K, slot N with its recess *c*, cam O, and spring P, the whole being applied together so as to operate in manner as explained.

110,323.—ANTI-FRICTION JOURNAL.—Pierce W. Yarrell, Littleton, N. C.

Claim.—1. The arrangement, within a hollow or recessed casing, A, of a series of single wheels *a a*, and a series of double wheels, *b b*, arranged and operating around the circumference of the shaft or journal, substantially as set forth.

2. The arrangement, within a casing, A, of a series of single wheels, *a a*, and a series of double wheels, *b b*, the wheels *a a* having bearings or boxes in the casing A, and the wheels *b b* their bearings on the peripheries of the wheels *a*, arranged and operating around the circumference of the shaft or journal, substantially as and for the purpose set forth.

110,324.—AUTOMATIC BAND-CUTTER, SPREADER, AND FEEDER.—William H. H. Youngs, Waverly, Iowa.

Claim.—An improved automatic band-cutter, spreader, and feeder for thrashing-machines, consisting of the frame A, adjustable support B C D, endless-belt carrier E, rollers F, adjusting-screws G, circular sickle-toothed cutters H, shaft I, angular spreaders J, shaft K, cap L, guide T U, and inclined side-boards V, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

110,325.—SOCKET FOR BROOM-HANDLES.—Henry Achow, Cincinnati, Ohio.

Claim.—The combination, substantially as described, of the reversible socket C D, handle E, and pads G, for the purpose set forth.

110,326.—TWINE-HOLDER.—John Adt, New Haven, Conn.

Claim.—In a twine-holder, consisting of the two parts A B, the projection D, formed upon one of the parts and inclosing the head of or forming the screw *b* in the process of casting, substantially as and for the purpose described.

110,327.—COMBINED LINT-ROOM AND COTTON-PRESS.—Ichabod H. Albertson, Bedias, Texas.

Claim.—1. The lint-room I, for packing the cotton, constructed as described, with side doors *f f* and *h h*, and back door *k*, for the purpose of transforming it afterward into a bale-box for pressing the cotton, substantially as herein set forth.

2. In combination with the lint-room I, the condenser, composed of the sliding arms *d d* and roller D, constructed and operating as and for the purposes herein set forth.

3. The combination of the worm L, cog-wheel C, screw B, follower H, room I, and condenser *d* D, all constructed and arranged substantially as and for the purposes herein set forth.

110,328.—REVOLVING REFRIGERATOR.—Frank Allen, Erie, Pa.

Claim.—The ice-chamber A, with the pockets B B B, &c., constructed as described, in combination with the base L, guttered as described, and the standard F, arranged and operated as and for the purposes set forth.

110,329, antedated December 7, 1870.—GRAPNEL.—Nathaniel P. Allen and Nathaniel E. Allen, Salem, Mass.

Claim.—1. The improved grapnel, as composed of the long weight or arm A, the ground-prongs *a a*, and the leading prong *b*, arranged together as specified.

2. The combination and arrangement of the sounding-weight *h* with the line *f* and the grapnel, composed of the long weight or arm A, the ground-prongs *a a*, and the leading-prong *b*, arranged as described.

110,330.—ROTARY PUMP.—William D. Andrews, Brookhaven, N. Y.

Claim.—1. A free-joint rotary pump for conveying water or other fluid, by impetus communicated by rapid motion, when said pump is constructed with a case having an annular recess of like diameter at both ends, within which the propelling-wheel revolves or makes an entire sweep, free from contact, the said case having induction and eduction passages communicating with said recess through openings in its periphery, the centers of which openings are in the plane of motion of the center of the propelling-wheel, substantially as specified.

2. In combination with the case A, its annular recess B, and induction and eduction passages, as described, the propelling wheel C, made up of radial wings arranged to project from a central hub, and supported by a central flange, for operation within the recess, essentially as specified.

3. The combination of the movable or adjustable head D and bearing-boxes F and H, substantially as and for the purpose herein set forth.

4. The bearing-box H having a curved base, K, and made adjustable in relation to the curved arm G, in combination with the shaft I having a grooved or ridged fit within said box, essentially as described.

5. The combination of the boss or ring N on the case A, and concentric with the shaft I of the pump, with the annular or recessed standard L, for varying the position of the pump, substantially as specified.

110,331.—HOISTING APPARATUS.—William D. Andrews, Brookhaven, N. Y.

Claim.—1. The combination, as described, of movable and fulcrum gear-wheels of the same diameters at their pitch-lines, placed side by side, with their centers in line, the fulcrum-wheel having one or more teeth less or more than the movable wheel, and an actuating-wheel or pinion carried upon a crank or eccentric attached to a driving-shaft whose center is coincident with the centers of the movable and fulcrum-wheels, the pinion meshing into the movable and fulcrum-wheels simultaneously, tooth for tooth.

2. The combination, with the gearing, as described, of a friction-brake, attached to the fulcrum-wheel for the purpose of holding it stationary when hoisting, and permitting it to revolve, when required, to admit of the weight being lowered without reversing or stopping the moving power.

3. The two concentric drums, moving in opposite directions, in combination with gearing, substantially as described, for the purpose of increasing the power of the machine, as specified.

110,332.—BEE-HIVE.—Roberson Arnold, Suffolk, Va.

Claim.—As a new article of manufacture, a bee-hive head, composed of the bottom A, cap B, boxes C C, and slats E E, all constructed and arranged substantially as shown and described, and for the purposes set forth.

110,333.—COMBINED LAND-ROLLER AND MARKER.—Henry F. Baker, Centreville, Ind.

Claim.—1. The sliding bars *b b*, provided with shovels *a' a'*, and adjusted at any desired distance from the center in the roller B, substantially as and for the purposes herein set forth.

2. The roller B, provided with stationary shovels *a a* and adjustable shovels *a' a'*, substantially as and for the purposes herein set forth.

3. In combination with the roller B, constructed as described, the lever C with pin *f*, substantially for the purposes herein set forth.

110,334.—DRAUGHT-COCK.—Wallace H. Bate, East Somerville, Mass.

Claim.—A stop-cock, A, with its enlargement, *a*, and tack or flange, *b*, and provided with one or more apertures, *d*, for the reception of the pipe, all constructed substantially as and for the purpose described.

110,335.—SEWING-MACHINE TABLE.—Joseph Bennor, Philadelphia, Pa., assignor to himself, John N. McLean, and Samuel Crawford, same place.

Claim.—1. The combination of the legs or frames A, the locking and bracing-bar B, and rod C, all constructed and arranged to operate substantially as described.

2. The legs A, provided with the inclined studs *m*, in combination with the table-top, having correspondingly-inclined holes, whereby the table-top is secured to the legs without the use of screws, substantially as described.

3. The detachable hinge, consisting of the stem *f* jointed to the lug or arm *e*, and applied to sewing-machines or their covers, as described.

110,336.—PLOW.—James O. Billing, Halcyon Dale, Ga.

Claim.—The within-described plow, consisting of the beam A, handles B B, standard D, land-side C with ear *f*, and share G, all the parts being constructed, arranged, and operating substantially as set forth.

G P O——62 70

110,337.—CORPSE-PRESERVING COFFIN.—James Y. Black, Cleveland, Ohio.

Claim.—The case A, containing the air-chamber D, ice-chamber F, eduction-pipe L, and casket E, in combination with the cover G, containing the space or chamber I with its vent-holes J, cover H, and gasket K, when all the parts are constructed and arranged in the manner and for the purpose substantially as described.

110,338.—FEEDER FOR REPEATING FIRE-ARMS.—Lewis Wells Broadwell, Carlsruhe, Grand Duchy of Baden.

Claim.—1. The revolving feeding-cylinder, constructed and operated substantially as described, and for the purpose herein set forth.

2. The table or support A, in combination with the revolving feeding-cylinder, essentially as shown and described.

3. The under projection or lip E, as shown, and for the object specified.

110,339.—FARE-REGISTERING APPARATUS.—Charles Alexander Calvert, Manchester, Kingdom of Great Britain.

Claim.—The swinging tube or reservoir *b*, suspended at its upper end, and having at the lower end a frame, *e e*, in combination with a case recessed opposite the frame *e*, and with a hinged plate, *f*, sliding in a slot in the lower end of the tube, all as and for the purpose described.

110,340.—SAFETY-CASE FOR FRUIT-JARS.—Jane Carter, Towanda, Pa.

Claim.—The safety-case for preserve-jars, made of cotton or other fabric, with closed sides and a perforated bottom, as herein described, as a new article of manufacture.

110,341.—CORN-PLANTER.—John T. Carter and Moses B. Williamson, Xenia, Ill.

Claim.—In combination with the hoppers having shoulders formed thereon, the bar M, cog-wheel O, dropping-wheels L, and lever R, all arranged and operating substantially in the manner and for the purpose set forth.

110,342.—PEN.—Richard H. Chinn, Washington, D. C.

Claim.—1. The four-sided pen, Nos. 1, 2, 3, and 4, having two stiff points and two elastic points, to be used with or without a fountain-handle, as herein described, and for the purposes set forth.

2. The flat spring E, valves K and B, flange H, piston J, rubber rings G and L, when used, arranged, and operating in a cylinder, A, as a fountain pen-holder, in combination with my four-sided pen, as herein described, and for the purposes set forth.

110,343.—ROOFING MATERIAL.—James H. Cole, Chicago, Ill.

Claim.—The combination of the ingredients herein specified, with a paper or other suitable fabric for a foundation, for roofing purposes, substantially as described.

110,344.—HARROW.—Daniel B. Conover, New Bedford, N. J.

Claim.—1. A harrow divided into sections longitudinally and traversely, and said sections so united by hinged connections that they will yield to any unevenness of the ground independently of each other, and so that, through the center, longitudinally, said sections will be wholly unconnected except by a single hinged joint in front, substantially as described.

2. In combination with a harrow divided longitudinally into hinged sections, a draft from the center and the two forward corners, substantially as and for the purpose described.

110,345.—COMPOUND FOR PURIFYING MINE-WATER.—Frederick Jacob Delker, Ashland, Pa.

Claim.—The combination of the ingredients herein mentioned, for the purposes specified.

110,346, antedated December 9, 1870.—HYDRAULIC PRESS.—Jules Auguste Desgoffe, Paris, France.

Claim.—1. The combination of the screw J and hollow plunger H with the ram F and cylinders D I, substantially as specified.

2. The combination, with the elements recited in the previous claim, of the platen L and auxiliary screw K, essentially as herein set forth.

3. The arrangement, relatively to each other, of the plunger H and its operating screw J, the ram F with its bed G, and platen L with its operating screw K, substantially as shown and described.

110,347.—CLOTHES-DRIER.—John T. Elliott, Grand Rapids, Mich.

Claim.—The combination of the stationary post G, pieces E E, pins *d*, *e*, and *f*, and the post A, said post being grooved at its lower end, and provided with the collars B B', braces C C, and arms D D, all constructed and arranged substantially as and for the purposes herein set forth.

110,348.—MILK-RECEPTACLE.—George Millard Fillmore, St. Paul, Minn.

Claim.—1. The milk-receptacle A, provided with a tube, B, strainer S, suspension-plate *c*, and cover *a*, the tube B extending through an opening, C, in the door, and protected by a lock, D, substantially as described.

2. The milk-receptacle constructed as herein described, and arranged and operating substantially in the manner and for the purpose set forth.

110,349.—ROLL FOR FORMING HORSESHOE BLANKS.—Charles L. Fitzhugh, Pittsburg, Pa.

Claim.—As an improvement on the machine patented as aforesaid to W. W. Lewis, the cutting-off knives *a''*, inserted in the roll for the purpose of cutting the rolled bar into suitable lengths for horseshoe blanks while lying within the groove of the roll, as set forth.

110,350.—ROTARY STEAM-ENGINE.—George S. Follensbee, Philadelphia, Pa., assignor to himself and John Rosencrantz, same place.

Claim.—In an engine consisting of a case containing two cog-wheels, B B, arranged to operate as described, ports *b b' c* and a valve, H, arranged and operating as set forth.

110,351.—GRAIN-SIEVE AND OAT-EXTRACTOR.—Thomas Follett, Clermont, Iowa.

Claim.—The grooved frame A, combined with parallel strips B, bent to form one right and one acute angle, and the straight slotted edge-projecting strips C, all constructed and arranged as and for the purpose specified.

110,352. — OSCILLATING STEAM-ENGINE.—Isaac Newton Forrester, Bridgeport, Conn.

Claim.—1. The combination of the oscillating cylinder with the slide-valve working transversely across the bore of the cylinder, these parts being constructed to operate in combination substantially as hereinbefore set forth.

2. The combination of the oscillating valve-chest, the reciprocating slide-valve, and the valve-rod extending entirely through the chest, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

3. The combination of the oscillating valve-chest, the reciprocating slide-valve, and the oscillating yoke, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

4. The combination of the oscillating cylinder, the slide-valve reciprocating transversely to the bore of the cylinder, and the valve-seat reciprocating in a direction opposite to that of the movement of the valve, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

5. The combination of the cylinder, the valve-seat, having trunnions on which the cylinder oscillates, and the valve-chest, oscillating with the cylinder, these parts being constructed to operate in combination, substantially as hereinbefore set forth.

6. The combination of the bed-plate, the oscillating cylinder, the valve-seat, the trunnions, the valve-chest, the valve, and the oscillating yoke, all these parts being constructed to operate in combination, substantially as hereinbefore set forth.

7. The combination, with the cylinder of a pump or water-engine, of elastic cushions at each end of the cylinder to deaden the concussion of the water on the cylinder-heads, as hereinbefore set forth.

110,353. — BREECH-LOADING FIRE-ARM.—Stephen Gerngross, St. Louis, Mo.

Claim.—1. The combination of the needle-socket *b* with elastic packing *n*, spring catch *g*, spring F, and the rear bearing *y* for said spring, all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. In combination with the mechanism herein described for operating the needle, the needle-chamber C, provided with the angular groove *s* and handle *e*, substantially as and for the purposes herein set forth.

3. The lock-tube B, provided with lip *b* and angular groove *w*, and wedge-shaped cams *c c'*, substantially as and for the purposes herein set forth.

4. The combination of the lever D, bit E, and spring G, arranged for operation in connection with the spring catch *u*, as shown and described, and for the purposes set forth.

110,354.—MACHINE FOR CUTTING SHEET METAL TO AN OVAL FORM.—William D. Grimshaw, Newark, N. J.

Claim.—1. The arrangement of the pin-carrying slides D D' within the table E in different planes, whereby they are enabled to cross each other, substantially as specified.

2. The combination, with the table E, of the pressure-clamp, composed of the cranked brace or arm I, the lifting-rod H, and the disk G, the whole arranged to be capable of turning, essentially as herein described.

3. The combination of the eccentric sleeve or bearing M, with the shears F F' and friction-wheels K K', or other gears, substantially as specified.

110,355.—EXPLOSIVE COMPOUND.—Joseph Hafenegger, San Francisco, Cal.

Claim.—Fatty or oily substances in intermixture with explosive compounds, to prevent spontaneous or premature explosion, substantially as set forth.

110,356.—GANG-PLOW.—James Harris, San Francisco, Cal.

Claim.—The axle E, recessed as described, in combination with the timbers A B, extended cross-pieces D D', and pins *a*, for adjusting the plow-frame, seat, and the level of the plows, substantially as above described.

110,357.—MOUSE-TRAP.—Hubert C. Hart, Unionville, Conn.

Claim.—In a wood-choker mouse-trap, the combination, with the frame or saddle and yoke or choker, of a bait-hook, so constructed and arranged as to engage directly with said saddle, substantially as and for the purposes herein specified.

110,358.—HANDLE FOR CUTLERY, TOOLS, &c.—John T. Haviland, San Francisco, Cal.

Claim.—As a new article of manufacture, a handle for cutlery, arms, and tools, composed of baked or burned clay or earthy matter, substantially as above set forth.

110,359. — PILE AND POST-DRIVER.—Noah Havermale, Canton, Ill.

Claim.—1. The sills L, cross-timbers C, platform U, guide-posts W, guide-bars D, braces X, cap Y, braces R and S, posts T, windlass P, rope O, and pulleys M and N, when combined and arranged in the manner shown and described, and for the purpose set forth.

2. The hammer H, guide-arms *b*, sections *a*, buttons *a*, guide-bars D, and posts W, when combined and arranged in the manner shown and described, and for the purpose set forth.

110,360.—GUN-LOCK.—Edwin B. Hendee, San Francisco, Cal.

Claim.—A cock, or hammer and trigger, constructed and arranged to operate in connection with each other, substantially as described, so as to dispense with the tumbler, sear, and sear-spring heretofore used.

110,361.—LUBRICATING-OIL.—David R. P. Hill, Fredericktown, Pa., assignor to himself, E. F. Weaver, and H H. Weaver, same place.

Claim.—The lubricating-oil herein described, composed of the ingredients substantially as set forth.

110,362. — ELECTRO-MAGNETIC ENVELOPE FOR SAFES, VAULTS, &c.—Edwin Holmes, New York, N. Y., and Henry C. Roome, Jersey City, N. J.

Claim.—1. An envelope or lining for safes, vaults, and other structures, composed of two parts or conductors imperfectly insulated from each other, or connected with each other through a resistance-coil or medium, and in connection with the opposite poles of a battery or other electrical apparatus, for action as specified.

2. The combination of an electric envelope or lining for safes, vaults, and other structures, with a galvanometer or instrument, the movements of which are produced by variation in a current of electricity from a battery or other electrical apparatus, in connection with a safe, vault, or structure, substantially as herein described.

3. An electro-magnetic envelope or lining, composed of thin and pliable sheets of metal, insulated from each other by pliable non-conductors, so that when glued or cemented together the whole forms a single sheet, substantially as specified.

4. The combination of the metallic sheets or plates *a b*, the insulating sheets *c c'*, the metallic ribbon *d*, the resistance-coil or medium *f*, and the battery-wires or connections *k l*, essentially as described.

110,363.—GATE.—Henry R. Hoskins, Harlan, Ind.

Claim.—The lever-yokes F, pivoted to the bottom of panel B, embracing the gate on each side, and moving in the slots E to guide it, actuating and supporting it by the straps H, and operated by a weighted lever and strap K I, all as and for the purpose described.

110,364. — PURIFYING OILS WHICH HAVE BEEN USED IN LUBRICATING MACHINERY.—Christopher Houlker, Frankford, Pa.

Claim.—The process herein described for purifying or cleaning refuse petroleum lubricating oil that has been used for oiling shafting and other machinery, as and for the purpose set forth.

110,365. — SASH-SUPPORTER. — Robert B. Hugunin, New York, N. Y.

Claim.—The arrangement and combination of the lever holding plate A, movable lever D having friction surface F, roller K, and spring J, substantially as and for the purposes herein described.

110,366.—UTILIZING SEWERAGE MATTERS. —J. Burrows Hyde, New York, N. Y.

Claim.—1. The construction and use of a sewer-chamber or trap in the manner and for the purpose described.

2. The use of the described material in the manner and for the purpose set forth.

110,367. — THILL-COUPLING. — Frederic Augustus Jewett, Grafton, Mass.

Claim.—The metal plate A, provided with the right-angular screw A^2, in combination with the cylinder or plate B, constructed with a chamber having a screw-thread, and with the staple *b*, arranged to operate substantially as and for the purpose described.

110,368.—MACHINE FOR OPENING COTTON. William C. Jillson and Amos B. Palmer, Willimantic, Conn.

Claim.—1. In a machine for opening cotton, two or more reels or pulleys provided with hinged or pivoted flails, in combination with two or more shells or concaves, these parts being constructed and arranged substantially as shown and described, whereby the cotton, after being partially opened by the first set of flails, shall be fed to the second set of flails by the action of the first, substantially as set forth.

2. In combination with the bent flails and reel-bars constructed as shown, the elastic sleeves for separating the flails and allowing them to yield laterally, substantially as set forth.

110,369.—ROLLING-MILL.—John H. Jones, Knoxville, Tenn.

Claim.—1. The combination of the roll F in stationary bearings, the rolls E and G in shifting bearings, mechanism to elevate and depress the roll G, and mechanism to simultaneously shift laterally the rolls E and G, the latter roll half the distance of the former, in order to preserve the contrality of the roll G over the groove formed by the rolls E E, as described.

2. The combination of the movable roll E and its frame and guides *m n* with the stationary roll F and its frame and guides *m n*, as and for the purpose set forth.

3. The construction of the pair of vertical rolls E F with one or more welding and shaping-grooves and one or more finishing-grooves, located one above the other, and shaped, severally, substantially as described, for patching and re-rolling railway-bars.

4. The arrangement of the vertical shaft B, the several pairs of beveled gears *w x y*, the screws of varied pitch, and the roll-shafts M and *q*, substantially as described.

110,370.—TRUSS AND SUPPORTER.—Nathaniel Jones, New York, N. Y.

Claim.—The foraminous plate *a*, in combination with the perforated pad *b*, that is attached to said plate *a* and projects from the same, as and for the purposes specified.

110,371.—ROLLED BAR FOR PLOW-BEAM BLANKS.—George W. Jope and William Bunton, Pittsburg, Pa.

Claim.—As a new article of manufacture, a bar of iron or steel rolled into the form herein described and shown, for the purpose of forming a continuous series of blanks for plow-beams.

110,372, antedated December 15, 1870.—MACHINE FOR MAKING POST-HOLES.—James M. Kirkpatrick, Utica, Ohio.

Claim.—1. The movable frame I, set-screws A, and wedges *i i*, in combination with the false post H, substantially as shown and described.

2. The lever K, constructed, arranged, and operating substantially in the manner and for the purposes shown and described.

110,373.—APPARATUS FOR PITCHING BARRELS.—Alexander A. C. Klaucke, Washington, D. C., assignor to Charles F. Smith and Henry C. Comegys, of Baltimore, Maryland.

Claim.—1. The hinged bottom B of the furnace A, when arranged to operate substantially as and for the purpose specified.

2. The arrangement of the hot-air blast-pipe above the grate, and perforating its branches E, substantially as and for the purpose described.

3. The flanges or lugs *a*, on the outside of the furnace, in combination with the legs H, when constructed and operating substantially as and for the purpose specified.

110,374.—BRAIDING-GUIDE FOR SEWING-MACHINES.—Albert Komp, New York, N. Y.

Claim.—The throat-plate A, formed in one piece with the inverted T-shaped slot *b* having the vertical portion thereof opening on the face of said plate, and the horizontal portion communicating therewith below the face, all as set forth, for the purpose described.

110,375.—STONE-DRILLING AND CHANNELING MACHINE.—Ebenezer G. Lamson, Windsor, Vt.

Claim.—1. The yielding pitman, consisting of the arms I and spring H, with the connecting-rod G, or its equivalent, combined and arranged to operate substantially as described.

2. The brackets or guides D, in combination with the cutter J, arranged to play therein, substantially as set forth.

3. The clamp F, with the serrated block K and set-screw L, in combination with the serrated cutter J, constructed and arranged substantially as described.

110,376.—STONE-CHANNELING MACHINE.—Ebenezer G. Lamson, Windsor, Vt.

Claim.—1. A clamp for holding the chisels or drills of a stone-channeling machine, consisting of the recessed plate I provided with the side and top ledges *u*, and the plate N united to its face by bolts, thus forming a socket in which all the chisels or drills have a solid bearing on their ends and sides, substantially as described.

2. In combination with a clamp constructed as herein described, the serrated wedges *i*, arranged to lock the chisels in the clamp, as set forth.

3. The slotted cutter-bar H, provided with serrations on its face, in combination with a clamp provided with corresponding serrations, the said bar and clamp being united by a bolt, substantially as described.

4. The adjustable crank, consisting of the slotted arm U, crank-pin *t*, and collar W, all constructed and operating substantially as described.

5. The chain T, arranged on the machine in such a manner that, when motion is imparted to said chain by the operating mechanism, it shall engage with the studs *b* or equivalent devices attached to the supporting-rail or frame, for the purpose of feeding the machine along, substantially as described.

6. The stationary guide J, secured to the lower end of the cutter-bar for holding and guiding the cutters, substantially as described.

7. In combination with the stops R, or their equivalents, the pivoted lever *d*, connected to the clutch *c*, for automatically shifting the feed-worm and reversing the motion or travel of the machine, substantially as described.

110,377.—BREAST-COLLAR FOR HORSES.—William E. Leonard, Boston, Mass.

Claim.—The combination of an inner stay of enameled leather with an outer covering of ordinary harness-leather, substantially as and for the purpose set forth and described.

110,378.—CASTING CHILLED ROLLS.—George G. Lobdell and William Stuart, Wilmington, Del.

Claim.—1. The employment, in casting chilled rolls, of a sleeve or its equivalent, receiving the metal which forms the soft end of the roll, and moving with the latter when the metal contracts, substantially as described.

2. The application, to the top of the newly-cast roll, of pressure, as set forth.

110,379.—CARTRIDGE-BOX.—John C. Ludlam, Brooklyn, N. Y.

Claim.—1. A cartridge-box, consisting of the body A provided with a series of holes, *a*, in combination with the lifting-bars *f*, arranged to work in slots in the lower portion of the body, substantially as and for the purpose set forth.

2. The hinged doors or flaps *b'*, arranged to work in cavities in the sides of the body A and support the upper tier of cartridges, substantially as set forth.

3. The arm A, provided with the spring hooks *i* and the shoulders *k*, in combination with the bars *f*, arranged to operate substantially as described.

4. In combination with the lifting-bars *f* working in the slots of the body A, the handle *g*, protruding through the vertical slot *e*, substantially as described.

110,380.—PUMP.—Robert Mudge Marchant, London, England.

Claim.—1. A pump for compressing aeriform fluids, in which the bucket is made to work under water, with the inlet E for said fluid arranged below the water, and the outlet on transit above in free communication with the water, substantially as specified.

2. The combination and arrangement, essentially as herein set forth, of the inclined water-barrel or pump-cylinder A, the bucket B, the inlet E for the fluid to be compressed, the receptacle or chamber C, and its pipe D, for operation substantially as described.

110,381.—TABLE-FAN.—Joseph C. McEwen, Micanopy, Fla.

Claim.—The combination of the fan or brush C, shaft D, cord E, spring F, and treadle H, with each other and with the frame A and top B of a table, substantially as herein shown and described, and for the purpose set forth.

110,382, antedated December 9, 1870.—ELEVATOR FOR MERCHANDISE.—William McNaughten, Utica, Ohio.

Claim.—The merchandise-elevator herein described, consisting of the cars D and E, rails D', portable track F, windlass H, and pipe or box *c'*, when arranged and operating as shown and described.

110,383.—SHOT-CARTRIDGE.—Richard R. Moffatt, Brooklyn, N. Y.

Claim.—A shot-case or shell made partly or wholly consumable, substantially as and for the purpose herein set forth.

110,384.—RAILWAY RAIL-JOINT.—William Morehouse, Buffalo, N. Y.

Claim.—1. The spring-clamps C C applied to the fish-bars B B and rail-sections by means of a bolt, D.

2. The shoulders *g g*, made into the fish-bars to receive the ends of the clamps C C, substantially as described.

3. The combination of elastic washers *b* with the clamps C and fish-bars, substantially as described.

110,385.—METHOD OF FORMING SHAFT-IRONS FOR CARRIAGES.—Francis B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith & Co., same place.

Claim.—The process herein described for forming the shaft-iron of carriages.

110,386.—CLIP-BAR FOR CARRIAGES.—Francis B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith & Co., same place.

Claim.—As a new article of manufacture, a clip-bar constructed and prepared for use substantially as herein set forth, and either with or without the rib R.

110,387.—BASIN-COCK.—Charles A. Newton, Providence, R. I.

Claim.—The forked and flanged double tube K K F, screws G, nut H, and packing I, combined as described, to form a tight and easily-adjusted joint between the prolonged tubes C D and the water-pipes.

110,388.—LAWN-MOWER.—Augustus J. Ohmer, Hamilton, Ohio.

Claim.—The tubular handle *d* for the driving-shaft, provided with the shield *g* for protecting the gearing, in the manner and for the purpose substantially as described.

110,389.—COMBINED PARLOR AND COOKING-STOVE.—William W. S. Orbeton, Bradford, Mass.

Claim.—1. The combined parlor and cooking-stove, substantially as described, the same consisting of the fire-pot A, the air-supply inducts K K', the flame-educts I I', the oven L, the space or flue L^2, the main flues P P', and the discharge-pipe O, all constructed, combined, and arranged together and within a case, A, and so as to operate as and for the purpose set forth.

2. A parlor cook-stove, composed of the fire-pot A', the flame-educts I I', the air-supply inducts K K', the air-reservoir or chamber E, the oven L^2, the main flues P P', the flue or space L^2, the damper N', and the discharge-pipe O, the whole being combined and arranged in manner and so as to operate as described.

3. In combination with the fire-pot A' and the oven L^2, the main flues P P' and the cross-flue or space L^2, when all the said flues are arranged with respect to the oven and so as to operate as and for the purpose set forth.

4. The registers *f* and H, when arranged with respect to the oven, as described, and so as to regulate the heat thereof, as set forth.

5. The guards or deflectors *b b'*, in combination with the fire-pot, when the former are provided with air-inlets *h*, as described, and for the purpose set forth.

110,390.—SAW-TOOTH SWAGE.—Gordon Burleigh Pattee, Ottawa, Canada.

Claim.—1. The anvil-bar E, fitted with a movable die-piece, *r*, and provided with a shoulder, S, for shaping a saw-tooth, as described.

2. The combination of the jaw H, rod I, spring K, screws L L, and plate A, arranged and operating as described, for the purpose set forth.

3. The arrangement of the arm T, table *b*, set-screws V V, and screw U, for adjusting the anvil-bar and shoulder S, as specified.

4. The combination of the cam-lever X, pitman Y, the sliding journal-boxes Z Z, when applied as set forth, and arm Q', with the cam-shaft O, as set forth.

110,391.—STOP-VALVE.—Robert Pilling, Waterford, N. Y.

Claim.—1. In combination with the ratchet-gates C C, the wedge-shaped projection *h* for the purpose of expanding the gates, substantially as herein set forth.

2. The combination of casing A, bonnet E, stuffing-box G, ratchet-gates C C, wedge-shaped projection *h*, and stem D, all constructed and arranged to form a stop-valve, as set forth and described.

110,392.—STUFFING-BOX.—Andrew J. Prescott, Catawissa, Pa.

Claim.—The arrangement of the oil-chamber *a* between the two stuffing-boxes D and B, and provided with inlet F and outlet N, substantially as and for the purposes herein set forth.

110,393, antedated December 13, 1870.—COTTON-PLANTER.—Blackman Asbury Ramsey, Trenton, Tenn.

Claim.—1. The cotton-planter herein described, having automatically-adjustable barrel F, concave crushing and smoothing ties D E, concave harrow B, and concave roller L, when constructed and arranged as and for the purposes specified.

2. In a cotton-planter, the concave harrow B, adapted to the form of the ridge, having its central tooth *d'* longer than its fellows, to open the way for the furrowing-shoe, as specified.

3. In combination with the slotted uprights G of the frame, the automatically-adjustable seed-barrel F, having inner wall sloping to the center and elliptical exit opening *e*, and provided with the pins *b* extending partly within and partly without the barrel, as specified.

110,394.—REFRIGERATING-CAR.—Thomas L. Rankin, Granville, Ill.

Claim.—The arrangement, upon each side of the walk upon the top of the railroad-car A, of the inclined boxes B B, with followers D and spouts *a* leading into the troughs *c*, from which extend pipes *b* outside of the car, all substantially as set forth.

110,395.—FOUNDATION FOR PAVEMENTS.—Selah Reeve, Chicago, Ill.

Claim.—The described combination and arrangement of the paving-blocks, partitions, and packing-sand, when the latter not only fills the spaces between the partitions, but extends above their upper edge so as to form a uniform surface of sand for the support of the blocks, substantially as herein set forth.

110,396.—VEHICLE.—John D. Ross and Martin Keever Burk, Truckee, Cal.

Claim.—1. A truck-coupling, consisting of the horizontal rotating rim D, supported by the wheel J, and moving in the opening in the floor A so as to turn said wheel in any direction, substantially as herein described.

2. The device for reducing friction, consisting of the rollers *c* and guiding-plate E, operating between the rims *a* and *a* of the truck, substantially as specified.

3. The truck constructed with three wheels, B, B, and J, when mounted and operating substantially as herein described.

110,397, antedated December 9, 1870.—GRINDING-MILL.—John H. Rusk, Philadelphia, Pa.

Claim.—1. The combination, substantially as described, of soft-metal pins or plugs *c* with the driving-gear of a grinding-mill.

2. The detachable lining or inner shell, composed of one or more sections, adapted to and rendered self-locking in the outer conical shell of a grinding-mill by inclined planes on the cover or bridge of the mill, and similar inclined planes on the section or sections, all substantially in the manner described.

3. The detachable sections, having at their backs recesses filled with soft metal, as set forth.

4. The combination of the rotating spindle H, its bars P N, cross-piece K, sleeve *i* extending through said cross-piece, and set-screw *h*, substantially as described.

5. The outer shell or casing J, receiving the detachable sections E S, and sustaining the section K, as specified.

110,398.—Machine for Turning Logs.—Edward H. Stearns, Erie, Pa.

Claim.—1. The beam, provided with hawse-hole P, in combination with the fixed chain U' and turning chain *f*, substantially in the manner and for the purpose described.

2. The combination, with the upper pulleys G and H and the lower pulleys on the shaft *t*, the tightening pulleys H and H', the crossed belt *l*, an open belt, *m*, operated by the rods P and N, levers L and M, and bell-crank lever O, and spiral spring *g*, all substantially as and for the purpose described.

3. The device, composed of the traveling-pulley *o* and the grab-link *n'*, combined with the chain U', constructed and operated substantially in the manner and for the purpose set forth.

4. The chain U', stretched and fastened at each end thereof to a beam, or otherwise supported in a horizontal position, as a track or way for a traveling-pulley, when constructed and arranged substantially as and for the purpose described.

110,399.—Pipe and Tube for Water and Gas.—Henry M. Stow, San Francisco, Cal.

Claim.—A pipe composed of sheet metal or wire, and paper and pitch, substantially as herein described.

110,400.—Cooking-Stove.—David Stuart and Lewis Bridge, Philadelphia, Pa., assignors to Stuart, Peterson & Co., same place.

Claim.—The within-described arrangement of the oven G, fire-place F, the shelf J, damper K, plate I, and flue M, for the purpose specified.

110,401. — Wheel-Plow.—John H. Suydam, Atwater, Minn.

Claim.—The within-described attachment for plows, consisting of the wheel I, axle G, elongated seat J, brace K, slotted knee H, and clamp *a*, all constructed and used substantially as set forth.

110,402.—Seat-Hinge for School-Desks and Settees.—Nelson O. Tiffany, Buffalo, N. Y.

Claim.—1. In combination with the inclosed stop-lug *t* and stop-groove *v* of a seat-hinge, the cushion B, arranged in the end of the said stop-groove, all substantially as shown and described, for the purposes set forth.

2. The combination of the journal-socket *x*, journal *u*, stop-groove *v*, lug *t*, perforation *w x*, bolt C, and nut D, with a seat-arm B, and a bracket or arm, A, on the desk or other support, formed and arranged substantially as described, and represented for the purposes shown.

110,403.—Bark-Rosser and Breaker.—George S. Tillinghast and John W. Burdwin, Morrisville, N. Y.

Claim.—1. In combination with the self-adjusting reciprocal feeding-rollers C' C the rossing-knife E, substantially as specified.

2. The arrangement of the levers D D, arms *a a* and *a' a'*, thumb-screws *d d*, and springs *f f*, or their equivalent, for making the feed-rollers C C' self-adjusting, substantially as herein set forth.

3. In a machine for rossing and breaking bark, the combination of the lower deeply-indented feeding-roller C with the upper feeding-roller C', having its serrations projecting in a much less degree, substantially as and for the purposes specified.

4. The combination of the breaking-rollers G G, rossing-knife E, and self-adjusting feed-rollers C C, substantially as specified.

110,404.—Stone-Channeling Machine.—Francis C. Treadwell, Jr., New York, N. Y., and Ebenezer G. Lamson, Windsor, Vt.; said Treadwell assigns to said Lamson.

Claim.—1. In combination with a stone-channeling mechanism, a track or guide-frame, consisting of a lower supporting-rail and an upper guide-rail, supported in any suitable manner, constructed and operating substantially as described.

2. In combination with a stone-channeling machine, a track or guide-frame having a lower and an upper supporting and guiding-rail, with the adjustable braces for supporting the frame or track in an upright or inclined position, substantially as herein described.

3. The combination of the rail or track A, having the chain Y secured thereto, with the machine having the griping-wheel X and the pinions *m* and *n* and sliding clutch *o* all mounted thereon, the whole being arranged to operate substantially as described, for feeding the machine forward or backward on the track, as herein set forth.

4. The arrangement of the notched wheel M and the bifurcated lever *v*, in connection with the feed-wheel X for locking the machine fast on the frame at any desired point, substantially as set forth.

110,405. — Portable Drilling-Tool.—Claus Van Haagen, Philadelphia, Pa., assignor to himself and Anthony Van Haagen, same place.

Claim.—The combination of the casing A B, driving-spindle D, cutter-spindle F, gear *b b'*, screw M, nut L, and the screw-shaft N, or other devices, whereby motion may be communicated from the driving-shaft to the nut.

110,406. — Gear-Cutting Machine.—Claus Van Haagen, Philadelphia, Pa., assignor to himself and Anthony Van Haagen, same place.

Claim.—The combination of the worm G, its shaft *f*, screw J turning in a nut, J', and sliding on the shaft G, the stationary stops *r' s'*, fixed stop *r*, and adjustable stop *s* on the screw, and the sleeve H, wheel I, arm and pawl, or equivalent devices, whereby the screw may be turned in one direction with and in the other independently of the shaft *f*, as specified.

110,407. — Grooving-Tool. — Claus Van Haagen, Philadelphia, Pa., assignor to himself and Anthony Van Haagen, same place.

Claim.—The combination herein described, with the stock A, of the spindle B, gears *a a'*, tool-spindle C, and the stud *m*, or its equivalent.

110,408.—Silvering Glass.—Henry Balen Walker, New York, N. Y.

Claim.—The making and constructing a stool made of wood and glass, or wood and metal, or wholly of metal or glass, substantially in the manner and form as above described, and for the uses and purposes set forth, to be used in the process of silvering glass.

110,409.—Scrubber and Mop.—William Penn Walker and Ernest Henry Leseman, Toledo, Ohio.

Claim.—1. The method herein described, of fastening rubber strips in grooves by means of one or more side grooves and rods to each strip, substantially as herein set forth.

2. The combination of the head A and rubber strips B B, when said strips extend beyond the end of the head, have their lower edges cut at suitable intervals, and are fastened in the head by the rods *a*, all substantially as herein set forth.

110,410.—Ironing-Table Bureau.—Margaret White, Saratoga Springs, N. Y.

Claim. — The vertically-operating adjustable slides G G' for supporting the ironing-boards at any height desired, substantially as set forth.

110,411. — Cotton-Plow. — James Wiley, Warsaw, N. C.

Claim.—1. The metal bar A, bent and slotted as described, and having the flanged piece *d* in combination with the cross-bar B, and the scraper C having the peculiar form and set described, and having the slot *c*, when each is constructed and all are arranged together substantially in the manner and for the purpose described.

2. The sweep D, with its bars, braces, nuts, and screws, in combination with the cross-bar B, when each and all are constructed and arranged substantially as described.

3. The slotted bar B, with its bars, bolts, and braces, when so constructed and arranged that the sweep D and the teeth T T can be used interchangeably in the plow, substantially in the manner and for the purposes described.

110,412.—Lock.—Horatio Willard, Evansville, Ind.

Claim.—The combination of the spring *g* and the bolt *b*, passing through both sides of the case and furnished with two positive fastening notches that engage on the sides of the case, said bolt being operated directly by the key, as set forth.

110,413.—Chair.—Jackson C. Zimmerman, Thomaston, Ga.

Claim.—The combination, in a chair having horizontal braces or rounds E E, which extend from leg to leg, of the diagonal braces G G or the braces I I, or both, all as set forth and shown.

REISSUES.

4,203. — Manufacture of Paper-Pulp from Straw, &c. — Asahel K. Eaton, New York, N. Y.—Patent No. 41,982, dated March 22, 1864.

Claim.—1. Preparing paper-pulp from straw or other substances by subjecting it to a mechanical reduction, as described, commencing, with the early stages of the treatment, with the chemical solvent, and continuing the said mechanical reduction in connection with the chemical solvent, in the manner and for the purpose described.

2. Purifying the alkali held in solution in the refuse liquor by passing it through a filter constructed substantially as above described, sufficiently to enable me to use it again, and completely reproducing it, when necessary, by making it into combustible cakes, as set forth.

4,204.—Pump.—Chalkley Griscom, Lewis Griscom, and John P. Griscom, Mahanoy Plane, Pa. — Patent No. 95,242, dated September 28, 1869.

Claim.—1. The cross-heads K, made solid, with vertical grooves on their inner faces, and with angular lips on their backs which extend beyond the sides of the cross-heads and over the edges of the stationary guides L, all arranged between the steam and pump-cylinders of a double-acting steam-pump, substantially as set forth.

2. The combination of the cross-heads K, constructed as described, the piston-rods H, plunger-rods I, stationary guides L, and the crank-shaft M, with its arms *e* placed at right angles, all operating as set forth.

3. The combination of the induction and eduction pipes F and G, each with two curved branches, forming a central cone, arranged between and acting with the two clack-chambers E E, having X-shaped partitions and valves, and the pump-cylinders C D, all substantially as and for the purposes herein set forth.

4. The combination and arrangement of the steam-cylinders A B, piston-rods H H', stationary guides L L, cross-heads K K, crank-shaft M, pump-cylinders C D, clack-chambers E E, and the suction and discharge-pipes F and G, all constructed to operate substantially as and for the purposes herein set forth.

4,205.—Hasp for Trunk-Locks.—Louis Hillebrand, Philadelphia, Pa.—Patent No. 95,111, dated September 21, 1869.

Claim.—1. A hingeless spring hasp, whose free or staple end stands off from the trunk, when unlocked, in the manner described.

2. A hingeless trunk-hasp, having its body constructed wholly of, or in pieces united by, a strip of elastic metal, and operating in the manner and for the purpose described.

4,206.—Meter.—Jacob C. Horton, New York, and Samuel K. Hawkins, Lansingburgh, N. Y., assignors to the Manhattan Meter Company.—Patent No. 68,746, dated September 10, 1867.

Claim.—1. A valve or valves, for liquid-meters and other purposes, moved instantaneously at the extremity of the travel of the piston by means of power accumulated during the travel of said piston, substantially as shown and described.

2. The reciprocating grooved plate F, in combination with the oscillating valves, the arms J, bar K, stud K', and the spring and levers by which said stud is thrown from one groove to the other, substantially as shown and described.

3. The reciprocating grooved plate F, in combination with the stud K' and the levers and springs by which said stud is thrown from one groove to the other, as a means of operating oscillating valves, substantially as shown and described.

4,207. — Clock-Case. — Elias Ingraham, Bristol, Conn.—Design No. 3,830, dated February 15, 1870.

Claim.—The ornamentation of a clock-case by forming its edge into corrugations or transverse elevations and depressions, *c d*, substantially as shown and described.

4,208.—Table-Caster.—Division A.—Cyrus H. Latham, Lowell, Mass., assignor to Woods, Sherwood & Co., same place.—Patent No. 104,743, dated June 28, 1870.

Claim.—The caster herein described, consisting of the handle, cups, and legs of twisted wire, combined and arranged substantially in the manner described and specified.

4,209.—Cup for Casters, &c.—Division B.—Cyrus H. Latham, Lowell, Mass., assignor to Woods, Sherwood & Co., same place.—Patent No. 104,743, dated June 28, 1870.

Claim.—As a new article of manufacture, a cup, basket, or holder of twisted wire, constructed substantially in the manner and for the purposes set forth and specified.

4,210.—Material for Bearings and Packings.—Eliza Dexter Murfey, New York, N. Y., assignor to the Manhattan Packing Manufacturing Company, same place. Patent No. 105,361, dated July 12, 1870.

Claim.—1. A sheet of paper or other material coated or impregnated with plumbago or its equiv-

alent, and applied to a bearing or step, as described.

2. The said sheet prepared as described, and condensed under pressure.

3. A packing or bearing, consisting of a sheet saturated with rubber or its equivalent, and having a composition applied to and compressed on the surface of the same, as set forth.

4. The said sheet perforated and coated or impregnated as described.

5. The said coated or impregnated sheet applied to a step or bearing and polished, as set forth.

6. The combination, with a step or bearing, of the said sheet and a layer of felt or its equivalent, as specified.

4,211.—FRUIT-JAR.—Thomas Garrison Otterson, Philadelphia, Pa., assignor to S. B. Rowley.—Patent No. 36,853, dated November 4, 1862; reissue No. 2,977, dated June 9, 1868.

Claim.—A fruit-jar having the following features: a groove or recess in the exterior of the neck, below the mouth, the bottom of said groove or recess forming a continuation of an exterior shoulder on the jar, and a cover overlapping that portion of the jar above the said shoulder, and adapted to bear upon and compress a packing-ring resting upon the said shoulder, and being applicable to and removable from the packing-ring without turning it thereon.

4,212.—WAGON AND CAR-UNLOADING APPARATUS.—Noah Swickard, Galva, assignor, by mesne assignments, to Nicholas E. Phillips and John W. Cline, Knox county, Ill.—Patent No. 83,005, dated October 13, 1868.

Claim.—1. The tilting platform B, in combination with platform or floor A, as and for the purpose set forth.

2. Spring supports E, arranged and operating in connection with platforms A and B, for the purpose set forth.

3. The combination of spring supports E, lever F, and cam-shaft *f*, for the purpose set forth.

4. The combination of platform B with self-acting dogs G, for the purpose set forth.

5. The combination of platforms A and B with a stop device, I, for the purpose set forth.

6. The combination of platforms A and B with receiving-bin or chute C, operated substantially as described, for the purpose set forth.

7. The combination of platforms A and B with lid D, for the purposes set forth.

4,213. — CALENDAR CLOCK.—William A. Terry, Bristol, Conn.—Patent No. 79,026, dated June 16, 1868.

Claim.—1. The month-wheel D, constructed with an extra tooth in addition to thirty-one, as described, in combination with the operating mechanism which moves the month-wheel D forward at the end of the months, for the purpose of moving said wheel over a space equal to two or more of its teeth at the end of every month, substantially as described.

2. The arrangement of the pin A and pinion *g*, or their equivalents, in relation to the wheels D C, revolving together as described, so that the differential movement between the wheels shall take place at the end of each month, as herein specified.

3. The combination of the disk A with the wheel C, pins *b* and *c*, the pawl *a a'*, the stops *d l m n*, &c., the wheel D, the pinion *g* or its equivalent, and the pin A, constructed and operating substantially as described.

4. The combination of the disk A (having the month of the year marked thereon) and the pointer B, combined and operating together within a circle of figures representing the days of the months, so that the same pointer shall indicate the month and the day of the month, substantially as described.

5. The combination of the pin *b*, or its equivalent, with the dog or pawl *a a'*, the stops *d l m n*, &c., and the wheels D and C, each revolving upon a stationary axis and all operating together, substantially as described.

6. The combination of the parts named in claim 5, pinion *g*, and pin A, whereby the changes of the wheel C, which operates the month-indicator, shall take place between the last day of one month and the first day of the next month, substantially as described.

7. The combination of a leap-year indicator, and its operating mechanism, with a clock-calendar movement, combined and operating together, substantially as described, so that the relative position of the parts of said operating mechanism is indicated upon the dial by indicating the year relative to leap-year, for the purpose of more conveniently setting the calendar, as herein described.

4,214.—MACHINE FOR CUTTING NAILS.—Alonzo P. Winslow, Cleveland, Ohio.—Patent No. 108,225, dated October 11, 1870.

Claim.—The serrated-edged cutters J K, when arranged in relation to each other, to operate in the manner substantially as described, and for the purpose set forth.

DESIGNS.

4,522. — FRUIT-JAR CLAMP.—Peter John Biesenbach, Rochester, N. Y.

Claim.—The design for a fruit-jar clamp, as herein illustrated and described.

4,523.—TUCK-COMB.—Elias Brown, Wappinger's Falls, N. Y.

Claim.—The design for a tuck-comb, as shown and described.

4,524.—CLOCK-CASE.—Robert Dunn, Brooklyn, N. Y., assignor to Waterbury Clock Company, Waterbury, Conn.

Claim.—The design for a clock-case, as shown.

4,525. — SHIRRED GOODS.—Ansel Hecht, New York, N. Y.

Claim.—The design for shirred goods, as shown.

4,526. — WOVEN SHAWL-FABRIC.—Joseph Hodgson, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a woven shawl-fabric, substantially as described and illustrated in and by the accompanying drawing.

4,527. — WOVEN SHAWL-FABRIC.—Joseph Hodgson, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a woven shawl-fabric, substantially as described, and as illustrated in and by the accompanying drawing.

4,528. — WOVEN SHAWL-FABRIC.—Joseph Hodgson, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a woven shawl-fabric, substantially as described and as illustrated in and by the accompanying drawing.

4,529.—TYPE.—John K. Rogers, Brookline, Mass.

Claim.—The design for printing-types, as shown.

4,530.—TYPE.—John K. Rogers, Brookline, Mass.

Claim.—The design for printing-types, as shown.

4,531.—TYPE.—Carl Schraubstädter, Brookline, Mass.

Claim.—The design for printing-types, as shown.

4,532.—WOVEN FABRIC.—Royal C. Taft, William B. Weeden, and James W. Taft, Providence, R. I.

Claim.—The design herein described, consisting of the single-threaded lines *a a a a a*, of equal sizes, of a contrasting color, equidistant, and arranged in series A, separated by spaces B, having a corresponding width with the series A, and relieved by spots of a contrasting color.

4,533. — MEDICINE-DROPPER. — Henry A. Tweed, New York, N. Y.

Claim.—The design for a medicine-dropper, as herein shown and described.

4,534. — BLOCK OF SOAP. — Anthony Van Haagen, Philadelphia, Pa., assignor to McKeone, Van Haagen & Co.

Claim.—The design for a block or cake of soap, substantially as described, and as represented in and by the accompanying drawing.

TRADE-MARKS.

109.—STOVE-POLISH.—James L. Prescott, North Berwick, Me.

110.—TOBACCO.—Reune R. Randolph, New York, N. Y.

111.—WATER-PROOF GOODS.—Charles Toppan, Wakefield, and Moses F. Winn, Woburn, Mass.

EXTENSIONS.

ROBERT BRYSON, of Schenectady, N. Y.—Letters Patent No. 16,204, dated December 9, 1856.

"Improvement in Machines for Husking Corn."

Claim.—The combination of the two endless aprons G I, corrugated rollers E F F, and guard J, when constructed, arranged, and operating as shown, for the purpose set forth.

JOHN NEVILLE, of Brooklyn, N. Y.—Letters Patent No. 16,214.—Dated December 9, 1856.

"Improvement in Making Cast-Steel."

Claim.—The within-described process of converting wrought-iron into cast-steel, consisting essentially in the use of the various compounds of cyanogen and of sal-ammoniac, either separately or in combination with each other, or with other ingredients, when mixed and fused with the wrought-iron which is to be thus converted.

SILAS S. PUTNAM, of Neponset, Mass.—Letters Patent No. 16,186, dated December 9, 1856.

"Improvement in Machines for Forging Iron."

Claim.—The arrangement of the four hammers operating in pairs, in the manner set forth, and actuated by a single central cam, as described.

WENDELL WRIGHT, of Bloomfield, N. J.—Letters Patent No. 16,254, dated December 16, 1856.

"Mode of Securing Springs in Upholstery."

Claim.—Securing the spring A to its seats B B by having annular grooves *a* made in the seats, one in each, and having the greater portion of the coils C at the ends of the springs made or bent in horizontal form and somewhat larger in diameter than the grooves *a*, so that they will have a requisite bearing on the seats and be retained by their elasticity within the grooves, as herein described.

C. O. CROSBY, of New Haven, Conn.—Letters Patent No. 16,266, dated December 23, 1856; reissue No. 3,687, dated October 26, 1869.

"Improvement in Machinery for Folding Paper."

Claim.—1. The combination, with a vibrating fly, of a folding-blade, which shall form a bight or double in the sheet for the first fold, as it is received from the press, and deliver the same to mechanism to complete the folds, whereby the sheets of paper may be folded direct from a printing-press, substantially as described and specified.

2. The combination, with a vibrating fly and folding-blade, of griping-bars, constructed, arranged, and operating substantially as described and specified.

3. The folding-blades, in combination with the fingers, arranged and operating substantially as described and specified.

4. The employment and use of jaws, one of which in each set is cut away, in combination with a folding-blade having portions cut away, so that the sheets of paper can be griped at the points where the blade is cut away, and firmly held during the retraction of the folding-blade from the jaws, substantially as described and specified.

ISSUE OF DECEMBER 27.

PATENTS.

110,414.—APPARATUS FOR SUPPLYING AIR.—Henry W. Adams, Philadelphia, Pa.

Claim.—The combination and arrangement of the wheel B, provided with compartments in the case A, pipes P, E, H, and *f*, gearing G, *g*, *i*, pulley N, cord *c*, and frame I, all constructed and operating as shown and described, as and for the purpose set forth.

110,415. — WOOD-SPLITTING MACHINE.—William A. Allen, Baltimore, Md.

Claim.—1. The combination of the feeder, reciprocating cutters, and the reciprocating plate, all substantially as specified.

2. The combination, with the cutters and the hopper, of the gate *a*, substantially as specified.

110,416. — RAILROAD-CAR VENTILATOR.—George B. Armstrong, Chicago, Ill., and George F. McLellan, Washington, D. C.

Claim.—A dust-guard and fan for railway travelers, consisting of the rod A, two or more arms B B B, and flexible material D, combined and operating substantially in the manner and for the purpose herein described and set forth.

110,417.—PLOW.—James Archer, Springfield, Wis.

Claim.—The construction and arrangement, with the double mold-boards C and plow-standard B, of the bar A, rear standard D, slotted plow-beam E, and key G, substantially as and for the purposes herein set forth.

110,418.—MACHINE FOR BURRING WOOL ON THE SKIN.—Edward H. Ashcroft, Lynn, Mass.

Claim.—The improved pelt-deburring machine, composed of the adjustable slide-bar or pelt-supporter, made as described, its adjusting-screws or devices as set forth, and the rotary series of blades

or beaters, all arranged in and combined with a supporting-frame, so as to operate in manner as specified.

110,419.—CULTIVATOR.—Robert H. Avery, Galesburg, Ill.

Claim.—1. The combination and arrangement of the elevated couplings H', K, and M, and connecting or link-rods O and P, with the plow-beams A of a cultivator, as and for the purpose substantially as set forth.

2. The chains a a, when combined and arranged to operate with the rods or bars M M and handles C C, and elevated couplings H and K, substantially as described, and for the purpose specified.

110,420.—COFFEE-POT STRAINER.—George A. Barron, Pembroke, Me.

Claim.—A coffee and teapot-strainer, made adjustable, or so as to be increased or diminished in diameter, and substantially in the manner shown and described.

110,421. — BOTTLE-FASTENING.—Benjamin Bates, Baltimore, Md.

Claim.—A bottle-fastening, consisting of the metal collar c, provided with eyes a a and hinged loop d, and fastening-string or wire g, by which the collar is secured around the neck and the cork in the bottle, substantially as shown.

110,422. — COUPLING FOR SHAFTING. — Charles Bean, Providence, R. I., assignor to Albert F. Allen, same place.

Claim.—A shaft-coupling or sleeve constructed in two longitudinal parts, united by an angular joint parallel with the shaft, and secured by tapering keys, substantially as shown and described.

110,423. — MEDICAL BITTERS. — Theodore Beck, Omaha, Nebraska.

Claim.—The composition of the medical bitters as above described, and manufactured of the within-named ingredients, in such proportions as above indicated.

110,424.—TAKE-UP MECHANISM FOR SEWING-MACHINES.—Walter Bennett, Springfield, Ill.

Claim.—A thread take-up, attached centrally to and moving with the vibrating arm of the sewing-machine, its back end being free to come in contact with a fixed stop on the upward movement, and with a projection on the foot-bar on the downward movement, as and for the purpose described.

110,425. — MIDDLINGS-PURIFIER.—Lemuel G. Binkley, Baughman, Ohio.

Claim.—1. The hinged deflectors O O^1 O^2, arranged in the chamber K with reference to the air-tube J, fan L, and hoppers M M^1 M^2, provided respectively with the spout N, gate m, and spout m^2, as herein shown and described, for the purpose specified.

2. The arrangement with the reels B and G, and conductors F H I, of the air-pipe J, chamber K, hoppers M M^1 M^2, spouts N I, and hinged deflectors O O^1 O^2, substantially as herein shown and described.

110,426.—THUMB-SUPPORTER.—James Sanford Borden, Bloomfield, Ill.

Claim.—An improved thumb-supporter, consisting of the socket A, band B, arms C, ring D, and tube E, arranged substantially as specified.

110,427.—METHOD OF PRODUCING ILLUMINATING-GAS.—John F. Boynton, Syracuse, N. Y.

Claim.—1. The use of nitrogen gas, prepared and carbureted, substantially as and for the purposes herein set forth.

2. The mixture of nitrogen and hydrogen, for the purposes herein described.

110,428. — PORTABLE FARE-BOX.—Alfred Bradley, New Orleans, La., assignor to himself and W. L. Cushing, same place.

Claim.—The double pivoted angular guards B H, and spring-plates or leaves F G, in combination with each other and with the box or case A, substantially as herein shown and described, and for the purpose set forth.

110,429.—CHURN-DASHER.—Robert Brown, Columbus, Miss.

Claim.—A churn dasher, consisting of the ring A, bars C and D, and the tube E, the latter for the attachment of the handle, all combined and arranged substantially as specified.

110,430, antedated December 9, 1870.—SAW-TEETH.—Isaiah Byrd and Turner Byrd, Jr., Calvin township, Mich.

Claim.—The tooth B, constructed as described, in connection with the shoulders b b' and projection c of the saw-plate A, and secured thereto by the rivets c c', as and for the purpose set forth.

110,431. — WIRE FOR MAKING PEGS FOR BOOTS AND SHOES.—Duncan H. Campbell, Sunderland, Scotland, and Erastus Woodward, Charlestown, Mass.

Claim.—As a new article of manufacture, a wire cable, of continuous size throughout, for attaching the soles to boots and shoes, formed from one central wire, a, or a column of wires, surrounded by one or more wires, b b b, of any desirable pitch, and united together by means of a solder or alloy, for the purpose as herein fully set forth and described.

110,432. — LUBRICATING COMPOUND FOR STEAM AND OTHER PACKING.—William M. Canfield, Philadelphia, Pa.

Claim.—1. A lubricating compound, composed of tallow, myrtle wax, Brazilian wax, beeswax, Japanese wax, German black-lead, American graphite, and asbestos, all combined in or about the proportions herein set forth.

2. A lubricating compound, composed of American graphite, myrtle wax, tallow, beeswax, and Brazilian wax, all combined in or about the proportions herein set forth.

3. A lubricating compound, composed of German black-lead, asbestos, Japanese wax, tallow, and beeswax, all combined in or about the proportions herein set forth.

110,433, antedated December 15, 1870.—BOOT-JACK AND DOOR-BUFFER.—Walter S. Chatham, Williamsport, Pa., assignor to John W. Riddell, same place.

Claim.—As a new article of manufacture, a boot-jack and door-buffer combined, substantially as herein described, and for the purposes set forth.

110,434. — UMBRELLA-HOLDER. — Almon Clarke, Sheboygan Falls, Wis., assignor of one-half his right to Charles A. Spencer, same place.

Claim.—1. The method of holding an umbrella so that it can be adjusted and secured at any desired altitude or angle, and in any direction.

2. The double bearing D, constructed and operated as described, and for the purpose specified.

3. The combination of the shaft C with the socket A, bearing B, and double bearing D, as described, and for the purpose specified.

4. The improved umbrella-holder, constructed, arranged, operated, and operating as specified.

110,435.—ASTRONOMICAL LANTERN.—James Freeman Clarke, West Roxbury, Mass.

Claim.—1. The within-described astronomical lantern, provided with one or more perforated maps of the heavens or portion thereof, operating

substantially in the manner and for the purpose set forth.

2. In combination with the above, the box or receptacle C, as and for the purpose described.

110,436.—TIDAL MOTIVE-POWER.—Walter R. Close, Bangor, Me.

Claim.—1. Obtaining a continuous revolution of a shaft, in a desired direction, by means of the cylinders E E', revolving in alternate directions on the shaft D D', and acting in connection with the stationary collar F, pawls e e', springs d d', and ropes or chains K K', all as shown and described.

2. The cylinders E E', in combination with the shaft D D', collar F, pawls e e', springs d d', ropes or chains K K', with the weights I I', floating weight or craft G, and the upright posts or standards C C', all as shown and described.

110,437.—DIE-PLATE FOR SCREW-CUTTING DIES.—William T. Cole, New York, N. Y.

Claim.—An improved shell, having the base-plate B, ribs E H I, and recesses F M, all cast in one piece, combined with a covering-plate, K, as shown and described.

110,438.—FOLDING-CHAIR.—Francis Colton, Brooklyn, N. Y.

Claim.—In combination with the frame A, provided with the elongated slots f f, the seat D, having attached to it the guides e and braces or supports E, and the rear legs G and braces I, I^2, J, and J^2, when the same shall be constructed and operate substantially as and for the purposes set forth.

110,439. — FASTENING FOR NECK-TIES.—William J. Cowing, Washington, D. C.

Claim.—The rider a, wings b, eye c, and pin d, all constructed and arranged to operate as specified.

110,440.—MACHINE FOR GROOVING BLOCKS FOR WOOD PAVEMENTS.—Perley D. Cummings, Portland, Me.

Claim.—The combination of the scorers I M, cutter P with the feeding device A' C' and the cutting-box, with its series of independent self-adjusting rollers.

110,441. — SELF-CLEANING LOCOMOTIVE SMOKE-STACK. — Samuel M. Cummins and Henry Isreal, Allegheny, Pa., assignors for one-third their right to Ransom C. Wright, same place.

Claim.—1. The pipe F, provided with stops or breakers O O O and openings N N N, in combination with pipes P and D, substantially as and for the purpose described.

2. The openings N N N, in combination with the passages B, for counteracting the draught on the tubes B, which communicate with the furnace, substantially as herein described.

110,442.—PRESS FOR HAY, COTTON, &c.—Matthew G. Cunningham, Corsicana, Texas.

Claim.—The combination and arrangement of the case A, frame B, follower C, rods F, cross head G, screw I, nut H, wheels M and N, and the sweep, all substantially as specified.

110,443.—HAY AND COTTON-PRESS.—Joseph K. Davis, Monticello, S. C.

Claim.—The uprights B B, provided with scarf or beveled joints A A, catches C C, and notches f f, as and for the purposes hereinbefore specified.

110,444, antedated December 15, 1870.—CARRIAGE-WINDOW.—James F. Dohan, Binghamton, N. Y.

Claim.—The outside section B, having the sharp teeth or points "uniformly" produced on its outer edge, in combination with the inside section C and glass D, substantially as and for the purpose herein described.

110,445. — GRAIN-SEPARATOR. — James W. Donaldson, Fairfield, Cal.

Claim.—The combination of the plate T with the projection Q, shaft O, and nut U, as described, for the purpose set forth.

110,446. — SNOW-PLOW FOR RAILWAYS.—Tiberius Dougherty, Philadelphia, Pa.

Claim.—1. The spring-wings c' at the side of the plow, substantially as and for the purpose described.

2. The railway snow-plow, consisting of the rotating shovels b, shafts c, gearing g' g, and driving-rods a, arranged in relation to each other and to the running wheels of the plow, substantially as and for the purposes described.

110,447, antedated December 10, 1870.—COMBINED BROADCAST SEEDER AND CULTIVATOR.—Joseph E. Fargo, Lake Mills, Wis.

Claim.—1. The feed-shaft C and sleeve c, shifter D, clutch b', pinion b, and gear a, arranged and operating as and for the purpose set forth.

2. The partially-fluted or recessed cylinders I, secured to the shaft C and rotating in the feed-box H, vibrating guard K, spring k, spout J, plate j, and shifter F, substantially as described, and operating for the purposes herein set forth.

3. The rock-shaft N, eccentrically journaled in the frame-standards E, and operated by means of the lever P, notched quadrant Q, dog R, bell-crank lever p, wire p', and tripper q, for raising the drag-bars L by means of the chains O, substantially as described.

4. The hemispherical washers l, in connection with the drag-bars L, when constructed and arranged as described and shown, and as and for the purpose set forth.

110,448.—DEVICE FOR SIGHTING AND FIRING ORDNANCE.—George K. Farrington, Alcatraz Island, Cal., assignor to himself, Lorenzo Hubbard, and C. W. M. Smith.

Claim.—1. The cascabel E provided with the recess G, in combination with the chambered vent P in the breech, as and for the purpose described.

2. The cascabel E having the recess I, when combined with the wedge H, as described, for the purpose set forth.

3. A piece of ordnance, constructed substantially as described, with chambers, recesses, wedge, weight, and rest, for the purpose set forth.

110,449. — LENS OR GLASS FOR HEAD-LIGHTS.—Henry C. Felthousen, Buffalo, N. Y.

Claim.—A front glass for head-lights, as a new article of manufacture, when cast solid in a single piece, and of the form shown and described.

110,450. — BUSHING FOR WARP-BEAMS.—Richard Ferguson, Louisville, Ky.

Claim.—1. The adjustable tapering metal sleeve A, having a longitudinal opening, B, with parallel sides, and an adjusting set-screw, C, in combination with a removable warp-beam and its shaft, constructed and arranged as described, and for the purpose set forth.

110,451.—SAW-MILL. — Charles M. Flint, Hancock, N. H.

Claim.—1. The combination and arrangement of the carriage B, its grooved ways C C, the bar or carrier E, the jaws m n, right and left screws q r, rod t, support plates o p, carrier and guide s, shaft F, wheels G G, bands a b a b, rack H, slider I, the pawl or pawls e d, stud e, cams K L, the toothed wheel M, catch-lever N, and cam O, the whole being applied and to operate together, sub-

sentially in manner as explained, so as to constitute an improved head-block for saw-mills, whereby, by whose operation, a log may be supported and presented and moved with reference to a saw, in manner as explained.

2. The combination for advancing the log bar E, the same consisting of the shaft F, wheels G G, bands *a b a b*, the rack H, the slider I, its pawl or pawls *c d*, the stud E, and the stationary cam K, and the adjustable cam L, the whole being arranged substantially in manner and so as to operate as set forth.

110,452.—DRIP-ATTACHMENT FOR UMBRELLAS. — Thaddeus Fowler, Tottenville, N. Y.

Claim.—The sponge *a* or other absorbent, in combination with the staff and cover of an umbrella, so as to receive and hold the drippings therefrom, and from which the water may be ejected by compression, substantially as and for the purpose described.

110,453.—WASHING-MACHINE.—Abram A. Gardner, Savannah, Mo.

Claim.—The arrangement of the cylinder, consisting of the pieces *b*, peripherical plates *c*, buckets *d'*, and rib *e*, as specified.

110,454. — INCUBATOR. — Jacob Graves, Reading, and Henry Graves, Boston, Mass.

Claim.—1. The burner S, provided with the beveled tube S' and regulator T, as and for the purpose set forth.

2. In combination with the burner S, constructed as described, the cylinder M, cork-float N', tube K, rod N, lever O, spring V, and crank U, arranged and operated substantially as described.

3. In combination with burner S, cylinder M, cork-float or piston N', tube K, rod N, lever O, spring V, and crank U, the valve P and wires R, substantially as set forth.

4. In combination with burner S, cylinder M, cork-float or piston N', tube K, rod N, lever O, spring V, crank U, and valve P, the cold-air tube W, substantially as set forth.

5. The combination of the artificial mother, shown in fig. 5, with burner S, cylinder M, cork-float or piston N', tube K, rod N, lever O, spring V, crank U, and valve P, substantially as set forth.

110,455, antedated December 22, 1870.—POWER-PRESS. — Albert D. Hamlin, Brooklyn, N. Y., assignor to Mays & Bliss, same place.

Claim.—1. The combination of the key or plug J, formed with a reduction, *f*, and made capable of turning, as described, the shaft G, having a groove, *e*, in it, the lever K, the disk I, with its projection L, and the trip or stop-lever M, substantially as specified.

2. The combination of the pitman F, arranged within the cheeks or sides *b b* of the mandrel C, and relatively to the box or guide E, for operation therethrough, and the bushes D D', made to fit the V-shaped edges of the cheeks *b b*, essentially as as shown and described.

110,456.—FLOUR-BOLT.—Cyrus T. Hanna, Keokuk, Iowa.

Claim.—1. The arrangement of the fast and loose ends of the tail-pieces F with the ends of the stationary and movable parts of the ribs C, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement of the head-piece G, with the ends of the stationary and movable parts of the ribs C, substantially as herein shown and described, and for the purpose set forth.

110,457.—LAWN-MOWER.—Hubert C. Hart, Unionville, Conn.

Claim.—The combination of the main roller *e*, cam-shaft A, with cam *i j*, gearing *f g*, lever K, cutter *m n*, and the frame *a*, when the parts are constructed and arranged specifically as described, for the purpose set forth.

110,458. — CORN-PLANTER.—Charles Allen Haskell, Galena, Ill.

Claim.—1. In corn-planters, the truck-frame F, carrying a seed-dropping device and moving on the frame A, as and for the purpose set forth.

2. The frame-standards N, shaft O, pinion O', lever N', ratchet *e*, dog S, and latch *f*; the arm G, rod G', chain-wheels P P', chain Q, and dropper-shaft I, in connection with the axle A, driving-gear C', and truck-frame F, all arranged and operating substantially as described, for the purpose specified.

3. The slide-boxes L, catches *a*, catch-spring *a'*, and the slide-bars M provided with markers M', as and for the purpose set forth.

110,459. — CANAL-LOCK MECHANISM. — George Heath, Annapolis, Md.

Claim.—The hollow rock *a*, fitted and confined by a nut or stop upon the reduced portion of a vertical rod A, which serves as part of the mechanism for opening and closing canal-lock valves, substantially as and for the purpose described.

110,460, antedated December 24, 1870.—GAUGE FOR TURNING CLOCK-WORK.—Harry F. Henderson and James E. Ladd, Bristol, Conn.

Claim.—The improved gauging-tool herein described, consisting essentially of the shafts D *d*, socketed post *b*, tube *c*, collars *f f'*, spring *g*, screw and nut *j k*, and gauge-disk *l*, constructed and combined substantially as herein described.

110,461.—NON-CONDUCTING COMPOUND FOR COATING STEAM-BOILERS, &c.—John Hessing, Paterson, N. Y.

Claim.—The improved compound, consisting of the ingredients and compounded substantially in the manner specified.

110,462.—MACHINE FOR CUTTING THE ENDS OF HOOPS.—Lorenzo N. Howes, Swansey, N. H.

Claim.—The knives D D, arranged with their rear ends inclined toward each other in the sliding stock E, which is operated by the lever G, in combination with the tapering bed A, substantially as and for the purpose herein described.

110,463.—COMPOUND AND PROCESS OF REMOVING INCRUSTATIONS OF LIME FROM STEAM-BOILERS, METALS, &c.—J. Austin Hewett, Nora Springs, Iowa.

Claim.—The compound and process for dissolving lime and for cleansing steam-boilers, metals, mechanical instruments, and all kinds and descriptions of machinery whatever from the deposits of lime and from all corroding and impure substances which exist or may be found in water, either hard or soft, fresh or salt, separately or combined, with safety and without injury to the materials of which they are composed, substantially as described.

110,464.—LAMP.—Charles F. A. Hinrichs, New York, N. Y.

Claim.—1. The pipe *b*, passing from the reservoir *a* to the wick-cylinder *c*, and bent within the globe or ornament *e*, through which globe *e* the slide tube *f* for the standard *g* also passes, as and for the purposes specified.

2. The wick-cylinder *c* and movable collar *l*, in combination with a burner from which the wick hangs, substantially as and for the purpose set forth.

110,465.—MANUFACTURE OF LEATHER.—Frederick A. Holcomb, Grand Rapids, Mich., assignor to himself and Samuel B. Jenks.

Claim.—The use upon the surface of skins while they are in a wet condition, after coming from the tanning solution, a mixture of plaster of Paris and water, or of other substances having a similar nature or effect, in order thus to prevent the skins from drying so hard that they cannot be readily softened, especially such skins as have not been in strong tanning solutions.

110,466.—PROPULSION OF CANAL-BOATS.—Julius L. Hornig, Chicago, Ill.

Claim.—1. The drums or sheaved wheels C, provided with the central groove *a* and side grooves *b*, in combination with the rail A and the endless chain E, all constructed substantially as described and shown, for the purposes set forth.

2. The carriage B, provided with inwardly-projecting bosses *c* at the ends of the side frames thereof, and with the drums C, guide-wheels M, and grooved pulley F, all constructed and arranged substantially as described and shown, for the purposes set forth.

3. The guide-wheels M, traversing loosely upon a connecting-axle, constructed and arranged substantially as described and shown, for the purposes set forth.

4. The combination of the shaft G, rotated by suitable power upon a canal-boat, the pulley I, the brace H, the carriage B, provided with pulley F, drums C, and guide-wheels M, the endless chains J and E, and the rail A, all constructed and arranged substantially as described and shown, for the purposes set forth.

110,467.—FIRE-BOX FOR STOVES AND RANGES.—Marcus L. Horton, Windsor, Vt.

Claim.—1. The combination of the series of slats *g*, arranged as described, with the back-plate, and its series of perforated partitions *d*, all being arranged as and for the purpose of making a metallic lining for a furnace, as specified.

2. The combination and arrangement of the slatted check-plate G, made as described, with the series of slats *g*, arranged as set forth, and with the back-plate *c*, and its series of divisional perforated partitions *d*, all being arranged as explained.

3. The combination and arrangement of the fire-brick lining A, as set forth, with the metallic lining, as composed of the series of slats *g*, and the back-plate *c*, and its perforated partitions *d*, or of such and the check-plate G, as described, arranged as explained.

110,468, antedated December 9, 1870.—DEVICE FOR FILLING LOWLANDS.—George Howell, Philadelphia, Pa.

Claim.—The combination of the adjustable scooping-trunks G G with the boat F, the said trunks being constructed and arranged substantially as described, and discharging the dirt into a scow, T, as specified.

110,469.—REFINING OIL FROM COTTON-WASTE, &c.—Edgar T. Jarrold, Tottenville, N. Y., assignor, by mesne assignments, to himself, Henry S. Gerow, and Henry McLean, of New York City.

Claim.—The mode or process of refining oils and greases obtained from refuse cotton-waste and similar material, by distilling such oils or greases in connection with steam, either common or superheated, introduced into the contents of the still, and afterward treating the same with sulphuric acid and bichromate of potash, substantially as described.

110,470.—MEDICAL COMPOUND FOR CURE OF RHEUMATISM.—Nathaniel Jenkins, New Orleans, La.

Claim.—The above medical compound, substantially as and for the purposes described.

110,471.—SPRING-BED BOTTOM.—William B. Judson, Poughkeepsie, N. Y., assignor to L. P. Nelson, Jr.

Claim.—1. The combination of the springs S, made with straight sides, *s s*, at top and bottom, tubes *a a*, inclosing the straight sides from angle to angle, and packing placed between the tubes and the straight sides, all in the manner shown in the drawing, and described herein.

110,472, antedated December 17, 1870.—BASE-BURNING STOVE.—William Kaiser, Wilkesbarre, Pa.

Claim.—1. The arrangement and combination of the revolving depressible outer casing or ring *e* and the inclined rods *k k* and columns *h h*, as and for the purpose hereinbefore set forth.

2. The combination, with the revolving depressible ring or outer casing *e* and inclined rods *k k*, of the cylinder grate *d* and stationary grate *f*, substantially as and for the purpose hereinbefore set forth.

110,473.—SPICE-BOX.—Edward S. Kennedy, Birmingham, (Buchanan Post-office,) Pa.

Claim.—1. The spice-box A, made with two compartments and provided with caps D and adjustable perforated plates E F, whether used with or without a stand, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the box A, made with two compartments, caps D, perforated pivoted plates E F, pivots B, and stand C, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

110,474.—SCYTHE-FASTENING.—Samuel U. King, Windsor, Vt.

Claim.—The described scythe-fastening, as constructed with the hooked clamp C, and its nut *b* arranged between the hooked abutment *g* and the toe-socket *c*, all being substantially as specified.

110,475. — SMUT-MACHINE. — William H. Kite and George S. Newman, Liberty Mills, Va.

Claim.—The combination and arrangement of the cylinder B, having the perforations *a* and *b*, with the shaft A, provided with scouring plates C C, upper fans E E, and lower fans F F, double funnels or diaphragms D D, spouts H, and casing L, all constructed and operating substantially as shown, and for the purposes set forth.

110,476. — ATTACHMENT FOR RATLINS.—John Calef Knowlton, Rockport, Mass.

Claim.—My improved ratlin attachment as composed of the yoke or clasp A, the screw-bolt C, the nut D, the thimble E, and the eye made in the ratlin in manner as described or represented.

110,477.—VINE AND WEED-CUTTER.—Harry Lawrence, New York, N. Y.

Claim.—The combination of the gathering-blades, rotary cutter, and the discharger, either mounted on an independent truck or on the truck of a potato-digging machine, all substantially as specified.

110,478. —WASHING-MACHINE. — Balsam Chaffin Lawson, Yolo county Cal.

Claim.—The combination of the circular bottom, the dasher G, the inclining wash-boards or racks C C, and the converging sides or beveled boards E E, in combination with axle M, pitman L, and weighted lever K, as constructed and shown, as the same is set forth in the foregoing specifications.

110,479.—KNITTING-MACHINE.—John Lee, Mark Lee, and William Carter, Needham, Mass.

Claim.—1. The yarn-guide carrier S, constructed and arranged substantially as specified.

2. The shifting rotary yarn-guide receiver Y, constructed, arranged, and operating substantially as specified.

3. The combination, with the receiver, of the springs X' and the spring-top 14, substantially as specified.

4. The yarn guides *a d b*, constructed and arranged substantially as specified.

5. The combination, with the rotary yarn-guide receiver Y, of the toothed racks *i j* and the oscillating shifting disks *l m* and pins *n*, the said disks and pins arranged for operating the receiver for changing the yard-guides, all substantially as specified.

6. The combination, with the disks *l* and *m* and pins *n n*, of the ratchet-wheels *w*, the pawl *x*, arms *y*, cam 7, springs *u*, sliding-pawl 3, and the spring 4, all substantially as specified.

7. The shifter 5, rod 11, lever 9, cam 7, and spring 13, combined and arranged substantially as specified.

8. The bar 24, provided with the latch-openers 25, constructed as described, and arranged relatively to the needles A and B, as and for the purpose specified.

9. The combination of the adjusting-bars 19, rods 20, screws 21, spring 15, with plates 16, bars 23, 18, and L, all substantially as specified.

10. The arrangement of the bar 18, the slotted bar 26, the spring-stops 27, and push-pins 28, substantially as specified.

11. The combination, with the receiver Y and the yarn-guide carrier, of the guard-wire 34, substantially as specified.

12. The combination, with the receiver, of the yarn-guide 29, substantially as specified.

13. The combination, with the cam-wheel O, of the sliding friction-roller Q and the shifting lever 36, the bar M, and the needle-bar L, substantially as specified.

14. The combination, with the gauge-screws 22, the rods 20, and the needles A, of the bar 24, arranged and operating substantially as specified.

110,480.—NEEDLE AND ITS CARRYING-ARM FOR SEWING-MACHINES.—George A. Lloyd, San Francisco, Cal., assignor to himself, George W. Smiley, James McMeehan, and Anthony Rosenfield.

Claim.—The divided needle *d*, having the loop *g* upon only one side, the said loop being made more rigid than the light elastic portion *e* situated below, when combined with the notched needle arm, as described, for the purpose set forth.

110,481.—COMPOUND FOR CLEANING CARPETS.—Leo. Marks, Cincinnati, Ohio.

Claim.—The carpet-cleaning compound, prepared and adapted to be applied, substantially as herein described and set forth.

110,482.—WASHING-MACHINE.—Moses S. Marshall, Somerville, assignor to John T. Folsom and John S. Folsom, Boston, Mass.

Claim.—1. The cylinder A, having ventilating-tubes D and convex perforated partition H, in combination with circular case E, having tube F, substantially as described.

2. The lid L, having flange I and projections N, in combination with cylinder A, having flanges J K and pivoted bolts O, substantially as described.

3. The weight R, in combination with cylinder A, substantially as described.

110,483.—CONSTRUCTION OF PRISONS.—Edwin May, Indianapolis, Ind.

Claim.—The vertical rods H, furnished with the hooked catches N N, and the vertical rods L, furnished with the lever M, in combination with the levers J J, attached to the lower ends of rods H and L, and connecting-rod K, arranged substantially as and for the purpose set forth.

110,484.—WATER-FAUCET.—Pierre A. Mayor, New York, N. Y.

Claim.—The sleeve B, when provided with the valve-seat *c*, in combination with the plunger D and spindle C, all constructed and operated substantially as described and specified.

110,485, antedated December 16, 1870.—CAMP-BEDSTEAD.—Amos Dunham McCoy, Alexandria, La.

Claim.—The combination of the side-pieces A A' and uprights E with the ridge-pole G, the bars H H', when these parts are made in sectional pieces, which are connected together by sleeve-joints, as herein described, and with a head-rest covered with slats *d*, when all the parts are constructed and arranged with respect to each other as described, for the purpose set forth.

110,486.—AUTOMATIC DOOR-BOLT.—Angus McKay, Montreal, Canada.

Claim.—The novel combination of the plate *c*, flanges *d* and *d*¹, inclined end *d*², bolt *f*, slot *g*, screw *g'*, incline A, shoulder A', bolt 5, slot *k*, screw *l*, spring *m*, stop-pin *n*, together with doors *a* and *b*, and recess for bolt 6 in the doorway, all working together substantially in the manner and for the purpose described.

110,487.—CHURN-DASHER.—James B. Mellor, New Hope, Mo.

Claim.—The improved churn-dasher above described and specified, consisting of the vertical revolving shaft B, having the arms *d* and *e* projecting from opposite sides downward at an angle of forty-five degrees, and the arms *c* and *f* projecting upward from the alternate sides at the same angle, said arms so arranged that the external ends respectively shall lie in the same horizontal plane.

110,488.—FILTER-TANK AND OTHER VESSELS USED IN REFINING SIRUPS, SUGAR, &c.—William Moller, Irvington, N. Y.

Claim.—Tanks, filters, and other vessels for sugar and sirups, constructed of iron, with a lining of cement and sand, substantially as and for the purpose herein shown.

110,489.—TREATING BESSEMER STEEL.—James Myers, Jr., Williamsburg, N. Y.

Claim.—The process herein set forth for converting the iron known as Bessemer steel into a workable steel, substantially as herein shown and described.

110,490.—BALANCED SLIDE-VALVE.—John Nesbitt, Concord, N. H.

Claim.—A slide-valve, A, having an exhaust-cavity cut therethrough, combined as described, with the case B, having puppet-valves E arranged to admit air to the interior of the steam-chest, at the time and in the manner set forth.

110,491, antedated December 15, 1870.—KEY FOR LOCKS.—Webster Park, Norwich, Conn.

Claim.—A lock-key, constructed as described, having a round, grooved stem A, in which is arranged an L-shaped lever or bit, B, so adjusted as to turn astride the edge of the lock-plate when entering a circular key-hole, substantially as and for the purpose set forth.

110,492.—GRAIN-BINDER.—La Fayette Parker, Davenport, Iowa.

Claim.—1. The combined grain-receiver and discharger F P and E E, constructed and operating substantially as described.

2. In combination with the preceding, the arm K', constructed and operating as described.

3. The combination of the sectional gear 38 and irregular spur-wheel 8, constructed as described, to impart an intermittent and irregular motion to arm K', as set forth.

4. The combination of the cam 48, cog-lever 19, sectional gear 39, and hollow rolling-shaft 21 with

the combined receiver and discharger, to cause it to open and discharge the bound sheaf, as shown.

5. In combination with the preceding, the slide 22, for the uses and purposes as described.

6. The combination of the compressing devices, consisting of the pulley Z, strap I, and strap I', and spring P, constructed and operating as described.

7. The combination of spring-stop 24 and rock-stop L with the cylinder-head G and arm K', as shown and described, for the purposes specified.

8. The vibrating twine-holder 3, in combination with spring 9, for the purposes shown and described.

9. The combination of the rod 2, twine-holder 3, and sliding-rack V, as shown and described, for purposes specified.

10. The twine-catch 5, constructed and operating as described, in combination with the circle 4, as and for the purposes specified.

11. The combined divider and guard M, constructed and operating as shown and described.

12. The combination of dog 13, stop N, bell-crank O, and cylinder-head G, arranged and operating as and for the purposes described.

110,493.—(Suspended.)

110,494.—COUNTERSINK.—Moses Magoon Pettee, Worcester, Mass.

Claim.—The improved countersink A, constructed of body C, having ear-pieces *a a*, knife-blade D, set-screws F G, and adjustable guard or lip H, substantially as described and for the purpose set forth.

110,495.—CLEANING WOOL, COTTON, &c.—Goldsbury H. Pond, Rutland, Vt.

Claim.—Immersing them in sulphide of carbon, naphtha, or benzole, to soften, dissolve, or saturate the excrements, oil, gum, dirt, and other impurities, and then sinking the fibrous materials or fabrics in water and allowing the impurities to rise to the surface of the water, with the sulphide of carbon, naphtha, or benzole and removing them from the surface of the water, leaving the cleansed or partially cleansed wool in water.

110,496.—GAS-RETORT AND HEATING-FURNACE.—Goldsbury H. Pond, Rutland, Vt.

Claim.—1. A gas-retort so constructed and arranged as that a fire may be made within it as a furnace for heating buildings, boiling, and cooking, while the fire is incandescent or very hot, close the draught-opening and smoke-escape, and supply steam, melted grease, &c., to the fire while it is hot, so as to make the gas with the fire made within the retort.

2. Arranging the steam or water-heating pipe in furnaces between the soap-stone or fire-brick lining and the outer case of the furnace, substantially as described.

3. In combination with the retort, the door J to close the opening I, constructed and arranged to operate substantially as described, for the purpose set forth.

110,497.—RAILWAY-CAR SPRING.—Albert Potts, Philadelphia, Pa.

Claim.—The plate C, provided with steps on its lower surface for compressing the springs successively, substantially as herein shown and described.

110,498, antedated December 17, 1870.—GRAIN-BINDER.—Francis W. Randall, Tekonsha, Mich.

Claim.—1. The reciprocating hook-bar T'' and sliding jaw T', in combination with a vibrating needle-bar, carrying the binding-twine and the spring-clamp *a'* operated in connection with the tying-cylinder M, the several parts being arranged and actuated substantially as and for the purpose set forth.

2. The knife K, actuated as described, in combination with the clamping devices *a'* and T' T'', the several parts being arranged to operate substantially as described.

3. The tying-cylinder M, rotating intermittently, and provided with spring-clamp *a'*, in combination with the inclosed sliding tube U, looping-rod V, and finger-bar F, said tube and bar having a differential and simultaneous movement imparted to them by means of the link-frame, as described, the several parts being arranged to operate substantially as and for the purpose set forth.

110,499.—LOCK-NUT.—James L. Randolph, Berkeley Springs, West Va.; assignor to S. L. Denny, Christiana, Pa.

Claim.—The plate C, cut and formed as described, with its spring for locking the nut, as and for the purpose set forth.

110,500.—NAIL FOR PICTURES, &c.—Thomas C. Richards, New York, N. Y.

Claim.—The combination, with the knob A, of the ring B, inserted within the periphery and on the under side of the same when in a plastic or molten state, and having its edge turned down over the plate C, which is adapted to receive a shank or nail, substantially as specified.

110,501.—PROPELLING APPARATUS FOR CARS.—John Roy, New Orleans, La.

Claim.—The grooved and suspended friction-wheels C C D applied to street-cars, as and for the purpose described.

110,502.—HANDLE FOR BARRELS, &c.—Minot S. Schofield, Stamford Conn.

Claim.—An improved self-adjustable handle for handling barrels, boxes, and other packages, consisting of the hand-piece A, made of any suitable form, and the jaws B and C, constructed and operating substantially as herein shown and described, and for the purpose set forth.

110,503.—WHIP-HOLDER FOR CARRIAGES.—Erastus W. Scott, Wauregan, Conn.

Claim.—The whip-holder as composed of two leaves, A B, provided with the prongs *c c d d*, cushions *f h*, and contractile screw *g*, and nut *i*, and formed and connected together all substantially in manner and so as to operate as set forth.

110,504, antedated December 16, 1870.—BOTTLE-FILLING APPARATUS.—Thomas Simmons and David H. Lowe, Brooklyn, N. Y.

Claim.—1. The combination of the exhauster, composed of the pipes D E, and the tube or tubular head-piece C, with the cork or stopper B, substantially as specified.

2. The combination and arrangement of the nut *b* with the tubular extension of the head-piece C, the stopper B, the pipes D and E, the collar *d*, and the screw-cap F, essentially as herein described.

110,505.—BREECH-LOADING FIRE-ARM.—James Smiles, Birmingham, England.

Claim.—1. The safety-catch or lever for preventing the accidental discharge of the gun, applied to the sliding sleeve and made to lock or engage the sleeve and bolt or plug together, substantially as hereinbefore described and illustrated in the accompanying drawing.

2. The arrangement or combination of parts, substantially as hereinbefore described and illustrated in the accompanying drawing, for permitting of the ready escape of the gas through the closing-bolt or plug in case imperfect cartridges are fired.

110,506.—PLOW.—Arthur C. Smith, Joyner's Depot, N. C.

Claim.—The hinged part E^2 of the mold-board E^1 E^2 and pivoted brace F, in combination with each other, with the stationary part E^1 of the said

mold-board E' F', and with the frame-work of the plow, substantially as herein shown and described, and for the purpose set forth.

110,507.—CABINET for SEWING-MACHINES. James E. Smith, Chicago, Ill., assignor to himself and Julius Ludwig, same place.

Claim.—The construction and arrangement of the walls A, wall sections A', front board D, flap E, and top F, in connection with the folding table C, substantially as and for the purposes herein shown and set forth.

110,508.—EYELET MACHINE.—Stephen N. Smith, Providence, R. I., assignor to the Union Eyelet Company, same place.

Claim.—The device for regulating the pressure upon the feeding-pawl, consisting of a cam N, rod M, lever L, rod O, nut P, and spring Q, all arranged to operate together as and for the purpose specified.

110,509. — BUCK-SAW. — Ariel B. Sprout, Muncy, Pa.

Claim.—The combination of the lever D with the bar E and stretcher C, for the purpose set forth and described.

110,510. — KEY FOR SHAFTING. — Nathan Stedman, Aurora, Ind.

Claim.—The improved key for shafting, having the concave face with chamfered-sided knife-edges, as explained.

110,511.—BAG-HOLDER.—Alfred D. Swogger, Worth, Pa.

Claim.—The extensible frame A B, having pawl and ratchet to hold it in any position, combined with the flooring *b*, posts *a c c*, and hopper *g*, as and for the purpose described.

110,512.—TURN-UP SEAT FOR CHURCHES, &c.—James P. Tibbits, New York, N. Y.

Claim.—1. The combination of the pivots *i*, bridle-rod F, and the slots *g g*, with the seat and standards, substantially as and for the purpose herein set forth.

2. The yielding cushion-covering strip *d*, supported by springs at the front of the seat, substantially as and for the purpose described.

3. The combination, with the seat, of strips *b* and *d*, furnished with pins *c* and *f*, substantially as and for the purpose herein described.

110,513.—CARRIAGE-BOW.—Isaac N. Topliff, Adrian, Mich.

Claim.—The straight part of the bow A, tubular and flattened at the lower end, the bow-socket D, consisting of two concave scalloped pieces, and the bent part of the bow B', all combined, constructed, and arranged as and for the purposes set forth.

110,514.—POTATO-DIGGER.—William Tripp, Mechanicsville, N. Y.

Claim.—The improved potato-digger, formed by the arrangement of the vertically-extended landside A, and the mold-board or share, provided with the broad and nearly flat extension B, and U or V-shaped recess D, all constructed as shown and described.

110,515, antedated December 10, 1870.—MACHINE FOR HEADING RIVET AND SCREW-BLANKS.—Victor De M. Upham, Brooklyn, N. Y.

Claim.—1. The die-plate *a*, with one or more die-openings, 59, and one or more semicircular grooves or recesses, 59, in combination with the die-block F or frame A, and the moving cutter and finger *d* and *e*, substantially as and for the purposes specified.

2. The construction and arrangement, relative to one another and to the die-plate of the finger and cutter *d* and *e*, of the brasses or bearings *g*, and wedges A, or their equivalents, substantially as shown and described.

3. The combination of the split and adjustable bushing Q, with the adjustable hammer-block E, substantially as and for the purposes set forth.

4. In combination with the subject-matter of the last preceding clause, the connecting-rod D and the eccentric C, on shaft B, substantially as shown and described.

5. For the purposes herein described, and in its relations to the other parts of the machine, the improved connecting-rod Y, the improvement in said rod consisting in making it in two pieces, lapped one on the other, and fastened together by rivets, bolts, or screws, substantially as described.

6. The combination of the shaft B, eccentric C, connecting-rod D, and hammer-block E, with a solid iron frame, constructed substantially as described.

7. The spring 20, arranged and combined with lever K, bolt *n*, connection Y, and cam *w*, in such manner that the spring keeps the end of the connection Y out of contact with the cam during a portion of the revolution, substantially as and for the purposes described.

110,516.—STILL FOR PETROLEUM AND OTHER OILS.—Samuel Van Syckel, Titusville, Pa.

Claim.—1. The combination, with the still B, of the steam-chandelier D, for introducing steam into the vapor of an oil-still, substantially in the manner and for the purposes described and specified.

2. The combination, with the still B, of the dome C and the steam-chandelier D, all constructed substantially in the manner herein described and specified.

110,517.—(Suspended.)

110,518.—HORSE-COLLAR PAD.—James F. Walsh, Hazel Green, Wis.

Claim.—The collar-pad, consisting of leather pieces A B, sheet-metal piece C, and short straps F, all combined, constructed, and arranged substantially as specified.

110,519.—TOY-HOOP.—Rivers Ward, Newark, N. J.

Claim.—1. A toy-hoop, provided with cross-bar or bars and stationary bells, the same being operated by means of a sliding plate carrying hammers, substantially as set forth.

2. The sliding metallic plate D, provided with a slot, *b*, stops or lugs *c c*, and a hammer or hammers, E E, substantially as and for the purpose described.

3. The spring F, arranged in connection with the bell A and sliding plate D, and operating substantially as and for the purpose specified.

110,520. — ADDING-MACHINE.—Francis F. Warner, Chicago, Ill.

Claim.—1. The annular plate B, having holes *b*, slot U, and projection Q, and having the numerals marked thereon, as described, substantially as specified.

2. The ratchet or hundreds-wheel C, with numbers marked thereon, as specified, and the spring S, with its projection *q*, in combination with the annular plate B, having a projection, Q, substantially as and for the purpose specified.

3. The hundreds-wheel C, having the incline surface of the ratchet-tooth *t* extending further out than the remaining teeth, for the purpose set forth, and substantially as specified.

4. The combination of the face-plate D, having apertures J K L M and a stop, P, and numerals marked thereon, as described, the annular plate B, hundreds-wheel C, and disk A, arranged substantially as specified.

110,521.—WINDLASS.—Enos Waterbury and George N. Waterbury, Stamford, Conn., assignors to G. N. Waterbury and A. M. Prior, same place.

Claim.—The combination of the bar-wheel E, with the slotted projection G, ratchet-wheel C, lever M, curved bars L, recessed disk or wheel K, and sleeve J, with each other and with the shaft A and drum I, substantially as herein shown and described, and for the purpose set forth.

110,522, antedated December 17, 1870.—PRINTERS' INKING-ROLLER.—Charles S. Westcott, Elizabeth, N. J., assignor to himself, John Austin, Rollin Germain, New York City, and William H. H. Williams, Middletown, Conn.

Claim.—1. An ink-roller, the body of which is composed of a composition of glue and treacle or glue and honey, such as is generally used in the formations of printers' ink-rollers, or of some other substance (not rubber or moss) of a similar nature which will be of the consistency and pliability requisite for the body of the roller, in combination with an external surface or a coating of solid rubber, either vulcanized or not, gutta-percha, or of leather or fibrous or textile material, or combined with rubber, gutta-percha, or some other suitable material, substantially as described.

2. An ink-roller, the body of which shall be of glue and treacle or glue and honey, or some other gintinous gum or pliable substance, (not India-rubber sponge or India-rubber moss,) and the external surface or coating of India rubber, gutta-percha, leather, cloth, or some other suitable material, substantially as set forth.

3. An ink-roller, the body of which shall be sponge, or sponge combined with glue, glycerine, or some other soft or gintinous substance suitable for the body of a printer's ink-roller, not including India-rubber sponge or India-rubber moss, combined with an outer skin or covering of India rubber, gutta-percha, leather, cloth, or some other suitable material, substantially as set forth.

110,523.—ROLLER-LIFTING POWER.—Elisha Whitcomb, Waterville, Ohio.

Claim.—1. The combination, substantially as described and shown, of the roller A and the standard B, for the purposes set forth.

2. The device herein described, wherein the roller A and standard B are constructed substantially as specified, and arranged to operate as and for the purposes set forth.

110,524.—LOOM.—Robert Whitehill, New York, N. Y., assignor to the Positive-Motion Loom Company, same place.

Claim.—1. The gears I K, having the slot and pin-connection, and arranged on different axes, in combination, substantially as described, with the shuttle and treadle-operating mechanism.

2. The combination, with the crank-shaft for operating the lay, of the slotted gear J, arranged in relation to said shaft, and engaging the pin *g*, as and for the purpose described.

3. The combination of the gears I, J, K, L, and M, and their slot and pin-connection *f g* and *i j*, with the crank-shaft E and cam-shaft F, substantially as herein described.

4. The endless shuttle-driving band, attached to the lay and driven through a shaft, P, which is attached to and oscillates with the lay, and which gears with a sleeve, Q, on one of the pivots *a*, on which the lay swings, substantially as herein specified.

5. The shuttle-driver, consisting of a plate or piece, *f*, attached to the shuttle-carrier, a plate or piece, *e*, attached to the endless band carried by the lay, and a connecting-pin or pivot, *s*, the whole combined and arranged to operate substantially as herein specified.

6. The combination of the gearing for operating the shuttle-driving band with the mechanism for driving the other parts of the loom by means of a slot and pin-connection, substantially as described, whereby the said band is made to move with an alternately-accelerated and retarded velocity, as and for the purpose herein specified.

110,525.—SUBSOIL-PLOW.—Tolbert G. Wilder, Camden, Miss.

Claim.—The herein-described subsoil-plow, consisting essentially of the beam A, standard C, share and heel-piece D, rigidly attached thereto, and pivoted and adjustable brace E, pins F F, and plates G G, when arranged as specified.

110,526.—LAMP.—Thomas Scott Williams, Boston, Mass., assignor to himself and Phillip S. Page, same place.

Claim.—1. The arrangement and combination of the guide or flaring mouth-piece D with the tube B, the wick-holders, the central passage, and the tube F, the whole being applied to the burner and the lamp-reservoir, substantially in manner as explained.

2. The combination of the wick-passages P P, on opposite sides of the flaring mouth-piece, with such mouth-piece, the tube B, the two wick-holders A A, and their passage C, arranged between them, all as set forth.

110,527, antedated December 17, 1870.—SEAT-GUARD FOR HOBBY-HORSES.—William L. Williams, New York, N. Y.

Claim.—1. The ring-guard *f*, hinged to the front standard *c*, so as to be thrown over the head of the hobby-horse, as and for the purposes specified.

2. The standard *h*, hinged at *m*, and provided with a latch, *p*, in combination with the ring *f*, hinged so as to turn over toward the head of the hobby-horse, substantially as and for the purposes set forth.

3. The standard *c*, (or *h*,) provided with a bearing-plate or base and straps, to pass around the hobby-horse, in combination with the ring-guard, for the purposes specified.

110,528.—RUNNING-GEAR FOR CARRIAGES. Jerome B. Withey, Detroit, Mich.

Claim.—1. The jack D, provided with ears *a*, as and for the purposes herein set forth.

2. The frame, consisting of the bars A B, in combination with the short axles or shafts C, jacks D, and reach E, substantially as and for the purposes set forth.

110,529.—MACHINE FOR MAKING BRUSHES. Oscar D. Woodbury, New York, N. Y.

Claim.—1. The combination of the inner bifurcated plunger L with the outer or hollow plunger K and nut or mouth-piece M, having a female thread in it, substantially as and for the purposes herein set forth.

2. The comb G and saw-shaped feeder J, constructed and arranged for operation together, essentially as specified.

3. The combination of the gange or twisted receiver I, with a device or devices for feeding the bristles to the device or devices by which they are inserted in the brush-stock, substantially as specified.

4. The centerer R, constructed to operate essentially as described, in combination with a device or devices for inserting the bristles in the brush-back.

5. The combination, with the plungers K and L, of an apparatus, S, for feeding the wire to or through the latter, and whereby said apparatus is made to move in common with the plungers, substantially as specified.

6. The combination, in one machine, of a bristle-feeding device or devices, a device or devices operating to double the bristles, to bind the wire spirally around the bunch and to insert or screw the latter into the brush-stock, together with an apparatus for supplying or feeding the wire through the folds formed by the doubling of the bristles, essentially as herein set forth.

110,530.—Boring-Machine.—Edward J. Worcester, Worcester, Mass.

Claim.—The combination, with the frame or upright B and the side-pieces C, of the rod D, provided at its end with right-and-left-hand screw-threads, the hand-piece F, and the nuts E fitting in the slotted pieces C and engaging with the screw-threads with which the ends of rod D are provided, said parts being constructed and operating substantially as shown and set forth.

110,531.—Cotton-Cultivator, Scraper, and Chopper.—John H. W. Young, Henderson, Texas.

Claim.—1. The combination, with the frame A and the axle B, of the blocks *b b*, handles *c c*, rack-posts *p p*, lock-bar *r*, and springs *s s*, substantially as and for the purpose specified.

2. The scraper-shank, when pivoted to the frame, and provided with a curved slot and set-screw, for the purpose of enabling the scrapers to be placed at any desired inclination to the line of the draft.

110,532.—Wood-Screw Machine.—James M. Alden, New York, N. Y., assignor to International Screw-Nail Company, same place.

Claim.—1. The combination, as set forth, of the gauge B with the bell-crank lever B^1 and the die C^1.

2. The tilt-pin H and flat hopper H^1, arranged relatively to the dies C^1 C^2 and to the threading-mechanism below, substantially as and for the purpose herein set forth.

3. The combination of the nozzle h^1 h^2, hopper H^1 and means for opening and closing it, guys h^4 h^5, and the threading-dies I^1 I^2, operating as and for the purpose set forth.

4. The arrangement of the movable rest K between the hopper H^1 and the loosely-holding-nozzle h^1 h^2, that it may be made to perform the double function of restraining the descent of a blank until the right period, and of holding down the blank which is being threaded, all as and for the purposes herein set forth.

5. The guys h^4 h^5, in combination with and arranged relatively to the compound nose h^1 h^2, reciprocating threading-dies I^1 I^2, and the hopper H^1, as and for the purposes herein set forth.

6. In combination, the several elements of the mechanism operated from the cam-shaft F, to wit: The cutting-off, griping, and pointing means; the gauge, and the means of operating it; the heading means, and the means of clearing the shaped blank from the dies and conducting it away, as and for the purposes herein set forth.

7. In combination, the several elements of mechanism operated from the crank-shaft J, to wit: The movable rest K or its equivalent, the opening and closing nose h^1 h^2, with means h^3 h^4 for locking it tightly while required, and the threading-dies I^1 I^2, all arranged to operate on blanks and to produce therefrom threaded screws or screw-bolts as herein specified.

8. In combination, the two complete trains or sets of mechanism herein described, to wit: The mechanism for producing the blanks, and the mechanism for threading the same, the latter mechanism receiving the blanks from the former in a uniform position through the hopper H^1 or its equivalent, operating successively to form a complete screw, as herein specified.

110,533.—Treadle.—Arthur M. Allen, New York, N. Y.

Claim.—1. The vibrating bar *d*, connected on each side of the fulcrum to a pedal, in combination with a crank, to which a revolving motion is to be imparted, substantially as described.

2. The centrally-pivoted pedals, having an alternating motion toward and from the operator, in combination with a single crank substantially as herein set forth.

3. The knee-bar A, in combination with a dog acting on the wheel, for the purpose of starting the same in the right direction, substantially as described.

110,534.—Cope for Casting Car-Wheels. Albert Alling, Chicago, Ill.

Claim.—1. A car-wheel cope, provided with a hollow or double-rim, the outer rim being adapted for attachment to the chill, substantially as described, for the purpose specified.

2. In combination with the double cope-rim, the chill, and the lugs G, the lugs M, substantially as described, for the purpose specified.

110,535.—Thread-Guide and Holder for Bobbin-Winding Machine. — William W. Altemus, Philadelphia, Pa.

Claim.—A holder of bent wire, having a U-shaped elastic end adapted to a similarly-shaped porcelain thread-guide, and retaining the same by its elasticity, as set forth.

110,536.—Paper-Bag Machine.—Charles F. Annan, Boston, assignor to himself and Herbert S. Merrill, Cambridge, Mass.

Claim.—A curved guide, consisting of side-pieces A A, provided with removable cross-bars B, and with or without a central strip, C, and brace D, substantially as and for the purpose set forth.

110,537.—Adjustable Cam. — Charles F. Annan, Boston, assignor to himself and Herbert S. Merrill, Cambridge, Mass.

Claim.—The within described adjustable cam, consisting essentially of the grooved blocks or enlargements D E, the distance between which may be varied, substantially as and for the purpose set forth.

110,538.—Portable Store-Room and Pantry.—Thomas A. Barrell, Maron, Ill., assignor to himself and William H. Austin, of same place.

Claim.—The combination, in one article of household furniture, of the box or chest Z and cupboard Y, when their various parts are constructed and arranged substantially as shown and described, and for the purpose herein set forth.

110,539.—Cotton-bale Tie. — George N. Beard, St. Louis, Mo.

Claim.—In combination, in the bale-tie A, herein described, of the rectangular slot *a* with the end-bars B B′, provided with the curved lips *a′* and central entering-slot *a*, and the strengthening-rib or projection D, when all these parts are constructed and arranged as shown and described, for the purpose set forth.

110,540. — Machine for Drying Paper and Other Fabrics.—Frederick Beck, New York, N. Y.

Claim.—1. The traverses *d*, which support the paper or other fabric to be dried, and which rest upon the endless ropes A A, having a revolving motion by means substantially such as herein described.

2. The arrangement of wheels *e*, at or near one or both ends of the traverses *d*, supported by ropes A A, in combination with stationary stops *f*, substantially in the manner and for the purpose herein set forth.

110,541.—Horse-Yoke.—A. B. Beaumont, Austerlitz, Mich.

Claim.—1. The hames A, pivoted to the cap-piece B, and made adjustable by means of the castings C, substantially as set forth.

2. The arrangement, on the bar K, of the toothed rods P P, wheel *d*, sleeves L L, guides *e*, and stops *e*, all substantially as shown and described.

3. In combination with the castings B and C, the the oscillating sockets H, when used substantially as shown.

4. The swivel-socket O, in combination with the spring M, when used to connect the bars K and N, substantially as shown.

5. The bars N and K, hames A, castings B and C, sockets H and O, rings L, rods P, spring M, and rack R, when all are combined so as to form a horse-yoke, substantially as shown.

110,542. — Grain-Thrasher, Separator and Cleaner.—Edgar M. Birdsall, Penn Yan, N. Y.

Claim.—1. The combination and arrangement of the tumbling-rod *a*, cross-piece *b* having coupling-jaws *f*, with clutch *e* provided with springs *e e*, and band *d*, all constructed and operated as shown and described, for the purpose set forth.

2. The combination of the bars *i k* in the cylinder F with the cast-steel teeth provided with the shank *g*, nut *l*, and brace *h*, all constructed and arranged as herein shown and described, for the purpose set forth.

3. The combination of the hollow spindle D, provided with the openings *m*, with the hollow crank Q having thread *r* and stop *p*, all constructed and arranged as shown and described, for the purpose set forth.

4. In the combination with the thrasher A, herein shown, the carrier H, supports K, windlass O, pulleys L, L, and M, and pivoted brace I, struts J, and ropes R, when said parts are constructed and arranged as and for the purpose set forth.

110,543.—Sifter.—Sanford O. Blanding, Vineland, N. J.

Claim.—1. The cover B, case A, and pivoted-handled sieve C, in combination, constructed and arranged substantially as described.

2. In combination with the handled sieve C and pivoted legs D, the beater-plates E, with curved ends, constructed and operating substantially as described.

110,544.—Water-Wheel.—John W. Bookwalter, Springfield, Ohio.

Claim.—The combination of the spherical or nearly spherical case and the removable cap upon its upper surface, to permit the removal of the wheel, the parts being constructed and arranged substantially as and for the purpose set forth.

110,545. — Combined Immersion and Steam-Bath.—John W. Caldwell, Cincinnati, Ohio.

Claim.—A bath-tub, adapted for immersion and for the application of vapor, and canopied by a cover which may be stored within the tub, all as described.

110,546.—Bridge. — Alexander McDonald Campbell, Newark, N. J., assignor to himself, Charles M. Bolen, and Frederick K. Day.

Claim.—1. The combination of the main cables A A around sustaining points P P of the abutment, and their anchorage on the bridge, substantially as set forth.

2. In combination with the continuous return-cables A A and E E, the cylinders P P and P P′, for obviating friction, substantially as set forth.

3. The compensating-levers H H, in combination with the return-cables A A and hangers G^1 G^2, as set forth.

4. The wedge-bearing B, in combination with the compensating-levers H H, as set forth.

5. In combination with the levers H H, the skew-backs C C C, the adjoining ones connected therewith for equalizing the weight upon all parts of the roadway, as set forth.

6. The combination of the girder-arches D D with the compensating-levers H H, as set forth.

7. The friction-pulleys M, in combination with the hangers G and G^2 and the cables A A, as set forth.

8. The tower-brace cables E E, in combination with the cylinders P P′, arranged and anchored, substantially as described.

9. The combination of the return-cables A A, compensating-levers H H, girders D D, and skew-backs C C C, with or without the tower-brace cables E E, substantially as set forth.

110,547.—Annunciator. — Jacob Capron, New York, N. Y.

Claim.—The stops *a*, acting directly upon the tumblers, combined with the rotating face-plates, as shown and described.

110,548.—Cultivator.—Joseph H. Carlow, Kidder, Mo.

Claim.—1. The combination and arrangement of the beams J K, adjustable bars I I′, pin i^2, strap L, and pin j^1, allowing the easy adjustment or removal of the beams, substantially as described.

2. The combination of the beams J K, upright N, rod Q, chain or cord P, and treadle R, as and for the purpose described.

110,549. — Cotton-Press. — Nash Cheek, Chapel Hill, N. C.

Claim.—1. In combination, with the horizontal frame H and the mechanism, herein described, for operating the same, the ratchet-bar L and hinged pawl M, arranged substantially as and for the purposes herein set forth.

2. The combination of the bed A, standards B, back-board C, bale-box D, follower G, frame H, ratchet-bars L L, toothed pawls J J, rods *a a*, levers K K, and hinged pawl M, constructed and arranged to operate substantially as and for the purposes herein set forth.

110,550.—Plow.—Josiah Clifton, Georgetown, Texas.

Claim.—The arrangement of the beam A, handles B B′, bar C, land-side D, share E E, rods *b b*, rounds G G, beam I, bar J, with plow K, and spring L, all substantially as shown and described.

110,551. — Clothes-Drier. — Emmons B. Corby, Bloomfield, N. J.

Claim.—A clothes-drier, consisting of the frame A, the base-plate B, made with a notched and shouldered flange, *b′*, arms D, and guard-plate E, when constructed and arranged as herein shown and described.

110,552.—Trunk.—Frederick K. Daggett, Boston, Mass.

Claim.—1. The improvement in trunks, herein described, which consists in protecting the ends with cast-metal right-angled frames C C′ G G′, connected by hinge-joints at the rear, as and for the purposes specified.

2. The metallic strap M, composed in two sections, secured respectively to the cover and body of the trunk, and connected by a hinge-joint at the rear, and by the locking devices at the front, as described.

3. The handle loops D, when the same are cast with the body-frames C C′, substantially as described.

110,553. — Preventing Incrustation of Steam-Boilers.—Charles James Adolph Dick, Paris, France.

Claim.—Preventing incrustation in and corrosion of boilers and other vessels containing water or other liquids, by continuously or intermittently feeding into the same, while under pressure or heated, (or into any appropriate vessel or chamber in connection therewith,) zinc or other equivalent metal or alloy.

110,554.—Land-Roller.—James W. Dilley, Macomb, Ill.

Claim.—The combination of the coupling *s* with the bars B and C, substantially as and for the purpose specified.

110,555. — WASHING-MACHINE. — William James Dodge, Syracuse, N. Y.

Claim.—1. The buckets, constructed with corrugated plates M M, with inlets and outlets K K and L L, division plates I I, as shown, in combination with the cylinder A and boiler G, as shown.

2. The square clothes-chamber, formed by the buckets, constructed with corrugated plates M M, in the manner shown, in combination with cylinder A and boiler G, as shown.

3. The detachable bearing, constructed with detachable plates E E, loops F F, in combination with boiler G, as shown and described.

110,556.—DRAWING-FRAME.—George Draper, Hopedale, Mass.

Claim.—The combination of the reinforce with the sliver draft-regulator, all being substantially as described.

110,557.—FASTENING CARRIAGE-WHEELS.—Wilson Elder, Mill Hall, Pa.

Claim.—1. The washer B and cap H, each having beveled faces, as described, and arranged to operate in conjunction, substantially as and for the purpose specified.

2. In combination with the washer B and cap H, the lugs *n* and *y*, when arranged upon the spindle of an axle, substantially as and for the purpose set forth.

110,558.—CARRIAGE-BUTTON.—Charles H. Field, Providence, R. I.

Claim.—The carriage-button herein described, having the driven shank A, with rotating eccentric head B cast on it, and separate conical washer C, substantially as shown and described.

110,559. — DISH-WASHER. — Ruth Filson, Robert D. S. Filson, and John D. Cope, Xenia, Ill.

Claim.—The box or tub A, with the inside dish-racks C C, of oscillating leaves, the whole being placed on rockers B B, substantially as and for the purposes herein set forth and shown.

110,560. — PERMUTATION-LOCK. — Charles Flesch, Rochester, N. Y.

Claim.—1. The construction of the cam C, with the hook *a*, cam-face *c*, and peripheral recess *b*, the whole arranged as described, and operating in the manner and for the purpose specified.

2. The combination, with the lever D and bolt E, of the arm G, provided with the spring *s*, which projects forward and bears under the pin *g*, the effect being to always hold said pin elevated in its slot, and thereby secure the stiff connection of the lever and bolt, as described.

3. In combination with the lock-bolt E and bolt-stem *r*, the single obtuse-angled elbow K, having its upper end armed with a roller, or equivalent stop *u*, which takes the strain from the lock-bolt, and provided with the depending latch L, which engages with the cam of the spindle I', as herein specified.

4. The combination and arrangement of the cam C, hook-bolt E, lever D, spring-arm G, and obtuse-angled elbow K, operating in the manner and for the purposes set forth.

110,561.—CHILD'S CARRIAGE.—Isaac Newton Forrester, Bridgeport, Conn.

Claim.—The combination of the carriage-body, the pushing-handle, the fixed axle in rear of the body, the hind wheels mounted on said axle, and the leading casters mounted and turning freely and independently of each other on spindles turning in the front part of the frame, all these parts being constructed and operating as hereinbefore set forth.

110,562.—TREATING HIDES AND MANUFACTURING LEATHER.—William H. Fuller, Brockport, assignor to himself and Gilbert J. Kingsbury, Rochester, N. Y.

Claim.—The method of tanning and "stuffing" hides and skins by means of the light and heavy oils herein mentioned, substantially in the manner set forth.

110,563.—CAR-WHEEL.—William Goodman, Boston, Mass.

Claim.—The general combination and arrangement of the elastic band *c*, the segmental blocks *e e*, and key-pieces *d d d*, the latter-mentioned blocks and keys being confined together by the bolts or pins *g g g*, and the whole operating in connection with the annular groove *b* of the body of the wheel to produce results before stated.

110,564.—APPARATUS FOR RAISING VESSELS. — John Emery Gowen, Boston, Mass.

Claim.—In combination with two or more floating caissons for buoying a navigable vessel, suitable barred or trussed platform, or their equivalents, for supporting or partially supporting the weight of the vessel where the said platform is suspended from the caissons by means of chains, or their equivalents, and the whole operating as explained.

110,565.—HAND CORN-HUSKER AND SHELLER.—James Madison Gray, Louisville, Ky.

Claim.—The hand corn-husker and sheller herein described, consisting of the hinged undulating plates A A, inclined interlocking edge-teeth *c c'*, shelling-teeth *c c'*, loop E, and strap D, when constructed and arranged for operation, as specified and shown.

110,566.—COOKING-RANGE.—William Hall, Quincy, Ill.

Claim.—1. The combination of the curved fire-back on No. 2, as working in connection with front draught only of slides A, without any side draught, and slating grate, in connection with dampers 1 2 3 4 5 6 7 8 9 10 11, to draw flame and smoke with redoubled force to various parts of the range, substantially as and for the purpose hereinbefore set forth.

2. The combination of said dampers and partition B with the four ovens, as and for the purposes hereto set forth.

3. The combination of flue-pipe E and dampers in water-tank, as and for the purposes set forth.

4. The combination of the steam-boiler F and angle flue-pipes E and main shaft D, substantially as and for the purpose hereinbefore set forth.

5. The elevated boiler F, provided with pipes H, regulated by faucets, as shown, and arranged in combination with the steam-heater and steam-table, as herein described.

6. The combination of my steam-heater K and my steam-table N, in connection with pipe J, substantially as and for the purpose hereinbefore set forth.

7. The combination of No. 6 section of steam-table with pipe P and pipe Q, in connection with pipe R, No. 2, connecting with pipe M and angle flue-pipe E, substantially as and for the purposes hereinbefore set forth.

8. The combination of my broiler-oven T, in connection with slide V and the balance-broiler W, substantially as and for the purpose hereinbefore set forth.

110,567.—METAL ROOF FOR BUILDINGS.—John S. Haywood, Rochester, Minn.

Claim.—1. The clip or cleats C, consisting of a single piece of tin, folded in the middle and having its ends hook-shaped, when applied as herein shown and described, for permanently securing the adjoining edges of a metallic roof to its sheathing, as set forth.

2. In combination with the upturned edges or ribs E of the adjoining metal sheets forming the roof, the cap F and clips or cleats C, when constructed and arranged as herein shown and described, and for the purpose set forth.

110,568.—HARVESTER.—George F. Hawley, Grand Rapids, Mich.

Claim.—1. The combination, substantially as herein described, of a series of revolving cutting-blades, *m m*, arranged to describe intersecting circles in a common horizontal plane, and to intermesh without overlapping and without contact, as herein set forth, with an upper fixed covering-plate, presenting thereto a shearing-edge above, and a finger-bar, H, and under plate M beneath, the whole operating in the manner and for the purpose specified.

2. The fifth-wheel E E', interposed vertically between the axle of the machine and the frame and bed-plate carrying the finger-bar and its gearing, to connect the same and to permit an inclination of the axle independently of the frame and bed-plate, all substantially as and for the purpose herein set forth.

3. The combination of the driving-wheel P with the axle of the machine by means of an interposed ball-and-socket joint, formed and operating substantially in the manner herein specified.

4. The concentric sliding arcs 7 and 8, suspended from one end of the curved bar F, and the slotted arm or bracket 9 secured to the other end thereof and to the annular plate E' of the fifth wheel, when combined with the bed-plate I, to support the same and permit an inclination thereof about a central longitudinal axis, all substantially as and for the purpose herein set forth.

110,569.—MECHANISM FOR OPERATING SEWING-MACHINES.—Elijah Leavitt Howard, Malden, assignor to George Augustus Whiting, Charlestown, Mass.

Claim.—1. The combination and arrangement of the lever or rocking-frame E, the shaft *a*, the wheels F *b*, the arm *e*, and pedal H, all being arranged or to be arranged with a driving-wheel, C, as set forth.

2. The combination and arrangement of the lever *k*, the rod *f*, and its screw *g*, the nuts *h i*, with the frame or lever E, the shaft *a*, and the wheels F *b*, all being arranged or to be arranged with a driving-wheel, C, as explained.

3. The combination and arrangement of the pedal H, and toggles *k f*, as set forth, with the frame or lever E, and its shaft *a*, and wheels F *b*, arranged as described.

4. The combination and arrangement of the rocker-frame or lever E, and its shaft *a*, and wheels F *b*, with the band *c*, and pulley A, the driving-wheel C, and the pedal H, or the toggles *k f*, or both pedal and toggles, all being to operate as described.

110,570.—HAT.—George Johnson, Philadelphia, Pa.

Claim.—A new and improved hat, the body or foundation of which is made of an open-woven fabric of stripe or splits of wood, as shown and described, and to which a suitable covering is attached.

110,571.—SLEIGH.—Alvarado Jones, Randolph, Wis.

Claim.—The method herein described of forming the beam and knees for one bench of a sleigh, of two pieces of timber halved together in the center, substantially as set forth.

110,572. — TRACE-BUCKLE. — William W. Kittleman, Bloomfield, Iowa.

Claim.—1. The body or box A, provided with rod *a*, loops *b b*, inclined slots *d d*, and lugs *e e*, all substantially as and for the purposes herein set forth.

2. The wedge B, passing under the lugs *e e*, and provided with rod *f*, pin *h*, and teeth *i i*, substantially as and for the purposes herein set forth.

3. The combination of the body A, having inclined slots *d d* and lugs *e e*, with the wedge B, having rod *f*, teeth *i i*, and pin *h*, all substantially as and for the purposes herein set forth.

110,573.—MACHINE FOR COOLING AIR AND FOR THE MANUFACTURE OF ICE.—Julius Kraffert, Hoboken, N. Y.

Claim.—The combination of the tubular chamber *h* and its inclosing-chamber *i*, with the double-acting air-pump and the compression-chamber.

2. The combination of the tubular chamber *h* and its inclosing-chamber *i* with the freezing-chamber *e*.

3. The combination of the tubular cooling-chamber *q* and its inclosing-chamber *r* with the freezing-chamber *e*.

4. The combination and arrangement of the freezing-chamber *e*, tubular expansion-chamber *h*, and the compression-chamber *c*, as described.

110,574.—FELTING-MACHINE. — Calvin P. Ladd, New York, N. Y., assignor to himself and James T. Sanford, same place.

Claim.—1. A felting-machine, the double steam-box Q Q, either with or without the compressing-rollers R R, in combination with the first felting-table, substantially as and for the purpose set forth.

2. The drum N, squeezing-roller T, and vat M, in combination with the two felters B B' C C', these parts being arranged for joint operation, substantially as described.

3. The cams K, cam-rods L L', and operating devices, in combination with platens B C, drum N, squeezing-roller T, and connecting devices, substantially as set forth.

110,575.—TRUNK.—John G. Lane, St. Louis, Mo.

Claim.—The frame A, front B, and lid D provided with the hooks or clasps N, the curved slotted guides I, thumb-screw L and rubber O and projection *a*, when all are combined to operate substantially as shown and specified.

110,576.—CURRY-COMB.—William E. Lawrence, New York, N. Y.

Claim.—1. The combination of a curry-comb, with an air-tube, substantially as described.

2. The combination of a curry-comb, with an air-tube and a bellows, substantially as described.

3. The adjustable combs C, fastened upon the rods F F, as described, in combination with the hollow frame or back A, the whole constructed substantially as and for the purpose set forth.

4. The adjustable comb M, secured upon the outside of the hollow-frame or back A by means of the rods N N and nuts O O, in combination with a handle P, substantially as described.

110,577. — IRONING-TABLE. — Johan Jacob Märki, Chicago, Ill., assignor to himself, William H. Lotz, and Carl Beer, same place.

Claim.—An ironing-board, consisting of the body A, having the hinged legs B, with the locking devices C *d*, or their equivalent applied thereto, substantially as described.

110,578.—FOLDING LOUNGE.—Michael Marso, Chicago, Ill.

Claim.—1. The arms G G, provided with pawls *d d*, in combination with rack or teeth *e e*, all arranged to operate substantially as and for the purpose described.

2. The hinged boards J J', in combination with the lounge, when said boards are arranged as to form, in connection with the lounge, either a chair or cradle, or both together, substantially as set forth.

3. The hinged back E, provided with hinged feet I I in combination with the pivoted arms G G, pins *b b*, pawls *d d*, and teeth *e e* in the boxes or castings H H, all substantially as and for the purposes herein set forth.

4. The rocker-blocks L L, hinged on the under side of the seat A, inside of the feet B B, and pro-

vided with spring-bars M M, all constructed as described, substantially for the purposes herein set forth.

110,579.—Axle-Skein.—Lorenzo Mayhew, Saratoga Springs, N. Y.

Claim.—The metallic partial skeins B B, connected by the tie *c*, in combination with the wooden axle A, substantially as specified.

110,580.—Car-Coupling.—William Henry Meadows, McMinnville, Tenn.

Claim.—The supplemental carrying-plate E of the coupling-hook D, hinged to the bumper C, and held in position by a spring F, in the manner and for the purpose described.

2. The combination and arrangement of the frame A B, bumper C, and its springs *c*, hook D, pivoted carrying-plate E, and its spring F, all arranged and operating as described.

110,581. — Carriage-Clip. — Francis B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith & Co., same place.

Claim.—As an improved article of manufacture, a carriage-clip in which the edge is chamfered or reduced, from shank to shank, after the clip has been trimmed, substantially as and for the purpose set forth.

110,582.—Material for Bearings and Packings.—Eliza D. Murfey, New York, N. Y., assignor to the Manhattan Packing-Manufacturing Company, same place.

Claim.—1. A bearing or packing material consisting of gum and plumbago, or other powder combined.

2. The said material condensed or molded, as set forth.

3. A powder or paste for impregnating or coating strands, &c., consisting of gum and powder, and prepared as specified.

110,583.—Bearing and Packing Material.—Eliza Dexter Murfey, New York, N. Y., assignor to the Manhattan Packing-Manufacturing Company, same place.

Claim.—1. As an article of manufacture, a material for packings and bearings, consisting of a sponge impregnated with plumbago.

2. A sponge impregnated with plumbago and an adhesive or gummy material, substantially as and for the purpose described.

3. The process of impregnating sponge with powdered material by the use of glycerine or water, or equivalent fluid, as a vehicle for carrying the powder among the interstices of the sponge, and then extracting the said vehicle.

110,584.—The Manufacture of Materials for Journals, Bearings and Packings.—Eliza D. Murfey, New York, N. Y., assignor to the Manhattan Packing-Manufacturing Company, same place.

Claim.—1. The process herein described of combining filaments or fibers and powdered substances, that is, by depositing the loose fibers and powder in a uniform mass upon a plate and then consolidating the said mass.

2. Consolidating the mass of powder and fur or wool by subjecting it to the action of water, as set forth.

3. The process of combining fibers or filaments and powders by the action of currents of air, as described.

110,585.—Hay and other Presses.—Moses V. Northrup, Hornitos, Cal.

Claim.—The combination of the follower B, provided with large openings *d* in rear of the rope-grooves with the corresponding depressions *b* and pin *c* at the end of the rope-groove *a*, the whole constructed and arranged to operate as specified.

110,586.—Machine for Dressing Fence-Pickets.—William Nuelle and Joseph F. Nuelle, St. Louis, Mo.

Claim.—The arrangement of the cutter G, staybolt H, pin *h*, forming a pointing-device in combination with the frame A, substantially as set forth.

110,587.—Finger-Ring.—John S. Palmer, Providence, R. I.

Claim.—1. The improvement in the manufacture of plated metal finger-rings and bands, which consists in uniting the inner and outer gold surfaces at a point remote from their inner peripheries, substantially as and for the purposes specified.

2. As a new articles of manufacture, the finger-ring herein described, made of base metal plated with precious metal, and having its inner and outer plated surfaces connected at the outer periphery of the ring.

110,588.—Cooking-Stove. — Miles Pratt, Watertown, Mass.

Claim.—1. A hole, H, made in the back or side of the stove, to correspond with one of the boiler-holes in the top, in combination with the collar-plate J, for the stove-pipe, made to fit both the boiler-hole in the top and the hole in the side or back, so that the hole in the side or back may be closed with the cover of the boiler-hole, when the collar-plate is used in the boiler-hole, substantially as described.

2. In combination with the bar M, provided with the flange N, the lug Q, and button R, to hold the bar and lining in place.

3. In combination with the collar-plate for the stove-pipe above claimed, the buttons I I on each side of the opening H, to hold the collar-plate or boiler-cover in place, as described.

110,589.—Broiler and Toaster.—Josiah M. Read and John M. Smith, Boston, Mass.

Claim.—The above-described gridiron and toaster, with spring-catch E in the handle, flat bars F F at the sides and flat bars A A at the ends, and the two parts hinged together by the hooks H H, substantially as described.

110,590. — Shaft-Coupling. — Peter W. Reinshagen, Cincinnati, Ohio, assignor to himself and John H. Buckman, same place.

Claim.—In combination with suitable compressing devices B B', or equivalent, the spring sleeve A *a a'*, when the same is split from opposite ends and opposite sides, in the manner and for the purpose set forth.

110,591.—Lamp-Wick.—Daniel T. Robinson, Boston, Mass.

Claim.—A lamp-wick as composed of mica, for purposes hereinbefore stated.

110,592. — Lawn-Mower. — Luther Ross, Worcester, Mass.

Claim.—1. The arrangement of the driving-wheels, cutter-cylinder, and dead-knife, substantially as described, so that when the machine is in working position the axes of rotation of the wheels and cylinder, and the cutting line of the cylinder and dead-knife, are in the same, or substantially the same, vertical plane.

2. The described geared connection of the driving-wheels and cutter-cylinder, each driving-gear being a spur-gear *p* fixed upon the adjacent driving-wheel, and meshing into a pinion, *j*, on an intermediate *w*, turning on a stud-pin, *v*, projecting from the adjacent head, the intermediate meshing into and driving the fast-and-loose pinion *w* on the adjacent journal of the cutter-cylinder.

110,593. — Corset-Fastening. — Christian Schieck, New York, N. Y.

Claim. — The corset-fastening, constructed as herein shown and described; that is to say, consisting of a bracket, A, provided with lugs *a a*, forming bearings for the pin *b* carrying spring *d* on its axes, in connection with the oscillating hook B, with its projecting lug, and operating with the slotted plate C, substantially as herein shown and described.

110,594. — Tobacco-Pipe.—William Selfe, Cincinnati, Ohio.

Claim.—1. In the described connection with the bowl A and water-chamber M, the chamber F G H, pipes K L N, and suitable smoking-stem P, as described, and for the purpose specified.

2. The exterior circulating-chamber C *b b'* for air in the described relation to the elements of the preceding clause, as described, and for the purpose specified.

3. In combination with the elements of the first clause of claim, the cock T and two-way cock U, as described, and for the purpose specified.

110,595.—Seed-Sower.—Samuel H. Sheplar, San Francisco, Cal., and William G. Conklin, Portland, Oregon.

Claim.—1. The flange C, arranged spirally inside the cylinders A and B, substantially as and for the purpose described.

2. The stationary cylindrical section D, with its hopper E and distributing-trough E', substantially as and for the purpose above described.

3. A seed-sower, composed of two revolving cylinders, A and B, and section D, when united by a central shaft, G, substantially as above specified.

110,596.—Carpenter's Gauge.—Henry P. Sisson, Rutland, Vt.

Claim.—The beam A, the sliding-block B, cam-lever *c*, and metal plate *d*, when the whole are combined in the manner and for the purpose substantially as specified.

110,597.—Combined Tramway and Pavement.—Barzillai C. Smith, Burlington, N. J.

Claim.—1. The combination, with ordinary street-pavements of longitudinal girders of cast-iron, constructed substantially as set forth.

2. The recesses *m* in the ends of the girders, communicating with vertical holes *p* in the same, and adapted to the pins *n*, all substantially as set forth.

110,598.—Chair-Frame.—William Merion Smith, Columbus, Ohio.

Claim.—1. The strip A of bent wood, forming the back posts and the front and side rails of the seat, as specified.

2. In combination, the strip A, the strips B B, and the bracing and strengthening strips C C, substantially as specified.

3. In combination with the back posts and seats of a chair-frame, as described, the bent bars B B and the bracing and strengthening strips C C, substantially as specified.

110,599.—Portable Shield for Infantry and Artillery.—Harde Spears, Snow Hill, N. C.

Claim. — 1. A breast-work, formed of metal plates, suspended loosely upon hooks, substantially as and for the purposes herein set forth.

2. Metallic sheets suspended upon or from standards on the rear portion of limber or caisson-frames, combined with an additional plate suspended from and between two of said plates to protect the space between two of said limbers or caissons, substantially as and for the purposes herein set forth.

3. The combination of the sheets E E, having openings *b b*, and shutters *d d*, with the middle plate E, provided with port-hole *e*, openings *b' b'*, and shutters *f* and *d' d'*, all constructed, arranged, and suspended, substantially in the manner and for the purposes herein set forth.

4. The portable and adjustable defensive plates E E, with or without ports and shutters, substantially as and for the purposes herein set forth.

110,600. — Life-Boat. — James M. Starr, Fond Du Lac, Wis.

Claim.—1. A life-boat, having its body A divided into two equal compartments, hinged together and arranged to be locked by the spring catches *b*, lugs *d d*, and blocks *e*, and also having its bow C and stern D detachable, substantially as and for the purpose set forth.

2. The arrangement of the air-tight chambers H and H' in each section of the body of the boat, substantially as and for the purpose set forth.

3. The air-tubes J, when constructed and arranged as described, for the purpose of being adjusted along the sides of the boat, or of being moved out laterally from its sides, as and for the purpose set forth.

4. In combination with the body A and the bow C and stern D, the spring catches *e*, staples *d'*, and hooks *h*, for attaching the bow and stern compartments, as set forth.

5. In combination with the body A and detachable stern D, the tube *e'* and the divided and coupled shaft E, with the mechanism for operating the latter, when constructed and arranged substantially as and for the purpose set forth.

6. The combination of the hinged air-tubes J, collars *y*, arms I, and braces *a'*, when constructed and arranged as described, for the purpose set forth.

110,601.—Malt-Reservoir.—Charles Stoll, Brooklyn, N. Y.

Claim.—The arrangement of a tower, A, having double walls to keep out the moisture and light, and divided in three compartments *c d e*, one for the elevator and the two others to receive different kinds of malt, the elevator being provided with two spouts, one for each malt-compartment, and the malt-compartments being closed at the bottom by a common hopper provided with slides which allow of mixing the two kinds of malt or of discharging each kind of malt independent of the other, as herein shown and described.

110,602.—Safety Attachment for Railway Trucks.—Arnold Strauss, New York, N. Y.

Claim.—1. The sliding hooks A and A', hung in recesses of the axles near the inner sides of the wheels, and braced by the crossing-bars E and kept in position by the springs F, substantially as and for the purposes set forth.

2. The scrapers *a*, in combination with the hooks A, as and for the purpose set forth.

3. The springs F, in combination with the yoke H, the piece I, and the bolt J, as and for the purpose described and shown.

110,603. — Pocket-Brush. — Theodore F. Stumpf, New York, N. Y.

Claim. — A pocket-brush, as shown and described.

110,604.—Steam-Boiler.—Frederick Sulter, Cleveland, Ohio.

Claim.—The arrangement of the water-chamber G, smoke-pipes S S, and apertures K K, when constructed and combined with the boiler-cylinder, as herein described, and for the purposes set forth.

110,605. — Grain-Register.—William Z. Taylor, Burlington, Iowa, assignor to himself and John R. King, same place.

Claim.—The combination of the wheels E, F, and G, spring detents I and I', and projections *c'* on

wheel E, and f^1 on wheel F, all constructed and arranged relatively to one another, substantially as set forth.

110,606.—CARRIAGE.—Chauncey Thomas Boston, Mass.

Claim.—1. The divided side springs *l*, each formed as a plain leaf-spring, fastened at one end to the bottom of the carriage-body, and at their other ends to the rear axle and to a transom-bar, by means of joints and cut-under recesses *h*, when combined and arranged substantially as shown and described.

2. The cut-under metal boxes, and the body-bottom running unbroken between them, substantially as shown and described.

3. The divided side springs *l*, (forming the support for the body,) combined with a center perch, *p*, and braces *p*, running from the perch, substantially as shown and described.

4. In combination with the divided side springs and cut-under spaces, the connecting-yoke straps *q*, substantially as described.

110,607.—CLOTHES-DRIER.—William Tredenick, Providence, R. I.

Claim.—A clothes-rack, consisting of a back, A, having an upper bracket, C, provided with spring clips E, and a lower bracket, B, provided with arms D, pivoted to a wire, *d*, the whole constructed and arranged as shown and described.

110,608.—PEPPER AND SPICE-BOX.—A. E. Turnbull, Jr., Clifton, Ohio, assignor to Joseph H. Steele, New Haven, Conn.

Claim.—As an article of manufacture, a spice-box or package, constructed with a perforated portion to form a dredge, and combined with a cover for closing the perforations, substantially as herein set forth.

110,609.—MACHINE FOR CUTTING AND SHAPING METALS.—Claus Van Haagen, Philadelphia, Pa., assignor to himself and Anthony Van Haagen, same place.

Claim.—1. The sliding head-stock H, its spindle I, and pulley I^1, in combination with the traversing slide H^1, the counter-shaft I^2, moving laterally with the slide H^1, and the driving-pulley I^3 sliding on said counter-shaft.

2. The traversing-slide H^1, head-stock H, and screw J, in combination with the shaft G^1, and worm w^1, and with the worm-wheel w, screw J, clutch w^2, and screw-rod w^3, substantially as described.

3. The vertically-adjustable sliding-table B, and the nut a^2, vertical screw D, gears b b^1, and shaft D^1, in combination with the driving-pinion *c*, adjustable disk A carrying the pinions g g^1, and gear-wheels b^2 *f*, and c^1, and pinions *f*, *c*, and *c*, substantially as described.

4. The shaft G^1, capable of a limited longitudinal movement, in combination with a sleeve, K, carrying a notched disk, K^1, and having a spiral slot, into which projects a pin on the shaft G^1, with a disk, A, having a slot, s^1, and carrying independent pinions g g^1, and with an arm, L^1, carrying a slide on which are two pins, one adapted to a notch in the disk K^1, and the other to the slot s^1, so that the longitudinal movement of the shaft G^1 is made the means of turning the disk A and moving one of the pinions g g^1 into the gear with the wheel *f*.

5. The combination of the aforesaid arm L^1 having cam-like projections f^2 f^2 at its lower end, the said notched disk A carrying pinions g g^1, and pawl-catches *t t* adapted to the notches in the disk A, and operated by the cam end of the arm L^1, for the purpose described.

6. The combination of the subject-matter of the preceding claim, and the adjustable projections t^2 on the parts *t t*, for the purpose described.

7. The frame S, having wheels *r* running on ways w^1, and carrying a rotating counter-shaft, I^2, on which slides a pulley, I^3, in combination with the driving-shaft M and gears V V^1, or equivalent devices, for imparting a rotary motion to the counter-shaft, and with a shaft, I, rotating in a stock which travels horizontally in two directions at right angles to each other, substantially as set forth.

110,610.—COMPOUND FOR TREATING LEATHER.—Samuel S. Walbank, Superior City, Wis.

Claim.—The combination of the ingredients, when mixed and used in the quantities and proportions as herein described, and for the purposes set forth.

110,611.—TAP FOR OIL PACKAGE.—Albin Warth, Stapleton, N. Y.

Claim.—1. The ring O, formed with the guides *h* and hooks *i*, spring *l*, valve *g*, valve-seat *f*, and plate *a*, provided with the vent *c*, and spout *d*, the whole combined and operating together substantially as described.

2. In combination with the elements of the preceding claim, the hook *m*, substantially as described.

110,612.—TAP FOR OIL-PACKAGE.—Albin Warth, Stapleton, N. Y.

Claim.—The protecting-plate *d*, formed with the vent *c*, spout *f*, and a central depressed opening, in combination with the cup-shaped valve *b*, provided with the loops *g* and *h*, the former operated upon by a bar, *h*, the latter connected with the end of the spring *c*, the whole constructed and operating as described.

110,613.—GRAIN-RAKE.—Marcus M. Wells, Hartwick, N. Y.

Claim.—The rake and binding apparatus herein described, when constructed with concave teeth *c*, binding-platform *z*, and bent arms B and C, substantially as specified.

110,614.—WATCH-REGULATOR.—Charles V. Woerd, Waltham, Mass.

Claim.—In combination with the actuating-pinion, the eccentric for adjusting the pinion relatively to the segment-rack, substantially as described.

110,615.—FUR-SET BOX.—Clinton W. Fraser, Brooklyn, N. Y.

Claim.—The box A, combined with the case C, and suspending-rivet or screw *e*, arranged as described, for the purpose set forth.

110,616.—CHURN.—Joseph O. MaClaskey, Perth Amboy, N. J., assignor to himself and James E. Tyrrell, same place.

Claim.—The dasher-frames *e* *y* upon the shaft *d* and tube *f*, respectively, in combination with the gears *h* *i* and screw-socket *p*, receiving the end of the shaft *d*, the parts being constructed and acting as and for the purposes specified.

REISSUES.

4,215.—HOISTING-BLOCK.—Joseph A. Burr, Brooklyn, assignor to Burr & Co., New York, N. Y.—Patent No. 106,446, dated October 18, 1870.

Claim.—The metallic end-piece E, secured to the hook or fastening F of a pulley-block, as shown, and for the purposes described.

4,216.—SHOVEL-PLOW AND POTATO-DIGGER COMBINED.—James Millen Dick, Buffalo, N. Y., assignor to himself and William H. Albro, same place.—Patent No. 105,922, dated August 2, 1870.

Claim.—The frame with the straight bottom part A, angular face C, and beam B, being a continuation of back part A', all formed in one piece, in combination with the digger D, substantially as set forth.

4,217.—Division B.—HARVESTER.—Rufus Dutton, Yonkers, N. Y.—Patent No. 31,378, dated February 12, 1861; reissue No. 4,125, dated September 20, 1870.

Claim.—1. A hollow metal casing-plate, separate and apart from any driving or carrying-wheel, which casing-plate makes one side or main part of a box or case which incloses and protects the secondary gear-wheels of a mowing or reaping-machine, substantially as described.

2. A box or case, made substantially as described, of two casing-plates, separate and apart from any driving or carrying-wheel, which box or case incloses and protects the secondary gear-wheels of a mowing or reaping-machine.

3. A hollow metal casing-plate, separate and apart from any driving or carrying-wheel, which casing-plate makes one side or main part of a box or case which incloses and protects the secondary gear-wheels, and which casing-plate also supports a journal of the secondary gear-wheel-axle of a mowing or reaping-machine, substantially as described.

4. A box or case, made substantially as described, of two casing-plates, separate and apart from any driving or carrying-wheel, which box or case incloses and protects the secondary gear-wheels, and also supports the journals of the secondary gear-wheel-axle of a mowing or reaping-machine.

4,218.—BROILER.—James T. Page, Rochester, N. Y.—Patent No. 106,280, dated August 9, 1870.

Claim.—1. The rim A and handle *b*, made of a single piece of sheet metal, in combination with the wire-grating D, substantially as and for the purpose herein set forth.

2. The T-shaped slots or incisions *d d*, to receive the wire-strands *c c*, substantially as herein set forth.

3. In combination with the rim A and grating D, the drip-pan B, provided with the annular groove *h* and a central opening, substantially as and for the purposes herein set forth.

4,219.—RESERVOIR COOKING-STOVE.—George H. Phillips, Troy, N. Y.—Patent No. 88,585, dated February 2, 1869.

Claim.—1. A water-reservoir, constructed in such manner that it has a vertical flue through it, and, by the addition of one plate, a horizontal flue also running through the same, and uniting or combining the said reservoir with a cooking-stove, against the back of the stove, its upper surface flush with the stove-top, the said flue or flues of the reservoir being the only outlet of escape for the products of combustion from the stove to the exit-pipe, substantially in manner as described and set forth.

2. In combination with the reservoir so constructed, the plate C, forming the bottom of the horizontal flue E, substantially in manner as described and set forth.

4,220.—WATER-PIPE MACHINE.—John W. Stockwell, Portland, Maine.—Patent No. 106,424, dated August 16, 1870.

Claim.—1. The suspended and oscillating hopper F, adjustable slide Q, and auxiliary hopper-plate, all constructed and relatively arranged to form an improved feeding device for a pipe-molding machine.

2. The core G, grooved or slotted vertical rotary shaft P, rotary sleeve U, with its stud or pin A', and the trowels V, all constructed, combined, and operating substantially as and for the purposes herein set forth.

3. The device X Y for forming the tip of the pipe, constructed and operated substantially as described and shown herein.

4,221.—LAMP-CHIMNEY.—The Requa Patent Concave Burner and Chimney Company, New York, N. Y., assignee of E. B. Requa.—Patent No. 37,773, dated February 24, 1863.

Claim.—1. A lamp-chimney made with a circular base, *b*, a contraction, at *a'*, and a bulb flattened in the direction in which the flame spreads, substantially as specified.

2. A lamp-chimney made with the conical base, *b*, a flange at its lower edge, and the contraction *a*, between said base *b* and the flattened bulb, as and for the purposes specified.

3. A glass lamp-chimney, made with one side roughened or ground, as and for the purposes set forth.

4. A glass lamp-chimney, formed with the base *b* and contraction *a'*, in combination with the lamp-burner, having a flat-wick, substantially as set forth.

4,222.—GANG-PLOW.—George W. Hildreth, Lockport, N. Y.—Patent No. 18,397, dated October 13, 1857.

Claim.—1. The combination, with the frame A of a gang-plow, of crank-supports, M M', for the main carrying and supporting-wheels, whereby the height of the frame from the ground can be adjusted substantially as described.

2. A crank-axle-tree, for supporting the frame in a gang-plow, provided with a crank upon each end, one of which is adjustable and so secured to the axle-tree that the supporting wheels, which turn upon the ends of said crank axle-tree, can be adjusted in the arcs of circles, to run upon the same or different horizontal planes, for the purposes above described.

3. The combination, with the supporting axle-tree H in a gang-plow, provided with cranks at its ends, one of which is adjustable independently of the other, of a hand-lever for turning said axle-tree, for the purposes above described.

4. The combination in a gang-plow of the following elements, viz: A supporting axle-tree, provided with a crank at each end; two supporting-wheels, one on each crank; a hand-lever for turning the axle-tree and cranks, and a holding device for retaining the axle-tree and cranks in position when adjusted.

5. The combination, with the frame in a gang-plow, of a tongue or draft-pole, which can be raised and lowered, and also moved to the right and left, for the purposes stated.

6. The combination, with the plow frame of a laterally-adjustable supporting axle-tree H, for the purposes stated.

7. The combination, with a crank axle-tree, Q R, in a gang-plow, of an eye-bolt and nut, for retaining the crank and its supporting wheel in any desired adjusted position.

8. A cast metallic frame, for carrying the gang of plows, constructed substantially as above described.

9. A combined cast and wrought-iron frame for gang-plows, constructed substantially as shown and described.

10. The combination, with the cast-iron main frame, of a tool-box cast with said frame, substantially as shown and described.

11. The combination, with the frame and axle-tree in a gang-plow, of a metallic-plate connection J J'.

12. The grooved and toothed plow-attaching plates D E, substantially as and for the purposes set forth.

13. The combination in a gang-plow of a series of plows, having short and long land-sides, substantially as and for the purposes set forth.

DESIGNS.

4,535.—FRUIT-GATHERER.—James S. Barry and Alfred M. Barry, Albion, Mich.

Claim.—The design for a device for gathering fruit from trees, as shown.

4,536.—BACK OF A PLAYING-CARD.—Solomon L. Cohen, New York, N. Y., assignor to Lawrence & Cohen, same place.

Claim.—The design for the back of a playing-card, as shown and described.

4,537.—BACK OF A PLAYING-CARD.—Solomon L. Cohen, New York, N. Y., assignor to Lawrence & Cohen, same place.

Claim.—The design for the back of a playing-card, as shown and described.

4,538.—OIL-CLOTH PATTERN.—Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

5,539.—OIL-CLOTH PATTERN.—Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

4,540.—CARPET-PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—The design for a carpet-pattern, substantially as described and represented in and by the accompanying drawing.

4,541.—RAILWAY-CAR SASH-LOCK. — William H. Paige, Springfield, Mass.

Claim.—The design for a railway-car sash-lock, herein shown in the drawing and described.

4,542. — POULTRY-FOUNTAIN. — Beekman Van Gaasbeek, Mount Vernon, N. Y.

Claim.—The design for a poultry-fountain, substantially as shown.

4,543.—CHAIN. — Josiah V. Waldron and Charles F. Waldron, New York, N. Y.

Claim.—The design for an oblong rectangular link-chain, as herein described and shown at *A b a*.

4,544. — OIL-CLOTH PATTERN. — John T. Webster, New York, N. Y., assignor to Thomas Potter, Son & Co., Philadelphia, Pa.

Claim.—The design for an oil-cloth, as shown.

4,545. — OIL-CLOTH PATTERN. — John T. Webster, New York, N. Y., assignor to Thomas Potter, Son & Co., Philadelphia, Pa.

Claim.—The design for an oil-cloth, as shown.

4,546.—CASE OF A PARLOR-ORGAN.—George Woods, Cambridge, Mass.

Claim.—The medallion design for the front of a parlor or cabinet-organ, substantially as shown and described.

TRADE-MARKS.

112.—WHISKY.—H. Block & Co., Cincinnati, Ohio.

113.—BURNING-FLUID.—George M. Danforth, New York, N. Y.

114.—HONOLULU ORANGE-BITTERS. — Robert Des Anges, New York, N. Y.

115.—FERTILIZER. — Dugdale & Girvin, Baltimore, Md.

116.—FERTILIZER. — Dugdale & Girvin, Baltimore, Md.

117. — LEAD-PENCILS. — Eberhard Faber, New York, N. Y.

118.—FURNISHING-GOODS.—Fisk, Clark & Flagg, New York, N. Y.

119.—LIQUORS.—Charles H. Ross & Co., Baltimore, Md.

120.—MEDICAL COMPOUND. — Samuel S. Seely, Bath, N. Y.

121.—BURNING-FLUID.—Philip Weisenberger, Pittsburg, Pa.

EXTENSIONS.

EMANUEL ANDREWS, of Williamsport, Pa. Letters Patent, No. 16,223, dated December 16, 1856; reissue No. 2,290, dated June 19, 1866.

"Improvement in Machines for Grinding Saws."

Claim.—1. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, roller-bearing, and spring, substantially as set forth.

2. The combination, in a grinding-machine, of the following instrumentalities, viz: a revolving grinder, bearing for the article, and turning-frame for the grinder, substantially as set forth.

3. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, traversing-carriage for the same, bearing for the article, and mechanism to move the grinder along the surface of the article with varying speed, substantially as set forth.

4. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, and pattern-holder of varying thickness at different parts of its length, substantially as set forth.

5. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, and pattern-holder of varying thickness, both lengthwise and crosswise, substantially as set forth.

6. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, and pattern-holder, whose thickness at different parts of its length can be varied by adjustment, substantially as set forth.

7. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, and pattern-holder, whose thickness at different parts of its length and breadth can be varied by adjustment, substantially as set forth.

8. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, pattern-holder, and spring to maintain a yielding pressure on the article during grinding, substantially as set forth.

9. The combination, in a grinding-machine, of the following instrumentalities, viz: the revolving grinder, bearing for the article, pattern-holder, spring to maintain a yielding pressure on the article during grinding, and mechanism to move the said pattern-holder past the grinder, substantially as set forth.

JOSEPH KINGSLAND, Jr., of Franklin, N. J. Letters Patent No. 16,278, dated December 23, 1856.

"Improvement in Paper-Pulp Engine."

Claim.—The method of regulating the feeding of the fiber to the grinder by varying the hydraulic pressure by means of an adjustable discharging

nozzle, or the equivalent thereof, substantially as herein set forth.

JOSEPH KINGSLAND, Jr., of Franklin, N. J. Letters Patent No. 16,239, dated December 16, 1856; reissue No. 745, dated June 28, 1859; reissue No. 1,380, dated January 6, 1863.

"Improvement in Machinery for Grinding Paper-Pulp."

Claim.—In an engine for reducing fibrous substances to pulp suitable for making paper, the combination of a rotating nut armed with blades suitable for reducing fibrous substances to pulp, a reservoir for containing fibers and water, and surrounding and inclosing the nut with its blades, a feeding aperture through which the fibrous substance and water is to be introduced into the reservoir, a discharge aperture to permit the escape of the water from the reservoir with the fibers when properly reduced, and to check the discharge, that the fibers may be retained under the beating action until properly reduced, and the means for inducing a current through the reservoir, the whole having a mode of operation substantially as herein described, and for the purpose specified.

JOSEPH KINGSLAND, Jr., of Franklin, N. J. Letters Patent No. 16,316, dated December 23, 1856; reissue No. 744, dated June 28, 1859; reissue No. 1,381, dated January 6, 1863.

"Improvement in the Process of Grinding Paper-Pulp."

Claim.—The process, substantially as herein described, of reducing fibers to pulp for the manufacture of paper, which process consists in causing the water, in which the fibers to be reduced are suspended, to pass in a current into, through, and out of a reservoir inclosing the beaters, and provided with a feeding-in and a discharge-aperture, so that the fibers shall be retained within the said reservoir, and under the action of the blades or beaters, until they are sufficiently reduced, and then follow the current of water to the discharge aperture, substantially as and for the purpose specified.

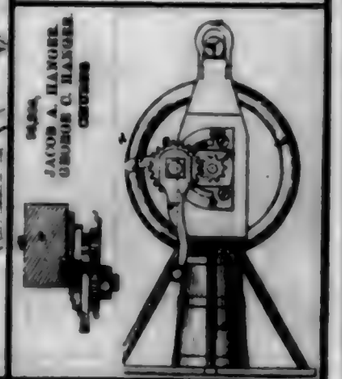
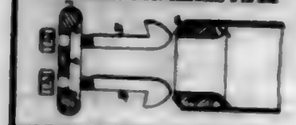
MACHINE FOR FINISHING S. SKINS.

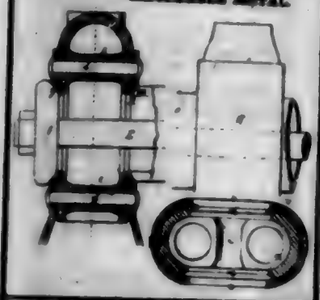


98,956. J. A. HALL.
COMBINED SPEEDER AND CULTIVATOR.

98,957. ROBERT HAMILTON.
ROAD-SCRAPERS.

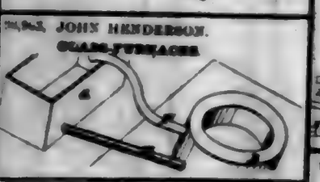


98,958. JACOB A. HANGER.
GEORGE C. HANGER.
CHURN.



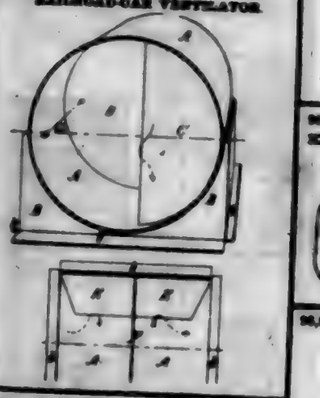
98,959. MRS. MARY J. HARBON.
MINERAL COMPOUND.

98,960. W. H. HARRISON.
JOINTS FOR METAL PIPES.

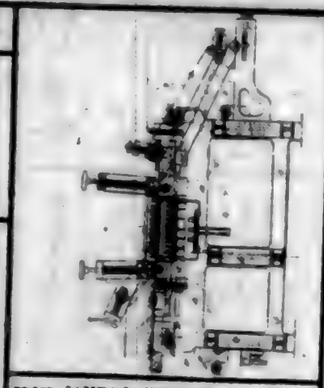


98,961. W. H. HARRISON.
CONNECTIONS FOR PIPES OF MALLEABLE METAL.

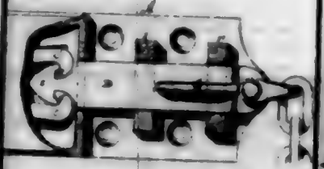
98,962. E. P. HASKELL, Lafayette.



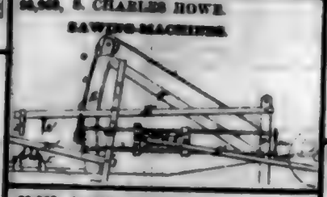
98,963. JOHN HENDERSON.
COAL-FURNACES.



98,964. CHARLES W. HERMANCE.
COOKING-STOVE.



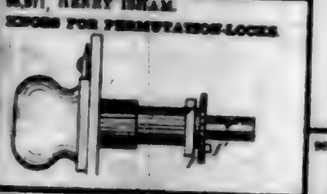
98,965. M. T. HITCHCOCK.
RAILROAD-CAR VENTILATOR.



98,966. EDWARD HOLDEN.
APPARATUS FOR COOKING AND PREPARING WOOL.

98,967. JAMES L. HOWARD.
CAR-DOOR LOCKS.

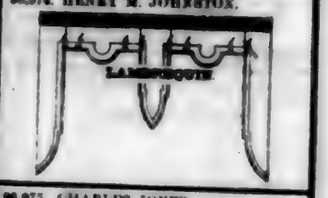
98,968. S. CHARLES HOWE.
SAWING-MACHINES.



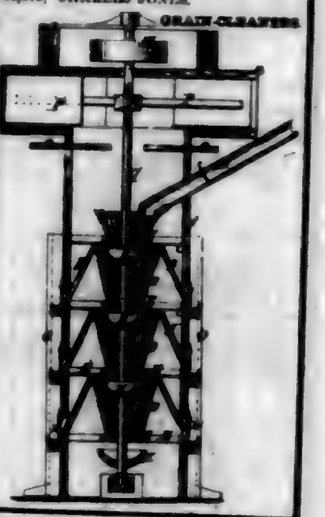
98,969. JAMES HOWLAND.
ROAD-SCRAPER.

98,970. BENJAMIN S. HYDE.
CULTIVATORS.

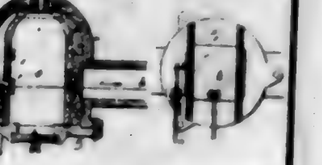
98,971. HENRY ISHAM.
KEYING FOR PERMUTATION-LOCKS.



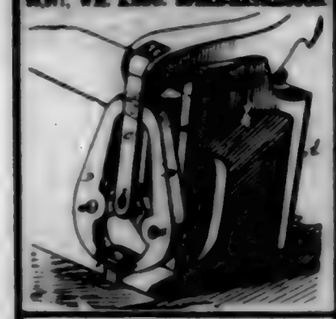
98,972. FRANCES B. ISHAM.
PERMUTATION-LOCKS.



98,973. WM. H. JOESKEL, CHAIR.



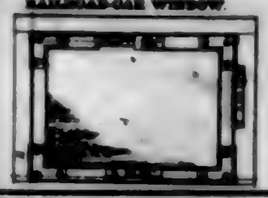
98,974. HENRY M. JOHNSTON.
LANDSCOUTH.



98,975. CHARLES JONES.
GRAIN-CLEANERS.

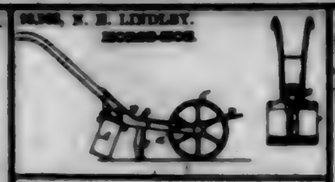
98,976. JAMES O. JONES. TUYERS.

98,977, WM. KROG. SPEED-REGULATOR.

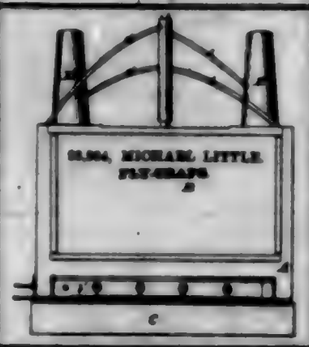


98,978, JOHN J. KIMBALL. FLOOD-GATE.

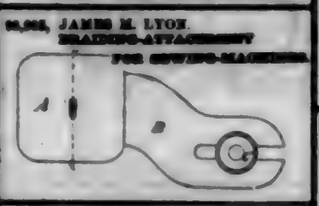
98,979, GEO. S. KNAPP. CHIMNEY-CLEANER.



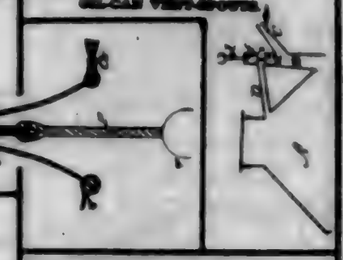
98,980, G. S. KNAPP. RAILROAD-CAR WINDOW.



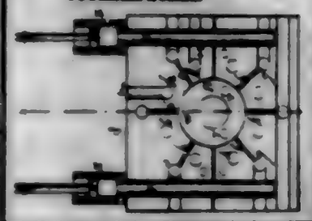
98,981, GEO. B. LEONARD. SHOW-CASE FOR SILKS, COTTONS.



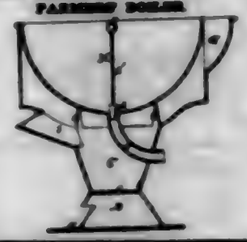
98,982, E. B. LINDLEY. HORSE-HOE.



98,983, MICHAEL LITTLE. FLY-TRAP.



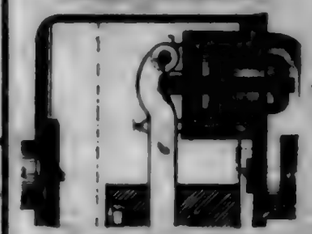
98,984, JAMES M. LYON. BRAIDING-ATTACHMENT FOR SEWING-MACHINES.



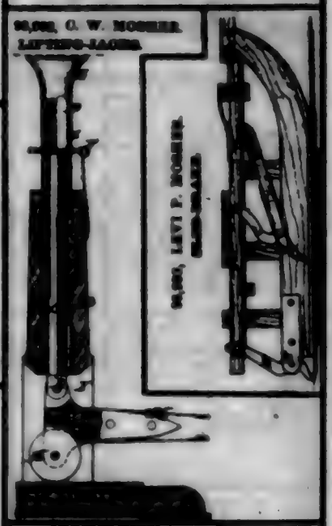
98,985, J. J. MAROT. OIL-CAN VENT-SPOUT.

98,986, JEREMIAH McILVAIN. JOURNAL-BOXES.

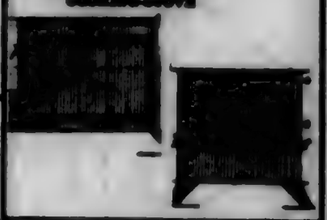
98,987, ALLEN F. MERRILL. PASSING BOBBIN.



98,988, DAN. O. MOORE, FRANK REID. CLOD-PENDING.

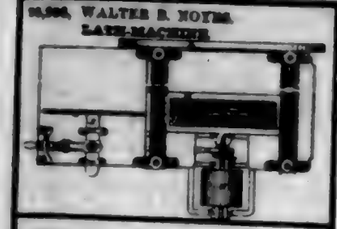


98,989, J. W. MOORE. SPRING-ATTACHMENT FOR CARRIAGES.

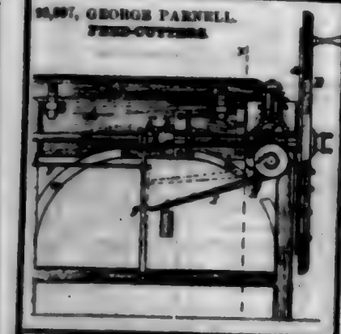


98,990, WILLIAM MORSE. LOCKED SAFETY-VALVE.

98,991, O. W. MOSHER. LIFTING-JACKS.



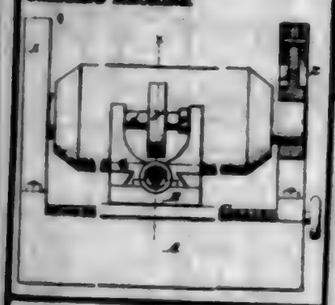
98,992, MARTIN J. MOSHER. GROOVING-GROUTS.



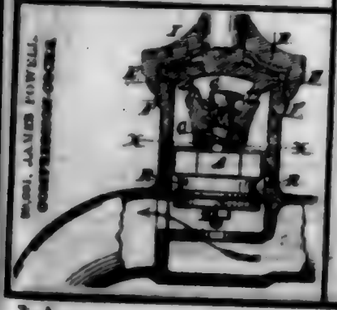
98,993, SEWELL NEWHOUSE. METALLIC CASKET.

98,986, WALTER B. NOYES. LATH-MACHINE.

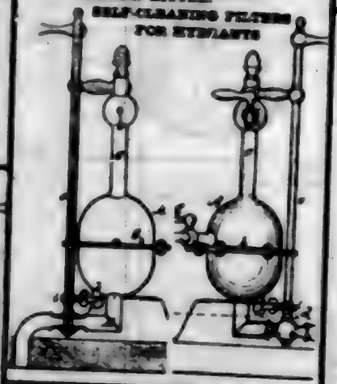
98,987, GEORGE PARNELL. FEED-CUTTERS.



98,988, JAMES I. PECK. TONGUE AND THILL-COUPLING.

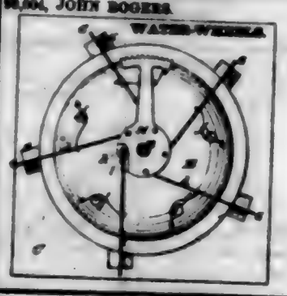


98,989, RUPERT PFEIFER. CORN-SHELLING.

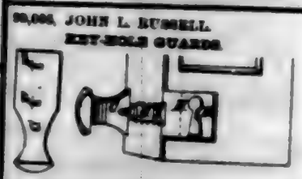


98,990, J. M. POOLE. CHURNING MACHINE.

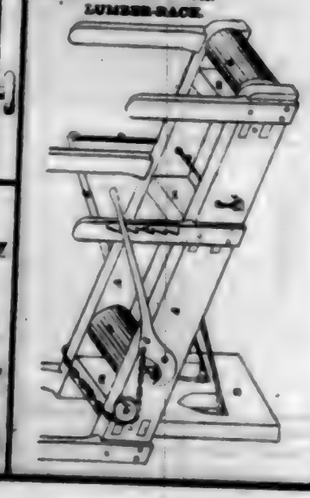
98,991, JAMES POWELL. CONVERTIBLE CHAIR.



98,992, JOHN RAIBLE, MATTHIAS REIS, JOHANN RITTER. SELF-CLEANING FILTERS FOR STEAM-ENGINES.

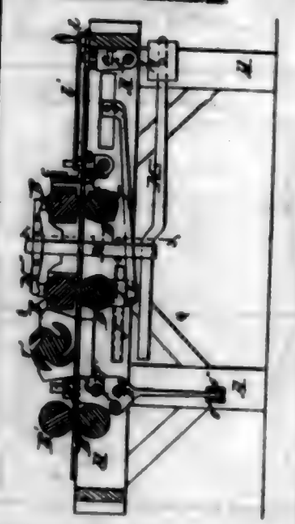


98,993, HENRY R. ROBBINS. PIPE-COUPLING FOR HEATING CARS.

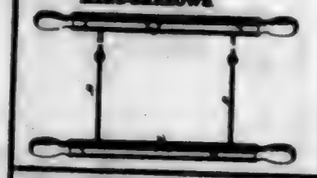


98,994, JOHN ROGERS. WATER-WHEELS.

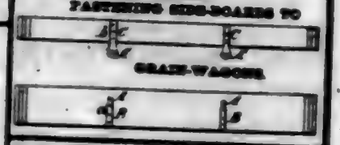
98,995, JOHN L. RUSSELL. KEY-HOLE GUARDS.



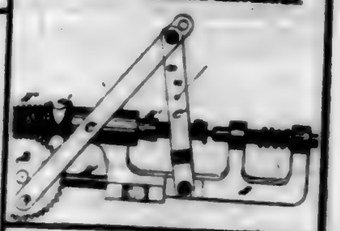
98,996, CHARLES SACH. LUMBER-RACK.



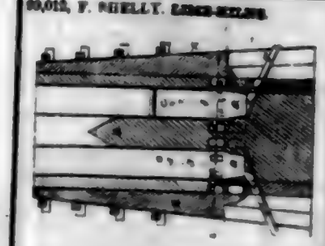
98,997, ELLIOT SAVAGE. ALLOYS OF MANGANESE.



98,998, JOHN B. SCHENCK. PLANING-MACHINES.



98,999, MINOT S. SCOFIELD. HAND-HARROWS.



99,010, GEO. SEITZINGER. FASTENING SIDE-BOARDS TO GRAIN-WAGONS.

99,011, THOMAS SHANKS. BOBBIN-WINDERS FOR SEWING-MACHINES.

99,012, F. SHELLY. LINER-KILNS.

99,033, E. S. SHEPARDSON. LOOM.

99,034, E. S. SLATER. APPARATUS FOR STRAIGHTENING CARD-TEETH.

99,035, ELI SLATER. HOT-AIR FURNACE.

99,036, FRANCIS W. SLATER. SEWER-REGULATOR.

99,037. SMITH, LATROBE AND SMITH. TRUSSES OF MOVABLE LATTICE AND VALLETS.

99,038, GEORGE G. SMITH. SPINNING FRAME.

99,039, JAMES T. SMITH. PUDDLING-FLAMES FOR FURNACE.

99,040, JOHN JOSEPH, CHAS SMITH. [illegible]

99,041, T. ECK SMITH, JAMES MITCHELL. CLOTHES-SPRINKLER.

99,042, JOHN SPERRY. PICTURE-FRAMES.

99,043, HENRY SPLITDORF. SPRING TOY-BALL.

99,044, JEREMIAH STEVER. SHUTTLE-DRIVING MECHANISM FOR LOOMS.

99,045, CLEMENT ST. JAMES. SHELL-CONTINUING.

99,046, I. E. STODDARD. PHOTOGRAPHIC CAMERAS.

99,047, ALSON A. STONE. DIE FOR FORGING SHUTTLE-EYES.

99,048, ALSON A. STONE. DIE FOR FORGING SHUTTLE-SPINDLE HEADS.

99,049, GEO. W. STRAHAHAN. WASHING-MACHINE.

99,050, HENRY SWINEFORD. SIDEBOARD-FASTENER.

99,051, E. I. SYERS. COTTON-PLANTER.

99,052, CHAS. H. TEBBBATH. MODE OF COVERING [illegible]

99,033, F. W. THORLA. [illegible] HAT-FORMS.

99,034, ELWOOD TUSH. CORN-HARVESTER.

99,035, EDWIN TUTTE. TIES FOR HOLLOW WALLS.

99,036, CORNELIUS WALSH. TENNIS-RACKS.

99,037, JAMES WALSH. STIRRUPS.

99,038, P. H. WALSH, PUDDING-SPRINGS, G. C. EATON.

99,039, WILLIAM WEBSTER. SPINNING FOR LOOMS.

99,040, A. S. WELLINGTON. [illegible] COOKING-STOVE.

99,041, MARSHALL D. WELLMAN. STOVE-GRATE.

99,042, STEPHEN S. WILCOX, ELI J. COLBURNE. REVOLVING GRATES.

99,043, J. S. WILSON. WAGONS.

99,044, DANIEL LONG, JOHN PRESTON. LET-OFF MECHANISMS FOR LOOMS.

99,045, JOSEPH BANIGAN, GEORGE W. MILLER. MOULDS FOR VULCANIZING [illegible] PUDDLE-TUYE.

3,797, WM. H. GUILD. PUDDING AND BRAIDING SUGAR.

3,798, WM. CLEVELAND HICKS. BREECH-LOADING FIRE-ARMS.

3,799, JOHN H. LYMAN. GAUGE FOR CUTTING VENEERS.

3,800, ELIE MONEUSE, LOUIS DUPARQUET. STOVE-GRATE.

3,801, ROBT. SOOBER. COOKING-STOVE.

3,802, WM. M. STEVENSON. BALANCE SLIDE-VALVES. Horizontal Section.

3,803, F. H. NORTH, CHARLES PEEK, [illegible] FOR A BRIDGE.

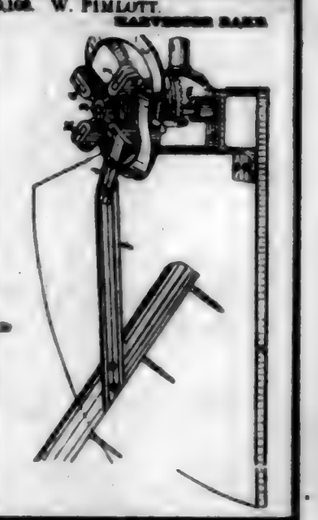
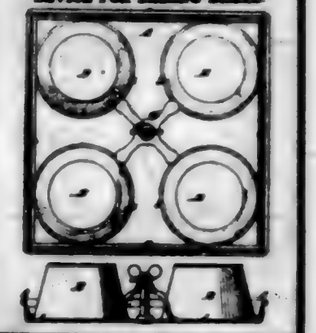
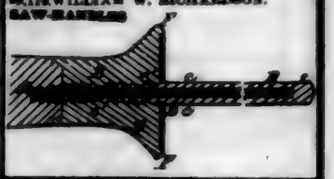
90,105, ALFRED PARAF.
METHOD OF FIXING FIGURINES TO FIBROUS AND TEXTILE MATERIALS.



90,106, WM. P. PATTON.
WILLIAM A. MIDDLETON.
SODA-SIPHONS.

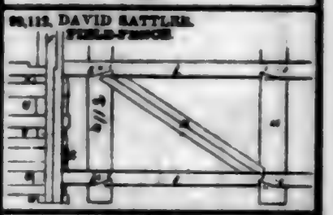


90,107, CHARLES F. PIKE.
COOLING-APPARATUS.

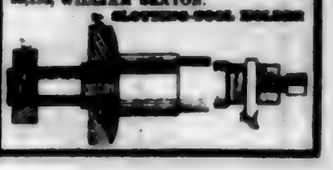


90,108 W. P. PIMLOTT.
HARVESTING RAKE.

90,109, ABRAM I. QUACKENBUSH.
GUILFORD HAWN.
DEVICE FOR RAISING SHEAF.

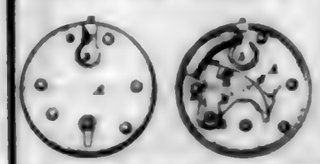


90,110, WILLIAM W. RICHARDSON.
SAW-HANDLES.



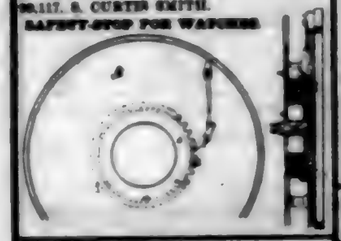
90,111, JOHN SALISBURY.
BORING-MOLDS.

90,112, DAVID SATTLER.
FIELD-FENCE.

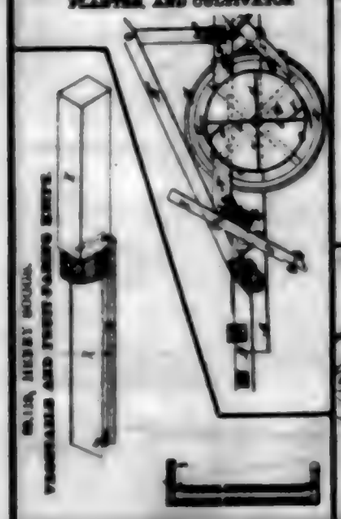


90,113, WILLIAM SEATON.
SLOTTING-TOOL HOLDER.

90,114. JAS. A. SINCLAIR.
GEO-WHEELED SULKY.

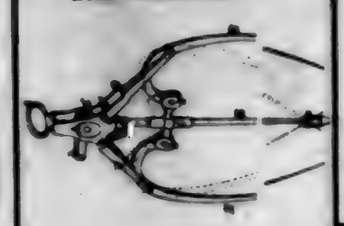


90,115. F. W. SMITH, Jr. PADLOCKS.

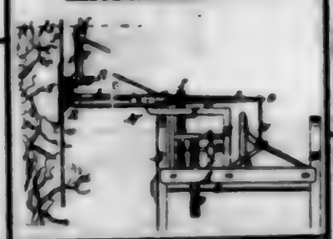


90,116. F. W. SMITH, Jr. PADLOCKS.

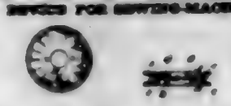
90,117. S. CURTIS SMITH.
SAFETY-STOP FOR WAGONS.



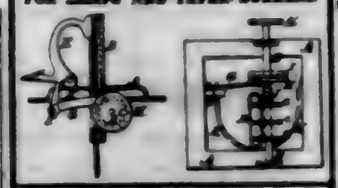
90,118. T. J. SMITH. COMBINED PLOW, PLASTER, AND CULTIVATOR.



90,119. HENRY SOUDS.
THRASHER AND FEED-PASSING BELT.



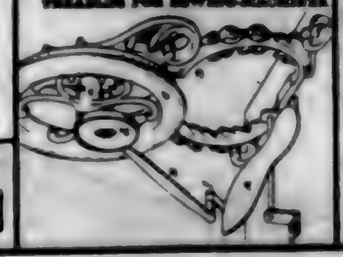
90,120. GEO. E. STEARNS.
BONNET HAT-FORMS.



90,121. JAMES M. VAN ROSDALL.
OLIVER W. VAN ROSDALL.
RIDGE-TRIMMER.

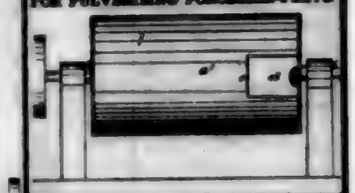
90,122. J. S. WARNER. THREAD-TENSION DEVICE FOR SEWING-MACHINES.

90,123. WM. H. WEEKS.
AUTOMATIC LIGHTING-ATTACHMENT FOR LAMPS AND TAPER-BURNERS.

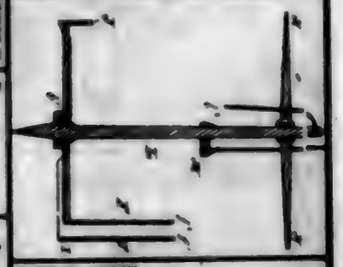


90,124. JOHN WEBSTER. COMPOSITION FOR LINING AXLE AND BOX-CASES.

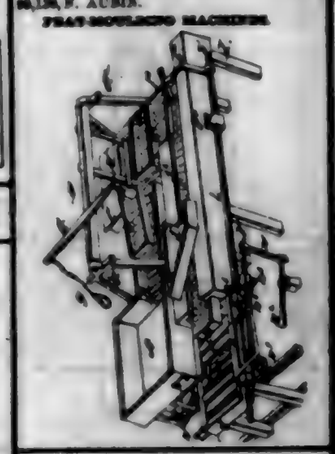
90,125. J. P. WHITEHEAD.
RAILROAD TRACKS.



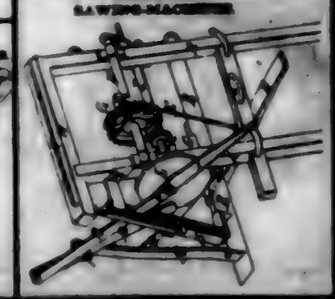
90,126. CHAS. H. WILLCOX.
THRASHING FOR SEWING-MACHINES.



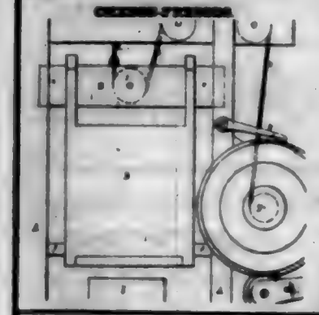
90,127. ARTHUR M. ALLEN
TOY BOBBILLER.



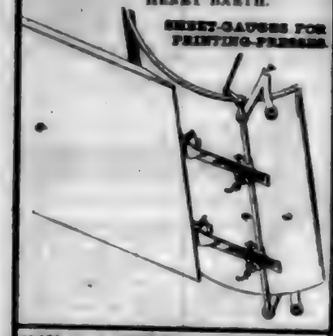
90,128. J. B. ALSING. APPARATUS FOR PULVERIZING PORCELAIN-PASTE.



90,129. N. AUBIN. FRAT AUGER.

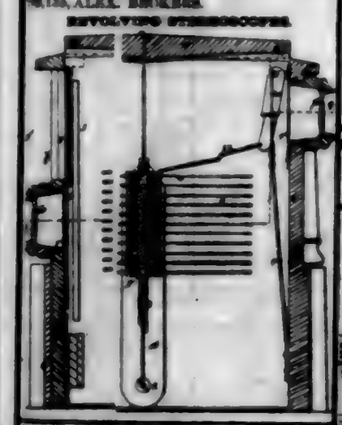


90,130. N. AUBIN.
FRAT-MOULDING MACHINE.

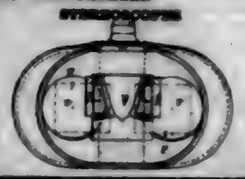


90,131. LOUIS BACH.
L. C. CHRISTLIP.
SAWING-MACHINE.

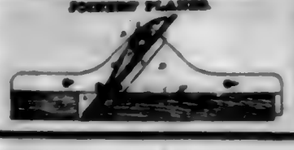
90,132. ALBERT G. BAGG.
CHIMNEY-TOPPING.



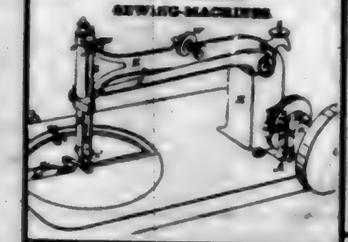
90,133.
HENRY BARTH.
SHEET-GAUGES FOR PRINTING-PRESSES.



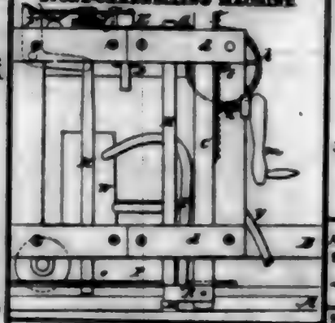
90,134. G. A. BECKER. FOUNTAIN-PENS.



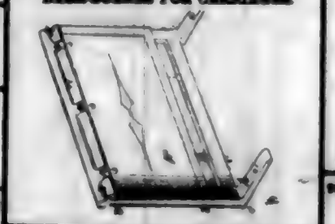
90,135. ALEX. BECKERS.
REVOLVING STEREOSCOPES.



90,136. ALEX. BECKERS.
STEREOSCOPES.



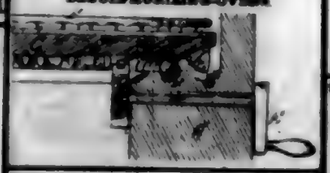
90,137. GEORGE CYRUS BECKWITH
JOINERS' PLANES.



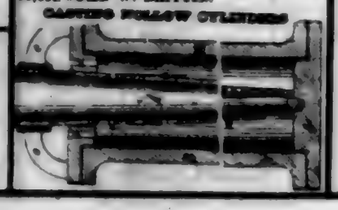
90,138. JOSEPH BENNOR.
SEWING-MACHINES.

90,139. VIRGIL W. BLANCHARD.
STONE-CHANNELLING MACHINE.

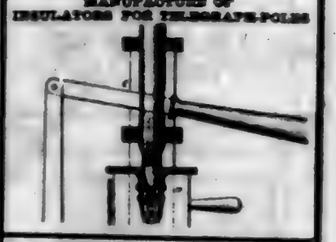
90,140. JOHN BLAND.
DASH-BOARDS FOR CARRIAGES.



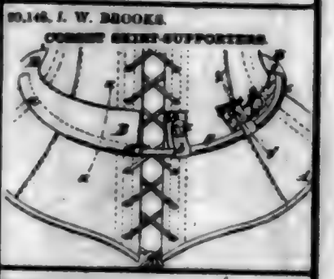
90,141. E. BOIVIN AND D. LOISEAU
PROCESS OF EXTRACTING, MANUFACTURING, AND REFINING SUGAR.



90,142. ELIJAH BOMAR.
RAILROAD-TIE LIFTERS.

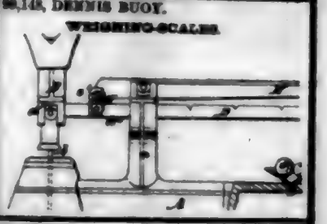


90,143. JOHN C. BREWSTER.
DESULPHURIZING-OVENS.

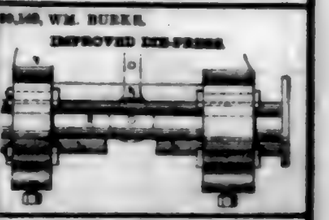


90,144. JOHN W. BRITTIN.
CASTING PISTON-CYLINDERS.

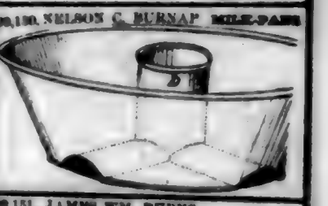
90,145. HOMER BROOKE.
MANUFACTURE OF INSULATORS FOR TELEGRAPH-POLES.



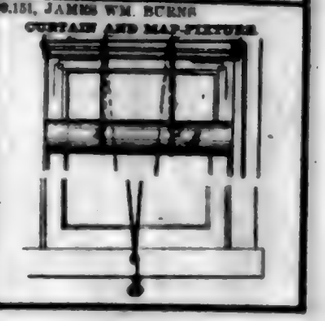
90,146. I. W. BROOKS.
CORSET SKIRT-SUPPORTERS.



ALBERT G. BROWN. SEE-SEWING 90,147, ATTACHMENT FOR PINS.



90,148. DENNIS BUOY.
WEIGHING-SCALES.



90,149. WM. BURKE.
IMPROVED INK-PRESS.

90,150. NELSON C. BURNAP. MILK-PANS.

90,151. JAMES WM. BURNS.
CURTAIN AND MAP-FIXTURE.

90,162. W. H. BURNS.
CRUPPLE FOR LOOMS.

90,163. C. A. BUTTLER.
STRAW-SEPARATING MACHINE.

90,164. E. F. CADY. SLITTING AND JOINING RAGS FOR CARPETS.

90,165. M. E. CAMPFIELD.
MORTISING-MACHINES.

90,166. WILBUR W. CASEY, GEO. W. HARRIS.
BARRELS FOR SEATING.

90,167. WILSON W. CASEY, G. W. HARRIS.
PLANING MACHINE.

A. G. CATLIN.
AUTOMATIC BARREL-FILLERS.

MARY P. CARPENTER.
AND HEM FOR SEWING-MACHINES.

90,168. JOHN CHAMBERS.
MACHINE FOR REMOVING THE "BLOW-OVER" OF GLASS JARS &c.

90,169. E. K. CHANDLER. TOOTH-RUBBER.

LINUS E. CHAPIN. CHICKEN-COOP.

90,170. J. A. CLIPPINGER.
SHOEMAKERS' TOOLS.

90,171. O. F. J. COLBURN. BIRD-CAGE.

90,172. WATTS COOKE.
RAILROAD-RAIL AND RAIL-PLATE.

90,173. JESSE A. CRANDALL.
TELEGRAPHS.

90,174. GEO. B. CUMMINGS.
COAL-GASCOKE PULVERIZING-PUMP.

90,175. G. W. CUSHMAN.
CHAMBER-CUTTER.

90,169. DANIEL E. DEWEY.
FLEECING-SCALES FOR HAY OR CATTLE.

90,170. GUSTAVUS D. DOWE.
SODA-FOUNTAINS.

90,171. THOMAS M. DROWN.
WATER-PROOF FABRIC.

90,172. M. C. DUFFEY.
FLEXIBLE JOINT FOR WATER-PIPES.

90,173. TIMOTHY EARLE. EGG-BEATER.

90,174. WILLIAM ENNIS. BRICK-KILNS.

90,175. MORTISING WHISKEY BONDED INSTALLATION.

90,176. GEORGE S. FAULKNER. HARNESS-OPERATING MECHANISM FOR LOOMS.

90,177. GEORGE S. FAULKNER. LOOM.

90,178. JOSEPH G. FOX.
KEY-HOLE GUARD AND PROTECTOR.

90,179. HENRY M. FLANAGIN.
LEVER AND STUMP-PULLER.

90,180. HENR. GANT.
PRESERVING MEAT.

90,181. CYRUS B. GARLINGHOUSE.
HAY-LOADERS.

90,182. HENRY GARRETT. PRESS.

90,183. JOHN D. HALL. MACHINE FOR GRINDING PEARL BUTTON-BLANKS.

90,184. JAMES W. HANKINSON.
LIGHTNING-RODS AND CONDUCTORS.

90,185. ROBT. HART.
HARNESS-GAMBLE HOOKS.

90,186. HERMAN HAUPT.
DRYING, PRESERVING, AND COLORING WOOD OR OTHER FIBROUS MATERIAL.

99,187, WILLIAM HERSER.
SLATE-FRAME.

99,188, A. F. HESS.
PACKING-CASE FOR TOBACCO.

99,189, JOSEPH W. HOPKINS, AIR-PUMPS.

99,190, JOSEPH INGELS.
GRAIN-DRILL AND BROADCAST-SOWER.

99,191, ELIOT HOLBROOK.
PRINTING-CYLINDER.

99,192, JOHN W. JARVIS.
PATENT PAN, BOWL, BOX AND DISH.

99,193, JOHN H. HIGGINS.
APPARATUS FOR STEAMING YARN.

99,194, CHARLES M. HOWELL.
WAGON-BRAKES.

99,195, NICHOLAS JENKINS.
METHOD OF WOOD-WORKING.

99,196, HENRY F. HILDEBRAND.
DOUBLE WASH-BOARD.

99,197, NICHOLAS JENKINS.
VARIETY-MOULDING MACHINE.

99,198, FRANK HUDNER.
RAILWAY-CAR AXLE.

99,199, JAMESON HUNLOCK.
SPRING-RACK FOR CARRIAGES.

99,200, BARTON H. JENKS.
RING-SPINNING FRAME.

99,201, LYSANDER S. HILL.
JEWELLERS' CHUCK.

99,202, DANIEL T. HURLBUT.
WINDOW-SCREEN.

99,203, PETER S. HOS.
FASTENING FOR ELECTROTYPING.

99,204, RALPH B. JENNINGS.
PERFORATED GRAIN-BOX.

99,205, JAMES J. JOHNSTON.
MILLS FOR GRINDING CORN.

99,206, JOSEPH B. JOHNSTON.
CHURNS.

99,207, D. P. KIMBALL.
SEXTONS.

99,208, JOSEPH G. KNAPP, SAMUEL D. LIBBY.
CULTIVATORS.

99,209, CHARLES KOEHLER.
MACHINES FOR ROUNDING SHOT.

99,210, A. KOMP.
RAILWAY-CAR WHEEL.

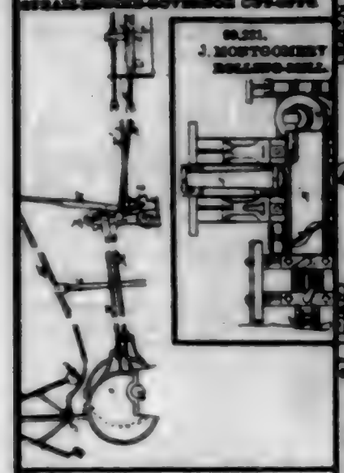
99,211, A. KRUSE.
MAGIC LANTERN.

99,212, J. S. LADOW.
CLASP.

99,213, ELLIOT LEWIS.
SAD-IRON HEATER.

99,214, W. H. LEWIS.
DEVICE FOR DESTROYING INSECTS.

99,215, H. C. LOCKWOOD.
COFFIN-CLEANING AND POLISHING.



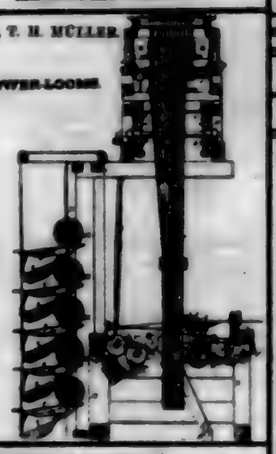
99,216, OLIVER T. MAY.
NON-CORROSIVE METALLIC ROOFING.

99,217, NOAH MENDENHALL.
SEED-PLANTERS.

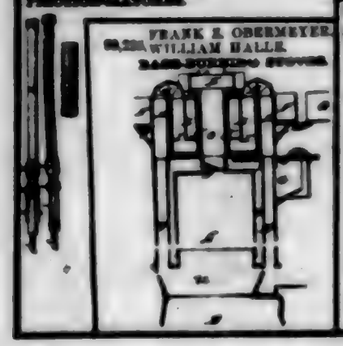
99,218, ANDREWS T. MERRIMAN.
STONE-PLANING MACHINE.

99,219, SAMUEL MERRITT.
IRONING-TABLE.

90,229, GEO. MILBANK.
STEAM-HEATED GOVERNOR CUT-OFF.



90,231, J. MONTGOMERY.
ROLLING-MILL.

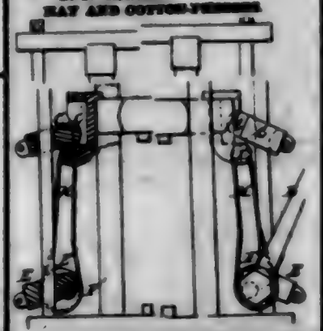


90,232, JORDAN L. MOTT.
BOILER-GUARD.

90,233, T. H. MÜLLER.
POWER-LOOMS.

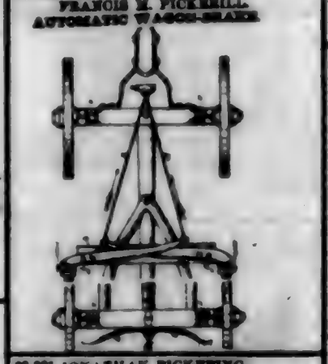
90,234, JUNIUS S. MORTON.
POCKET-GAUGE FOR
PRINTING-MACHINES.

90,235, FRANK E. OBERMEYER.
WILLIAM HALLE.
BAKE-BOILING STOVES.

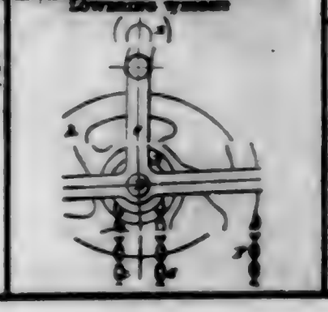


90,236, H. FARMELEE.
ARMING-MACHINE.

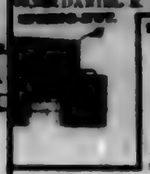
90,237, C. PARTRIDGE.
PRESTON.
POST-AUGURS.



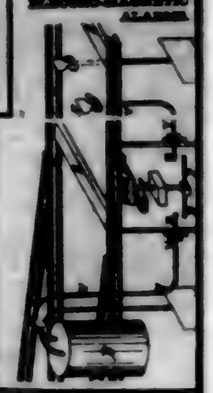
90,238, I. S. PATTEN.
D. G. MARDEN.
HAY AND COTTON-PRESSES.



90,239, ROSWIN DORMAN PRENOVER.
PAINT OR COATING FOR ROOFS.

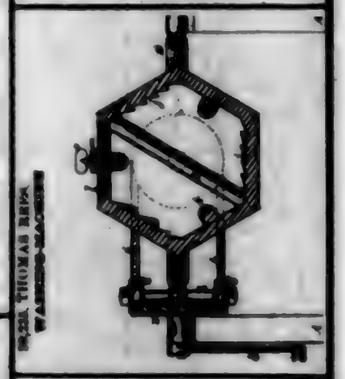


90,240, SAMUEL J. PICKERILL.
FRANCIS M. PICKERILL.
AUTOMATIC WAGON-BRAKE.



90,241, JONATHAN PICKERING.
APPARATUS FOR RAISING AND
LOWERING WINDOWS.

90,242, DANIEL R. PRATT.
SPRING-CUT.



90,243, T. A. B. PUTNAM.
RAILROAD-SWITCH
SIGNING-MAGNETIC
ALARM.

90,244, ROBERT REBSTMAN.
LOW-WATER INDICATOR AND
FEED-WATER REGULATOR.

90,245, THOMAS REPA.
WATER-CLOSET.

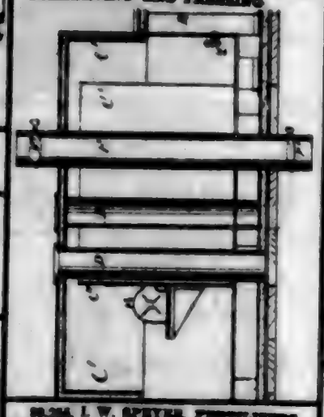
90,246, A. A. BROADE.
WILEY TARR.
PROPELLING ATTACHMENT
FOR PLOWS.

90,247, JOHN L. SHAW.
SHOVEL-HANDLE.

90,248, ALEXANDER J. SHELDON.
MANUFACTURE OF
PARCHMENT-PAPER.

90,249, OARE SHELDON.
CARRIAGE-SPRINGS.

90,250, AMOS SMITH.
PROCESS OF RENDERING LARD,
TALLOW, AND OTHER FATS.



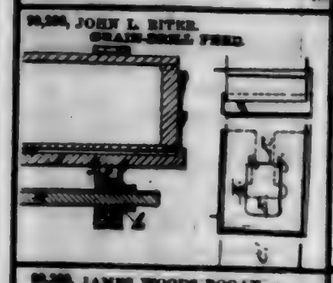
90,251, AMOS SMITH.
PROCESS FOR TREATING FISH TO
OBTAIN OILS AND FERTILIZERS.

90,252, AMOS SMITH. APPARATUS FOR
RENDERING FATTY ANIMAL MATTER.

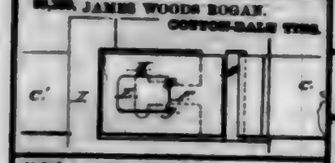
90,253, AMOS SMITH. PROCESS
FOR RENDERING RANCID
ANIMAL FATS, AND FOR
THE GASES EVOLVED.

90,254, D. R. SOMES. APPARATUS FOR
PRESERVING AND FREEZING

90,255, I. W. SPEYER. FIRE-ARMS.



90,256, R. W. SQUIRES.
CHAS. M. CLINTON.
ATTACHMENT FOR HARVESTERS.



90,257, JOSEPH STEGER.
RAILWAY-CAR BRAKE.

90,258, JOHN L. RITER.
GRAIN-SHELL FEED.

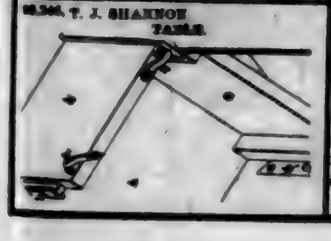
90,259, JAMES WOODS ROGAN.
COTTON-BALE TIES.

90,260, JACOB F. SAIGER.
PROCESS OF PRESERVING BUTTER.

90,261, WM. SANDERSON.
JAMES J. DE BARRY.
MANUFACTURE OF DOOR-KNOBS,
UMBRELLA-HANDLES, AND
OTHER MOULDED ARTICLES.

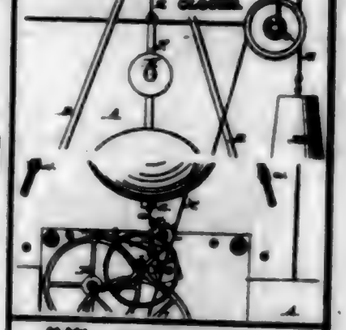
90,262, WM. SANDERSON.
JAMES J. DE BARRY.
HANDLES FOR
KNIVES, FORKS

90,263, O. S. SANFORD. HOOK-TONGS.



90,264, BENJAMIN SCHOPF.
CHRISTIAN SCHOPF.
LIFTING-JACKS.

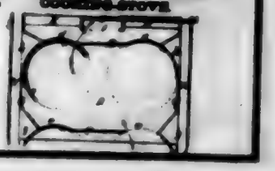
90,265, H. SEEHAUSEN. ANIMAL-TRAP.



90,266, T. J. SHANNON.
TABLE.

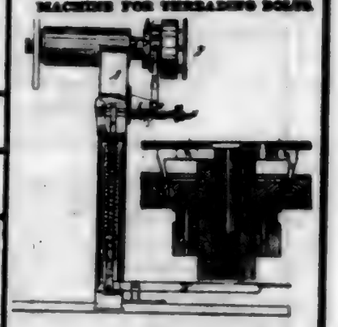
90,267, GEORGE K. THOMPSON.
PAINT-BRUSH.

90,268, THOS. THOMPSON.
ICE CLOSET.



90,269, WM. H. TOWERS.
WATER-PROOF SHOES.

90,270, S. CURTIS TRUBEE.
WINDOW-SUTTERS.



90,271, CHARLES VAN DE MARK.
COOKING-STOVE.

90,272, WM. A. TERRY.
CLOCK-CALENDARS.

90,273, NICHOLAS THOMAS.
MACHINE FOR TENDERING POSTS.

90,265, THEODORE VAN TASSELL, E. STARR POLLOCK. BOOTBLACKING-BOX HANDLE

90,266, ISAAC WAGNER. LIQUID-METERS.

90,267, PELAG WERNI. ROOFING-MATERIAL.

90,268, WILLIAM WERTS. MACHINE FOR SHRINKING TIRE.

90,269, J. S. WEST. LATHE-DOG.

90,270, C. G. WHEELER. FEED-REGULATOR.

90,271, GEO. W. YOUNT, F. P. REISTER, A. L. KERNODLE, WILLIAM YOUNT. CURTAIN-ROLLER.

90,272, JOHN ZIMMERMAN. SPIRAL-CURRENT WATER-WHEELS.

90,273, S. S. LAWS. PREVENTER FOR BORAX.

90,274, JAMES F. SPENCER, LOVIAS D. TOWSLEY. APPARATUS FOR CARBURETTING AIR.

90,275, LOUIS D. TREDWAY. SHOE-PEGS.

3,270, JACOB BATLE. PAINT-BRUSH.

3,271, JAMES McCORMICK. BREWING ALE, ETC.

3,272, WILLIAM F. RIPPON, GEO. A. JOHNSON. LAMP-SUSPENDER, &c.

3,273, MARSHAW SCOTT. SEATING.

3,274, CHARLES STETEFELDT. TREATING SILVER-ORES.

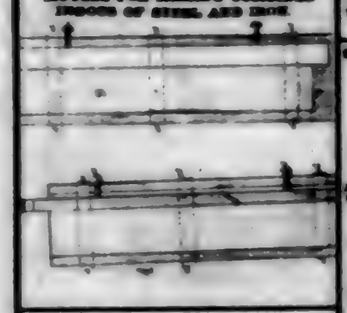
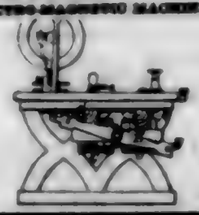
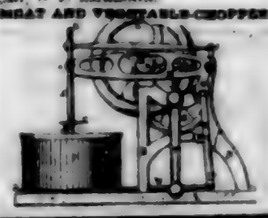
90,296, PETER E. DEDRICK. BALING-PRESSES.



No. 297, PETER E. DEDERICK. RAILING FENCES.



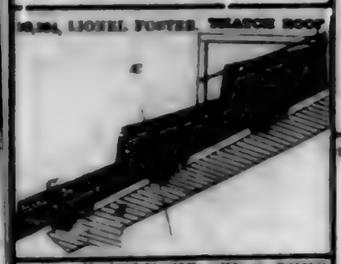
No. 298, JOHN H. HORNE. CHAIN OR BAND.



No. 299, PATRICK BOYLE. MOULDS FOR MAKING CONCAVED ROOFS OF STEEL AND IRON.

No. 300, A. E. IMPAM. ELECTRO-MAGNETIC MACHINES.

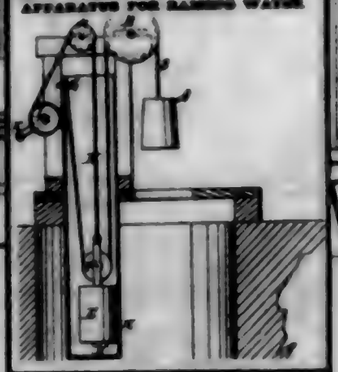
No. 301, H. F. EMERSON. MEAT AND VEGETABLE-CHOPPER.



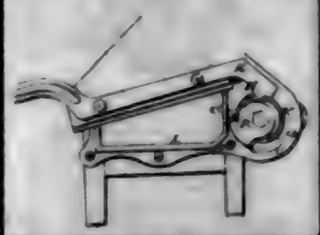
No. 302, AMASA J. FINCH. PRINTING CHASE.

No. 303, HIRAM PUTNEY. MACHINE FOR MORTISING STIRRUPS.

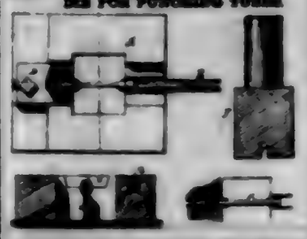
No. 304, LIONEL FOSTER. SEAMING ROOF.



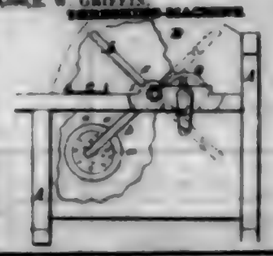
No. 305, H. GALMANN AND C. BUHR. JOIST PROTECTOR.



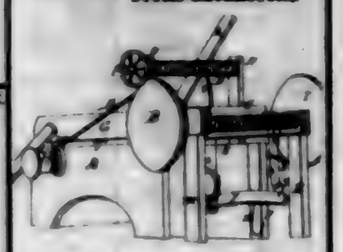
No. 306, SMITH GARDNER. COLORING MARBLE.



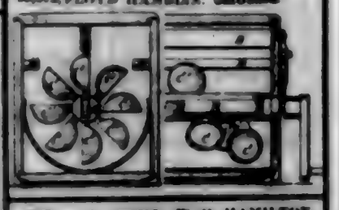
No. 307, J. L. GARLINGTON. APPARATUS FOR RAISING WATER.



No. 308, G. S. GARTH. STRAW-CUTTER.



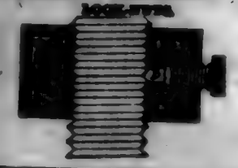
No. 309, JOHN GIBBS. PUNCH AND DIE FOR PUNCHING TUBES.



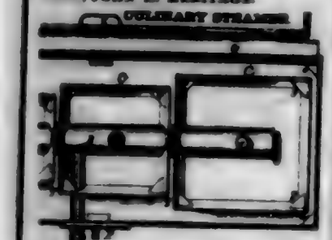
No. 310, E. W. GRIFFIN. THRASHING-MACHINE.

No. 311, ALBERT GUMMER. STUMP-EXTRACTOR.

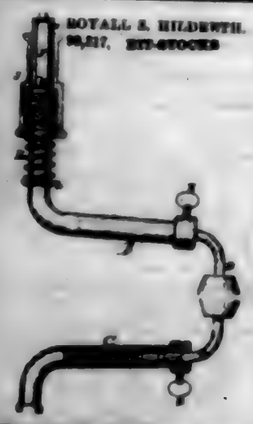
No. 312, FLOYD HAMBLIN. GRATER.



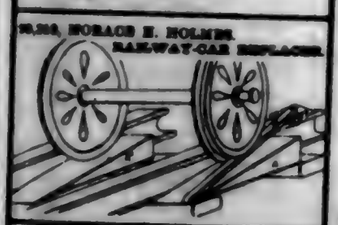
No. 313, W. G. HAMILTON. WATER-ELEVATOR.



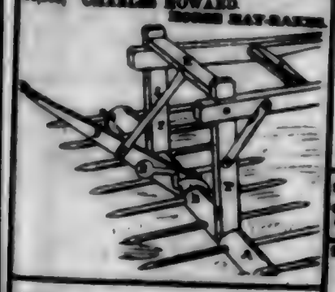
No. 314, J. P. HARLY. STREET-LAMP.



No. 315, GARET G. HERRMANN. LOCK-PINS.

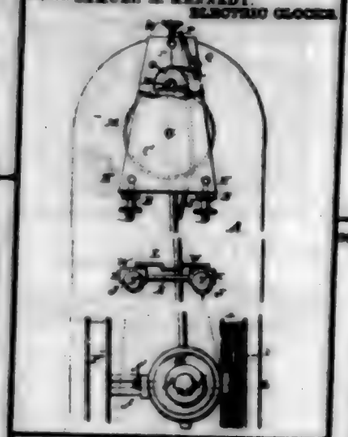


No. 316, JOHN H. HERITAGE. CULINARY STRAINER.

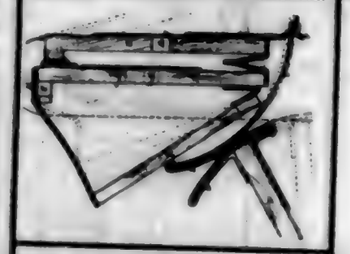


No. 317, ROYALL S. HILDRETH. SIT-STOCKS.

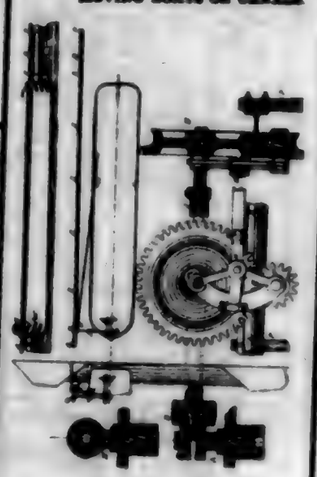
No. 318, HORACE E. HOLMES. RAILWAY-CAR REPLACER.



No. 319, CHARLES HOWARD. HORSE HAY-RAKES.



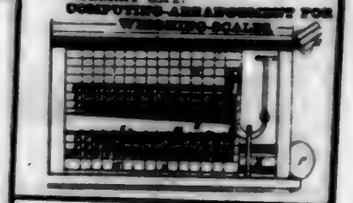
No. 320, J. E. JOHNSON. ELASTIC LANTERNS.



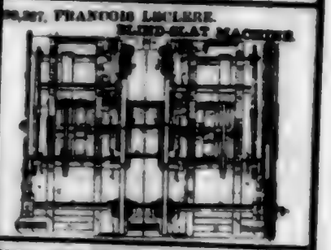
No. 321, SAMUEL A. KENNEDY. ELECTRIC CLOCKS.

No. 322, M. J. KERIGAN. BLOWING APPARATUS FOR ORGANS.

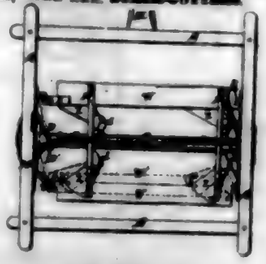
No. 323, W. R. KING. MACHINE FOR MOVING BOATS ON CANALS.



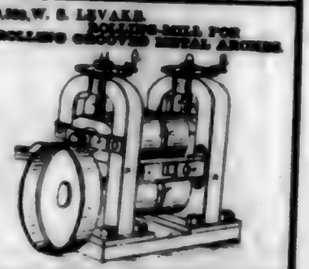
No. 324, WM. P. KIRKLAND. COMPOSITION FOR THE MANUFACTURE OF WATER, GAS, AND DRAIN PIPES.



No. 325, DAVID S. KLIEF. SAFE-LOCKING.



No. 326, H. D. LATHROP, ALBERT GAY. COMPUTING ARRANGEMENT FOR WEIGHING SCALES.

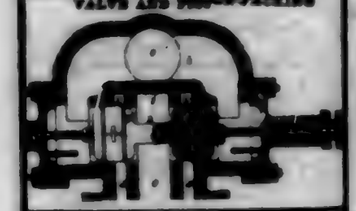


No. 327, FRANCOIS LEFEBVRE. BLIND-SLAT MACHINE.

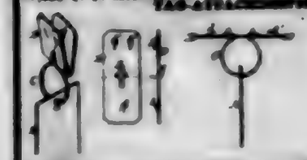
No. 328, JOEL LEE. SCALE-CUTTING.

No. 329, W. S. LEVAKE. ROLLING-MILL FOR ROLLING GROOVED METAL ARCHES.

No. 330, JACOB LEVY. BOLTS FOR DOORS.



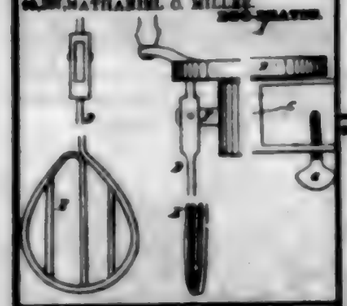
No. 331, WILLIAM H. LONG. HORSE HAY-RAKES.



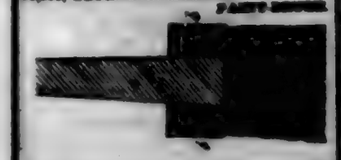
No. 332, ROBERT LOVE. COMPOSITION FOR PAINT.

No. 233, JOSEPH MARES.
VALVE AND PISTON-PACKING

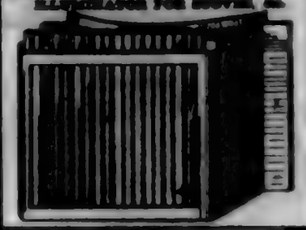
No. 234 T. P. MARSTON.
GAS-ATTACHMENTS.



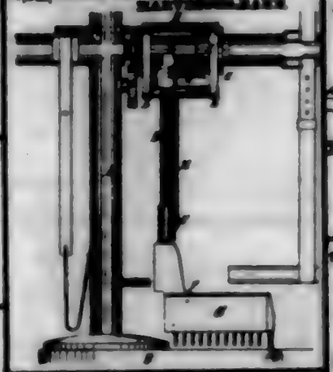
No. 235, JACOB McCLURE.
PENCIL-SHARPENING



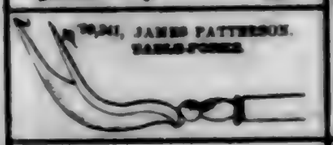
No. 236, W. MENDHAM.
PAPER FOLDING MACHINE.



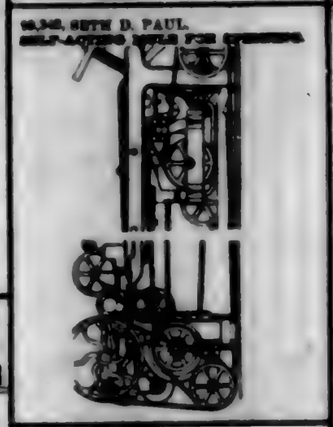
No. 237, NATHANIEL G. MILLER.
[illegible]



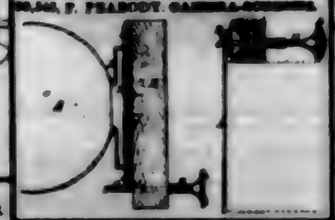
No. 238, GEORGE G. MORRIS.
PAINT-BRUSH.



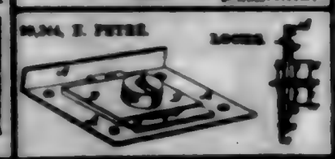
No. 239, BENJAMIN HOTT.
ILLUMINATOR FOR STOVES, &c.



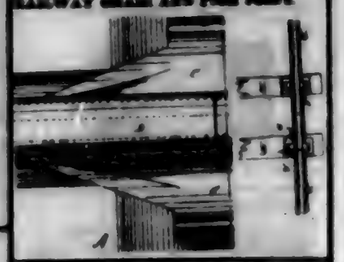
AARON PALMER.
No. 240, CHAS. W. PALMER.
HAY-[illegible]-RAKE.



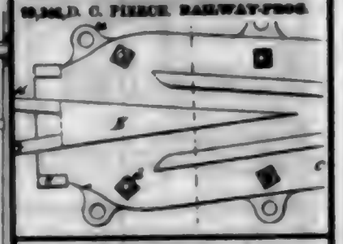
No. 241, JAMES PATTERSON.
RAILS-FORKS.



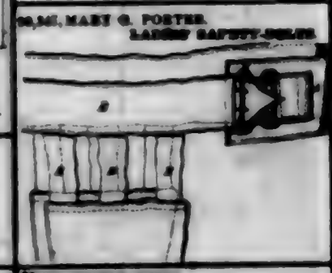
No. 242, SETH D. PAUL.
SELF-ACTING [illegible] FOR [illegible]



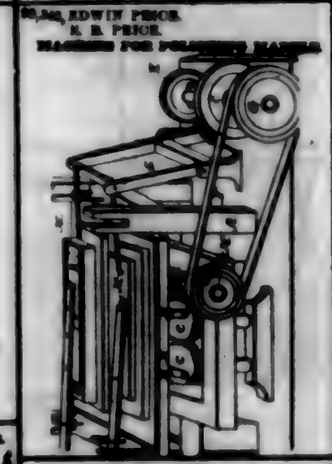
No. 243, P. PEABODY. CARRIER-SCREEN.



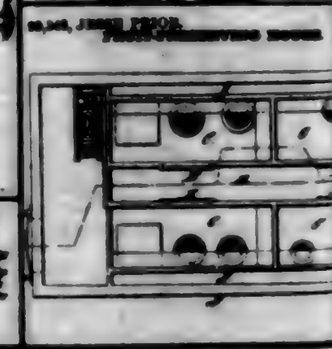
No. 244, E. PETER. [illegible]



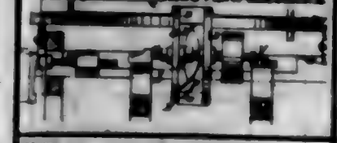
No. 245, D. C. PIERCE.
RAILWAY CHAIR AND PINS JOINT.



No. 246, D. C. PIERCE. RAILWAY-FROG.

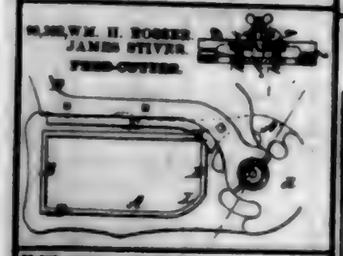


No. 247, MARY G. FOSTER.
LADDER SAFETY-[illegible].

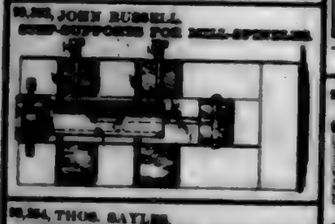


No. 248, EDWIN PRIOR.
E. B. PRIOR.
MACHINE FOR POLISHING HANDLES.

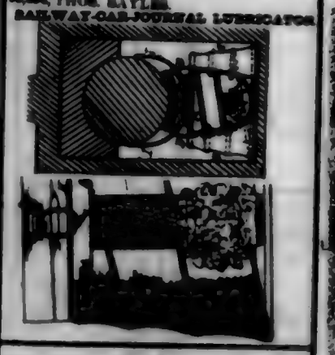
No. 249, JESSE PRIOR.
[illegible]



No. 250
W. G. RAOUL.
GROOVING-MACHINE.

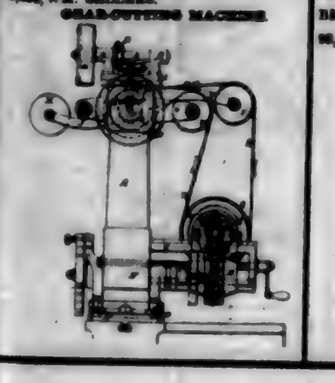


No. 251, W. G. RAOUL.
FARE-BOXES FOR RAILROAD-CARS.



No. 252, WM. H. ROGERS
JAMES STIVER
PIPE-CUTTER.

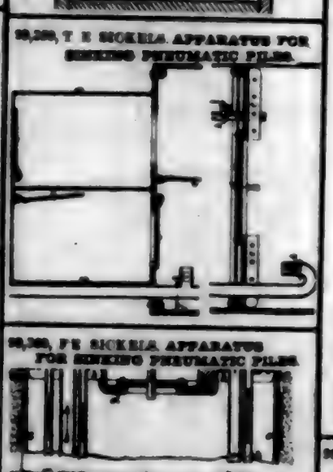
No. 253, JOHN RUSSELL.
[illegible]



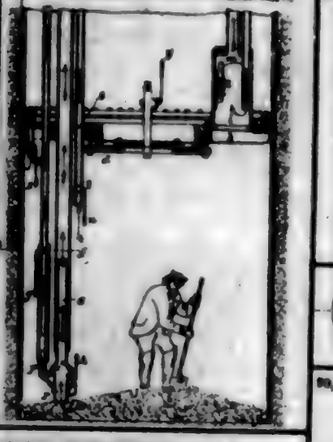
No. 254, THOS. SAYLES.
RAILWAY-CAR-JOURNAL LUBRICATOR.

No. 255, GUSTAVE SCHLUETER.
COMPOSITIONS FOR MOULDING FROM PLASTER OF PARIS.

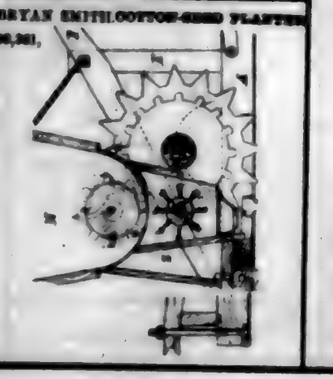
No. 256, WM. SELLERS.
GEAR-CUTTING MACHINE.



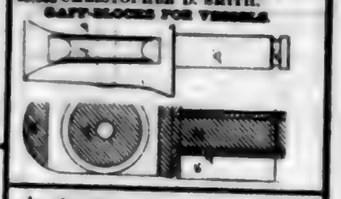
No. 257, ALEXANDER SWALES.
DEVICE FOR CONNECTING BOBBIN TO VEHICLES.



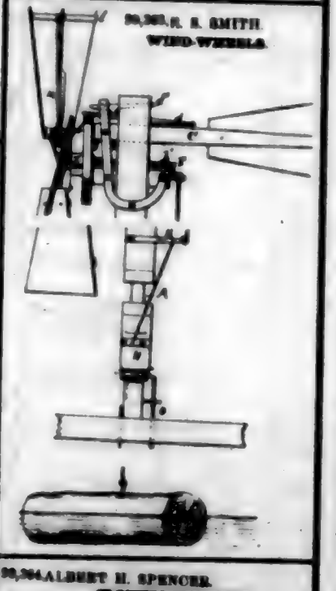
No. 258, GEO. W. SHAWE.
FIRE-ALARM SIGNAL-BOXES.



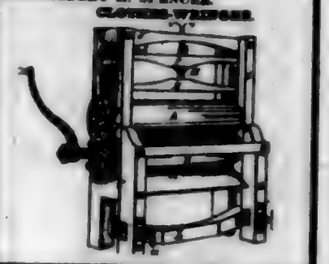
No. 259, T. S. SICKELS. APPARATUS FOR RAISING PNEUMATIC PILES.



No. 260, T. S. SICKELS. APPARATUS FOR RAISING PNEUMATIC PILES.

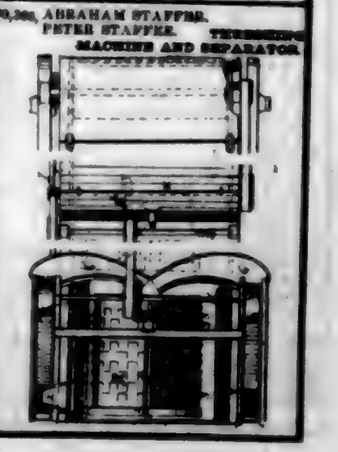


BRYAN SMITH. COTTON-SEED PLANTER.
No. 261,

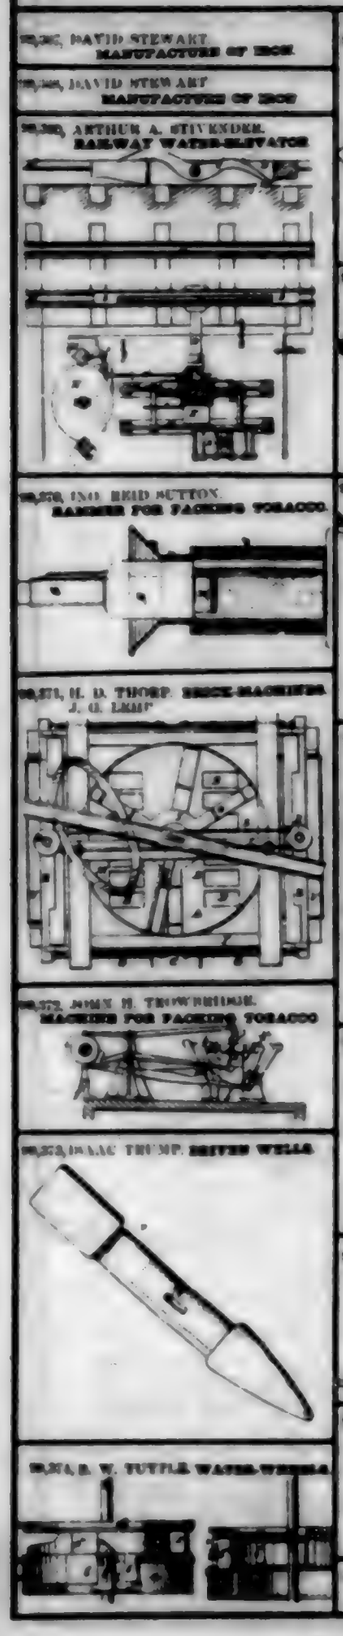


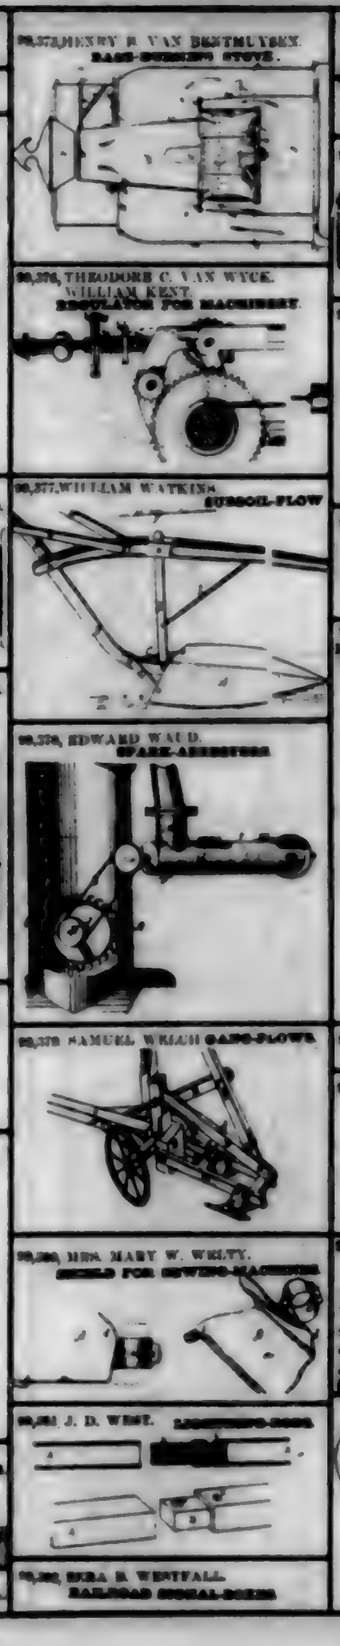
No. 262, CHRISTOPHER D. SMITH.
GAFF-BLOCKS FOR VESSELS.

No. 263, S. S. SMITH.
WIND-WHEELS.

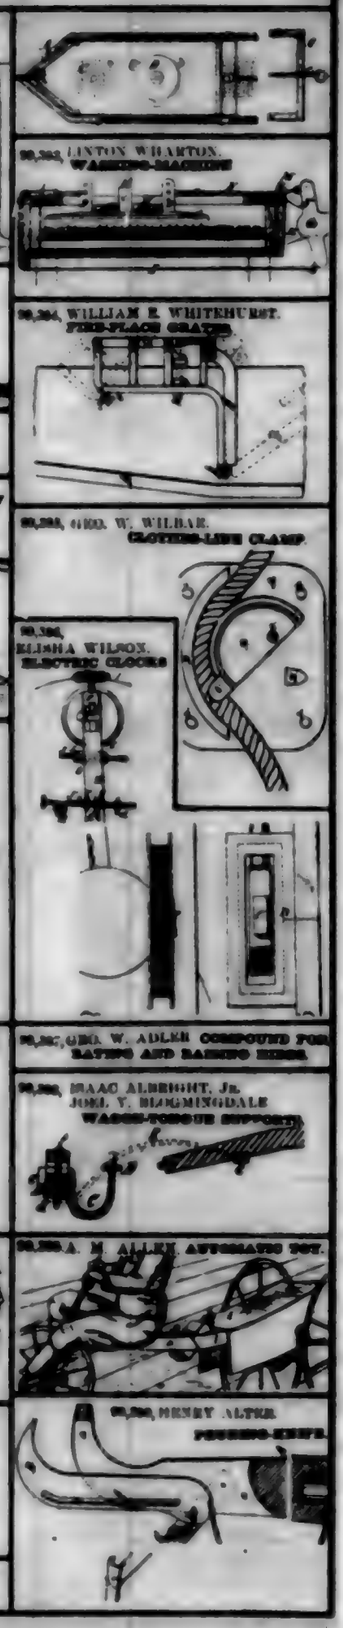


No. 264, ALBERT H. SPENCER.
CLOSING-WEDGES.

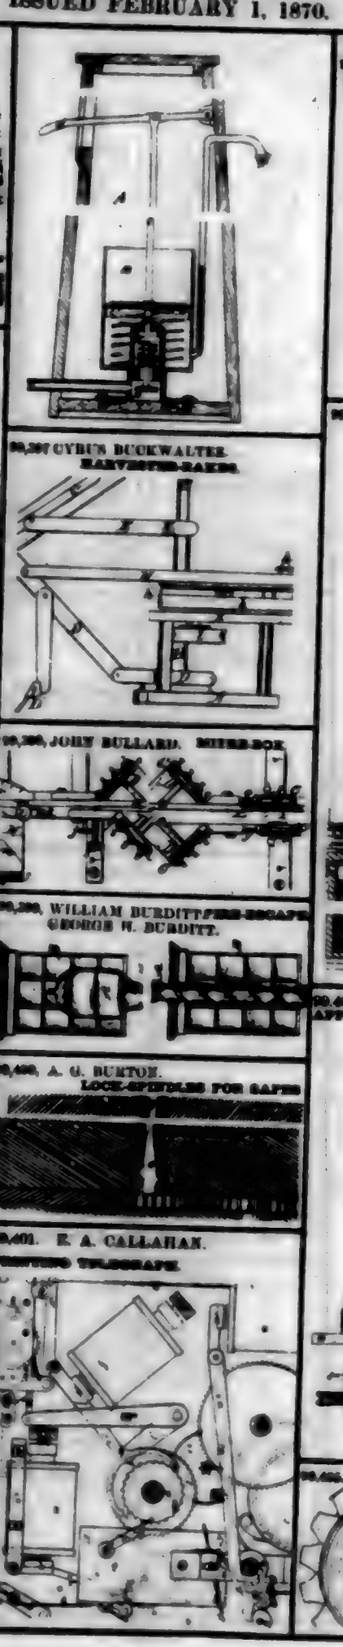


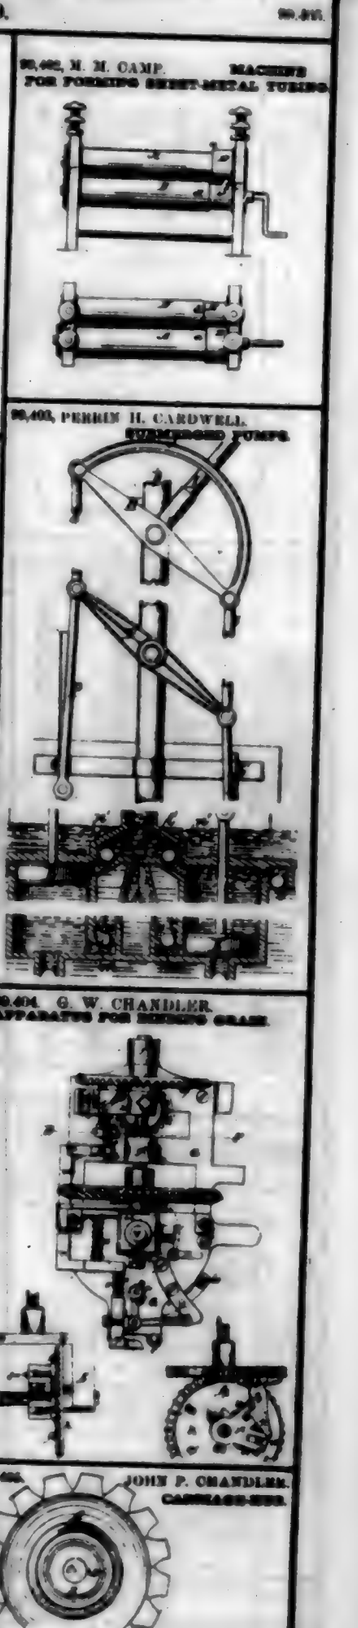


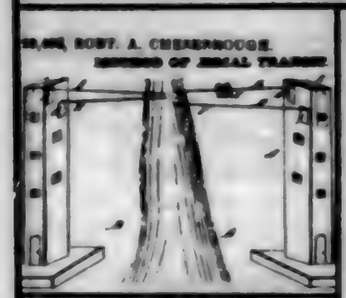
JOHN A. SPOONER, No. 265,
JOHN ELLERBY,
BUTTONS.

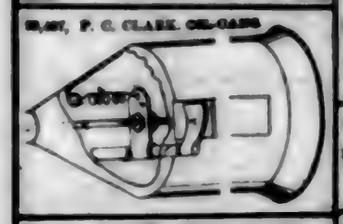


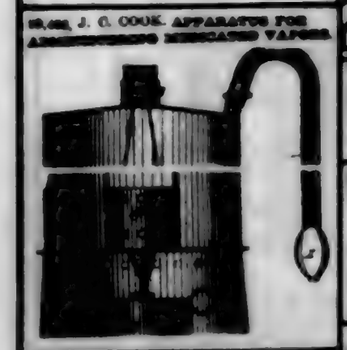
No. 266, ABRAHAM STAFFER.
PETER STAFFER.
TEDDING-MACHINE AND SEPARATOR.

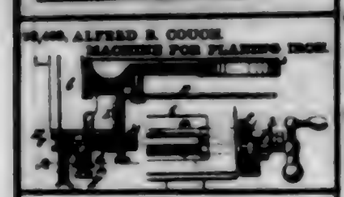


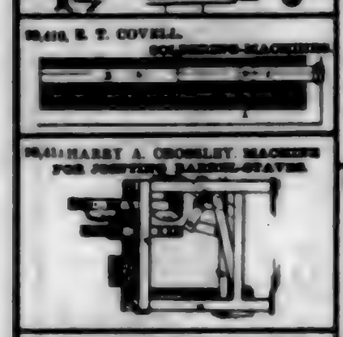


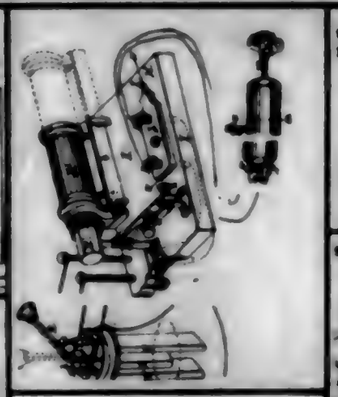


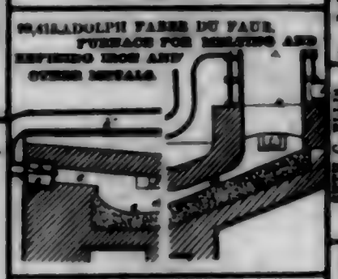


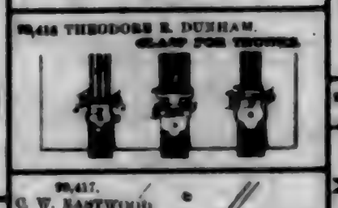


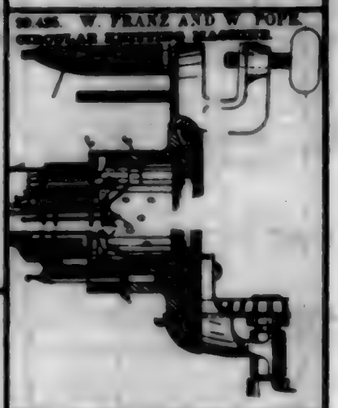


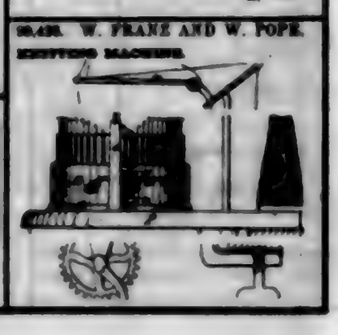


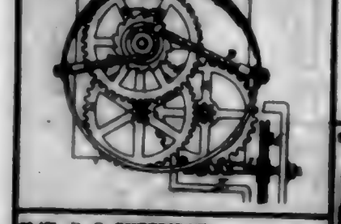


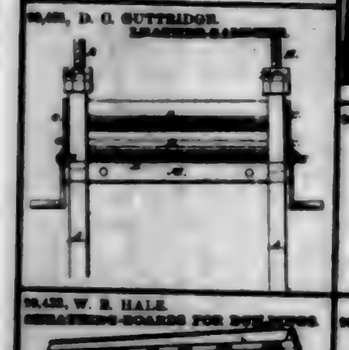


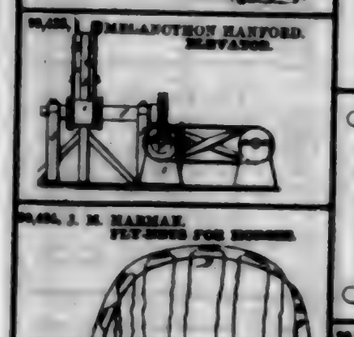


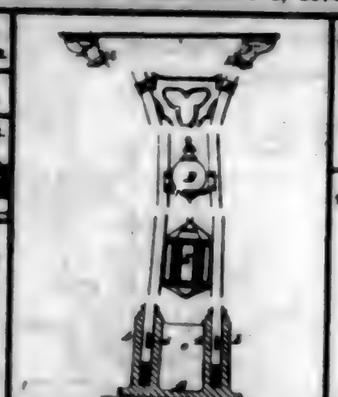


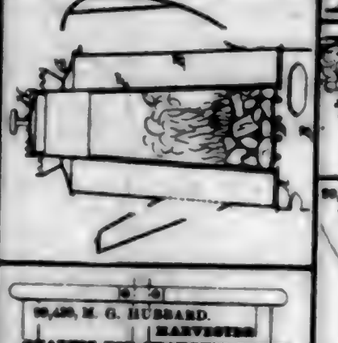


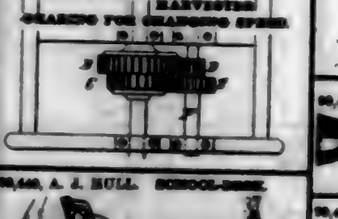


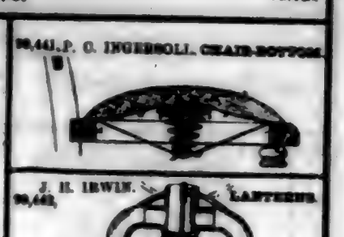


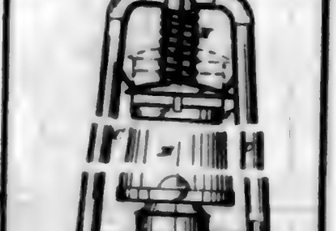


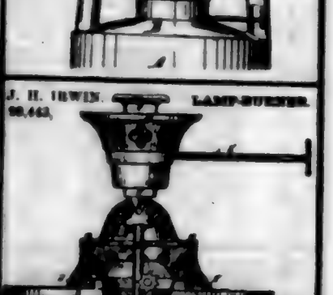


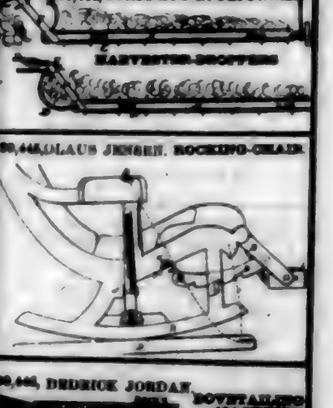












JAMES E. LARDELL.
LEROY H. SMITH. HAY-FORKS

PETER LOCKIE. WASHING-MACHINE

W. R. LOW AND A. ADAMS. HARVESTER.

CRAZIO LUGO.

JOHN McADAMS.

THOS. McMAHON.

FREDERICK MEYERS.

JAMES MONTGOMERY.

JOHN MORRAY.
WILLIAM OLINE, Jr.

J. P. MORLOT.

E. R. MORRISON.

D. A. MULLANE.
J. G. L. MURRAY.

DAVID MUNSON.

PETER MURPHY.

WILLIAM H. MURRAY.

J. NEWTON.
IRA BARFIELD.

FRED MORRIS.

NUMEN PACKARD.

C. E. PATRIC.

HENRY A. PEASE.

ISAAC PENNINGTON.

AURELIUS A. PERHAM. COMPOUND TOOL.

T. M. RICHARDSON. PLOUGHING-SET.

CHARLES F. PIKE. RAILWAY CATTLE-CAR.

A. K. RITTER. SHOULDER-BRACES.

JOSEPH P. POND. SELF-FEEDING WOOD AND COAL COOKING-STOVE.

E. ROBBINS. DECORATIVE SLAB FORMED FROM PLASTIC MATERIALS.

THOMAS ROBERTS. KNIFE-CLEANING MACHINE.

DANIEL B. PRATT. SPRING-HEADED SCREW-BOLT.

ADAM RAUCH. OIL-CLOSE CUTTER.

W. RHINELANDER. RAILWAY-CAR SPRING.

BRUNO RUDOLPH. ARRANGEMENT FOR HARDING GLOVES.

JEREMIAH RHOADS. CLAMP FOR FORMING HORSESHOE-CALKS.

JAMES P. RUSSELL. LAMPS.

P. B. RUSSELL. WAGON-JACK.

A. V. RYDER. HASP FOR TRUSS-LOCKS.

JUNIUS SCHENCK. METHOD OF PROTECTING THE BITS OF VULCANIZED INDIA-RUBBER OR CONDENSATION HOSE.

O. C. BRIGGS. HEAD-BLOCKS
GEO. SELDEN. FOR SAW-MILLS.

GIBSON SMITH. COMPOUND FOR COLORING AND PRESERVING THE HAIR.

MARSHALL P. SMITH.

JOB SMYTHE.
CHAUNCEY DEXTER. STOVE-PIPE SHELF.

J. G. SPRAGUE. HEDGE-TRIMMER AND STALK-CUTTER COMBINED.

H. L. STILES. BASE-BURNING PARLOR COOK-STOVE.

HENRY SWINEFORD.
SCAFFOLDS.

J. H. L. TUCK.
CORN-HARVESTER.

ROLLIN WHITE.
REVOLVING FIRE-ARMS.

ICHABOD B. TUTTLE.
MILK-TEMPERING AND COOLING APPARATUS.

WM. H. WHITELEY.
RAKES FOR HARVESTERS.

WILLM. STEER.

CHARLES WALL.
JOHN STEWART.
DRAWING-STANDS FOR FLAX RIMS.

GEO. C. TAFT.
TWEER-CUTTER.

GEO. C. TAFT.
MACHINES FOR DRILLING METALS.

DUNHAM WILKIN.
SHINGLE-MACHINE.

W. G. WARD.
BREECH-LOADING FIRE-ARMS.

GEO. W. TALBOT.
DYES FOR COLORING WOOL.

THEODORE D. TEAL.
PAINT FOR SHIPS' BOTTOMS.

JOHN HENRY THOMAS.
SEED-SOWER.

WILLIAM WILLIAMS.
SWIVEL-SHACKLE.

T. T. THORNE.
G. T. THORNE.
COTTON-PLANTERS.

CHARLES TOPTAN.
MANUFACTURE OF GAS FROM PETROLEUM.

J. WALL WILSON.
CAB-BRAKE AND STARTER.

THOS. WRIGHT.
BROOM FOR STABLES.

CHARLES BROWN.
BOOT-JACK.

HUGH YOUNG.
JAMES L. YOUNG.
STONE-CUTTING MACHINE.

D. R. AVERILL.
VARNISHES.

D. R. AVERILL.
THE MANUFACTURE OF VARNISHES.

ADAM WINGARD.
PADDLE-WHEELS.

HUGH YOUNG.
JAMES L. YOUNG.
TOOL FOR CUTTING STONE.

ISAAC BUSSEY.
COOKING-STOVE.

E. C. RUSSELL.
TREATMENT OF LEATHER.

WM. C. SCHMIDLIN.
J. W. DRISCOLL.
REFLECTOR FOR LAMPS.

EDWARD WRIGHT.
SELF-ACTING MULES FOR SPINNING.

ED. H. SITEMAN.
RAILWAY-BRAKE SHOE.

MRS. HANNAH G. SUPLEE.
NEEDLE FOR SEWING-MACHINES.

HANNAH G. SUPLEE.
NEEDLE FOR SEWING-MACHINES.

F. B. SESSIONS.
SAMUEL A. KNOX.
MOULD-BOARD FOR PLOWS.

GEO. B. FIELD.
H. L. HOTCHKISS.
PRINTING-TELEGRAPHS.

ILLUSTRATIONS OF PATENTS

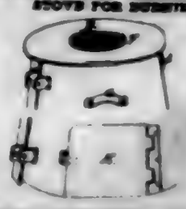
MODE OF COVERING MOLDS AND OTHER ARTICLES WITH A METALLIC SURFACE.



90,801, DAVID ANDERSON.
PADDLE-WHEELS.

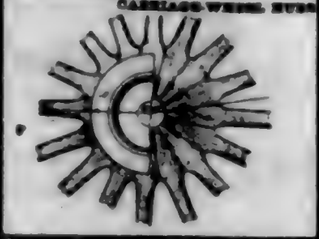
90,802, PEREGRINE WHITE.
LUBRICATOR FOR BEARINGS OF SHAFTS.

90,803, HENDERSON WILLARD.
STOVE FOR BURNING STUMPS.

90,804, GEO. G. WISANS.
ELEVATING APPARATUS.

90,805, EDWARD J. WORCESTER.
DRILLING-MACHINE.

90,806, W. H. YOUNG.
FARE-BOXES FOR STREET-CARS.



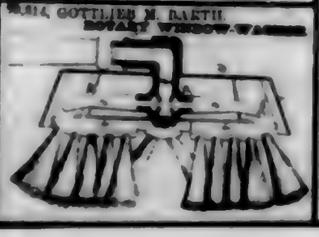
90,807, JOHN ADSTERDAM. PROCESS OF WELDING CAST OR REMELTED STEEL.

90,808, MOSES L. ANDREW.
PLANING-MACHINES.

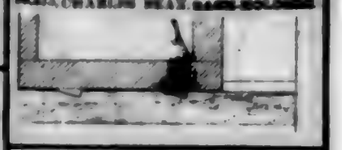
90,809, SIMEON ATHA.
CARRIAGE-WHEEL HUBS.

90,810, LORING ATWOOD.
EDWARD RIPLEY.
WOOD-TURNING LATHE.

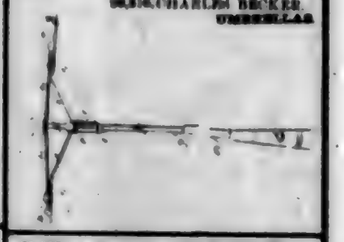
90,811, JACOB M. AUSTIN.
SOAP MIXTURE.



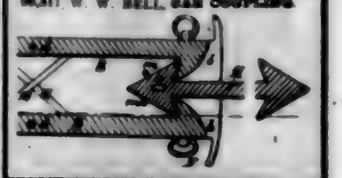
90,812, J. W. BALDWIN. GLOBE-VALVES.



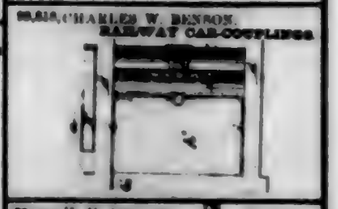
90,813, C. M. BANKS.
SPRING FOR RAILWAY-CARS.



90,814, GOTTLIEB M. BARTH.
ROTARY WINDOW-WASHER.

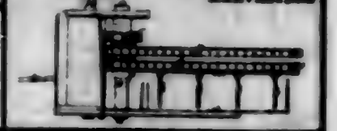


90,815, CHARLES BEAN. GAME-BOLDERS.

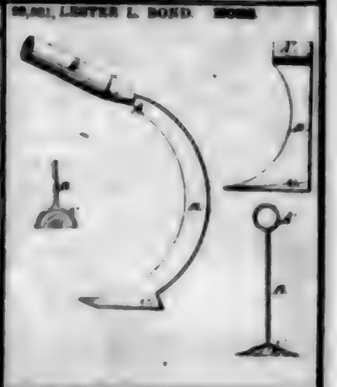


90,816, CHARLES BECKER.
UMBRELLAS.

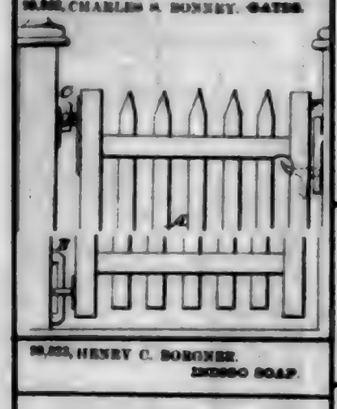
90,817, W. W. BELL. CAR COUPLING.



90,818, CHARLES W. BENSON.
RAILWAY CAR-COUPLINGS.

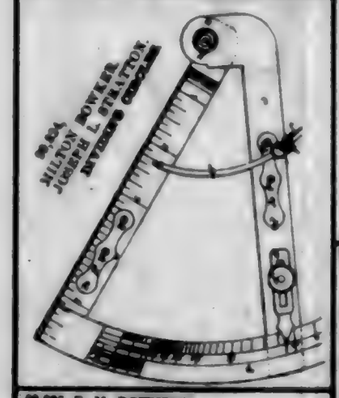


90,819, H. H. BIGARD.
E. H. KELLOGG.
C. A. PERATINE.
CHURNS.

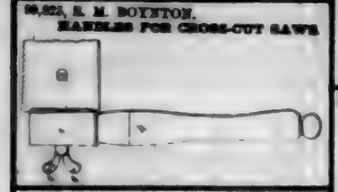


90,820, SAMUEL M. BINGMAN.
CORRUGATED IRON, AND RAKE FOR HARVESTING.

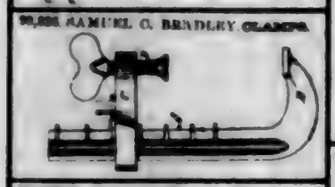
90,821, LESTER L. BOND. HOES.



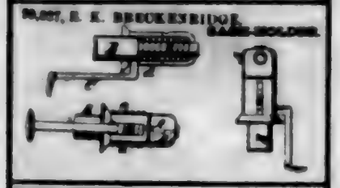
90,822, CHARLES S. BONNEY. GATES.



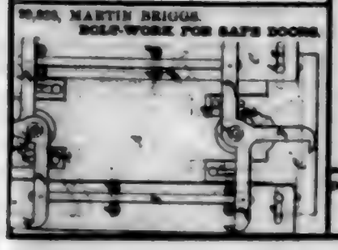
90,823, HENRY C. BORGNER.
INDIGO SOAP.



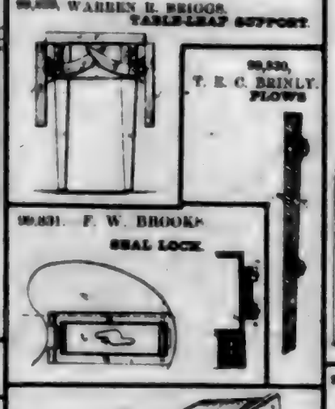
90,824, MILTON POWER,
JOSEPH L. STANTON.
BRIDGE CHECK.



90,825, E. M. BOYNTON.
HANDLES FOR CROSS-CUT SAWS.

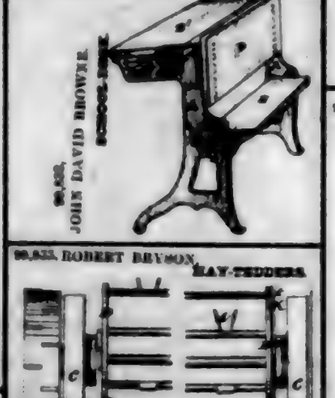


90,826, SAMUEL C. BRADLEY. CLAMPS.

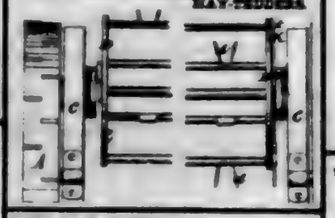


90,827, E. K. BRECKENRIDGE.
RAIL-BOLDER.

90,828, MARTIN BRIGGS.
BOLT-WORK FOR SAFE DOORS.



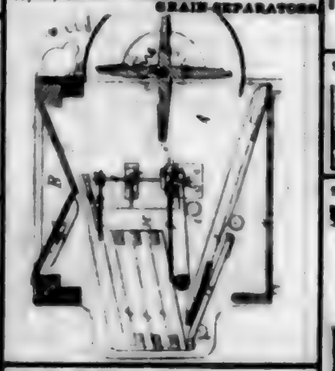
90,829, WARREN R. BRIGGS.
TABLE-LEAF SUPPORT.



90,830, T. E. C. BRINLY.
PLOWS.

90,831, F. W. BROOKS.
SEAL LOCK.

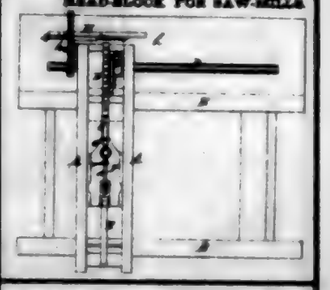
90,832, JOHN DAVID BROWNE.



90,833, ROBERT BRYSON.
HAY-TEDDERS.

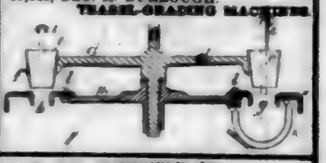
90,834, H. H. BUCHANAN.
BRIDLE.

90,835, HIRAM BURDICK.
GRAIN-SEPARATORS.



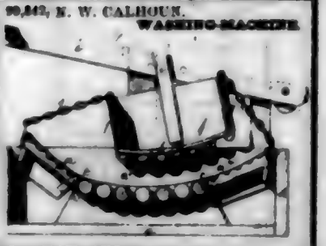
90,836, O. S. BURGER, Jr.
WASHING-MACHINE.

90,837, THOMAS BURGIN.
CURTAIN-FIXTURE.

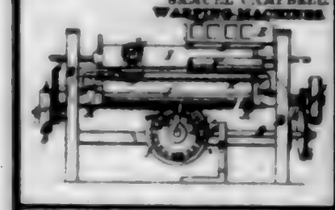


90,838, JOHN H. BURKET.
GEORGE BURKET.
HEAD-BLOCK FOR SAW-MILLS.

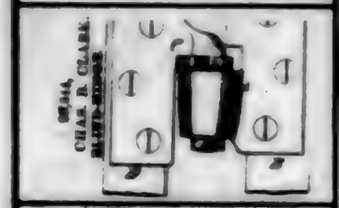
90,839, W. H. BURNS.
BOILER FURNACES AND FLUES.



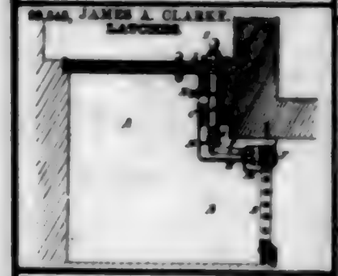
90,840, GEO. A. BURROUGH.
TEASEL-GRADING MACHINE.



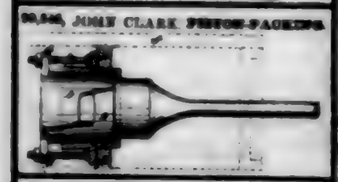
90,841, S. B. BUSHFIELD, Jr.
SLATE-FRAMES.



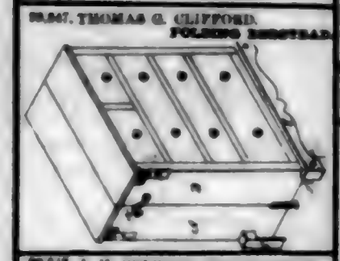
90,842, N. W. CALHOUN.
WASHING-MACHINE.



99,843. DUNCAN McFARLANE, SAMUEL CAMPBELL. WARPING-MACHINE.

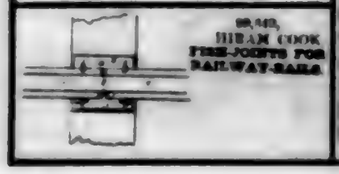


99,844. CHAS. B. CLARK. BLIND-HINGE.

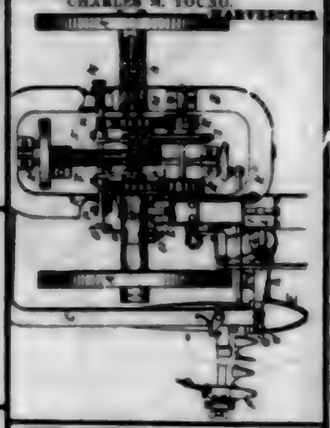


99,845. JAMES A. CLARKE. LASTING.

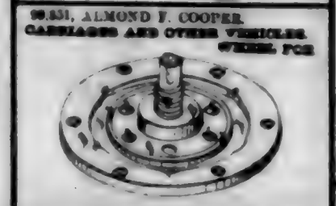
99,846. JOHN CLARK. PISTON-PACKING.



99,847. THOMAS G. CLIFFORD. FOLDING BEDSTEAD.

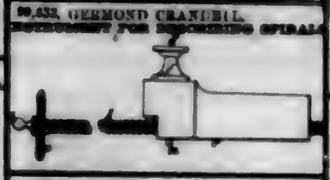


99,848. J. H. COLE. DIE AND PLUNGER.



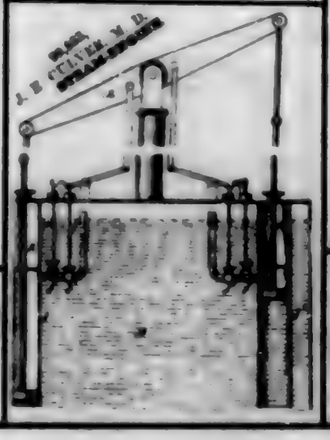
99,849. HIRAM COOK. FISH-JOINTS FOR RAILWAY-BARS.

99,850. GRANT T. COOLMAN, CHARLES M. YOUNG. HARVESTERS.



99,851. ALMOND F. COOPER. CARRIAGES AND OTHER VEHICLES. WHEEL FOR.

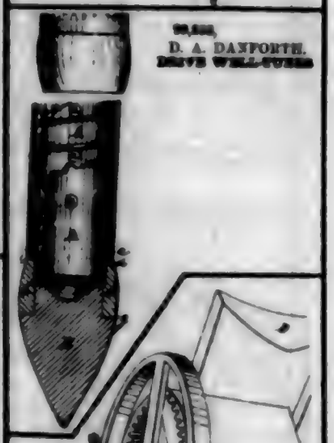
99,852. RICHARD D. COX. BRICK-KILN.



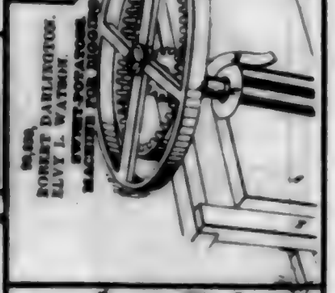
99,853. GERMOND CRANEBIL. INSTRUMENT FOR DESCRIBING SPIRALS.

99,854. JOHN D. CROCKER. PICTURE-FRAME FASTENING.

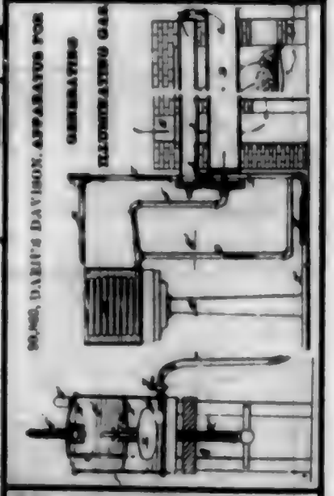
99,855. J. B. CRAVEN, JR. STEAM-ENGINE.



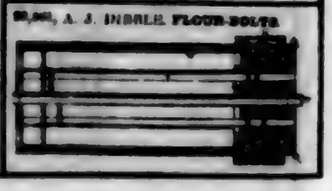
99,856. THOMAS H. CURREY. IMPROVED PAINT.



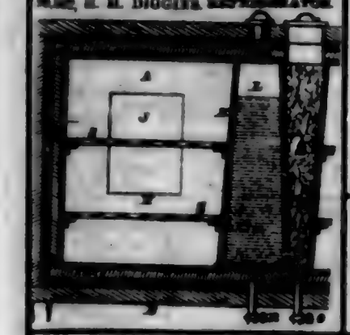
99,857. JOHN S. DAGGETT. TO FLOORS OF RAILROAD-CARS. DEVICE FOR ATTACHING SEATBOARDS.



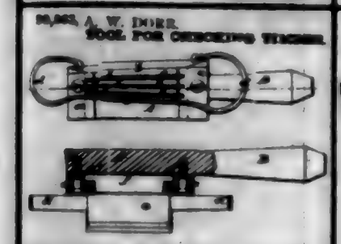
99,858. D. A. DANFORTH. DRIVE WELL-TUBES.



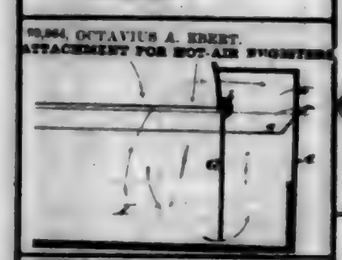
99,859. ROBERT DARLINGTON, ELVY L. WATSON. [illegible]



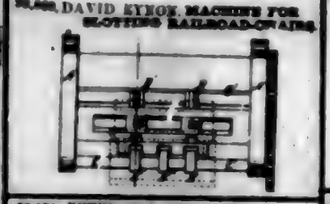
99,860. DARIUS DAVISON. APPARATUS FOR GENERATING GAS FOR ILLUMINATING PURPOSES.



99,861. A. J. DEBOLT. FLOOR-BOLTS.

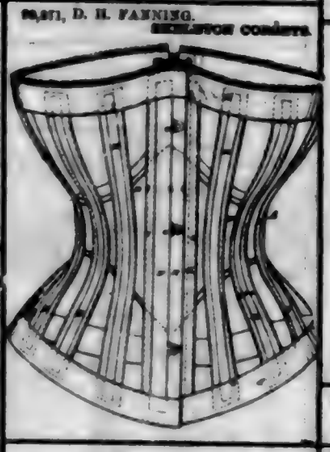


99,862. H. M. DIGGLES. REFRIGERATOR.

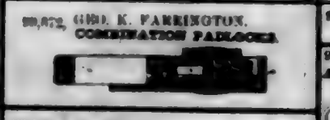


99,863. A. W. DORR. HOOK FOR CHECKING TRACES.

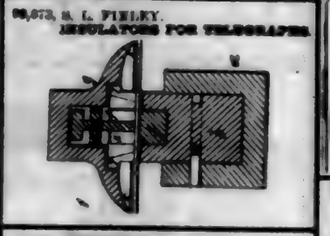
99,864. OCTAVIUS A. EBERT. ATTACHMENT FOR HOT-AIR FURNACES.



99,865. DAVID EYNON. MACHINE FOR MORTISING RAILROAD-CHAIRS.

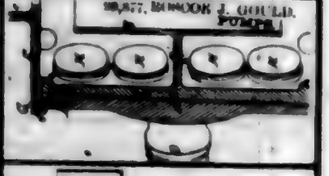


99,866. PETER FALARDO, GEO. H. SNOW. HAND CLOTHES-WASHER.

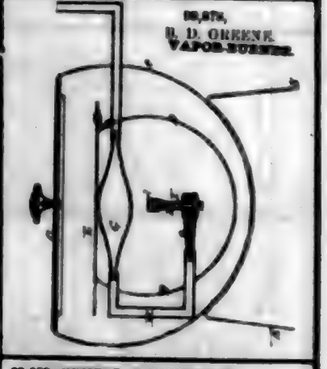


99,867. D. H. FANNING. SKELETON CORSETS.

99,868. GEO. K. FARRINGTON. COMBINATION PARLOCKS.

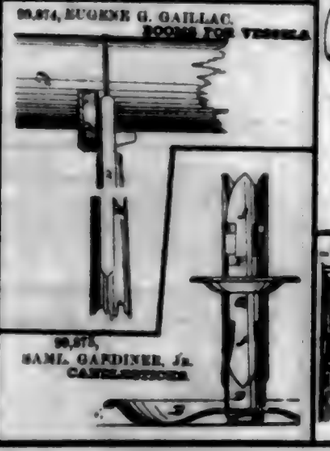


99,869. H. L. FINLEY. INSULATORS FOR TELEGRAPHS.



99,870. R. H. GILBERT. BLOWING APPARATUS.

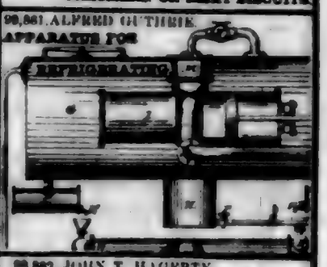
99,871. BUNKER J. GOULD. PUMPS.



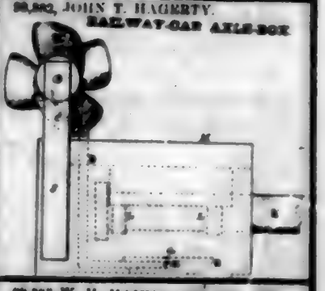
99,872. B. D. GREENE. VAPOR-BURNER.

99,873. ERNEST GREENFIELD. MANUFACTURE OF LOZENGES AND CONFECTIONERY.

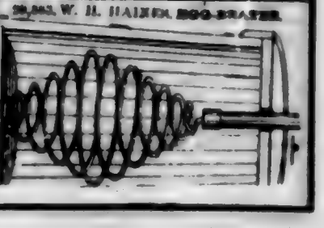
99,874. EUGENE G. GAILLAC. BOOTS FOR VESSELS.



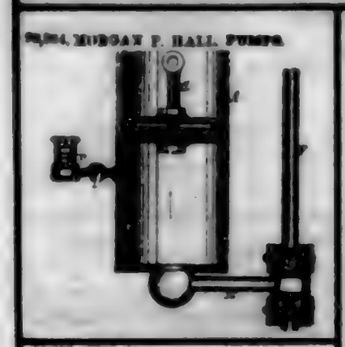
99,875. SAML. GARDINER, Jr. CANE-SOCKET.



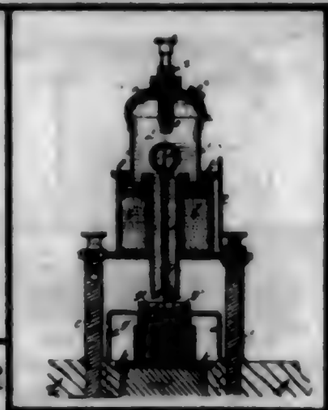
99,876. ERNEST GREENFIELD. CRACKERS OR MEAT BISCUITS.



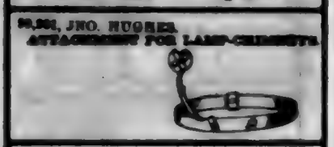
99,877. ALFRED GUTHRIE. APPARATUS FOR REFRIGERATING.



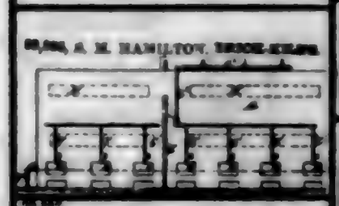
99,878. JOHN T. HAGERTY. RAILWAY-CAR AXLE-BOX.

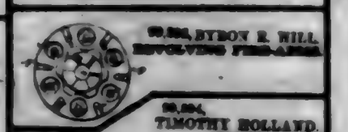


99,879. W. H. HAINES. EGG-BEATER.



MORGAN P. HALL. PUMPS.



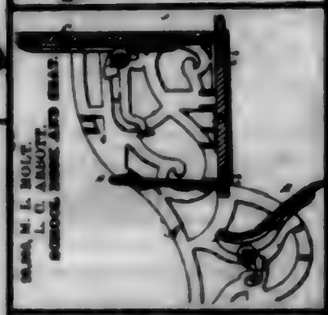


W. T. HOWARD.
OLIVER REEDER.

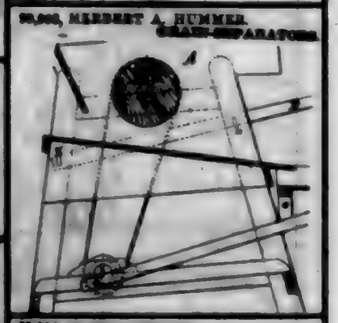
JNO. HUGHES.

A. M. HAMILTON. BRICK-KILNS.

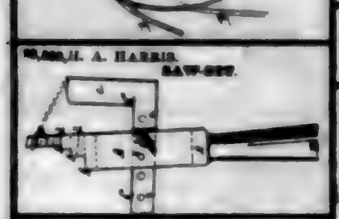
BYRON E. HILL.



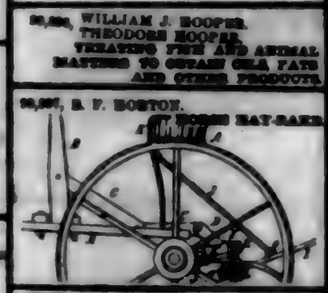
TIMOTHY HOLLAND.



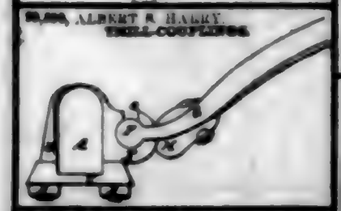
EDWIN JAMES HULBERT.
E. AUBIN.



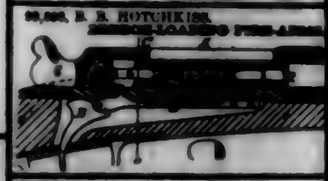
A. M. HAMILTON.



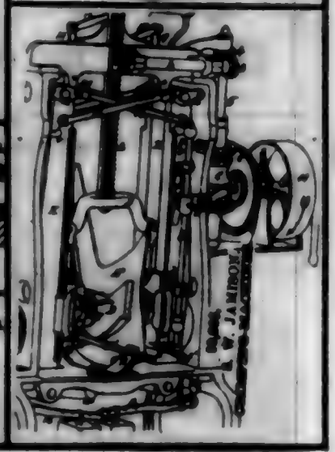
HERBERT A. HUMMER.



H. A. HARRIS.



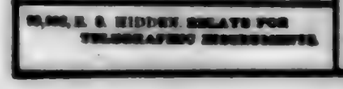
WILLIAM J. HOOPER.
THEODORE HOOPER.



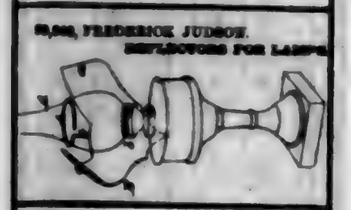
GEORGE H. JACKSON.

ALBERT S. HARRY.

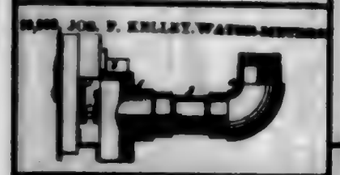
E. B. HOTCHKISS.



T. S. HATTERSLEY.

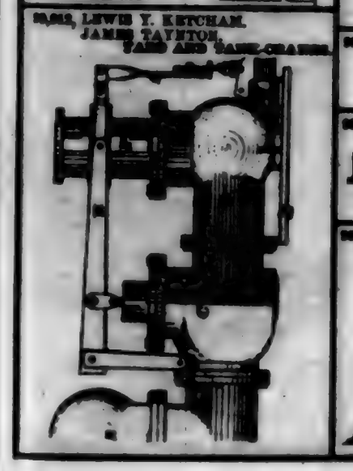


E. B. HOTCHKISS.

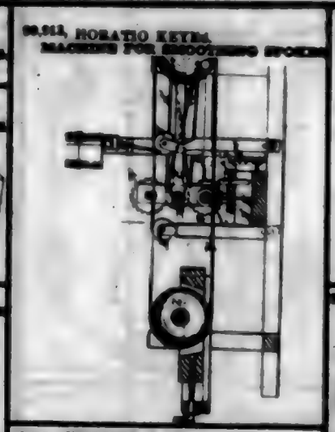


E. S. HIDDEN.

HENRY M. JOHNSTON.

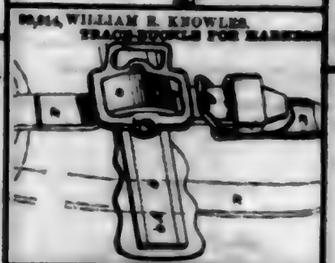


FREDERICK JUDSON.

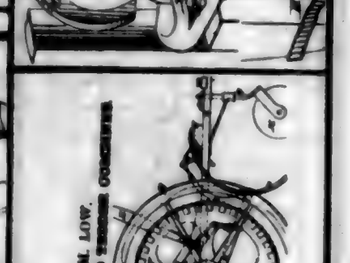


JOS. P. KELLEY.

JAMES B. KNIGHT.



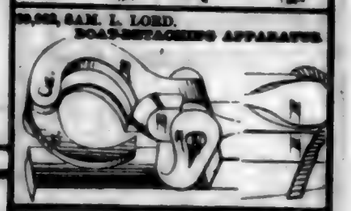
JAMES KEER.



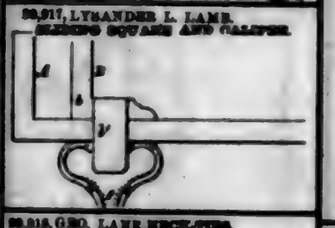
HORATIO KEYES.

CYRUS LITTLE.

WILLIAM B. KNOWLES.

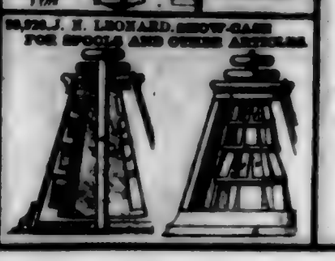


G. A. KNOWLTON.

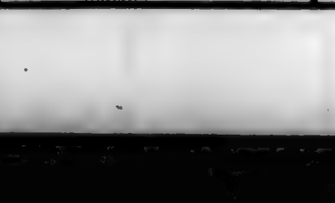


JOHN G. KRICHBAUM.

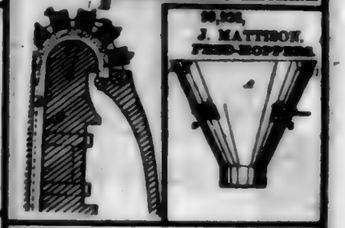
SAM. I. LORD.



J. H. LOW.

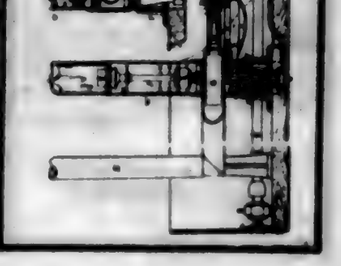


LYSANDER L. LAMB.



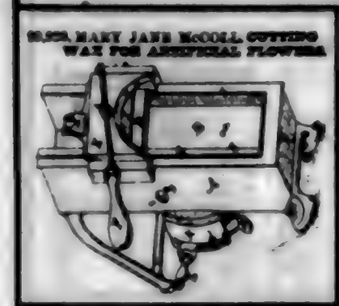
GEO. LANE.

M. LANGMORE.

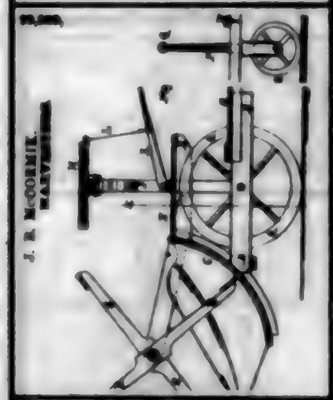


J. H. LEONARD.

ORAZIO LUGO.

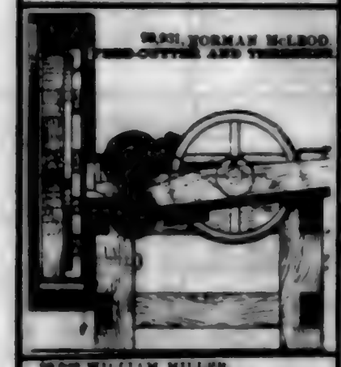


JAS. W. MARTIN.



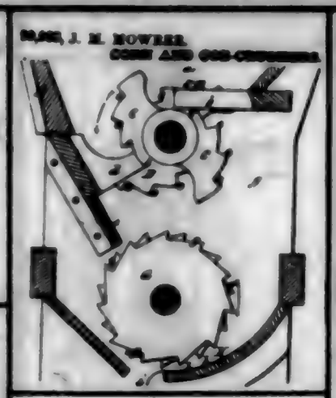
J. MATTISON.

HIRAM S. MAXIM.



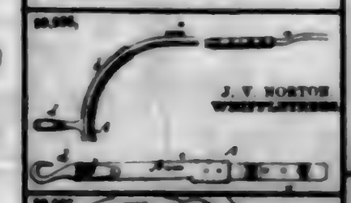
MARY JANE McCOLL. CUTTING WAX FOR ARTIFICIAL FLOWERS.

J. R. McCORMICK. REAPING-MACHINE.

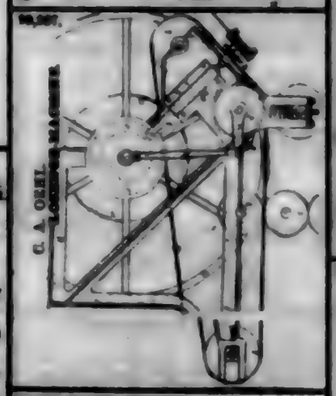


THOS. J. McHART. ARTIFICIAL CORNICE.

NORMAN McLEOD. CUTTER AND THRESHER.

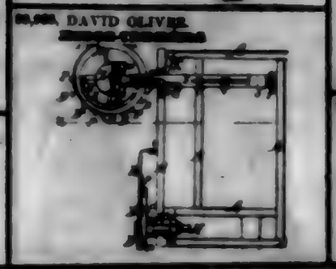


WILLIAM MILLER. WEATHER-STRIP.

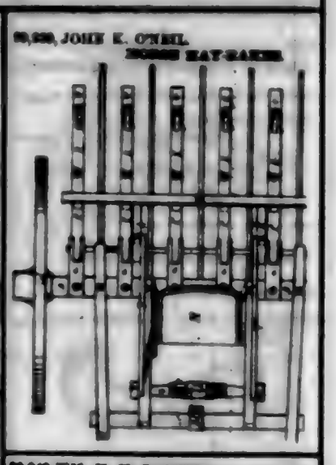


J. M. MOWER. CORN AND COB-CRUSHER.

C. MUIR. STOVE LINING AND FIRE BRICK.



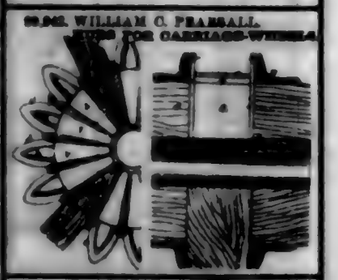
J. MURPHY. MANUFACTURE OF INDIA RUBBER AND GUTTA PERCHA GOODS.



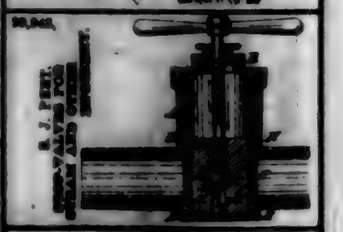
J. V. NORTON. WHIFFLETREES.

C. A. OSEL. LOOM FOR CARPET-WEAVING.

DAVID OLIVER. HORSE-CHECK.

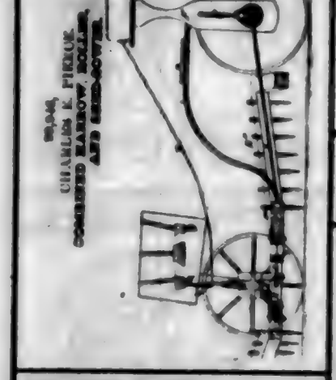


JOHN E. O'NEIL. HORSE HAY-RAKE.



WM. H. H. PALMER. SHUTTLE-MACHINE.

EDWARD PARKER. SCAFFOLD BRACKETS.

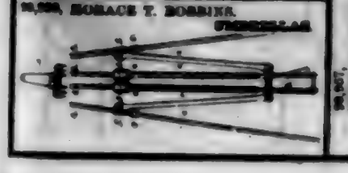


WILLIAM C. PEARSALL. HUB FOR CARRIAGE-WHEELS.

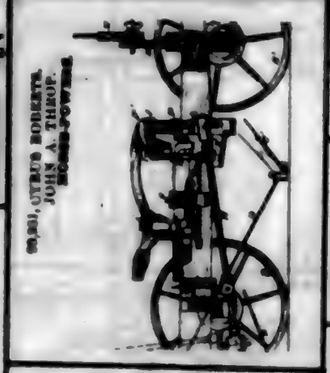
A. J. PERO. STEAM-VALVES FOR STEAM AND OTHER ENGINES.

ANTHONY PEPLE. PREPARING CERTAIN KINDS OF COTTON-WASTE FOR CLEANING MACHINERY.

CHARLES E. PIERCE. COMBINED HARROW AND ROLLER.

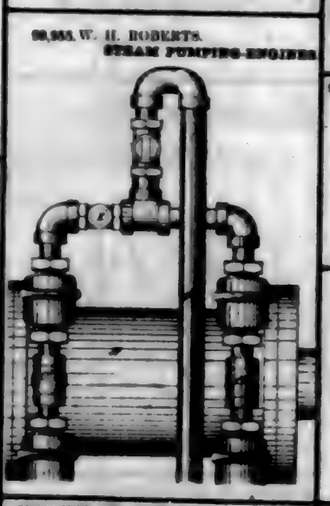


ALMON B. PRESTON. HAY-LOADER.

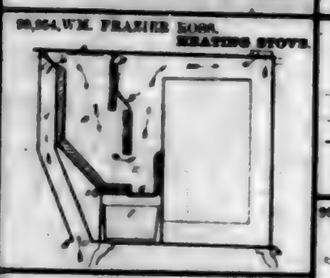


ED. RANDOLPH. RAILWAY-RAIL SPLICE.

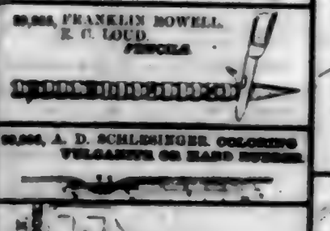
DEXTER REYNOLDS. PROCESS AND APPARATUS FOR THE MANUFACTURE OF SALT.



HORACE T. ROBBINS. TURNTABLE.

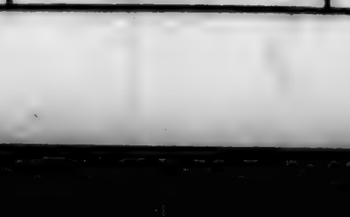


CYRUS ROBERTS, JOHN A. THROP. THRASHING-MACHINE.



R. J. ROBERTS. PLATED SPRINGS.

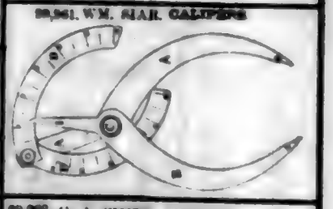
W. H. ROBERTS. STEAM PUMPING-ENGINES.



WM. FRAZIER ROSS. HEATING STOVE.

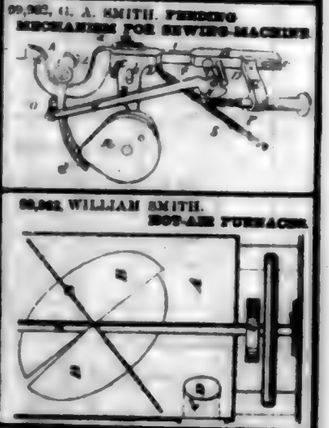
FRANKLIN ROWELL, E. C. LOUD. FENCES.

A. D. SCHLESINGER. COLORING VULCANITE OR HARD RUBBER.



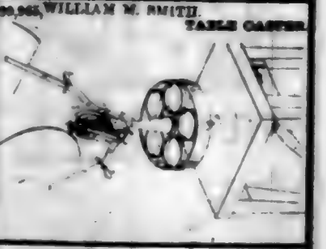
THOMAS SHAW. APPARATUS FOR FORGING METALS.

GEORGE V. SHEFFIELD, JOHN A. SHEFFIELD. MEDICAL COMPOUND.

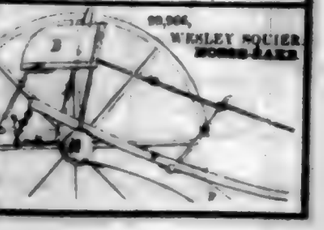


NICHOLS SHELTON. CRUTCH.

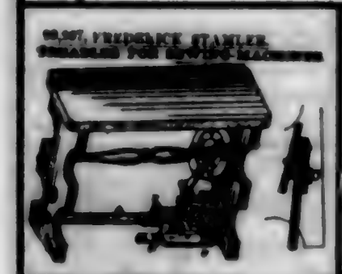
WM. SIAR. CALIPERS.



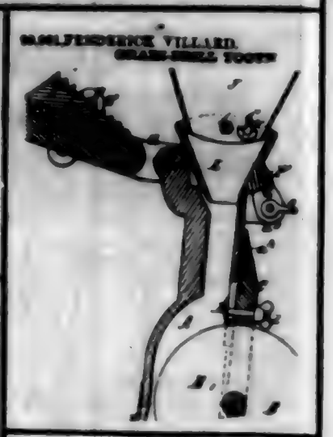
G. A. SMITH. FEEDING MECHANISM FOR SEWING-MACHINE.



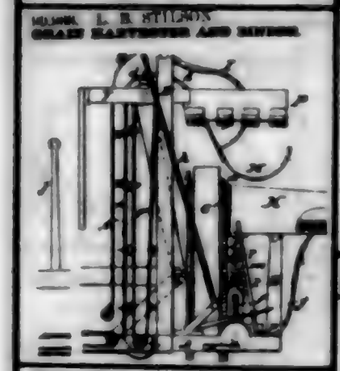
WILLIAM SMITH. BOG-AIR FURNACE.

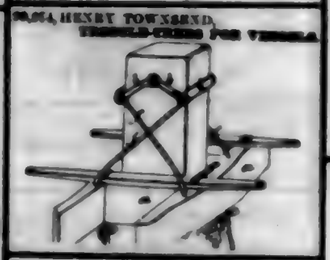


WILLIAM M. SMITH. COTTON-BALE TIES.

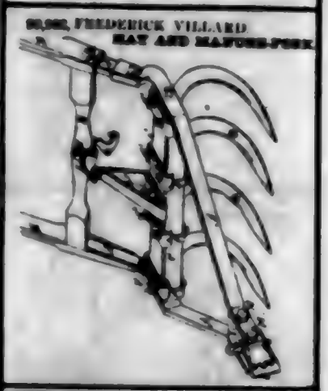


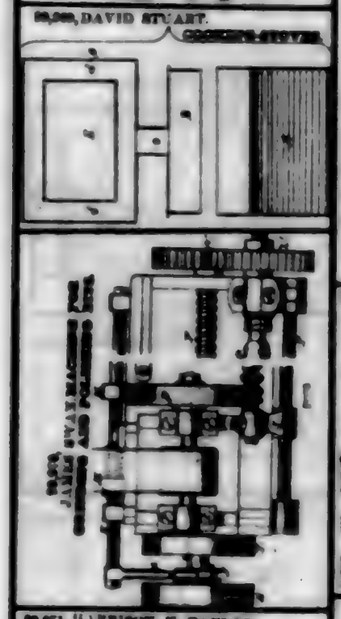
WILLIAM M. SMITH. TABLE CASTER.

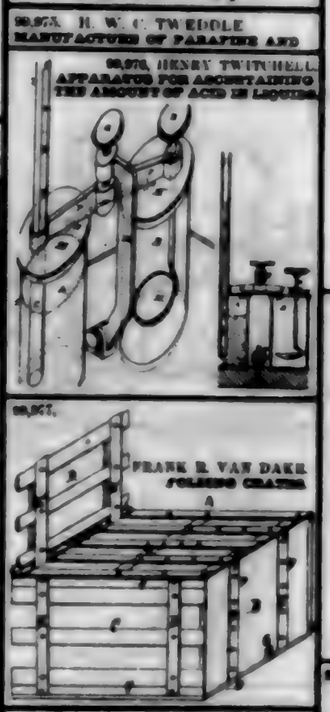


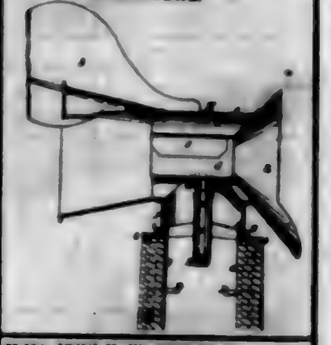


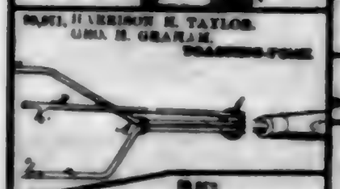
WESLEY SQUIER. HORSE-RAKE.

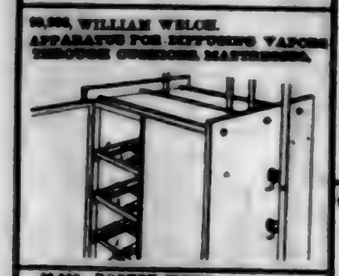


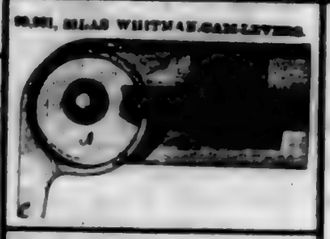


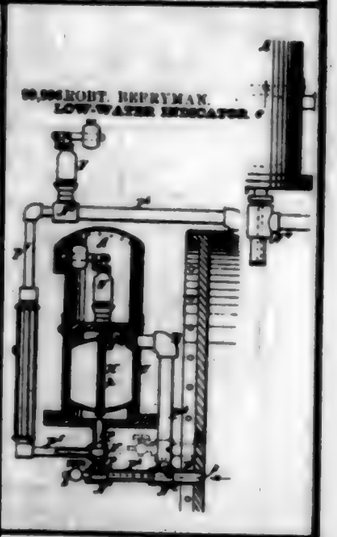


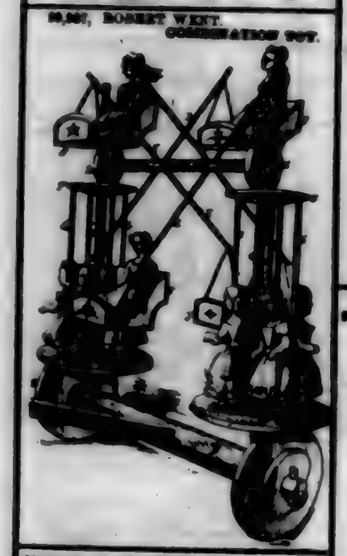


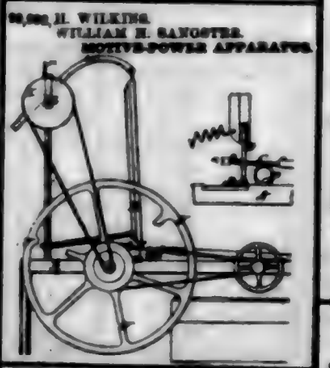


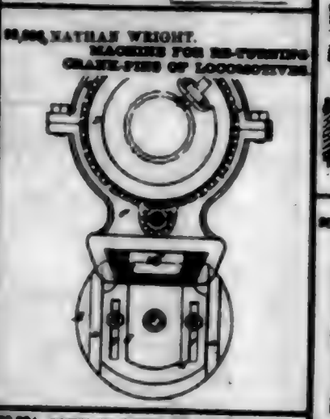


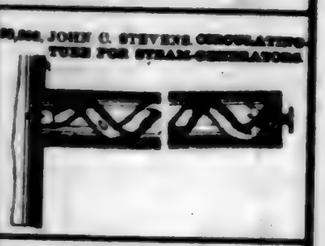


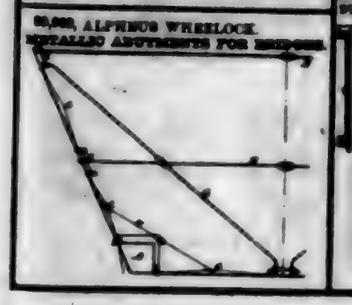


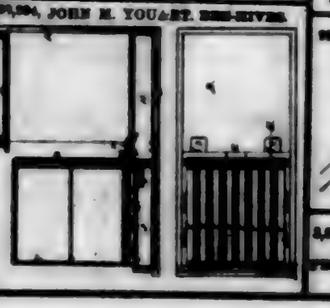


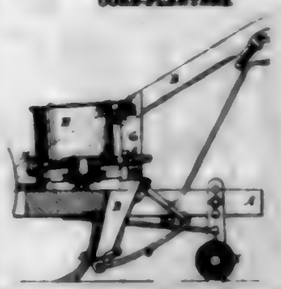




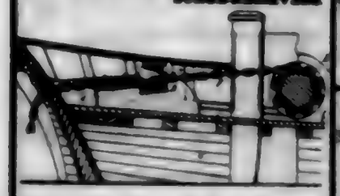




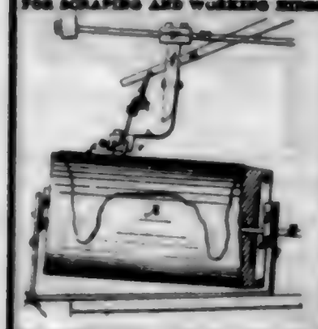




3,835, WM. W. AVERILL.
MANUFACTURE OF CAST-STEEL.



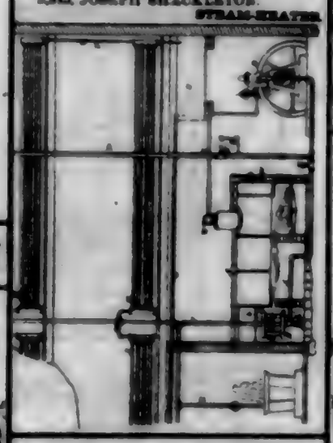
3,836, JAMES CAMPBELL.
WILLIAM CAMPBELL.
CORN-PLANTERS.



3,837. JOSEPH H. DEACON. ALCOHOLIC LIQUOR FROM THE RHUBARB PLANT.

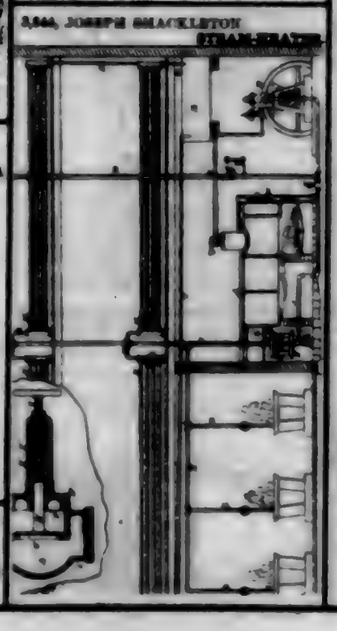
3,838, J. J. EMERY.
E. E. EMERY.
SUBSOIL-SHOVELS.

3,839, HENRY LAMPERT. APPARATUS FOR SCRAPING AND WORKING HIDES.

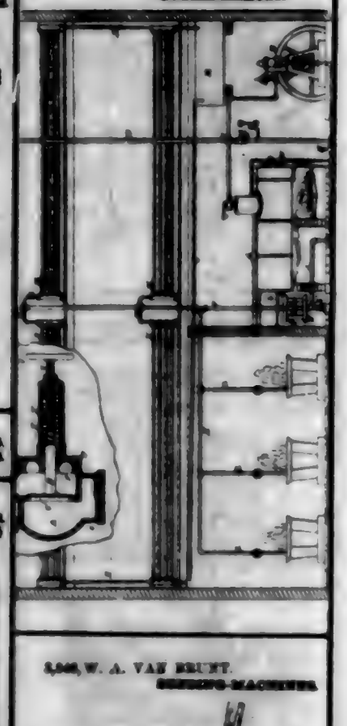


3,840, ORAZIO LUGO.
GUANO FROM FISH.
MANUFACTURE OF FERTILIZERS OR.

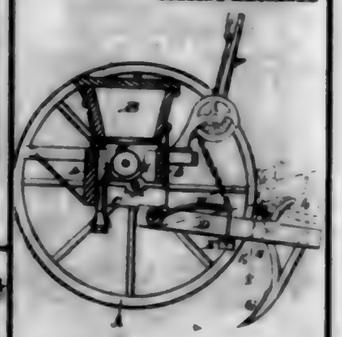
3,841, AMOS G. BOGGESS.
LEWIS SHAFFER.
RAILROAD-STATION TELEGRAPHS.



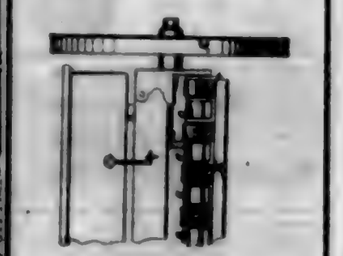
3,842, JUNIUS SCHENCK.
MANUFACTURE OF HOSE TUBING AND OTHER RUBBER FABRICS.

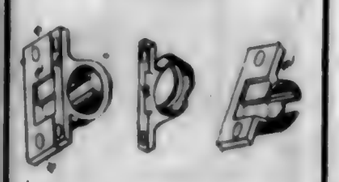


3,843, JOSEPH SHACKLETON.
STEAM-HEATER.



3,844, JOSEPH SHACKLETON.
STEAM-HEATER.



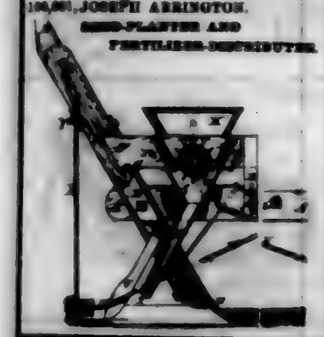


3,843, JOSEPH SHACKLETON.
STEAM-HEATER.

3,845, W. A. VAN BRUNT.
SEEDING-MACHINES.

ILLUSTRATIONS OF PATENTS

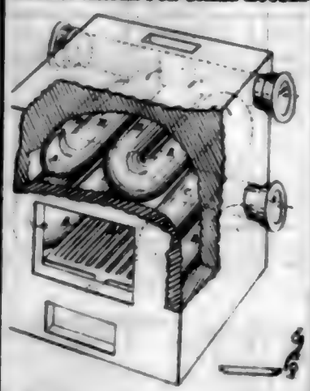
ISSUED FROM



THE UNITED STATES PATENT OFFICE

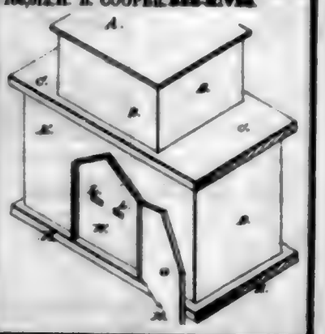
FEBRUARY 22, 1870.

100,010, JOHN ANDERSON.
SUB-SOILER FOR SCRAPERS.

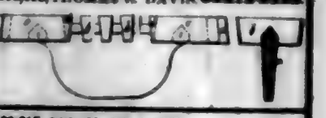


100,011, JOSEPH ARRINGTON.
SEED-PLANTER AND FERTILIZER-DISTRIBUTER.

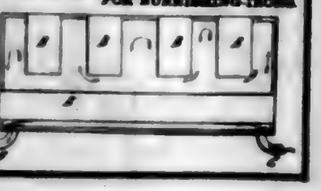
100,012, A. B. CALDWELL. UMBRELLAS.



100,013, S. E. CHURDUCK.
WATER-HEATER FOR GRIST-BOXES.

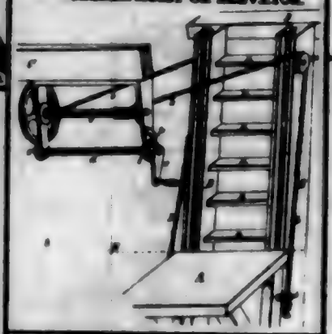


100,014, ELBERT P. COOK.
IMPROVED HEAD-BLOCK.

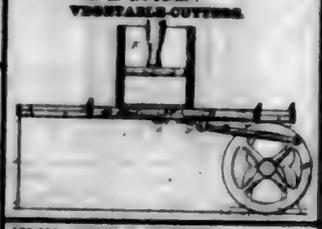


100,015, H. B. COOPER. BEE-HIVES.

100,016, THOMAS S. DAVIS. GRATE-BARS.

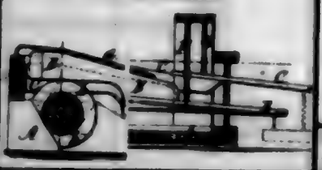


100,017, JOS. M. DE LACY.
STEAM-HEATER FOR BURNISHING-IRONS.



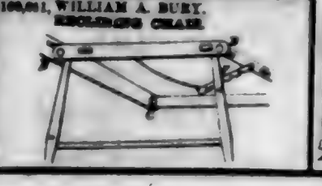
100,009, MARCAR WAHRAM SEYLIKOY.
MANUFACTURE OF WATER-PROOF FABRICS FROM WASTE RUBBER.

100,035, HENRY L. BOWERS.
CELLAR-BOOST OR ELEVATOR.

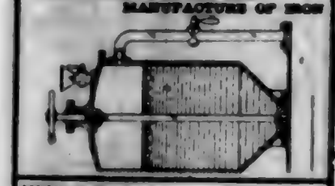


100,037, CHAS. J. MANN.
WM. A. BOYDEN.
VEGETABLE-CUTTERS.

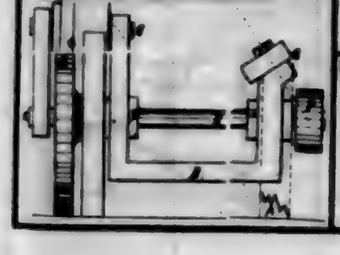
100,038, JAMES F. BREWER.
COAL-SHOVELS.



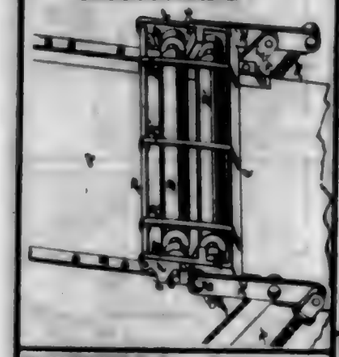
100,039, JOHN C. BRIGGS.
RELEASING ACTION.



100,040, LORENZO BROWN.
SEAT-FASTENING.



100,041, WILLIAM A. BURY.
REELING CHAIR.



100,042, HENRY BESSEMER. PROCESSES AND APPARATUS FOR THE MANUFACTURE OF IRON.

100,043, JAMES M. BRUBAKER.
RAISING GRAIN-SHAFTS.

100,044, HENRY BARTH.
PRINTING-PRESSES.

100,018. HENRY A. BYRN, CHARLES BOYNTON. SWITCH SIGNALS.

100,019. H. E. BLONDOR. SIDE-RAKES FOR VESSELS.

100,020. THOS. ELKINS. SEWING AND BROOMING CANES AND QUILTING FRAME.

100,021. JOHN FAUPOR. HARROW HEAD.

100,022. JAS. H. FERGUSON. COLLAR AND HAMES FOR HARNESS.

100,023. OSWALD S. FEEHLAER. DOG-LOCK.

100,024. GEO. FROH. HOOF-GRASP.

100,025. H. GARDNER. CHURN.

100,026. JOHN W. GROGAN. BOOK-HINGE.

100,027. JOHN P. GRIBBS. APPARATUS FOR COOLING AND PURIFYING BEER, WATER, AND OTHER LIQUIDS.

100,028. L. S. GUY. [illegible] AND COOLING APPARATUS.

100,029. JOHN HAMILTON. PATTERSON. CASES FOR CONTAINING [illegible] INVENTIONS.

100,030. ALONZO HAMNER, DAVID GEM. RAILWAY-GAIN.

100,031. W. H. HARRIS. HALTERS.

GEO. D. HAWORTH. 100,032. CORE-PLASTERER.

100,033. M. HAYDEN. GRAIN-BINDER.

100,034. ADAM HIRT.

100,035. WILLIAM B. HRITER. HEAD-CUTTER.

100,036. AUSTIN D. HOFFMAN. REGISTERING-PUNCH FOR RAILROAD CONDUCTORS.

100,037. AUSTIN D. HOFFMAN. TELL-TALE.

100,038. JAMES SPOONER HOWARD. ELECTROPLATING WITH ANTIMONY.

100,039. WILLIAM H. H. IRWIN. COMPOUND FOR CURE OF CANCER, COLDS.

100,040. NATHAN I. MORSE. CULTIVATORS.

100,041. JAMES JACOBS. STEAM-GENERATORS.

100,042. A. G. JUDSON. PLOWS.

100,043. MARTINUS B. KIMM. COMPOUND TO REMOVE GREASE FROM CLOTH, SILK, PAPER, [illegible]

100,044. JAMES KIMMEL. FASTENING FOR GATES.

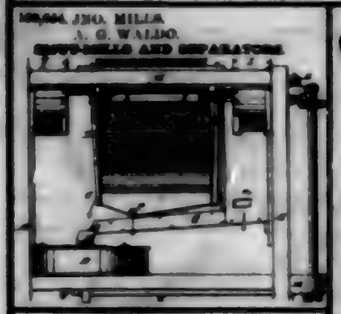
100,045. G. LANDRIN. CULINARY VESSEL.

100,046. JAS. H. DAVIS, EMMANUAL A. F. LEFEBURE. CLASPS FOR SECURING WEED-SOCKETS TO BASE-BOARDS.

100,047. PHILIP LEONARD. TOOL-HOLDER FOR GRINDSTONES.

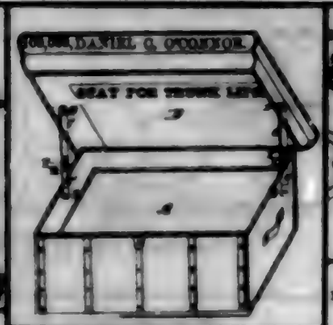
100,048. JOHN B. LOMAS. THRESHOLDS FOR GRAIN.

100,049. JOHN SCHULTHEIS, GEORG LUTZ, MICHEL FLORENTIN. VEGETABLE-CUTTER.



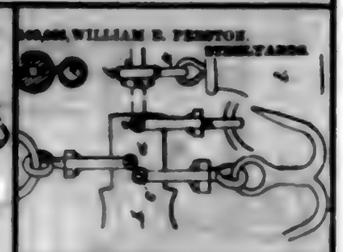
100,050. S. B. MANDLEBAUM. COMMERCIAL PORTFOLIOS.

100,051. J. McCAFFERY. HARVESTER.

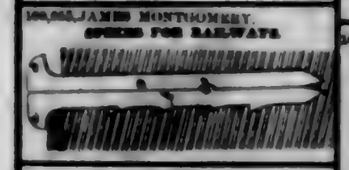


100,052. EDWARD MILLER. DUMPING-WAGON.

100,053. H. H. MILLER. MACHINE OF DIES FOR FORMING THE BRASS OF KEPO-BOLTS.



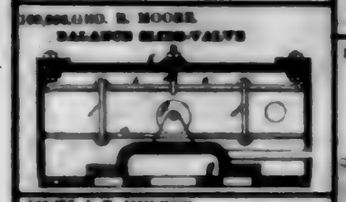
100,054, JNO. MILLS, A. G. WALDO. GRAIN-SHELLER AND SEPARATOR.



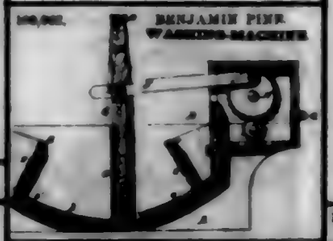
100,055, DANIEL O. O'CONNOR. SEAT FOR TRUNK LIDS.

100,056, WILLIAM B. PRESTON. STEERAGE.

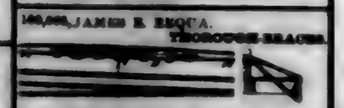
100,057, JAMES MONTGOMERY. SPRING FOR RAILWAYS.



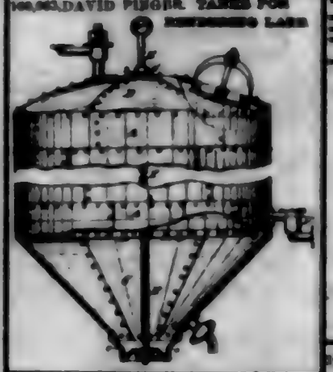
100,058, WALTER PECK.



ROBERT PRICE, STOVE-LOCK. 100,059.

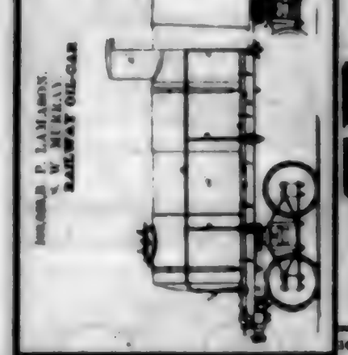


100,060, GEO. B. MOORE. BALANCE SLIDE-VALVE.



100,061, BENJAMIN PIER. WASHING-MACHINE.

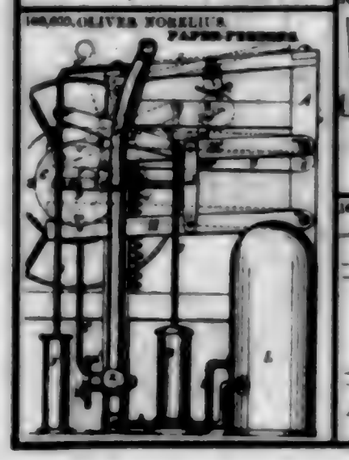
100,062, JAMES E. BROCA. TRIGGER-BRACES.



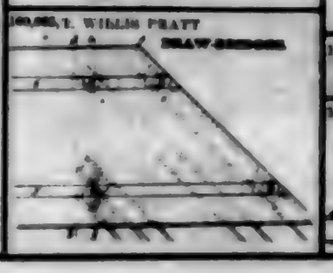
100,063, DAVID PIPER. TAKES FOR RESERVOIRS LABS.

100,064, GEO. H. REYNOLDS. BOOK-HOLDER.

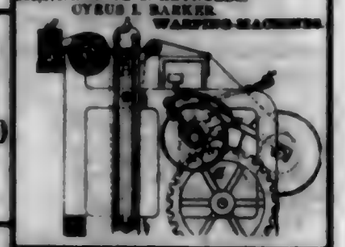
100,065, MICHAEL P. LAHARDY, C. W. MURRAY. RAILWAY OIL-GAS.



100,066, FRANCIS A. PRATT. FRICTION-CLUTCHES.

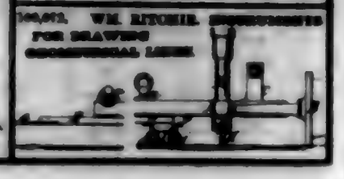


100,067, I. T. MULKEY. CEMENT FOR BRUSHES, BURRS, &c.

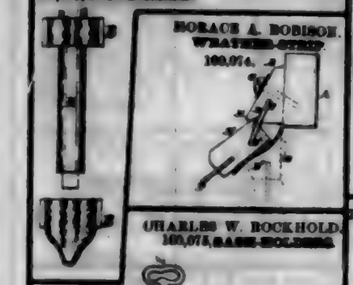


100,068, OLIVER MORELIUS. PAPER-PENDERS.

100,069, I. WILLIS PRATT. DRAW-BRIDGES.

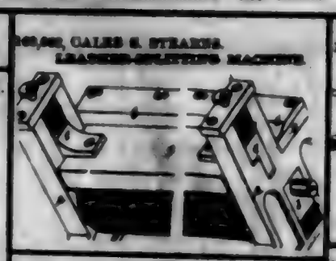


100,070, 100,071, JACOB C. REYNOLDS, CYRUS I. BARKER. WARPING-MACHINES.

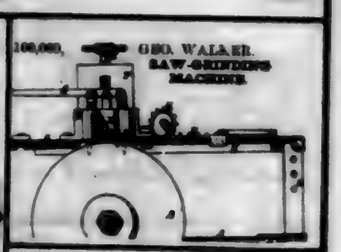


100,071, EDWIN T. BIGE. PROCESS OF BLEACHING AND CLEANING VEGETABLE FIBRES.

100,072, WM. RITCHIE. IMPROVEMENTS FOR DRAWING COMMERCIAL LIQUIDS.



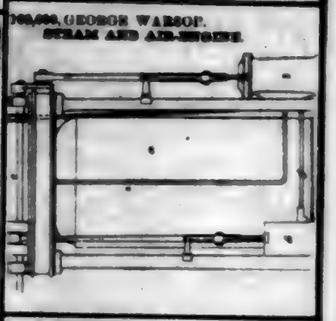
JOHN R. ROBERTSON. 100,073, STOVE-GRATE.



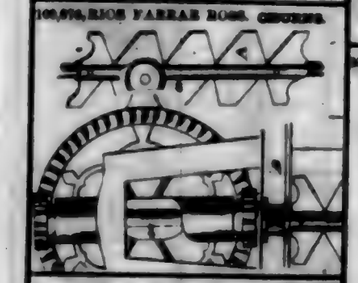
HORACE A. ROBISON. WEATHER-STRIP. 100,074.

GALES S. STRAUSS. LEATHER-SPLITTING MACHINE.

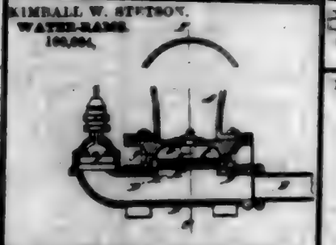
GEO. WALKER. SAW-GRINDING MACHINE.



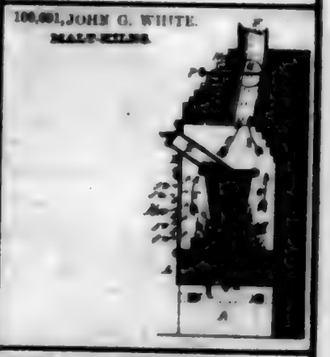
CHARLES W. ROCKHOLD. 100,075, SASH-HOLDERS.



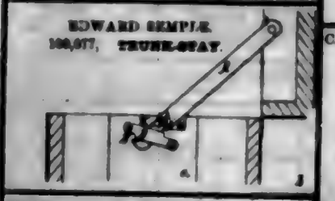
MATHIAS STEPHAN. SPRING-CHAIR FOR CHILDREN.



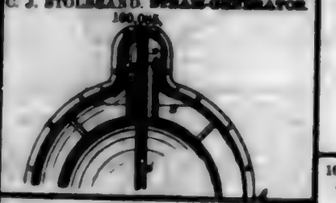
GEORGE WARROP. STEAM AND AIR-ENGINE.



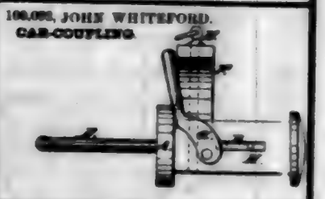
100,076, RICE FARRAR ROSS. GRATERS.



KIMBALL W. STETSON. WATER-RAMS. 100,077.

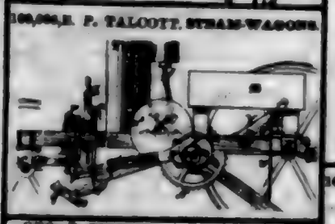


JOHN G. WHITE. MALT-KILNS.



EDWARD SEMPLE. 100,077, TRUNK-STAY.

C. J. STOLBRAND. STEAM-GENERATOR. 100,078.



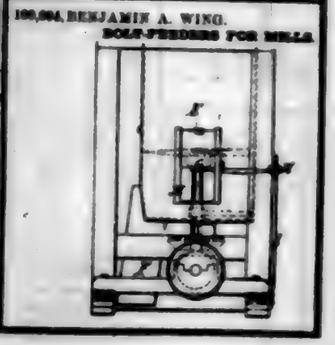
JOHN WHITEFORD. CAR-COUPLING.

DAVID B. SHIRK. HARVESTER-RAKE.

E. P. TALCOTT. STEAM-WAGONS.

LEWIS F. WHITING, FRANKLIN SMITH. SAFES.

GEO. E. TUCKETT. GAGE FOR CUTTING 100,027 AND TRANSPORTING TOBACCO.



MONTGOMERY P. SIMONS. PAPER-PENDERS.

WILLIAM SNODGRASS. PORTABLE GAS-GENERATOR.

BENJAMIN A. WING. BOLT-FEEDERS FOR MILLS.

MYERS J. VAN AKEN. HORSE-FORK.

WM. D. ST. CLAIR. COMPOUND TO BE USED AS AN ARTICLE OF [illegible]

100,096, CHARLES ADAMS.
MACHINERY AND
DAY-BOOKKEEPING PAGE CLAMP.

100,097, HENRY A. ALDER.
VULCANIZING RUBBER SHOE.

100,098, JOHN ALLGAIER.
HAND-MOTIVE GARDEN-HOE.

HENRY ALTER. WHEEL-BARROW.

100,099, JONAS A. ANDERSON.
PHOTOGRAPHIC SCREEN.

100,100, JOHN L. ARDS.
RAILROAD-SWITCH.

100,101, C. J. BEAMAN.
ALARM-GUN.

OSCAR BELLMAN.
JOHN W. GARVER. HOT-AIR FURNACE.

100,103,
WILLIAM J. AVERY.
TUNIS LABBETEAUX.
POTATO-CULTIVATOR AND HILLER.

C. S. BENJAMIN.
EDWARD STORY.
PAINT-BRUSH.

100,105, E. B. BINGHAM.
MANUFACTURE OF PAPER.

100,106, GEO. W. BLAKE.
HEATER AND VENTILATOR.

100,107, CHARLES H. BOOTH.
CORN-PLANTER.

100,108, A. S. BAILEY.
IMPROVEMENT IN COAL-ELEVATORS.

100,109, C. F. BLISSINTON.
MACHINE FOR GROOVING SHEET-METAL.

100,110, A. B. BARNARD.
DOUBLE HAT-SANDER.

100,111, CHARLES J. BRADLEY.
COTTON-PLANTER.

100,112, JOHN L. BOOTH.
NEEDLE FOR SEWING-MACHINES.

100,113 JOSEPH BISHOP.
HOE-CULTIVATOR.

100,114, HENRY S. BROWN.
CLOTHES-DRIER.

100,115 WILLIAM BROWN.
TUBE-SCOURER.

100,116, HALL COLBY.
ALARTUM INSTRUMENT.

ABEL D. COOK.
100,118, JAMES GRAVES.
FEATHER-RENOVATOR.

100,121, WM. H. CRANDALL.
CHILDREN'S CARRIAGE.

JOHN H. CRANMILL.
100,122, WATCH-SPRING.

100,123, JAMES CASSEDAY.
IMPROVED SEAT FOR CARS, &c.

100,124, LEONARD CROFOOT.
BAG-HOLDER.

100,117, THOS. CRADWICK.
PORTABLE FURNACE.

100,126, J. H. DATES.
SEWING-MACHINE AND HAT-TRIMMER.

100,118, MILTON W. CLARK. BLIND-CLASP.

100,122, WILLIAM DAVIS.
JOSEPH WHILE. MACHINE FOR ROLLING CAR-COUPLING PINS.

100,126, JAMES M. A. DEW. FAUCETS.

100,127, HIRAM DILLAWAY. MOLD FOR FORMING BLOWN GLASSWARE.

100,128 JOHN D. DUNN. COMBINED COTTON-CHOPPER AND CULTIVATOR.

100,129, CHARLES H. EGGLESTON. GATES.

100,130, D. W. ELDREDGE.
WATCH-REGULATOR.

100,131, JAMES B. ELKINGTON.
MANUFACTURE OF COPPER AND IN SEPARATING OTHER METALS THEREFROM.

HARRY H. EVERTS.
100,132, CONSTRUCTION OF CHAIRS.

MABEL H. EVARTS.
IMPROVED EMBOSSER.
No. 139,

FRANK W. O. GROVER.
SEWING MACHINE.

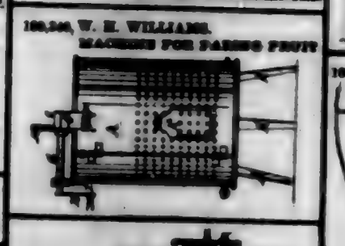
CULTIVATOR.

100,339, JOSHUA F. TABBATT.
CALENDARS.

100,340, WILLIAM WELLINGTON.
APPARATUS FOR TRANSMITTING MOTION TO SEWING-MACHINES.

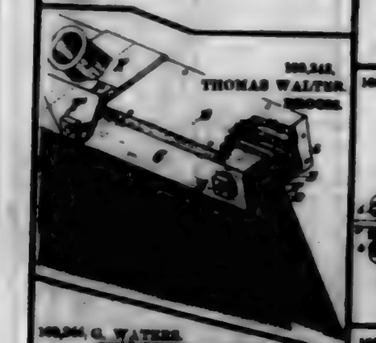


100,341, FR. WICKE,
JULIUS BRONNER,
THEODOR PETERSEN,
DR. G. SEHFUSS.
PRINTING FROM ENGRAVINGS.

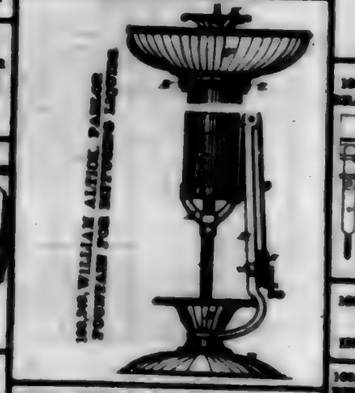
100,342, JAMES K. THOMPSON.
WOODEN PAVEMENT.

100,343, W. H. WILLIAMS.
MACHINE FOR PARING FRUIT.

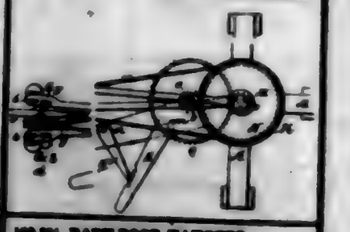
100,344, E. PALMER TIFFANY.



100,345, JAMES TURNBULL,
WILLIAM TURNBULL.
CHEMICAL FEEDER.

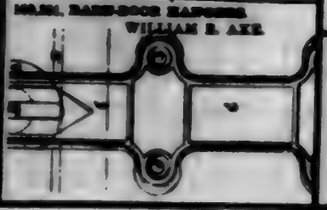


100,346, JAMES VANDERPOOL.
DEVICE FOR SECURING CARRIAGE AXLES.



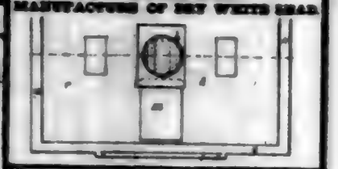
100,347, THOMAS WALTER.
HEDGE.

100,348, WILLIAM ALTICE, JAMES FOUNTAIN, and SETH HOLLOWAY.
CULTIVATOR.

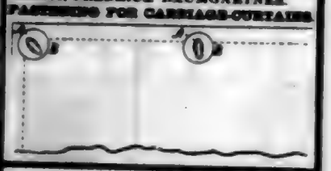


100,349, JOHN E. ATWOOD.
HORSE-POWERS.

100,350, C. WATERS.
FIRE-WATER PUMPER.



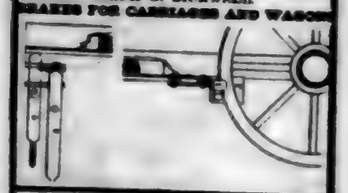
100,351, BASE-BOOK HANGERS.
WILLIAM B. AXE.



100,332, HENRY BARTHOLOMAY.
METHOD OF PRESERVING THE AROMATIC PRINCIPLE OF HOPS.

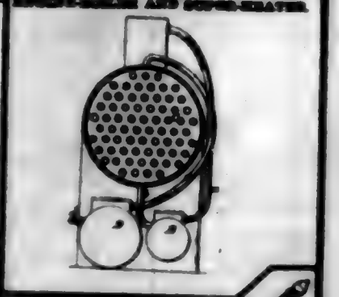
100,333, HAVEN O. BARTLETT.
MANUFACTURE OF BEST WHITE LEAD.

100,334, C. A. BAUMANN.
COVERING FOR STEAM BOILERS.



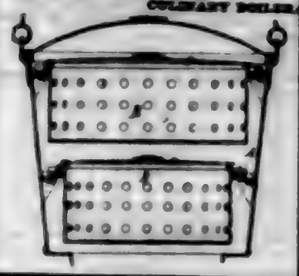
100,335, FREDRICK BAUMGARTNER.
FASTENING FOR CARRIAGE-CURTAINS.

100,336, JOSEPH HICK, VELOCIPEDE.

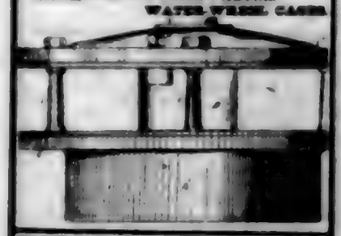


100,337, JOSEPH O. BICKWELL.
BRAKES FOR CARRIAGES AND WAGONS.

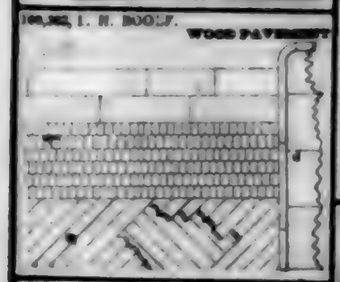
100,338, GEORGE W. BIRKS.
COMPOUND FOR PREVENTING INCRUSTATION IN STEAM-BOILERS.



100,339, F. B. BLANCHARD, COMBINED STEAM-BOILER AND SUPER-HEATER.



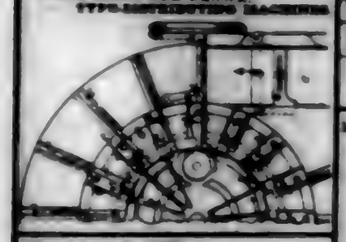
100,340, SANFORD O. BLANDING.
SIFTING-APPARATUS.



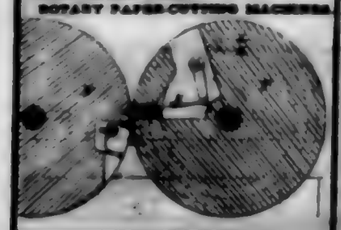
100,301 GEORGE W. BLISS.
CULINARY BOILER.

100,302, JOHN W. BOOKWALTER.
WATER-WHEEL CASES.

100,303, I. H. BOOLY.
WOOD PAVEMENT.



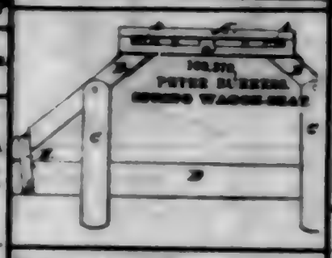
100,304, JOHN C. BRADY,
JAMES R. BRADY.
SNAP-HOOK AND SWIVEL.



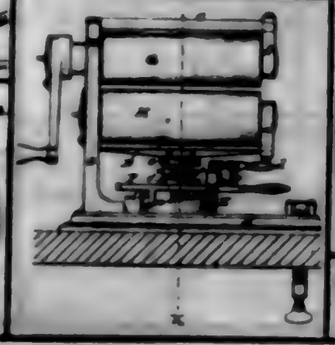
100,305, THOMAS BRISTOW.
MANUFACTURE OF MALLEABLE IRON.

100,306, OWEN LEE BROWN.
TYPE-DISTRIBUTING MACHINE.

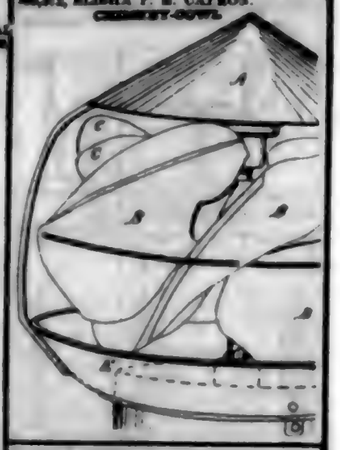
100,307, RICHD. VOSE.
ROTARY PAPER-CUTTING MACHINE.



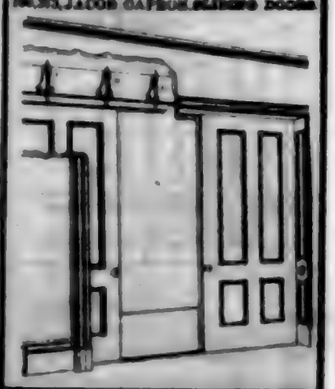
100,308, RICHD. VOSE.
MACHINE FOR PLANING AND SQUARING THE SIDE OF RECTANGULAR STEREOTYPE PLATES.



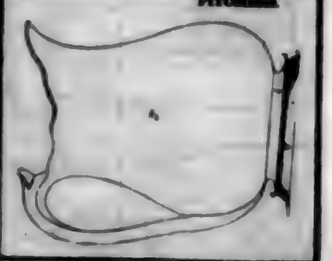
100,309, A. B. DURDICK, STOVE-PIPE DAMPERS AND VENTILATORS.



100,310,
PETER DURRER,
SPRING WAGON-SEAT.

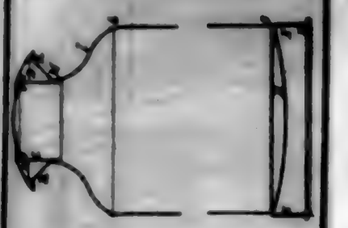


100,311, E. G. GABELL,
PASTING-MACHINE.

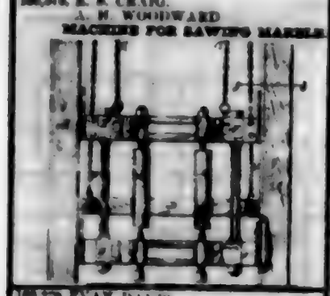


100,312, ELISHA P. H. CAPROT.
CHIMNEY-COWL.

100,313, JACOB CAPRON, SLIDING DOORS.

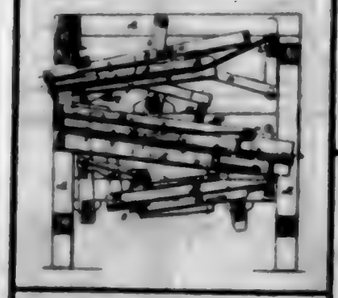


100,314, WM. B. CARLETON, SHIELD FOR FITCHES.

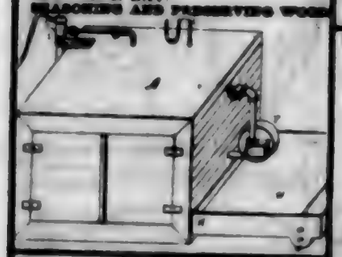


100,315, LEWIS H. CHASE.
CORN-PLANTER.

100,316, JOHN COCHRAN, MILK-CANS.

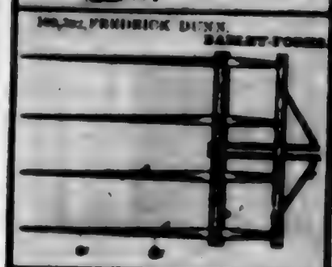


100,317, JOHN COCHRANE, CARPET.

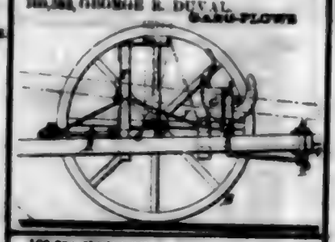


100,318, R. S. CRAIG,
A. H. WOODWARD.
MACHINE FOR SAWING MARBLE.

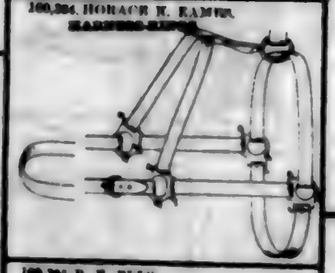
100,319, EVAN DAVIS.
GRAIN-SEPARATORS.



100,320, J. C. DAY.
SEASONING AND PRESERVING WOOD.



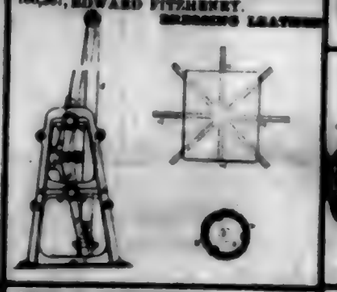
100,321, ARSENE DECASTRO.
HORSE-COLLARS.



100,322, FREDERICK DUNN.
BARREL-TRUSS.

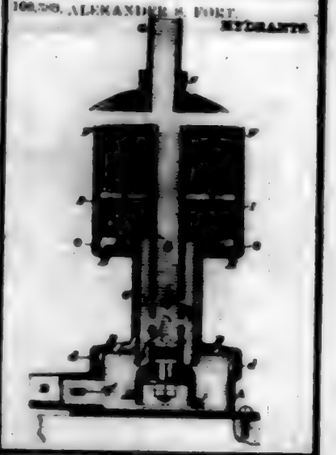
100,323, GEORGE R. DUVAL.
SAND-PLOWS.

100,324, HORACE H. EAMES.
HARVESTING-RAKE.

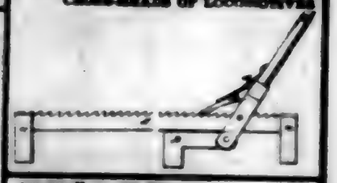


100,325, B. F. ELLIS.
SPRING-SEED BOTTOM.

100,326, C. J. EVERICKX, BEDSTEAD.



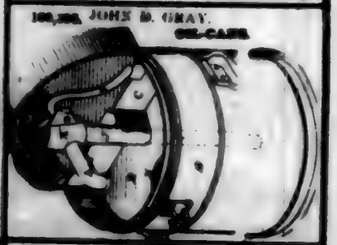
100,327, EDWARD FITZHENRY.
HARNESS LEATHER.



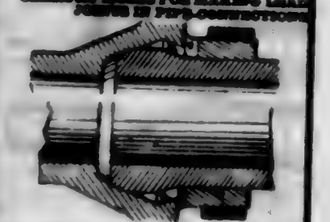
100,328, B. G. FITZHUGH.
WOOD-SPINNING.

100,329, ALEXANDER S. FORT.
HYDRANTS.

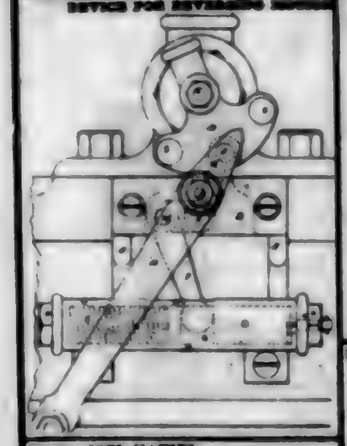
100,330, JOHN S. FUNK.
JACKS FOR MOVING THE CROSS-HEADS OF LOCOMOTIVES.



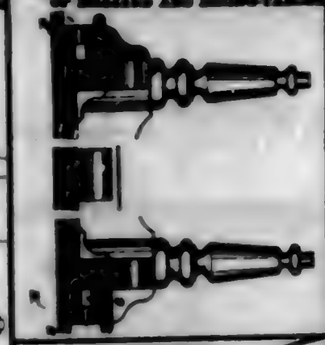
100,331, H. A. GAGE.
PAPER-CUTTING MACHINES.



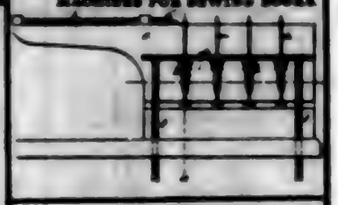
100,332, CHARLES O. GARDINER.
BOXES FOR CARS.



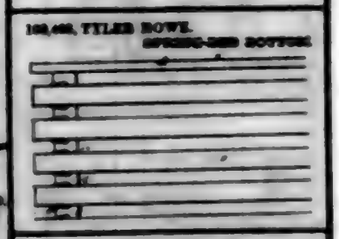
100,333, JOHN B. GRAY.
OIL-CANS.



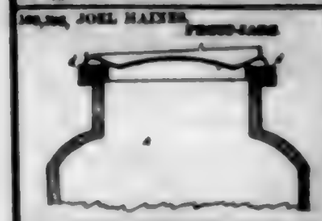
100,334, EDWARD GWYN.
CLAMPED SHIELD FOR MAKING LEAD JOINTS IN PIPE-CONNECTIONS.



100,409. CHARLES P. HADLEY.
DEVICE FOR REVERSING MOTION.



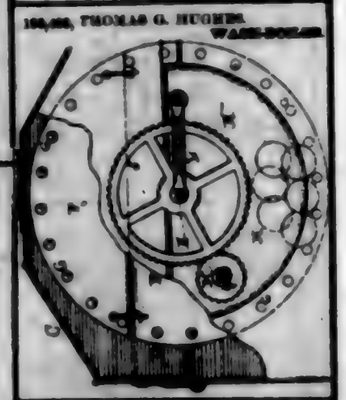
100,410. FRED. E. HELD, Germantown, Pa.
COMBINATION OF HEDDLE AND HEDDLE-FRAME.



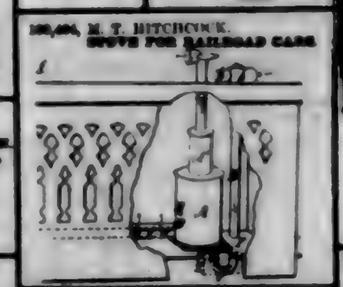
100,411. P. W. HOWE.
MACHINE FOR SEWING BOOKS.

100,412. TYLER HOWE.
SPRING-BED BOTTOM.

100,413. JOEL HAINES.
FRUIT-CANS.

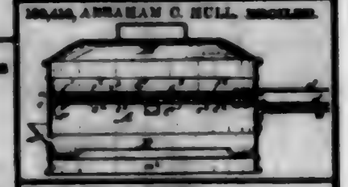


100,414. LOUIS HILLEBRAND, Paducah, Ky.
PARLOGRAPH.

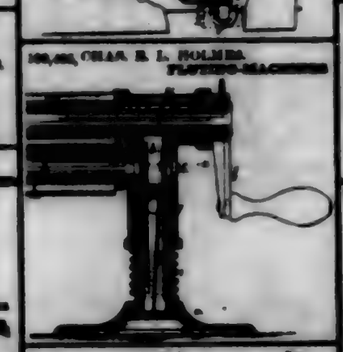


100,415. LOUIS HILLEBRAND, Paducah, Ky.
PARLOGRAPH.

100,416. THOMAS G. HUGHES, Washington, D. C.
WASH-BOILER.

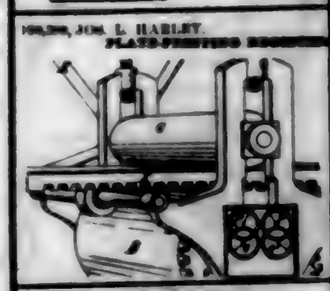


100,417. M. T. HITCHCOCK.
STOVE FOR RAILROAD CARS.

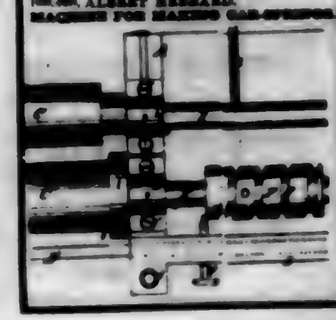


100,418. THOMAS P. HAMILTON.
SPOON, SKIMMER, AND COLANDER.

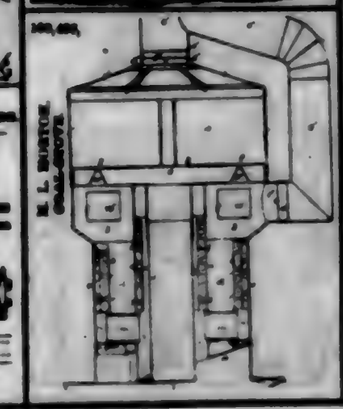
100,419. ABRAHAM C. HULL, Brooklyn, N. Y.
BROILER.



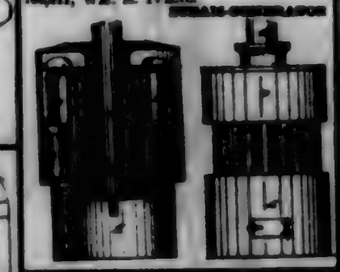
100,420. CHAS. R. L. HOLMES, Washington, D. C.
PLOWING-MACHINE.



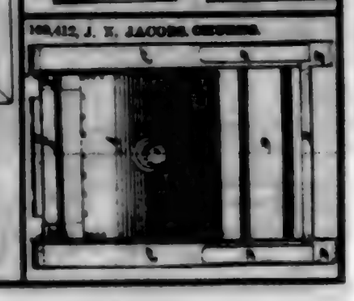
100,421. T. F. HAMMER, Cincinnati, O.
CAST-METAL LAMPS.



100,422. JOHN L. HARLEY, Cincinnati, O.
PLATE-PRINTING MACHINE.



100,423. ALBERT HERBARD, Cincinnati, O.
MACHINE FOR MAKING CAR-SPRINGS.

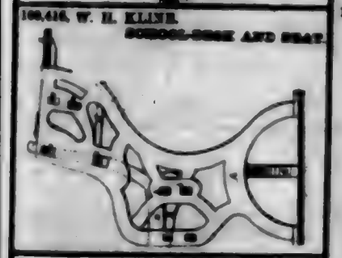


100,424. H. L. HINTON, Cincinnati, O.
CAR-STOVE.

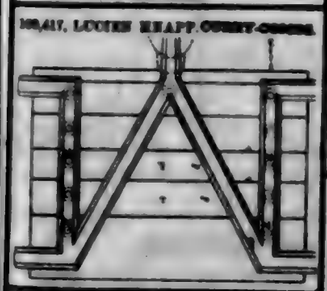
100,411. WM. M. IVENS, Cincinnati, O.
STEAM-GENERATOR.

100,412. J. N. JACOBS, Cincinnati, O.
OVEN.

100,413. J. D. JAMES, Jr.
TIE-WORKING TOOLS.



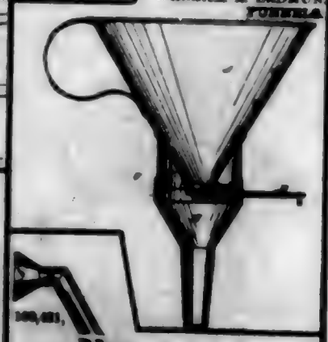
100,414. J. D. JAMES, Jr. Machine
FOR SEAMING METAL HOOPS.



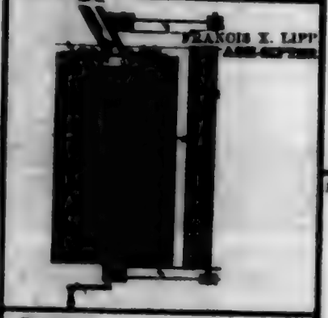
100,415. A. P. KEITH.
AERIAL CARS.

100,416. W. H. KLINE.
SCHOOL-DESK AND SEAT.

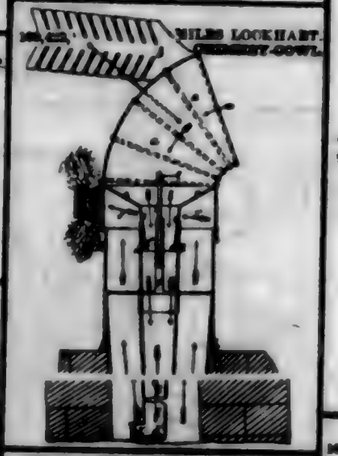
100,417. LOUIS KNAPP, Quincy, Ohio.
CURRY-COMBS.



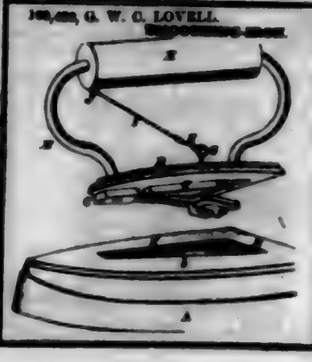
100,418. PATRICK LAUGHLIN.
CHURN-FRAME.



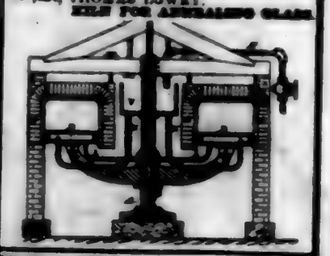
100,419. SEWALL LEACH.
RUBBER-COLLAR.



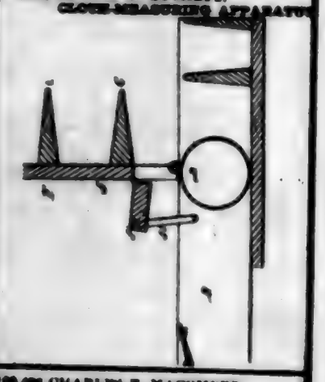
100,420. WILLIAM R. LEDMUN, Fishkill Landing, N. Y.
FURNACE.



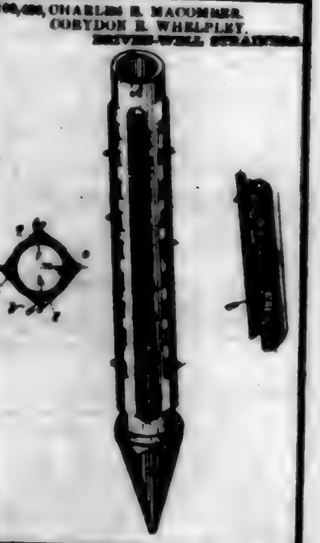
100,421. FRANCIS X. LIPP, Albany, N. Y.
ASH-SIFTER.



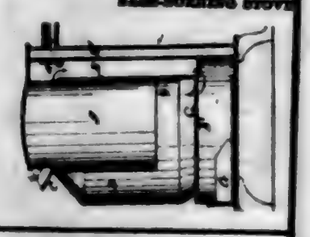
100,422. MILES LOCKHART, Cincinnati, O.
CEMENT-CHAIR.



100,423. G. W. C. LOVELL.
BROOMING-MAT.

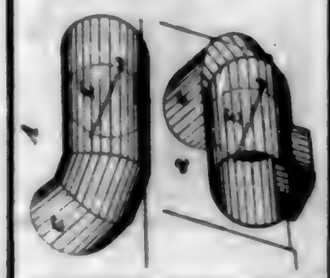


100,424. THOMAS LOWRY.
KILN FOR ANNEALING GLASS.

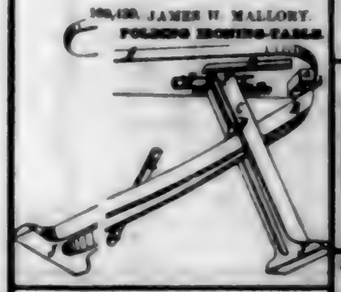


100,425. SAMUEL R. LUCKETT.
CLOTH-MEASURING APPARATUS.

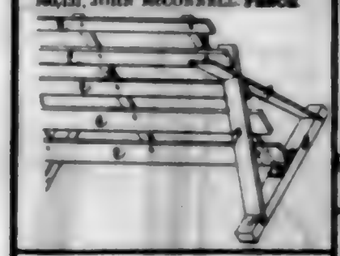
100,426. CHARLES E. MACOMBER, Cincinnati, O.
OBEYDON E. WHELPLEY, Newport, Ky.
DRIVER-WELL STRAINERS.



100,427. WILLIAM MAGILL.
RAGE-BURNING STOVE.

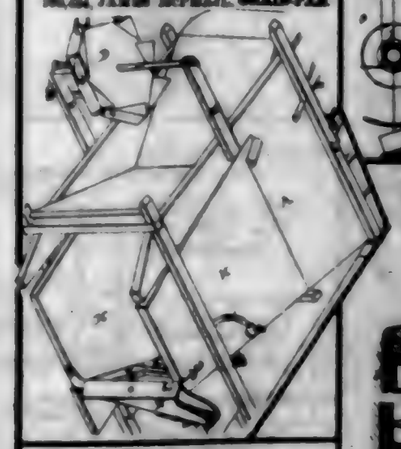


100,428. ARTHUR MAGINNIS.
WM. McCORMICK.
COLLECTING WASTE STEAM FROM BREWERIES AND BARS.



100,429. S. C. MAINE.
VENTILATOR FOR WINDOWS.

100,430. JAMES H. MALLORY.
FOLDING ironing-TABLE.



100,431. JOHN McCONNELL, PENCE.

100,432. GEORGE McKENZIE.
MANUFACTURE OF ILLUMINATING GAS FROM COAL AND OTHER MATERIALS.

100,433. GEORGE McKENZIE.
MANUFACTURE OF ILLUMINATING-GAS.

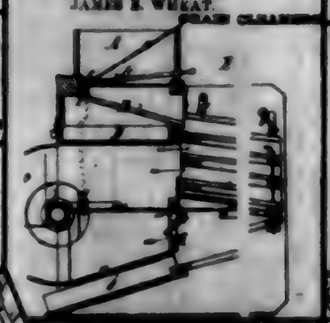
100,434. JAMES McFEAIL, GRAIN-FAN.

[illegible] J. B. NEWBROUGH
MANUFACTURE OF HARD STUDDS.

100,435. JAMES H. NEWTON.
MANUFACTURE OF CORRUGATED CLOTH AND PAPER FABRIC.

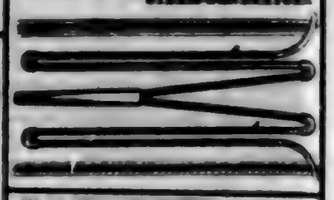
100,436.
T. J. NOTTINGHAM.
LUBRICATORS.

100,437. HARRISON OSBORN.
CLOTHES-LINE FASTENER.



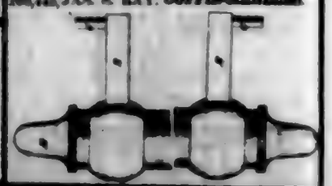
100,438. JOHN S. PEMBERTON. MEDICAL COMPOUND FROM GLOBE FLOWER.

100,439. ALFRED T. PERRINE.
AUGER FOR BORING SQUARE HOLES.

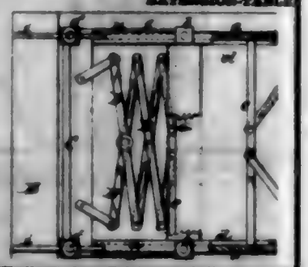


100,440. CHAUNCEY PERRY, JAMES B. WHEAT.
GRAIN-CLEANER.

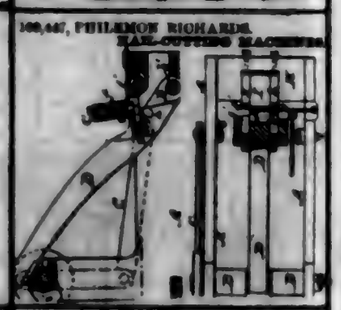
100,441. A. WARNER PLATT.
SWITCH-CLOSURE FOR ELECTRO-MAGNETIC RAILROAD SIGNALS.



100,442. HENRY A. V. PORT.
STEAM-GENERATOR.



100,443. WILLIAM PRUETT.
SPRING SEAT FOR WAGONS.



100,444. JAS. M. RAY. COFFIN-HANDLES.

100,445. WM. REICHENBACH, FERDINAND MORCHDIANTZKY.
EXTENSION-TABLE.

GAS-MACHINE.

L. IGNATIUS TRUDO. 100,691.
NUT-BEARER.

ROBERT D. SILVERWOOD.
WOOD-SPLITTING MACHINE.

100,683, THEODOR G. SPRINGER.
MACHINE FOR BENDING FELLOES.

100,692, JOSEPH P. TUTTLE. RAMPINS.

SAMUEL SIMPSON.
SPOOL-HOLDER AND REEL.

100,695, J. M. STAMP.
TOOL FOR LACING BELTS.

JACOB VALENTINE. RAILWAY-RAIL.
FRANCIS HARRIS, Jr.
CHAUNCY BARNES. 100,693, SPLICE.

APPARATUS FOR REFRIGERATING
100,687, D. E. SOMES, AND PRESERVING.

A. VAN PATTEN. 100,694,
J. F. KNIGHT.
RAIL-SPLICING.

100,697, GEORGE W. SWIFT.
HAY AND COTTON-PRESSES.

LOUDUS B. WALKER.
PLANING-MACHINE. 100,696.

COOLING AND PRESERVING-CASE.
100,688, D. E. SOMES.

100,698, LEWIS T. WEBSTER.
PLOW.

D. E. SOMES APPARATUS FOR COOLING
100,689, AND PRESERVING.

100,699, FRANK C. TIGHTHOFF.
ROOFING COMPOUND.

100,690, C. TELLIER.
MANUFACTURE OF ICE AND
COOLING AIR, LIQUIDS, &c.

100,697, ALFRED WEBB.
SELF-CLOSING AXLE-BOX-COVER.

100,700, G. TERWILLIGER.
SHOOTING-GAME.

100,686, WILLIAM WELLS.
SPRING-SIDE BOOTOES.

JOSEPH KLECKNER. CONSTRUCTION
OF CHIMNEYS AND FLUES. 100,702.

100,703, JESSE WOOD.
PLOW-CLEVIS.

100,688, CONSTRUCTION OF SUSPENSION-
BRIDGES. ADOLPH WEBER, JOHN KERSHAW.

JOSEPH KLECKNER.
100,704, CEMENT TO BE
USED IN BUILDING AND
REPAIRING
AND FOR CONSTRUCTING
FLUES AND OTHER PARTS
OF CHIMNEYS.

JOSEPH J. SHAFFER. RAILWAY
CURTIS C. STRICKETT. SWITCH.

100,701, JOEL L. WOODEN.
COLLAR AND HAME.

100,707.

2,869, JACOB B. BURKE.
VALVE-GEAR FOR STEAM-ENGINES.

100,702, WM. WRIGHT.
PUMP.

GUSTAVUS D. DOWS. 2,870,
CALVIN DOWS. TURNING-WASHER.
GEORGE S. CUMMINGS.

2,871, S. F. HESS.
PACKING-CASE FOR TOBACCO.

100,705, HENRY FOWLER.
BRUFF AND COLLAR-BOW.

2,872 W. J. NICHOLS AND A. G. RAND.
APPARATUS FOR THE MANUFACTURE OF GAS.

100,706, HENRY H. HARMON.
DOVETAILING-MACHINE.

2,873 W. J. NICHOLS AND
A. G. RAND.
MANUFACTURE OF GAS.

G. W. COLE. CORN-SCALE CUTTER.
2,874.

W. FOOS. 2,875. WATER-WHEEL.
JOHN W. BOOKWALTER.

2,876.
JOHN K. CESEL.
HORSE-HAY-FORKS.

2,877, C. D. PAGE. LENS-HOLDER.

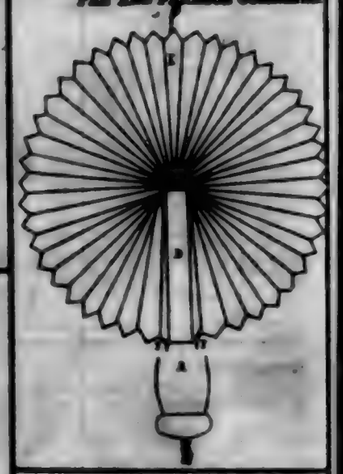
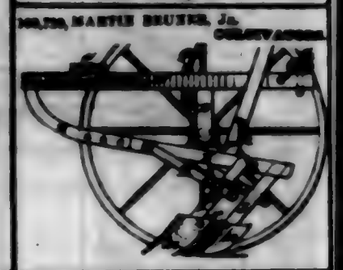
160,716,



160,717, LEMOT BOYETON. BREACHABLE
W. F. SWEET.
HANDLES FOR KNIVES AND FORKS.



160,718, LEVERETT BRAINARD.
BAG-WEIGHER AND DUSTER
FOR MEASURING PAPER STOCK.

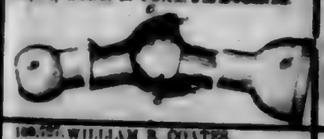
160,719, JOSHUA BROOKS.
FAN AND PARASOL.

160,720, MARTIN BRUNER, Jr.

160,721, JAMES BULGER.
FAUCETS.

160,722, JAMES H. BUTLER.
MACHINE FOR SAWING LATH.

160,723, CHAS. S. CHAFFEE.
A. WARING.
METHOD OF SHOEING SOLES TO BOOTS AND SHOES.

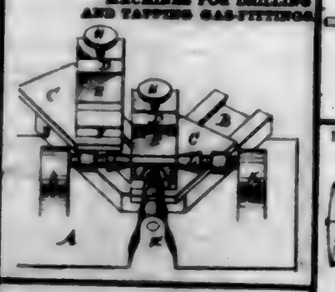


160,724, A. S. CLARK.
BOOT AND SHOE-HEAVE.

160,725, OSCEOLA W. CLARK, ASSIGNOR, TO CLAY GAS-RETORTS BURNING TRAY.

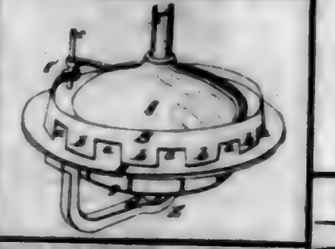
160,726, HORT. B. COAR. PIPE-JOINTS.

160,727, WILLIAM B. COATES.
CONCRETE AND WOODEN PAVEMENTS.



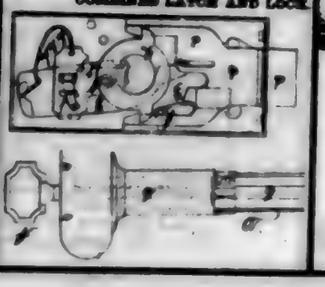
160,728, HENRY B. S. COLTON.
SAFETY-ATTACHMENT FOR SOCKETS.

160,729, JOHN COMMINS.
FERTILIZER.

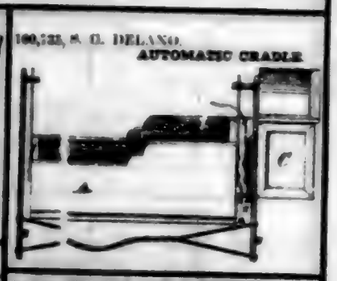


160,730, HIRAM M. CONKLIN.
COMPOUND FOR MAKING CONCRETE PAVEMENTS.

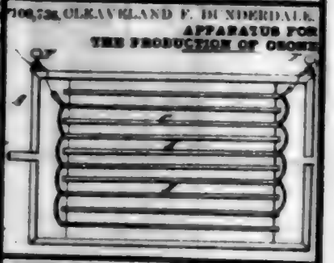
160,731, RICHARD T. CRANE.
MACHINERY FOR DRILLING AND TAPPING GAS-FITTINGS.



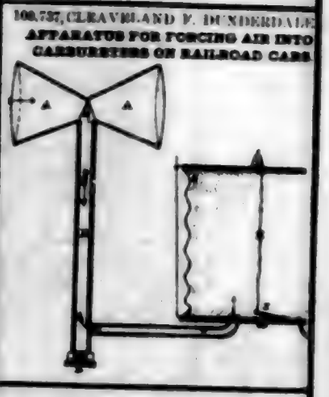
160,732, ELEAZER P. CROCKER.
TURBINE WATER-WHEELS.



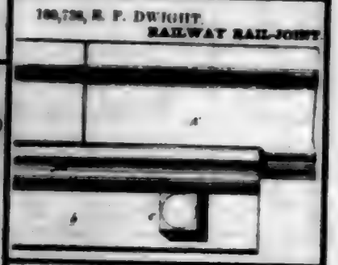
160,733, J. C. CRUMMY, FOLDING-CHAIR.
A. A. PARSONS.



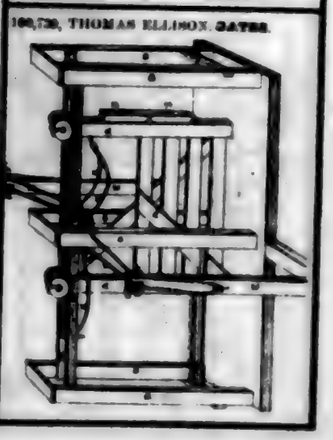
160,734, CHARLES L. DEAN.
COMBINED LATCH AND LOCK.



160,735, S. G. DELANO.
AUTOMATIC CRADLE.

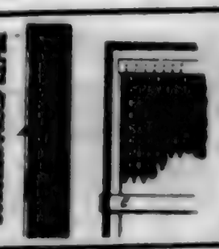


160,736, CLEAVELAND F. DUNDERDALE.
APPARATUS FOR THE PRODUCTION OF OZONE.



160,737, CLEAVELAND F. DUNDERDALE.
APPARATUS FOR FORCING AIR INTO CARBURETERS ON RAILROAD CARS.

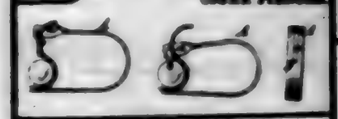
160,738, E. P. DWIGHT.
RAILWAY RAIL-JOINT.



160,739, THOMAS ELLISON. GATES.

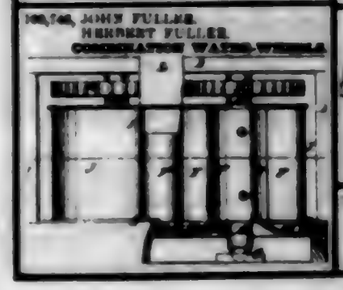
100,740, X. EVERGE, CORN-SHELLER

100,741, JOHN M. EVENS, BURGLAR-PROOF SAFE

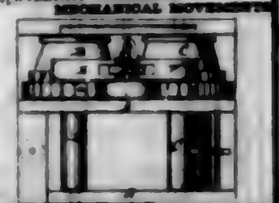


100,742, JOSEPH C. FIELD, LAWN-MOWERS

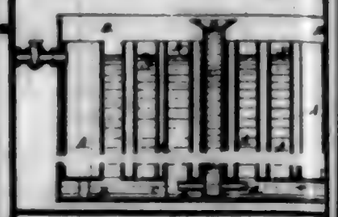
100,743, MIRANDA FORT, PLOWS



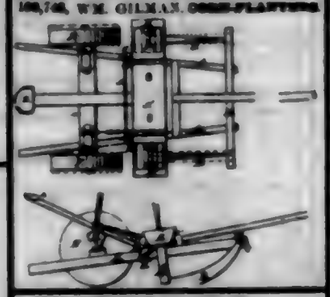
100,744, HORACE H. FOSTER, CIGAR PRESSES



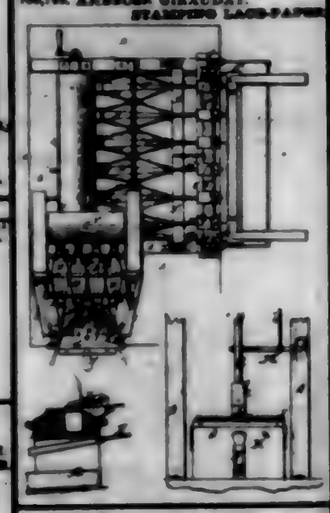
100,745, HENRY FRANKE, GRAVEL-CAR

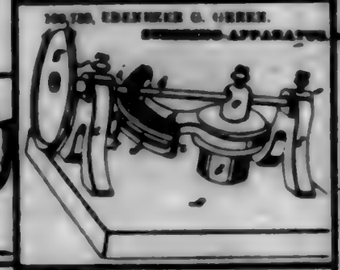


100,746, JOHN FULLER, HERBERT FULLER, COMBINATION WATER-WHEELS



100,747, WILLIAM GARRISON, MECHANICAL MOVEMENTS

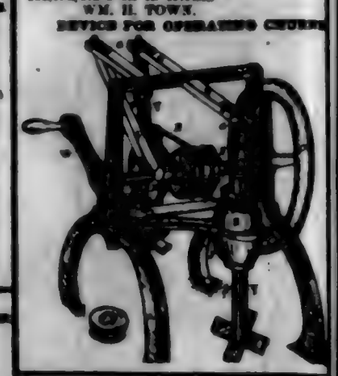




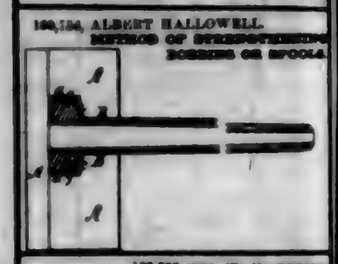
100,748, WM. GILMAN, CORN-PLANTING

100,749, AMBROSE GIRAUDAT, STAMPING LACE-PAPER

100,750, EBENEZER G. GREEN, SPINNING-APPARATUS

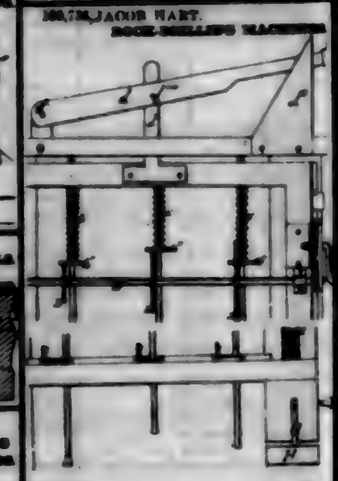


100,751, JOHN GRINDROD, COPING FOR WALLS



100,752, THEODORE GRÜNDMANN, APPARATUS FOR COOLING BEER AND OTHER LIQUIDS

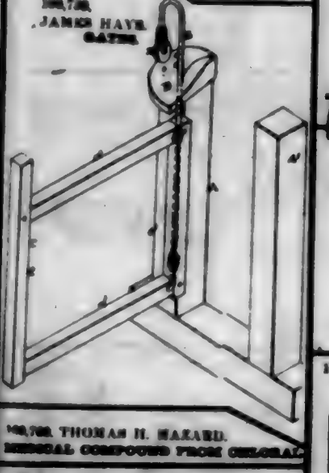
100,753, EDGAR R. HALL, WM. H. TOWN, DEVICE FOR OPERATING CHURN



100,754, ALBERT HALLOWELL, METHOD OF STRETCHING AND ROLLING ON SPOOLS

100,755, WM. W. HARDING, PAPER-MAKING MACHINERY

100,756, JACOB HART, HOOP-SHAVING MACHINES

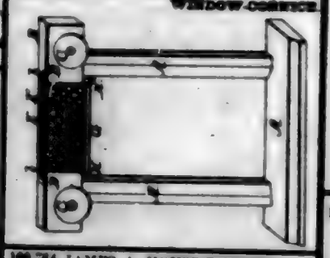


100,757, LEWIS HART, SCREW-DRIVER

100,758, G. G. HATHORN, FARE-BOXES FOR RAILROAD CARS

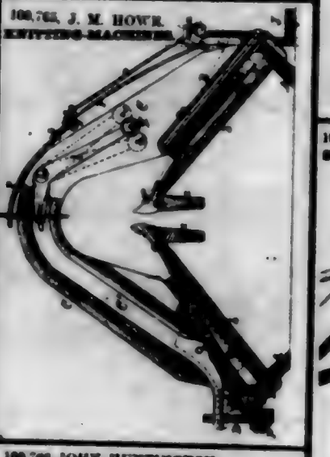
100,759, JAMES HAYE, GATES

100,760, THOMAS H. HAZARD, MINERAL COMPOUND FROM CHLORALS

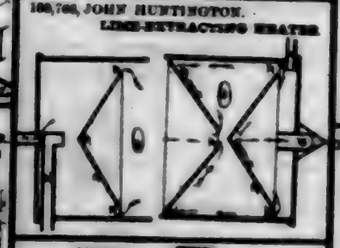


100,761, AUGUST G. HEITMANN, FLOATING-MILL POWER

100,762, DANIEL HILL, PLANING-APPARATUS



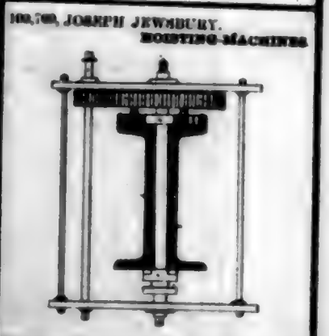
100,763, ROBERT N. HOFFMAN, WINDOW-CORNICE



100,764, JAMES A. HOUSE, FEEDING-MECHANISM FOR SEWING-MACHINE

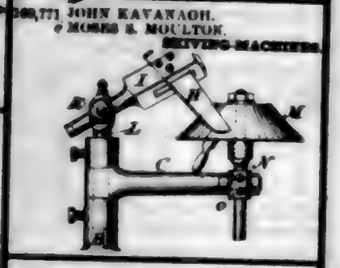
100,765, J. M. HOWE, KNITTING-MACHINE

100,766, JOHN HUNTINGTON, LINT-EXTRACTING HEATER



100,767, T. D. INGERSOLL, HORSE HAY-FORKS

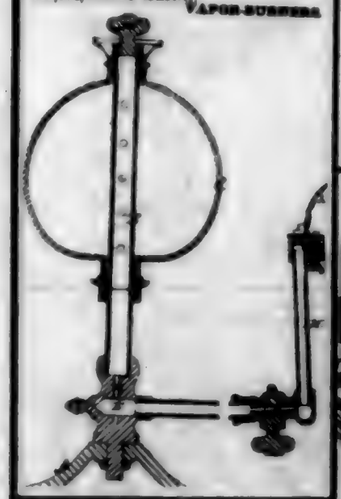
100,768, HIRAM INGRAHAM, BOBBINHORN



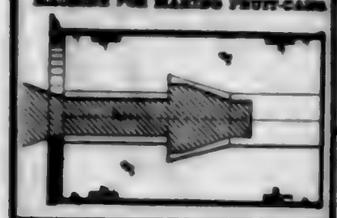
100,769, JOSEPH JEWSBURY, HOISTING-MACHINES

100,770, W. O. JOHNSON, STUMP-EXTRACTORS

100,771, JOHN KAVANAGH, & MOSES S. MOULTON, SEWING-MACHINES

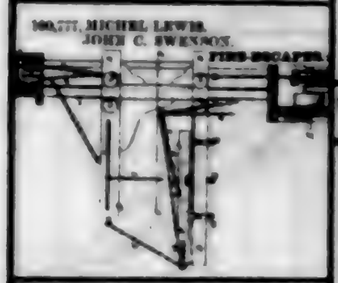


100,772, DANIEL KELLY, CONVEYING-ATTACHMENT FOR LATHES



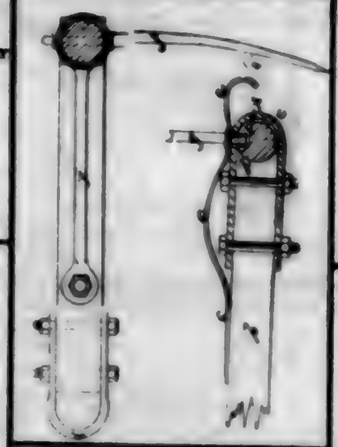
100,772, WM. H. KELLY.
APPARATUS FOR LIGHTING GAS BY ELECTRICITY

100,773, ISAAC KLINE.
VAPOR-BURNER.

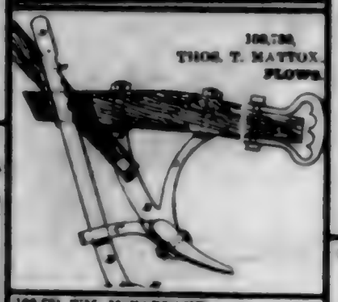


100,774, ISAAC KLINE.
MACHINE FOR MAKING FRUIT-CANS.

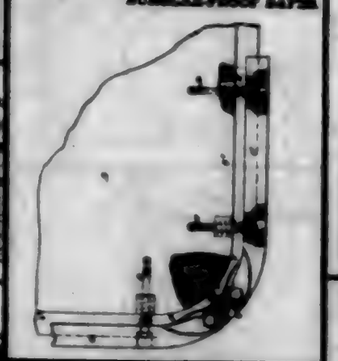
100,775, CHARLES PHILIPP LENZ.
EXTENSION TABLE.



100,776, MICHEL LEWIS.
JOHN C. SWENSON.
FIRE-ESCAPE.



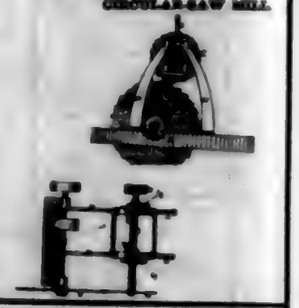
100,777, THOMAS F. LONGAKER.
MACHINE FOR CLEANING STABLES.



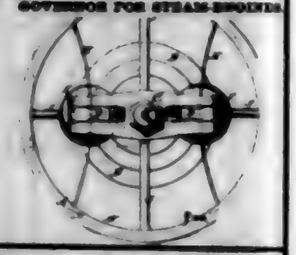
100,778, MYRON W. LYMAN.
AERIAL-TRAP.

100,779,
THOS. T. MATTOX.
PLOWS.

100,780, WM. McFARLAND.
BURGLAR-PROOF SAFES.

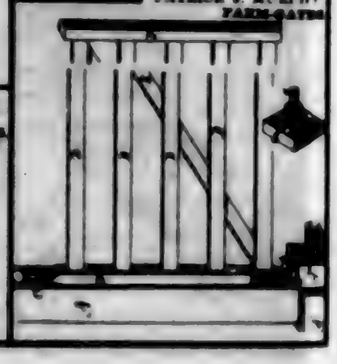


100,781, OREN C. MILLER, RACHEL WITT, AND M. COATES.
WATER-PIPE ATTACHMENT.



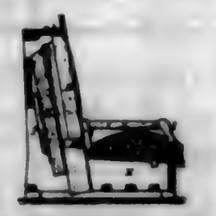
100,782, E. E. MILLER.
JIG FOR FORMING PIECE-PLATES.

100,783, JNO. MILLS.
A. G. WALDO.
CIRCULAR-SAW MILL.

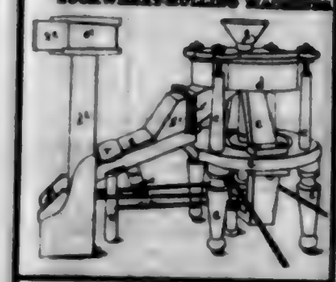


100,784, THOS. MOORE.
GOVERNOR FOR STEAM-ENGINES.

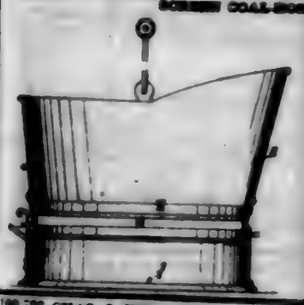
100,785, SOLOMON S. MOYER.
SIPHONS.



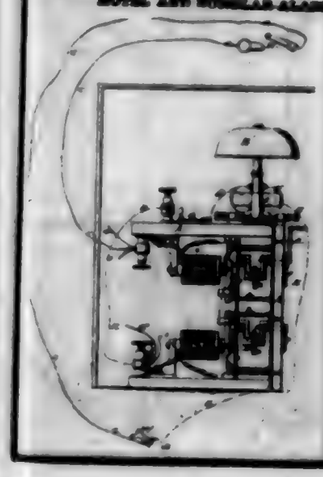
100,786,
JOSEPH H. MURPHY.
PATRICK J. MURPHY.
FARE-BOXES.



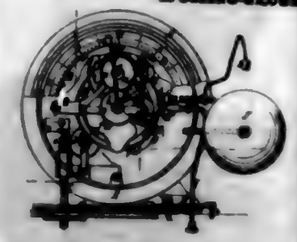
100,787, JAMES MYERS, Jr.
PREVENTING THE
STEALING OF BOATS.



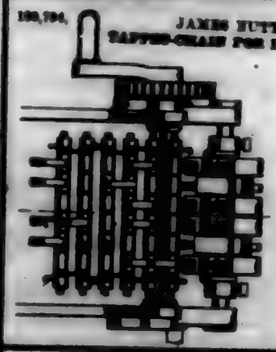
100,788, JOHN NEEDHAM.



100,789 THOMAS NELSON.
HOOP-WEIGHT-SETTING MACHINE.



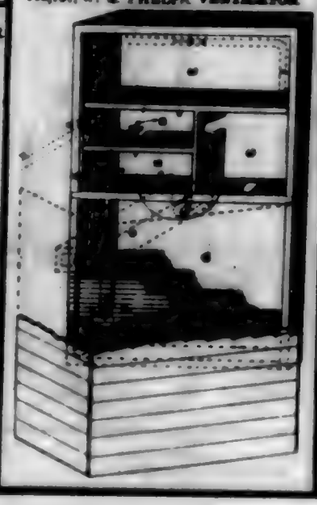
100,790, M. S. NICHOLS.
REUBEN WEAVER.
SCREEN COAL-HOD.



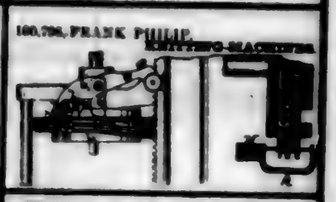
100,791, CHAS. S. NOE.
HOTEL AND BURGLAR-ALARM.

100,792, RICHARD H. NORRIS.
SPOOLING-GAUGE.

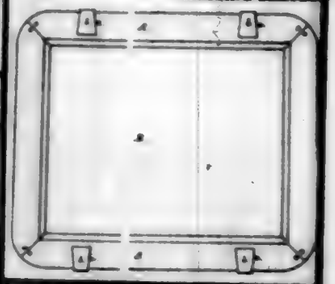
100,793,
JAMES NUTTALL.
TAPPING-CHASE FOR LOOMS.



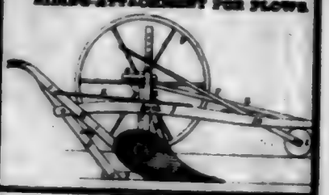
100,794, JOHN PATTERSON.
COAL-OAR AND TRUCK-WHEEL.



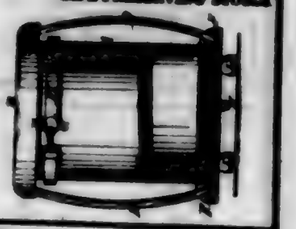
100,795, WILLIAM W. PETTEE.
PRESSER-FOOT FOR SEWING-MACHINES.



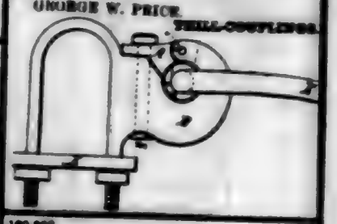
100,796, W. S. PHELPS, VENTILATOR.



100,797, FRANK PHILIP.
KNITTING-MACHINE.

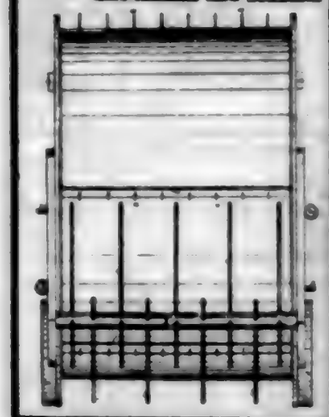


100,798, GEORGE EDWIN POOR.
WRITING-SLATES.



100,799, A. R. PORTER.
A. L. PORTER.
RISING-ATTACHMENT FOR PLOWS.

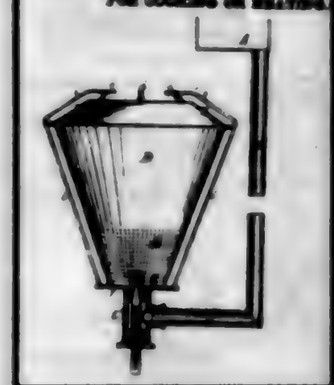
100,800, HENRY T. PRATT.
LIFE-PRESERVING SPOONS.



100,801,
GEORGE W. PRICE.
SHELL-COUPLINGS.

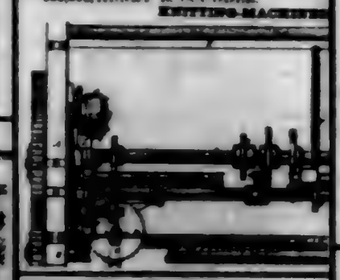
100,802, JNO. C. RANKIN.
CLOTHES-LIFT HOLDER.

100,804 GEO. H. BRISTER.
HAY-RAKING AND LOADING.

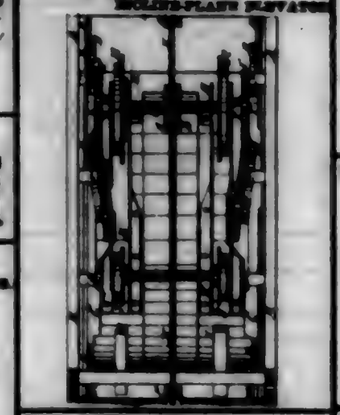


100,805 FRED. L. BOELL.
SAFETY-ATTACHMENTS FOR POCKETS.

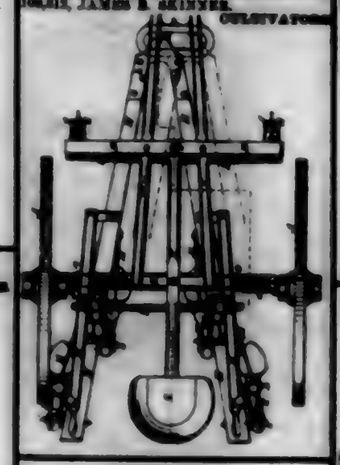
100,806 JOHN ROOT. PAPER BOX.



100,807 HERMAN S. HANOSH.
FOR COOKING OR HEATING.

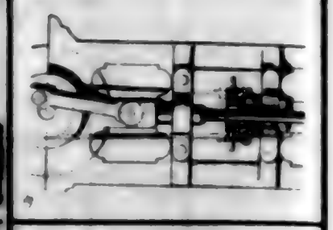


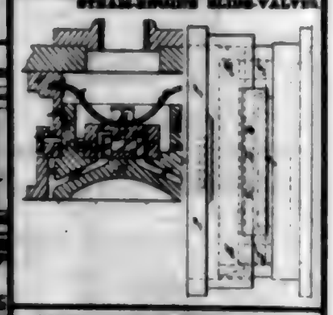
100,808 LEONHARD SCHMIDT. GRATER.



100,809 HENRY B. SCUDDER.
KNITTING-MACHINE.

100,811 THOS. B. SIMONTON.
HORSE-PLANE ELEVATOR.

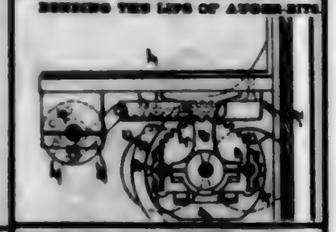


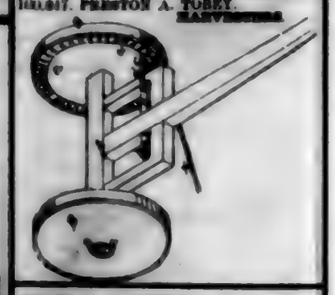


100,812 JAMES B. SKINNER.
CULTIVATOR.

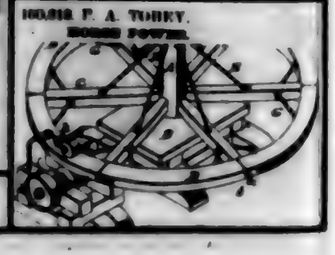
100,813 JAMES SKIPP.
SCOURING MACHINE.

100,814 ANDREW J. STEVENS.
STEAM-ENGINE SLIDE-VALVE.

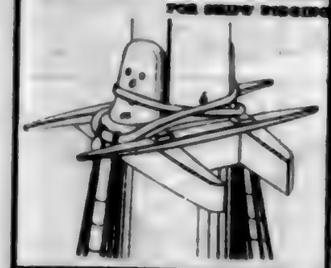




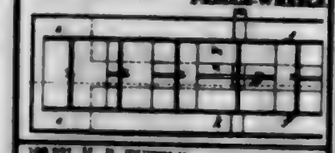
100,815 WILLIAM STIRK.
CORRUGATED CORN-MARKER, PLANTER, AND CULTIVATOR.



100,816 JAMES SWAN. MACHINE FOR BENDING THE LEGS OF ANGLE-IRON.

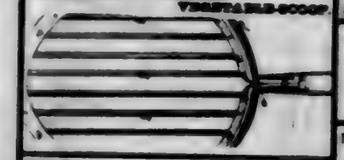


100,817 PRESTON A. TOBEY.
HARVESTER.

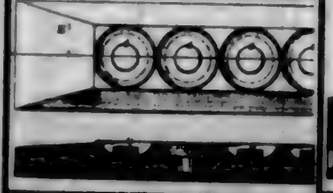


100,818 P. A. TOBEY.
HORSE POWER.

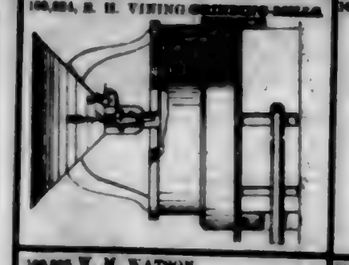
100,819 HENRY TOWNSEND.
CHEEK-PIECES AND SHROUD-TOKEN FOR SHIPS' RIGGING.



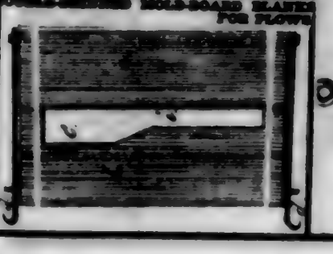
100,820 BENJAMIN W. TUCKER.
PADDLE-WHEELS.



100,821 H. P. TUTTLE.
HAND INDICATOR FOR SHOWING THE COURSE OF VESSELS.



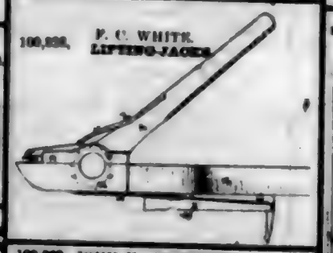
100,822 JOHN F. UNGLISH.
VEGETABLE-SCOOP.



100,823 SAMUEL VANSTONE.
DIE FOR MAKING GLOVE-RINGS.

100,824 E. H. VINING. SHEARING-SHEARS.

100,825 W. M. WATSON.
DIE OR FORMER FOR MAKING CURVED-SHEARED MOLD-BOARD BLADES FOR PLOWS.

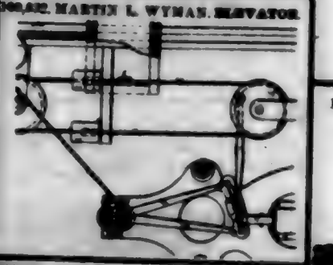


100,826 ALBERT S. WELLS.
LADLES FOR POURING METALS.

100,827 GEO. WHITBECK. HORSE-FORK.

100,828 P. C. WHITE.
LIFTING-JACKS.

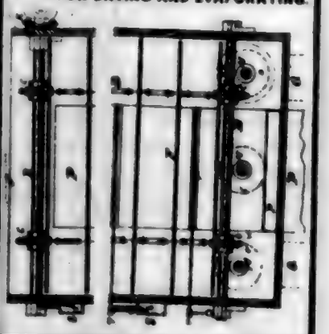
100,829 JOHN H. WHITNEY.
SLUICE-BOXES FOR GOLD-MINING.



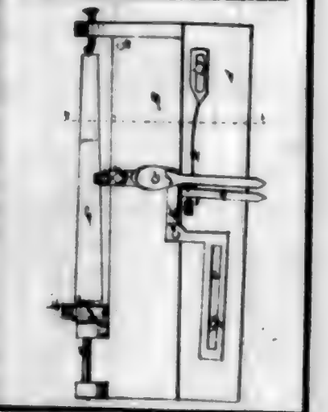
100,830 JOSEPH WHITTINGHAM.
REVERSIBLE EDGE-LASTING.

100,831 STANLEY R. WORRELL.
APPARATUS FOR WASHING AND ELEVATING LUMBER.

100,832 MARTIN L. WYMAN. ELEVATOR.

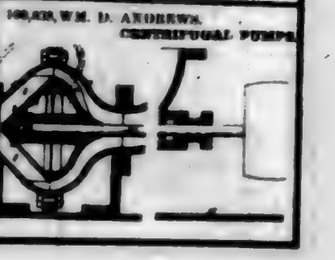


100,833 A. G. ZIEMING.
LOCKS FOR SHIPS' PUMPS.

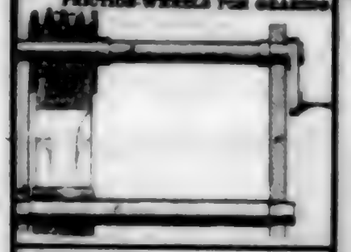


100,834 JOHN B. ADAMS.
TRACK-LAYING MACHINE.

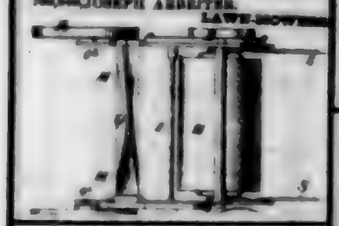
100,835 CHARLES ALDER. APPARATUS FOR DRYING AND EVAPORATING.



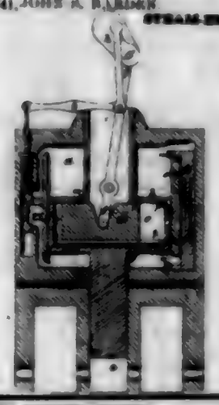
100,836 GEO. F. ALMY. SPOKE-LATHE.



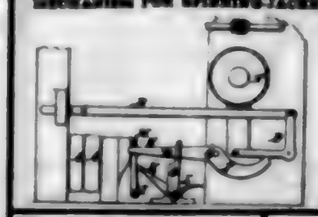
100,837 SAML. J. ANDERSON.
RAILWAY-CAR COUPLING.



100,838 WM. D. ANDREWS.
CENTRIFUGAL PUMP.



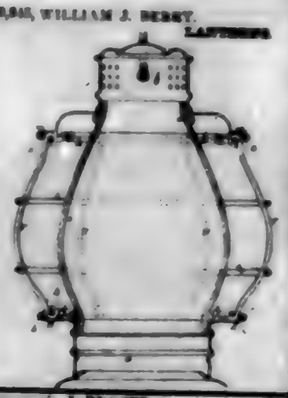
100,838, WM. D. ANDREWS.
FRICTION-WHEELS FOR GEARING



100,839, JOSEPH ARBEITER.
LAWN-MOWER

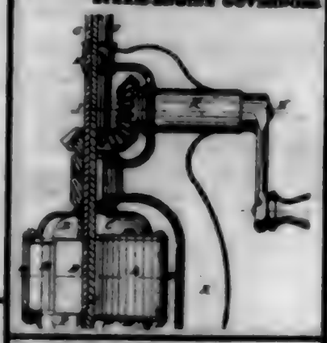
100,840, JOHN S. BARNES.
STEAM-ENGINES

100,841, JOSEPH BARON.
BELT-SHIPPING MECHANISM FOR SPINNING-JACKS



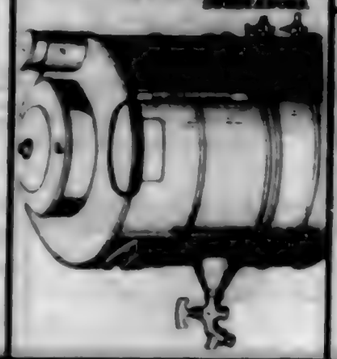
100,842, A. BELT.
HEDGE FENCE.

WITNESSES: ISAAC WILLIAM HERBERT, [illegible]

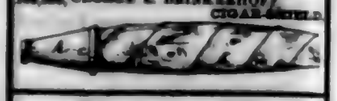


100,843, WILLIAM J. BERRY.
LANTERNS

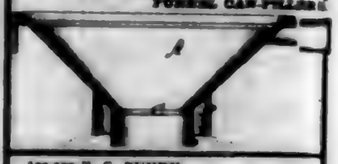
100,844, L. J. BLADES.
JNO. MAHONEY.
LIFTING-JACK.



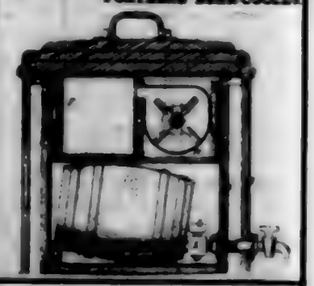
100,845, HORACE BOARDMAN.
STEAM-ENGINE GOVERNORS.



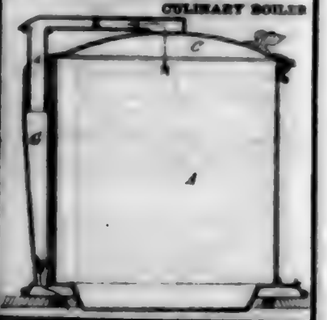
100,846, MYRON T. BOULT.
CARVING WOOD.



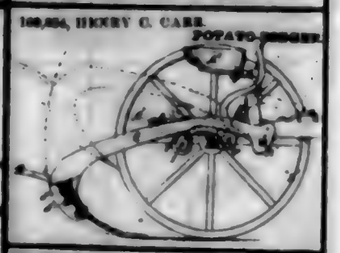
100,847, LOUIS BRAUER.
APPARATUS FOR MAKING EXTRACTS AND DECOCTIONS FROM COFFEE, TEA AND OTHER SUBSTANCES.



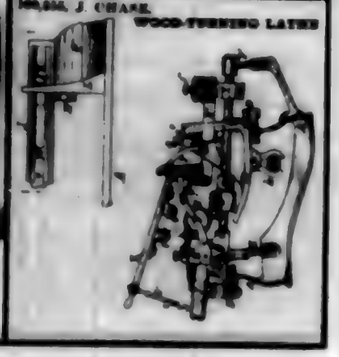
100,848, GEORGE E. BRINKERHOFF.
CIGAR-SHIELD.



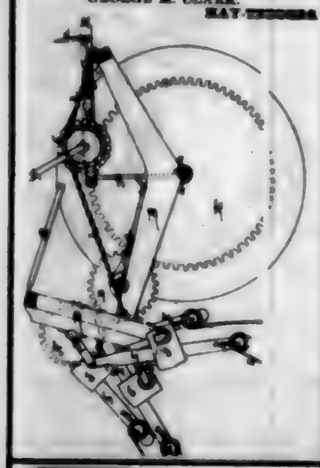
100,849, H. L. BRUNDAGE.
R. DOWNING.
FURNACE CAR-FILLER.



100,850, E. C. BUNDY.
PORTABLE BEER-COOLER.



100,851, FERDINAND M. CARNES.
CULINARY BOILER.



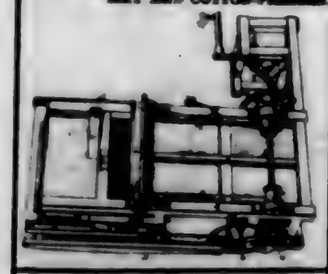
100,852, HENRY C. CARR.
POTATO-DIGGER.

100,853, J. CHASE.
WOOD-TURNING LATHE.

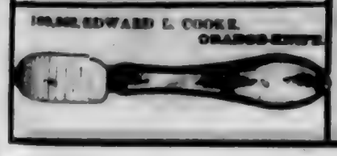
100,855, THOMAS J. CLARK.
GEORGE M. CLARK.
HAY-TEDDERS.

100,856, W. J. CLARK.
DOG-CARRIERS.

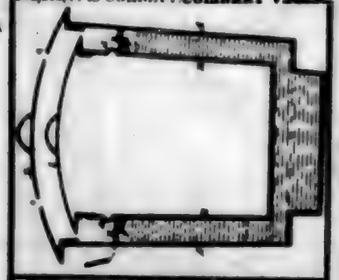
100,857, WEBSTER M. CLAYTON.
STAIR-RODS.



100,858, D. H. B. COFFIN, Jr.
CAPSTANS.



100,859, CHARLES COLE.
RAILWAY-CAR AXLES.



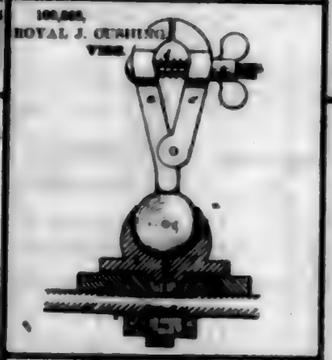
100,860, E. H. COLE.
G. P. COLE.
HAY AND COTTON-PRESSES.

100,861, EDWARD L. COOKE.
ORANGE-KNIFE.

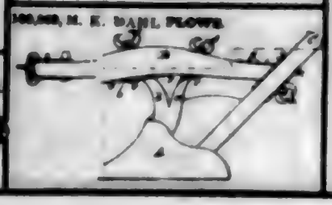
100,862, C. E. CORBETT, CULINARY VESSEL.

100,863, FREDRICK A. COWLES.
BODY-LOOP FOR CARRIAGES.

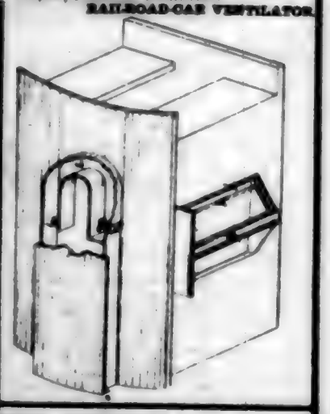
100,864, CHAUNCY O. CROSBY.
PAPER BOX.



100,865, DANIEL H. CROSS.
PHOTOGRAPHIC-PLATE HOLDER.

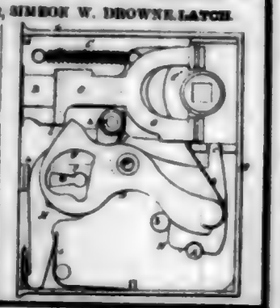


100,866, WILLIAM CURRAN.
DEFLATORS.

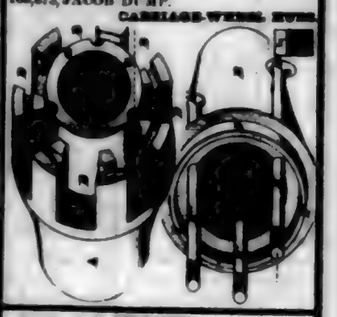


100,867, ROYAL J. CUSHING.
VISE.

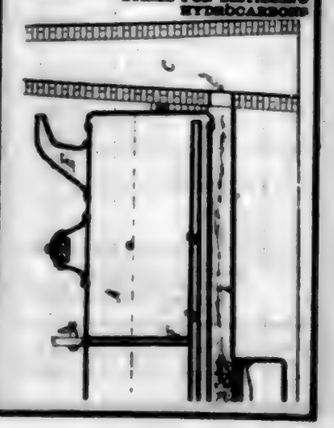
100,868, H. E. DAHL.
PLOWS.



100,869, SAMUEL DARLING.
RAIL-ROAD-CAR VENTILATOR.



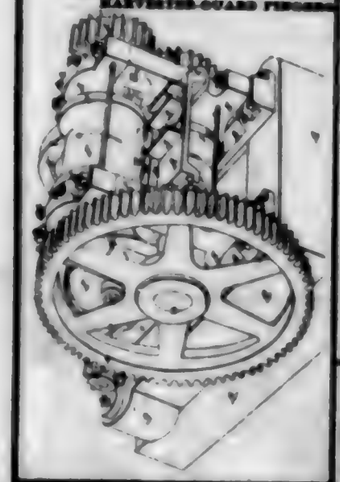
100,870, JUAN YNDRO DIAZ.
MANUFACTURE OF FERTILIZERS.



100,872, SIMEON W. DROWNE.
LATCH.

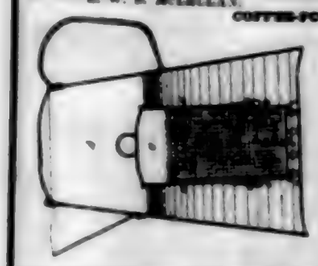
100,873, JACOB DUMP.
CARRIAGE-WHEEL HUB.

100,874, J. B. EDWARDS.
STILLS FOR DISTILLING HYDROCARBONS.



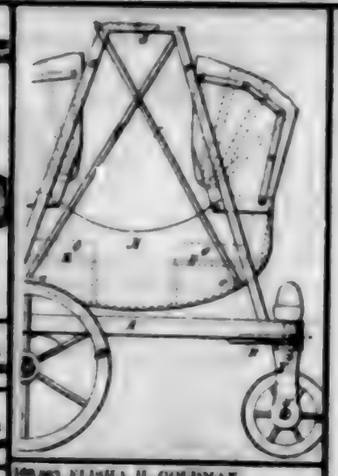
100,875. STEPHEN D. ELY.
MODE OF LUBRICATING THE WHEELS IN TREAD-POWERS.

100,876. ALONZO FARRAR.
PROCESS OF TREATING ACID SEDIMENT FROM OIL-REFINERIES.



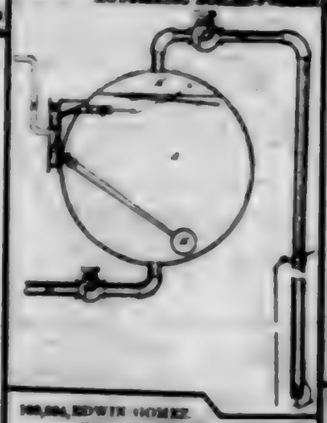
100,877. ALONZO FARRAR.
COMPOSITION TO BE USED FOR PRINTING OR PAINTING ON SURFACES.

100,878. JEROME FANNER.
MACHINE FOR MANUFACTURING HARVESTER-GUARD FINGERS.



100,879. W. B. FERRIS.
BURROUGHS BRACE FOR WHEELS-CASES.

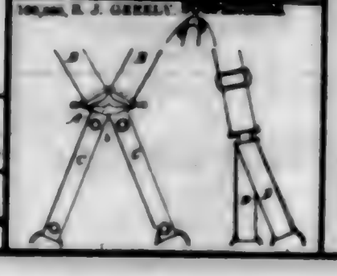
100,880. JAMES F. FITCH.
E. G. DEVOE.
E. W. B. McLELLAN.
COFFEE-POT.



100,881. CHRISTIAN FLAMMER.
PROCESS OF MAKING GLASS SHOW-CASES, &c.

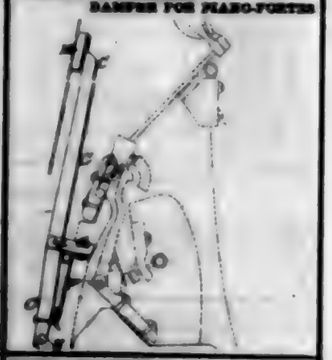
100,882. WILLIAM H. FLANIGAN.
CONSERVED CARRIAGE CHAIR SWING AND BAIT-WELL.

100,883. ELISHA H. GOLDMAN.
AUTOMATIC BOILER-FEEDER.



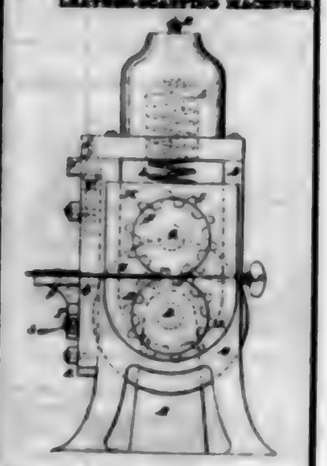
100,884. EDWIN GOMEZ.
TOMPION AND CARTRIDGE.

100,885. DANIEL J. GORTON. PUMP.

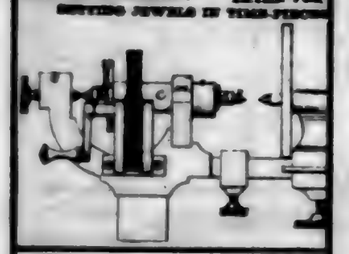


100,886. E. J. GERELY.

100,887. JOHN S. HASBROUCK.
APPARATUS FOR ELEVATING AND LOWERING GEAR.

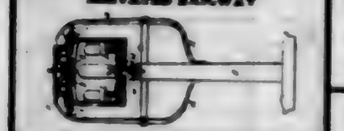


100,888. A. H. HASTINGS.
DAMPER FOR PIANO-FORTES.



100,889. CORNELIUS E. HAYES.
PACKING APPARATUS.

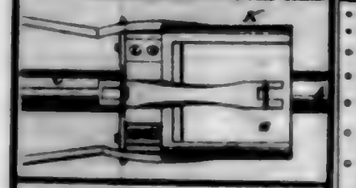
100,890. CHARLES H. HELMS.
LEATHER-SCARFING MACHINE.



100,891. H. H. HESKETT. LATHE FOR SETTING JEWELS IN TIMES-PIECES.

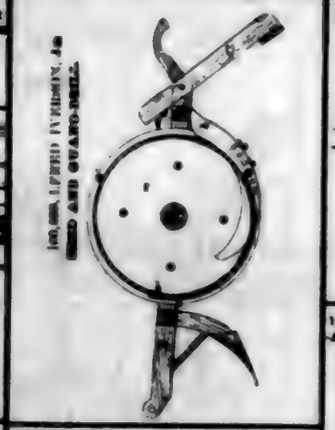
100,892. GEO. S. HEWITT.
MANUFACTURE OF BRICKS.

100,893. BENJ. L. HOOD.
HENRY O. HOOD.
EZRA W. CLARK, JR.
ELEVATED RAILWAY.



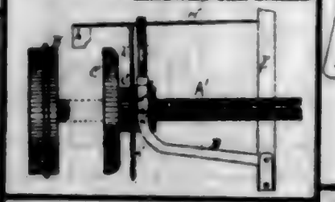
100,894. GEORGE HORTER. SADDLE.

100,895. WILCOX J. HUBBARD.
JOINTS FOR STEERING-BOGIES.

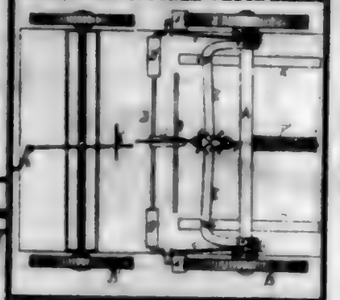


100,896. F. E. HUNT.
PIPE-COUPLING FOR HEATING AND VENTILATING RAILROAD CARS.

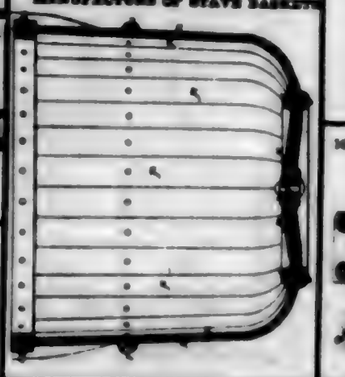
100,897. F. E. HUNT.
PACKAGE BAND AND FASTENER.



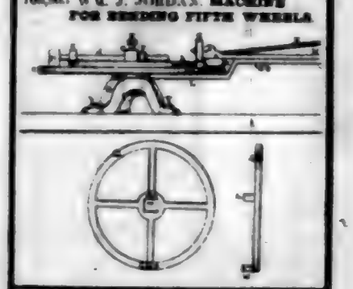
100,898. EDWD. P. JONES.
LEVER AND GUARD-BOLT.



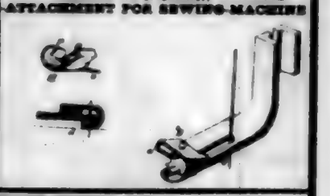
100,899. EDWD. P. JONES.
HASP AND STAPLE FASTENING.



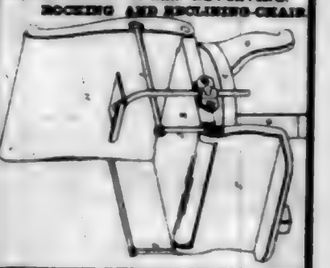
100,900. EDWD. P. JONES.
RAILWAY-CAR BRAKE.



100,901. EDWD. P. JONES. WAGON-BRAKE.



100,902. HORACE C. JONES.
MANUFACTURE OF STAVE BASKETS.



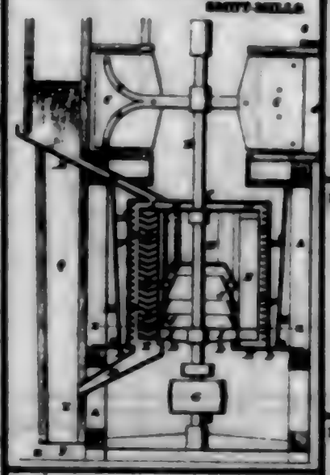
100,903. WM. J. JORDAN. MACHINE FOR BEADING FIFTH WHEELS.

100,904. AMASA C. KASSON. BINDING ATTACHMENT FOR SEWING-MACHINE.

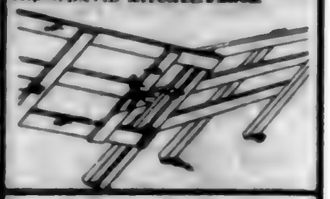
100,905. GEORGE KNELL. REVOLVING ROCKING AND RECLINING-CHAIR.

100,906. CAMILLE KREUT. LIFE-PRESERVER.

100,907. HENRY LAMPERT.
APPARATUS FOR WORKING MINES.

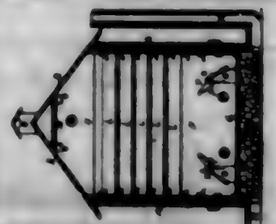


ILLUSTRATIONS OF PATENTS

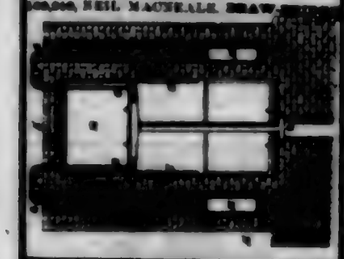


100,909. HORACE LITTLEFIELD.
PANNING AND SHUT-SELL.

100,910. DANIEL W. MARMON.
SHUT-SELLS

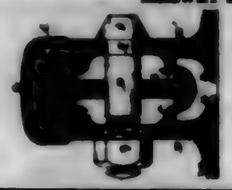


100,911. DAVID MITCHEL, PENCIL



100,912. T. A. MACAULAY.
FERRULE-ADJUSTING BLOCK FOR SEWING-MACHINES

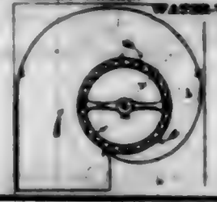
100,913. JAMES B. MAY. PHOTO-ENGRAVING



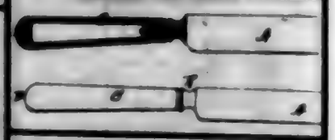
100,914. NEIL MACHEALE. DRAW-BENCH

100,915. THOMAS R. A. MERRILL.
PRODUCTION OF LIGHT FROM HEAVY HYDROCARBONS.

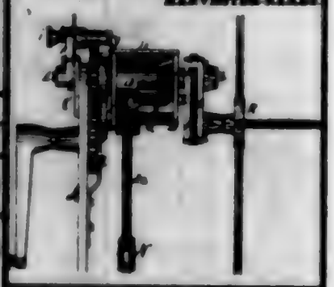
100,916. PHILEMON MERRYMAN.
PUDDLING PROCESS FOR MAKING WROUGHT IRON



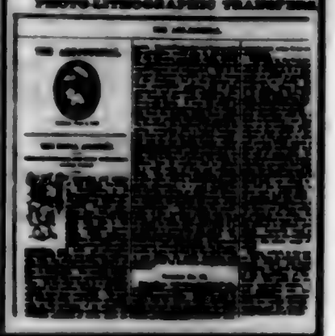
100,917. JAMES MILLHOLLAND.
RAILWAY RAIL



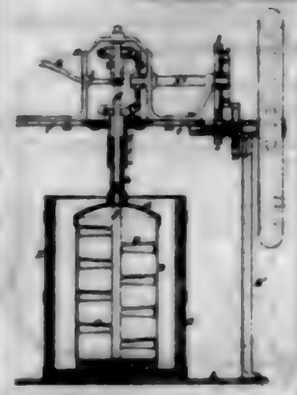
100,918. OBED W. PUTNAM
WASHING-MACHINE



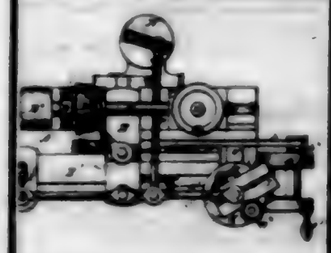
100,919. ALEXANDER F. MURRAY, HENRY GREEN.
WATER-WHEEL



100,920. J. H. NICHOLS, WM. BOWER.
HANDLES FOR TABLE CUTLERY

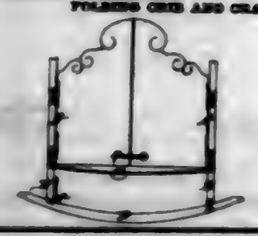


100,921. AARON PALMER, CHAS. W. PALMER.
HARVESTER-RAKES

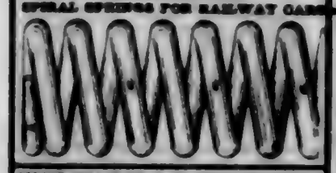


100,922. ISAAC REHN.
MODE OF PRODUCING PHOTO-LITHOGRAPHIC TRANSFERS

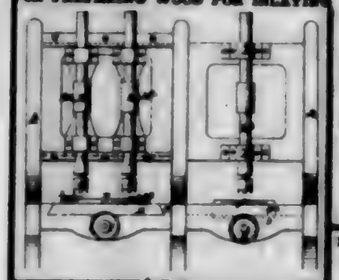
100,923. THOMAS MILLS, GEO. M. MILLS.
ICE-CREAM FREEZER



100,924. JOHN J. MABEY.
MACHINE FOR SPINNING SHEET METAL

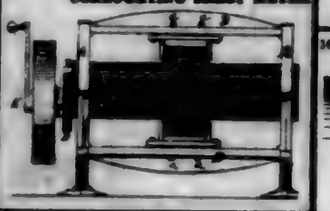


ISSUED MARCH 15, 1870.

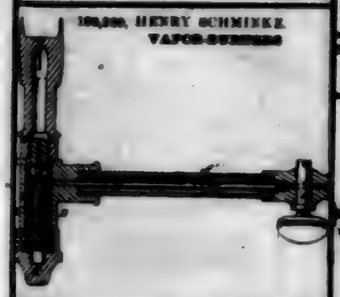


100,925. D. M. REYNOLDS.
FOLDING CRIB AND CRADLE

100,926. F. W. RHINELANDER.
SPIRAL SPRINGS FOR RAILWAY CARS



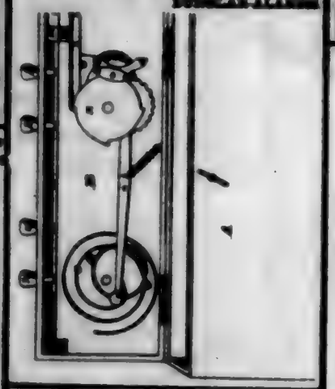
100,927. CHARLES F. RITCHEL. MACHINE FOR PREPARING WOOD FOR SLATES



100,928. JOHN ROOT.
MACHINE FOR HEADING BOLTS

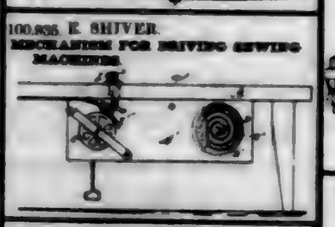
100,929. FRANKLIN ROYS. MACHINE FOR CORRUGATING SHEET METAL

100,930. HENRY SCHMINKE.
VAPOR-BURNER



100,931. THOMAS C. SCRUTON.
CATARRH RESCUE OR SNUFF

100,932. JOHN SEE.
SCRUBBING-BRUSH



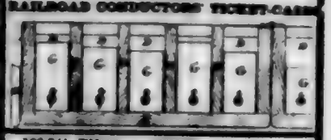
100,933. REUBEN SHALER.
BURGLAR-ALARM

100,934. E. SHIVER. MECHANISM FOR OPERATING SEWING-MACHINES

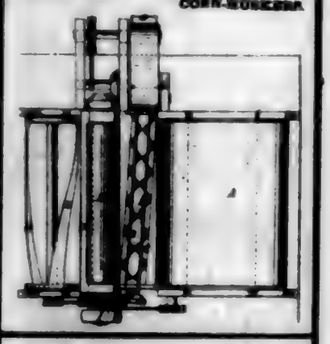
100,935. E. SHIVER.
MECHANISM FOR DRIVING SEWING MACHINES

100,936. J. C. SHULER. EXTRACTING TURPENTINE FROM PINE-TREES

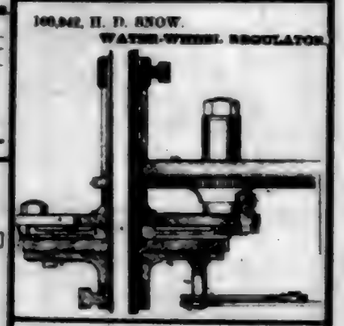
100,937. LORENZO SIBERT.
METALLIC ALLOY TO IMITATE THE PRECIOUS METALS



100,938. SAMUEL SIMPSON.
SPOON-MOLDS



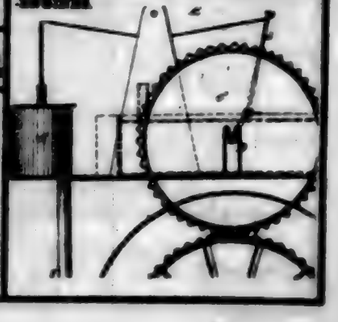
100,939. HENRY SMITH, Jr.
MAP-ROLD PLATE FOR TAPESTRY STUFFING-WHEEL



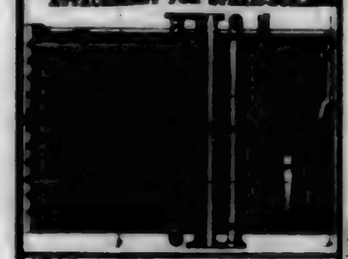
100,940. JOSEPH T. SMITH.
RAILROAD CONDUCTORS' TICKET-CASE

100,941. THOS. S. SMITH.
CORN-HUSKERS

100,942. H. D. SNOW.
WATER-WHEEL REGULATOR



100,943. S. M. SNYDER. RAILWAY GATE

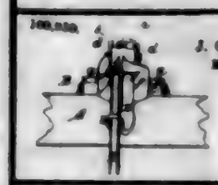


100,944. S. SOREL. MANUFACTURE OF CEMENT FOR ARTIFICIAL STONE.

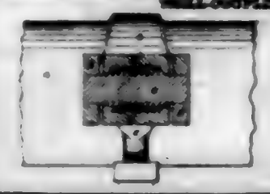
100,945. S. SOREL. MANUFACTURE OF ARTIFICIAL STONE

100,946. NATHERLY SPNAR. COMBINED CURRENT-WHEELS AND CONDENSING-ENGINES.

100,947, ELIHU SPENCER. SEAMING ATTACHMENT FOR STRAW-SEWING



100,948, GEORGE STECK. IRON FRAMING FOR UPRIGHT PIANOS

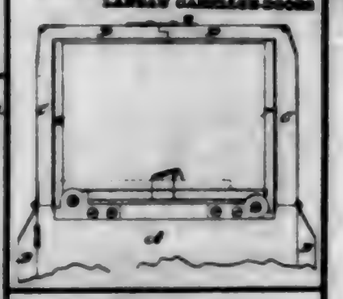


100,949, LOVITT STIMSON. WRAPPING BOTTOMS FOR TRANSPORTATION

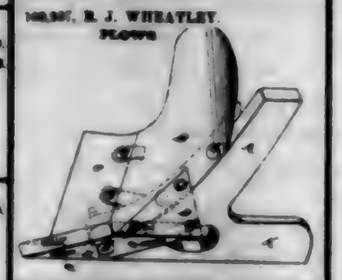
100,950, J. C. STODDARD. HORSE-RAKES

100,951, CHAUNCEY THOMAS. WELL-COUPLING

100,952, ROBERT J. S. THOMPSON. AXE-GRINDER

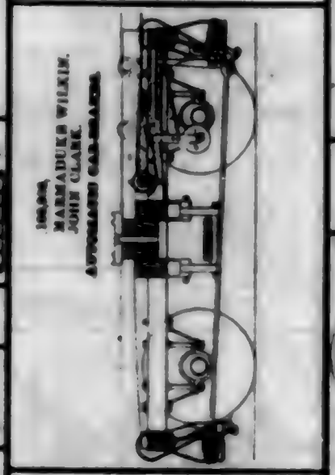


100,953, JOSEPH TREAT. MANUFACTURE OF BOBBIN-NUT.



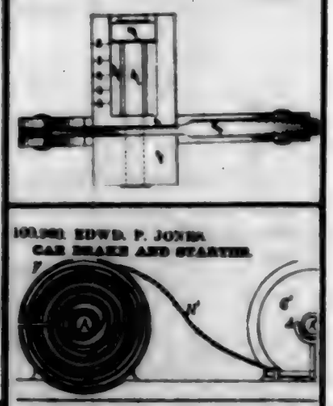
100,954, A. VAN CAMP, H. M. HOSHMAN. COMPOSITION FOR CONCRETE PAVEMENTS, WALLS, &c.

100,955, GEO. WADDINGTON. CORNERING MIDDLE-TEDDER AND MOWER.

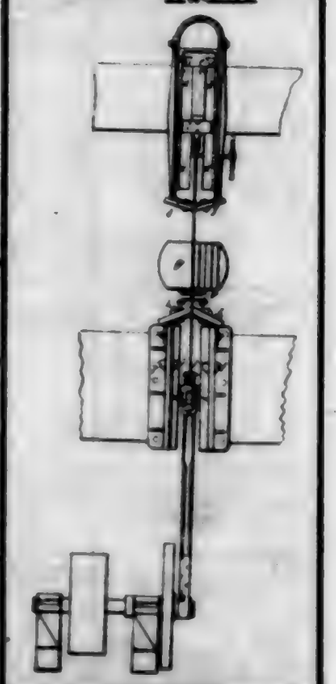


100,956, EDWARD WELLS. LAWN GARDAGE-DOORS

100,957, R. J. WHEATLEY. PLOWS

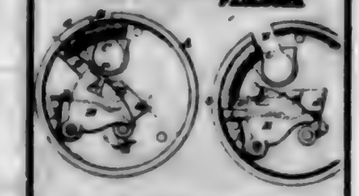


100,958, MARMADUKE WILKIN, JOHN CLARK. ADJUSTABLE GARDAGES



100,959, W. H. C. WILLSON. GAUGE FOR TOBACCO-CUTTERS

100,960, EDWD. P. JONES. CAR BRAKE AND STARTER



1,979, ARSHELL P. BARLOW. SAW-SETS

1,979, IRA T. PAYNE. AWNING

1,980, FREDERICK BOOS. PAIL-HOOK

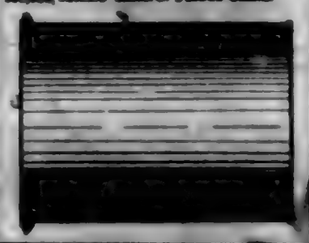
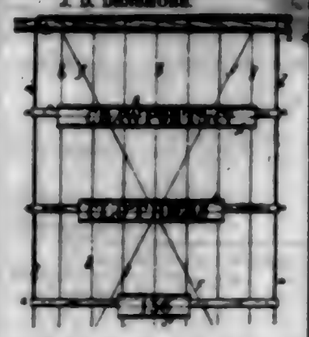
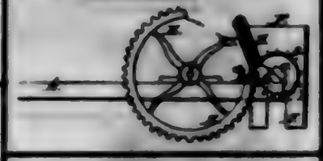
JOSEPH BENNETT.
HEATING AND OTHER FURNACES.



101,048. WM. MILLER INGERSOL
CAR-COUPLING



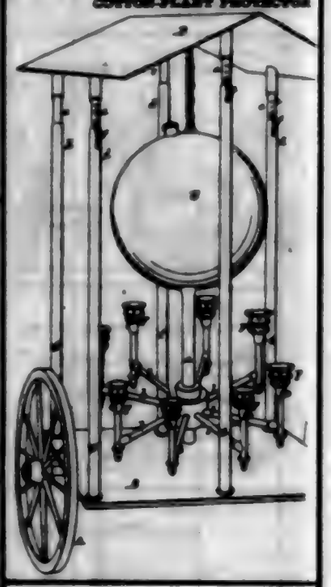
101,049. GUSTAVUS A. JASPER.
APPARATUS
FOR COOLING AND SAVING CHARCOAL.



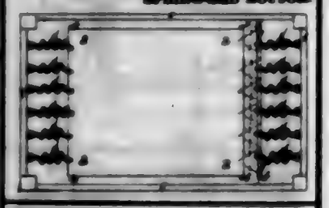
101,050. HAAS KLEIN. SHUTTER-BLIND

101,051. P. A. LA FRANCE, assignor
J. D. DENSMORE.

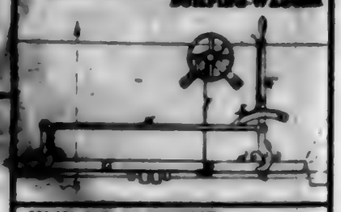
101,052. WARREN KIETON, GRANTEE
JOHN MAXSON.



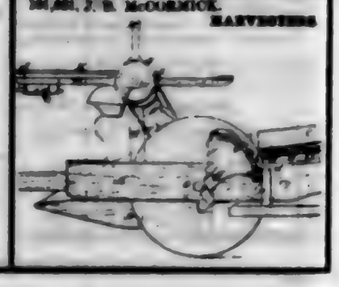
101,053. CATHERINA LAMBERT.
WOVEN TEXTURE.



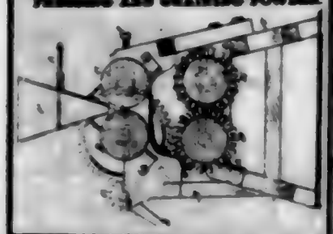
101,054. LOUIS F. LASTRETO.
MEDICINAL BEVERAGE



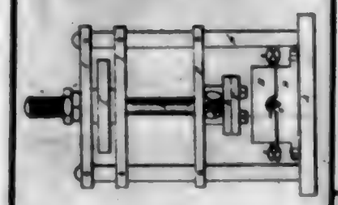
101,055. AUGUSTE LE BLANC.
COTTON-PLANT PROTECTOR



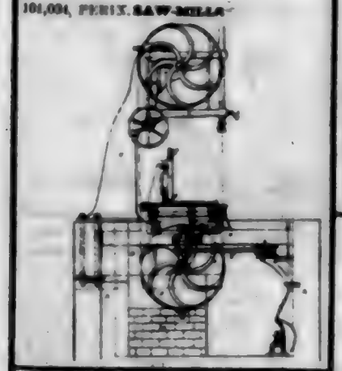
101,056. GEORGE W. LOOMIS.
SPRING-BED BOTTOM



101,057. VIRGIL H. LYON.
DUMPING-WAGGON



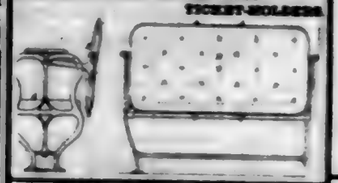
101,058. J. H. McCORMICK.
HARVESTERS



101,032. PAUL A. OLIVER. MACHINE FOR PEELING AND GRATING POTATOES.

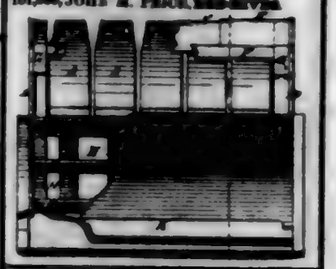
101,033. SAMUEL JOSEPH PERT.
DANIEL SAWYER.
MACHINES FOR FORMING MOULDS.

101,034. PERRIX. SAW-MILLS.

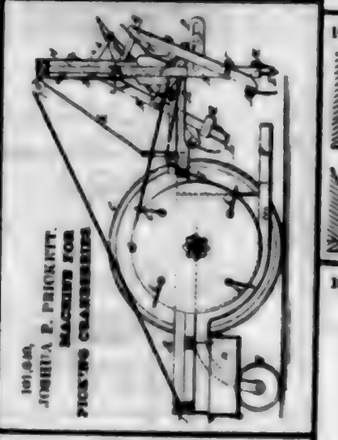


101,035. THOMAS P. PETERSON.
APPARATUS FOR PURIFYING WATER FOR THE MANUFACTURE OF ICE.

101,036. THOS. H. POWERS.
WATER-WHEELS



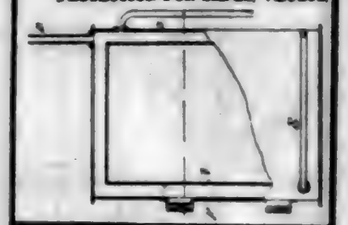
101,037. ONSVILLE EVANS PRAY.
TICKET-HOLDERS.



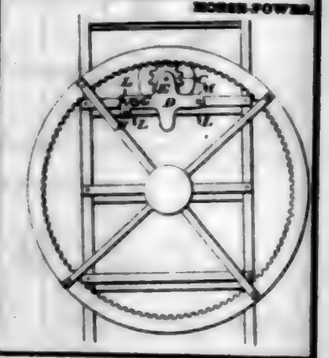
101,038. JACOB PRICE. GANG-PLOWS.

101,039. JOHN M. PRICE. HARVESTER.

101,040. JOSHUA P. PRICKETT.
MACHINES FOR CHAMFERING SPOKE-TENONS.

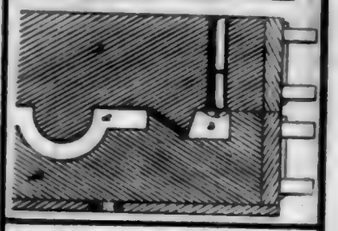


101,041. SAXON J. RAYMOND
KNIFE FOR SPLITTING WOOD.



101,042. DAVID RINKLE.
STORAGE BITTERS.

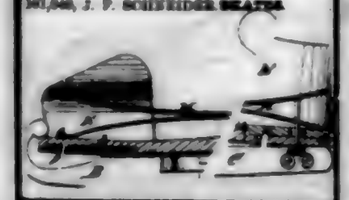
101,043. P. A. ROBERTS.
CAR-HOLDER FOR HORSES.



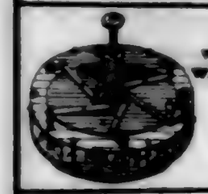
101,044. JOHN A. ROBERTSON. STEAM
PROTECTOR FOR SAFES, VAULTS.

101,045. F. W. ROBINSON.
HORSE-POWER.

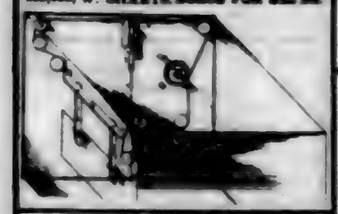
101,046. H. ROSS. CASTING METAL.



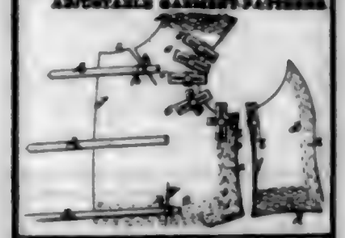
101,047. THEODORE BOWELL.
SHAFT-COUPLING.



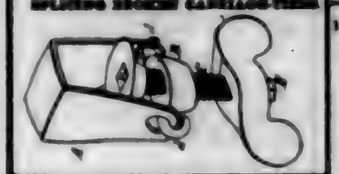
101,048. JOHN BOWLEY. TREATING COAL PRODUCTS TO OBTAIN HOMOGOL.



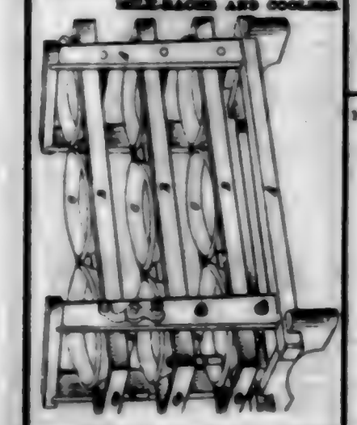
101,048, J. P. SCHNEIDER, SEATER.



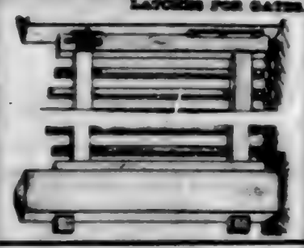
101,049, W. L. SELLICK, WATER-WHEEL.



101,051, W. SHARTS, HOLDS FOR SAFES.

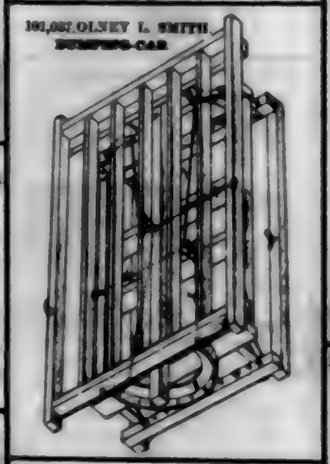


101,052, SAMUEL SHAWCROSS, ADJUSTABLE GARMENT-PATTERNS.

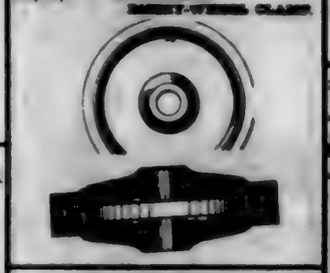


101,053, ALFRED B. SHRAFFER, HAND-SCREW AND CLIP FOR SPLICING BROKEN CARRIAGE-TIRES.

101,054, LAWSON SHIPMAN, BELT-RACER AND COOLER.



101,055, WARREN SHUMARD, LATCHES FOR GATES.

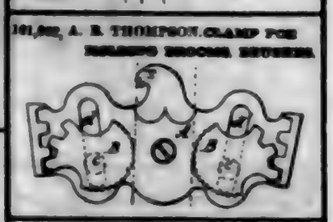


101,056, D. T. SINGLETON, PLOWS.

101,057, OLNEY L. SMITH, DUMPING-CAR.

101,058, E. A. SCWERDTFF, BELT-WRENCH CLAMP.

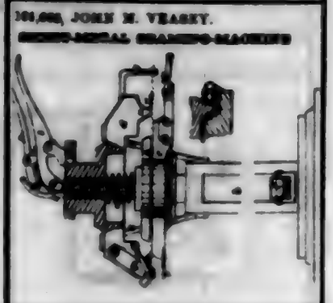
101,059, THOMAS SWEENY, WATER-MOTORS.



101,060, J. OSCAR TABER, COMBINED MOWER AND HEDGE-TRIMMER.

101,061, A. P. TAYLOR, SHARPENING HARVESTER-KNIVES.

101,062, A. B. THOMPSON, CLAMP FOR HOLDING BROOM HEADING.

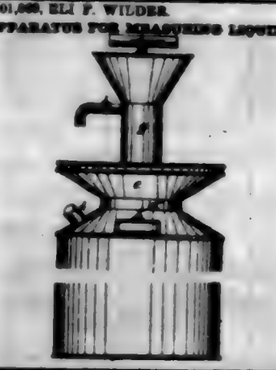


101,063, H. UHBY, GRAIN-DOOR.

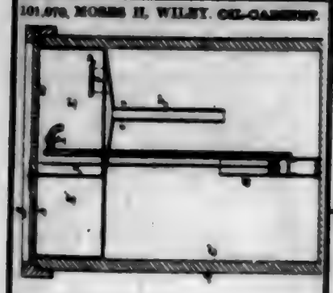
101,064, H. UHBY, GRAIN-DOOR.

101,065, JOHN M. VEASEY, METAL-SEDAL STAMPING-MACHINE.

101,066, WILLIAM WESTLAKE, ATTACHMENT FOR LAMP-BURNERS.

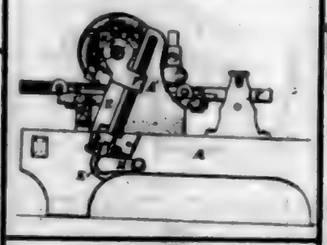


101,067, JAMES D. WHELPLEY, JACOB J. STOBER, MANUFACTURE OF IRON AND IN THE APPARATUS THEREFOR.

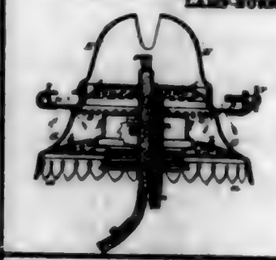


101,068, A. W. WHITNEY, F. A. WHITNEY, F. A. WHITNEY, TURNING AND SHEET-IRON WORKING ROLLS.

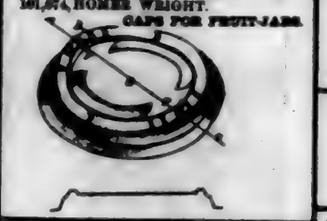
101,069, ELI F. WILDER, APPARATUS FOR SEASONING LIQUIDS.



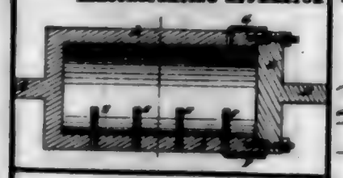
101,070, MORRIS H. WILEY, OIL-CABINET.



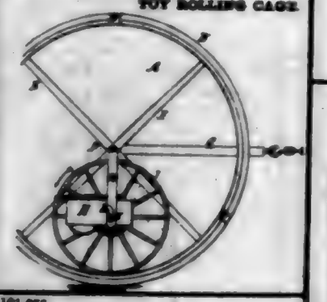
101,071, THOS. R. WOOD, COMPOUND TO BE APPLIED TO ROOFING.



101,072, GEORGE E. WOODBURY, PLANING-MACHINES.



101,073, DAVID PITCAIRN WRIGHT, CEPHAS BUTLER, LAMP-BURNERS.

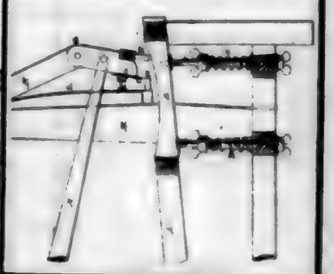


101,074, HOMER WRIGHT, CAPS FOR FRUIT-JARS.

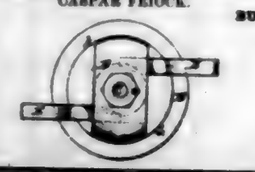
101,075, HOWELL W. WRIGHT, REDUPLICATING APPARATUS.

101,076, ARTHUR M. ALLEN, TOY ROLLING CAGE.

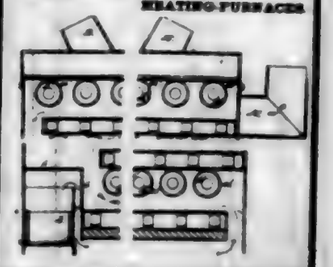
101,077, WM. J. ANDREWS, COTTON-CULTIVATOR.



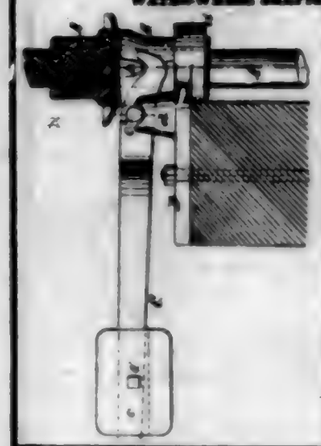
101,078, WILLIAM AURICH, VAPOR-BURNERS.



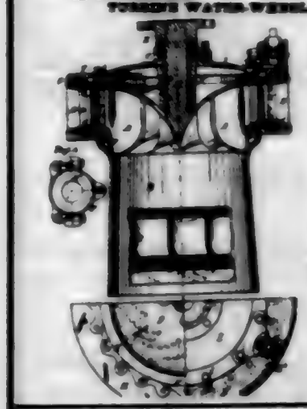
101,079, JAS. F. BABCOCK, SPRINGS FOR RAILROAD CARS.



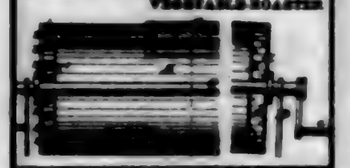
101,080, JAMES T. BARNSTEAD, MACHINES FOR SCRAPING LEATHER.



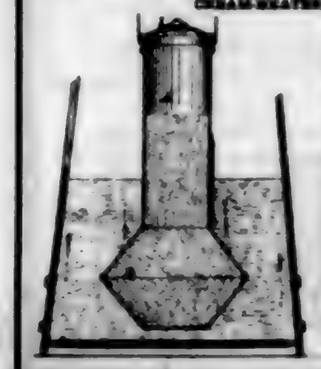
101,081, JOSEPH P. APPLEGATE, CASPAR FEIOCK, SAWS.



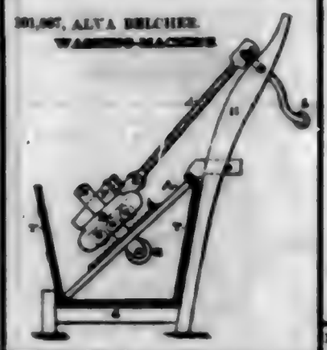
101,082, WM. D. BARTLETT, HEATING-FURNACES.



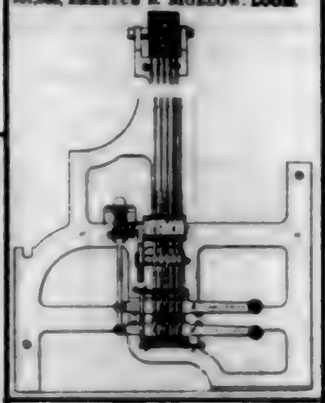
101,092, WM. BAYLEY.
ADJUSTABLE BEARING FOR WATER-WHEEL SHAFTS.



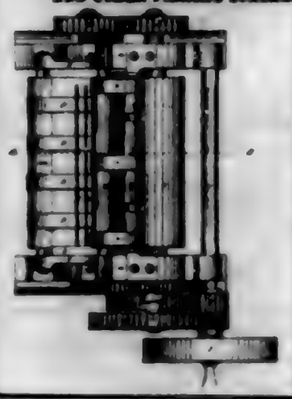
101,094, WM. BAYLEY.
A. B. CROWELL.
TURBINE WATER-WHEELS.



101,095, C. G. BAYLOR.
VEGETABLE-ROASTER.



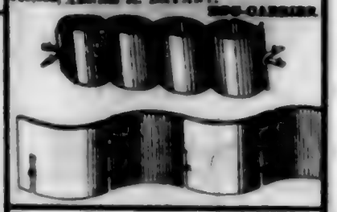
101,096, JAMES C. BEDDOE.
JOHN S. COON.
CREAM-HEATER.



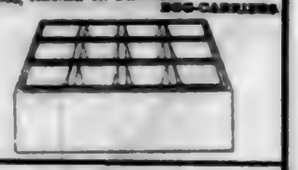
101,097, ALVA BELCHER.
WASHING-MACHINE.

101,098, ERASTUS B. BIGELOW. LOOM.

101,099, ERASTUS B. BIGELOW.
MACHINES FOR CRUSHING RAGS AND CURING FURNISH STALKS.

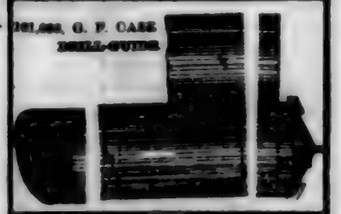


101,100, O. A. BINGHAM. CHAIR-SEAT.



101,101, C. C. BROWN.
CRUSHER.

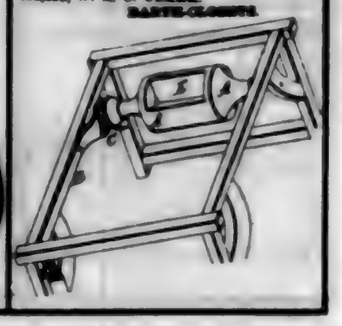
101,102, ABNER H. BRYANT.
HOG-CARRIER.



101,103, ABNER H. BRYANT.
HOG-CARRIER.

101,104, EDGAR D. BURRILL.
MEDICAL COMPOUND.

101,105, G. P. CASE.
DRILL-GUIDE.

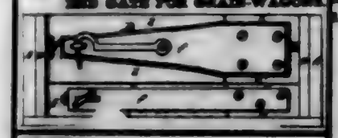


101,106 GEORGE W. CHATFIELD.
MEDICINE OR COUGH-SIRUP.

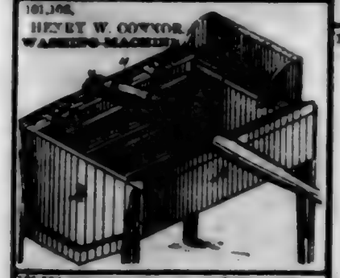
101,107, WM. A. CLARK.
CARRIAGE-AXLES.

101,108, W. R. C. CLARK.
SAFETY-CLOSETS.

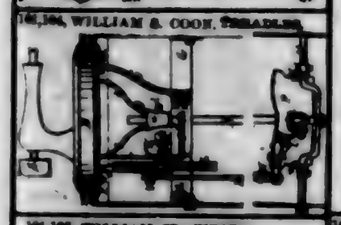
101,099, WILLIAM CLEMSON.
SAW-SWAGER.



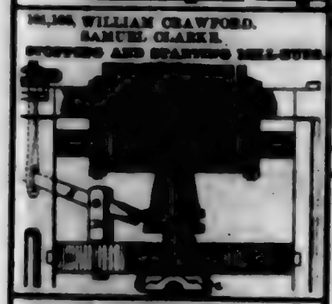
101,100, D. C. COLBY.
STREET PAVEMENT.



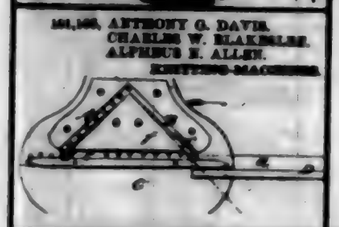
101,101,
JAS. R. COLE. COMPOSITION FOR THE MANUFACTURE OF TOBACCO PIPES, STEMS, AND CIGAR-HOLDERS.



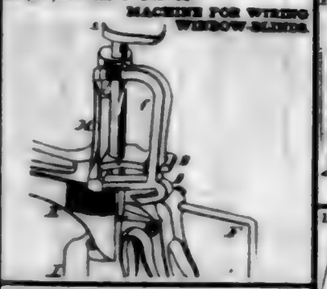
101,102, CHARLES H. COMSTOCK.
RED GATE FOR GRAIN-WAGONS.



101,103,
HENRY W. CONNOR.
WASHING-MACHINE.



101,104, WILLIAM S. COOK. THRASHER.



101,105, WILLIAM CRAWFORD.
SAMUEL CLARKE.
STUFFING AND STAPLING MILL-SUPS.

COOPERS-PLANING.

MOSES INGALLS. WASHING-MACHINE.
101,288.

101,289, JAMES HENDERSON.
MANUFACTURE OF IRON AND STEEL.

S. H. INGERSOLL. WOOD PAVEMENTS.
101,290.

101,290, JOSEPH S. GODFREY.
PLOWS.

101,291, DAVID KAHNWEILER.
SPINNING-MACHINES.

101,292, JAMES FRANKLIN KELLOGG.
TUCK-MEASURING ATTACHMENT FOR SEWING-MACHINE.
101,293.

101,294, EDWIN H. HILL.
HEADS AND SHEATHING-WIRE.

101,295, J. B. GOODWIN. CORN-PLANTERS.

101,296.
GEORGE S. GOODHOW.
SAWS.

101,297, J. J. HIRSCHBUHL.
SEWING-MACHINE.

101,298, JEREMIAH D. GERRY.
WHEEL FOR RAILWAY CARS.

101,299, JONAS HOUSE.
CORNICE AND EAVE-GUTTER.

SILVANUS HAWKES.
HAT-BODIES FOR

101,300, EVERETT G. HAMMOND.
PUMPS.

101,301, LIVERUS HULL.
IMPROVED SPRING-BED.

101,302, X. A. KETCHUM.
HARVESTER.

JOSEPH KIPP, 2d, and CHARLES S. GOULD.
SEWING-TOOLS.

101,304,
ROYAL G. KIDDER.
TRAPPING FOR SINKS.

JAMES KIRK. MACHINERY FOR FELTING.
SAMUEL SHELMERDINE. HAT-BODIES.
CEPHAS PROCTER.
101,276.

101,302. WM. LIGHTFOOT.
CURRENT WATER-WHEELS.

101,303. OSCAR LOEW.
BLEACHING
BARK SOAPS AND "FOOTS."

101,304. OSCAR LOEW.
BLEACHING AND REFINING OILS.

J. G. KOPAS. WASHING-MACHINE.
101,277.

101,305. EDGAR L. LOGER.
IMPROVED WINDOW-GUARD AGAINST FLIES AND MOSQUITOES.

101,278, JOSEPH LAUBER.
IMPROVED RATCHET DRILL.

101,306. ED ELISHA MACK.
PAPER COLLARS.

IMPROVED MINERAL COMPOUND.
101,279 PHILEMTER LEE.
LEMUEL MATTHEWS.

101,280. D. LEFEVRE RAILWAY DOORS. CAR-BRAKES.

101,307, I. P. MAGOON. FEED-WATER HEATER FOR LOCOMOTIVES.

101,281 CHARLES LEHMANN. IMPROVED STEERER AND SIDE-RAKER.

101,308.
C. K. MARSHALL.
APPARATUS FOR EVAPORATING CANE-JUICE.

101,309, ROBT. H. MAYO.
APPARATUS FOR SEPARATING THE SEED FROM FRUIT-PULP.

101,300, WM. D. McCLURE. STONE-DRILLS.

101,291. HUGH McDONALD.
MANUFACTURE OF CAST-STEEL.

101,292, WM. S. MEAD.
SEWING-MACHINES.

MICHAEL MEANY.
JOHN McGINNIS.
WILLIAM CUNNINGHAM.
CORNICE-MOLD.
101,293.

101,294 W. D. MEDBERY.
FEEDS AND STRAINERS COMBINED.

101,295,GEO. H. MELLEN.
CHILDREN'S CARRIAGES.

E. D. MERRICK. FIRE-PLACE GRATE 101,296

101,297, AXHOE MILLS, BAYONETS.

101,298, EDWARD MILNER.

101,299, G. J. MOFFATT. MACHINES FOR FOLDING PAPER BAGS.

CHAS. D. MOORE. SAW-MILL. 101,300.

D. F. NEIKIRK. IMPROVED WASHING MACHINE. JOHN J. KOCH. 101,301

101,302, JOEL G. NICCUM. TIE-BAR FOR HOLDING RIVET PINS.

101,303, WM. O'BRIEN. HARRY WENTWORTH. IMPROVED COLLAR AND HAMES.

101,304, M. S. ORTON. PUMPS.

101,305, H. C. S. OTTO, Dr. IMPROVED MEDICAL COMPOUNDS.

101,306, HENRY M. PAINE. ROTARY HYDRO-PNEUMATIC PUMPS.

101,307, SAMUEL PEARSON. ATTACHMENT FOR SHOVELS.

101,308, MICHAEL POWELL. WAGON-BRAKES.

101,309, ELI S. PRIME. GAUGE-BOXES.

101,310, FRED. L. PURROY. VELOCIPEDE.

101,311, R. RAMSEY AND C. STAFFORD. RAILWAY GATE.

101,312, E. C. REYNOLDS. BOAT-DETACHING APPARATUS.

D. S. ROBERTS. 101,313, CEMENT-POTS.

101,314, S. D. SANDERS. COMPOSITION ROOFING.

101,315, S. D. SANDERS. MACHINE FOR COMPRESSING WOOD TENONS.

101,316, THOMAS SCANTLIN. STOVE-RISER.

101,317, CASPAR SCHMITT. PIPE-BENDER.

ABRAHAM SCHOENBERG. 101,318, MOLDS FOR CASTING SOLDER, &c.

101,319, THEODORE SCHWARTZ. PROCESS OF OBTAINING ACETIC ACID FROM WOOD.

101,320, THEODORE SCHWARTZ. TREATING WOOD TO OBTAIN USEFUL PRODUCTS.

101,321, ANNA M. SMITH. WASHING-MACHINE.

101,322, C. J. SMITH. MOLDS FOR SAFETY-GUARDS FOR GANG-SAWS.

101,323, GEORGE W. SMITH. WATER-METERS.

101,324, MYRON H. SMITH. GRAIN-SEPARATORS.

101,325, JACOB M. SNYDER. INSECTICIDE COMPOUNDS.

101,326, JOSEPH SPERRY. BED-BOTTOMS.

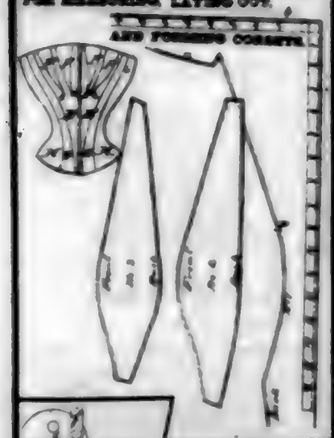
SAMUEL SPRINGER. 101,327, IMPROVED BED-FRAME.

101,328, JOHN L. WARREN. OVAL-TURNING TOOL.

101,329, JONATHAN BURNS WEST. DEVICE FOR TIGHTENING CARRIAGE-TIRES.

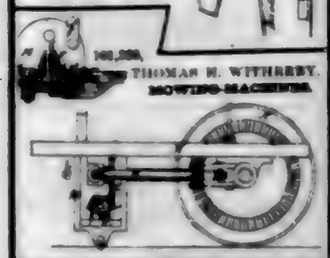
101,330, EBBARD THOMPSON WHITE. APPARATUS FOR TANNING HIDES.

101,332, JOHN L. WHITING. IMPROVED HOOPS.



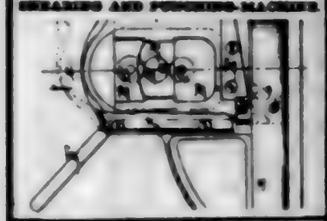
101,333, CHARLES H. WIGHT. HAND-SETTING CALIPERS.

101,334, JOSEPH C. WIGHTMAN. STEAM WATER-ELEVATOR.



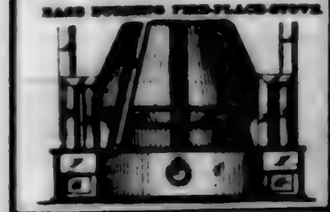
101,335, CALEB WILLIAMS. IMPROVED WASHING-MACHINE.

101,336, JOHN P. WILLIAMS. COOPER-POT.



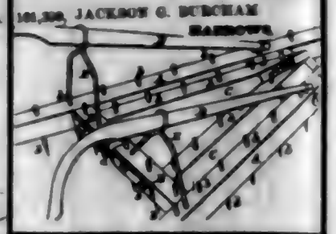
101,267, MOLLIE WILLIAMS. DEVICE FOR MEASURING, LAYING OUT, AND FORMING CORSETS.

101,268, THOMAS H. WITHERBY. MOWING-MACHINES.

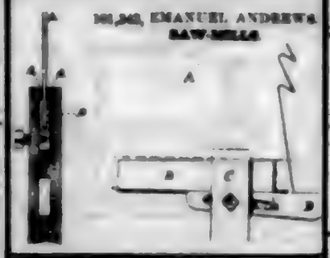


101,269, THOMAS H. WITHERBY. SHEARING AND PUNCHING-MACHINE.

101,270, LOUIS WOLFF. LUBRICANT FOR SPINNING BOLLER, &c.



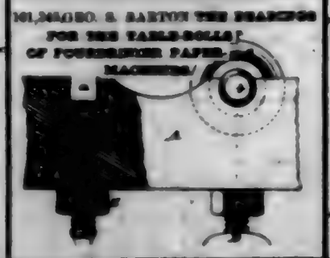
101,271, WM. S. WOOD. BASE-BURNING FIRE-PLACE-STOVE.



101,272, NELSON S. ALLEN, ISRAEL S. BROOKS, JAMES BOOD, AND JASPER HAYDEN, CULTIVATOR.

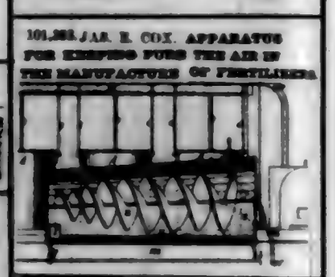
101,273, JACKSON G. BURCHAM. HARROWS.

101,274, EMANUEL ANDREWS. SAW-MILLS.



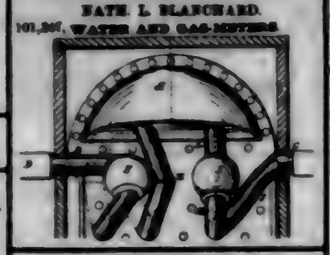
101,275, WM. X. BARTHOLOMEW. FENCE-CAMS.

101,276, TIMOTHY COFFIELD. FENCE.



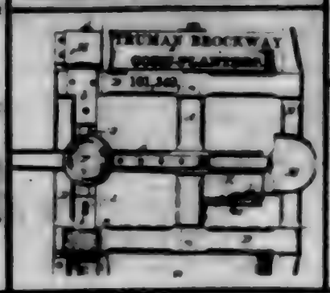
101,277, BD. S. BARTON. THE BRACKETS FOR THE TABLE-ROLLS OF FOURDRINIER PAPER-MACHINES.

101,278, H. S. COPELEY. RIVETS.

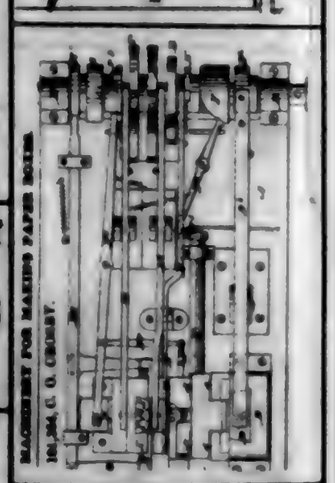


101,279, JAS. R. COX. APPARATUS FOR KEEPING FURS FREE FROM AIR IN THE MANUFACTURE OF FERTILIZERS.

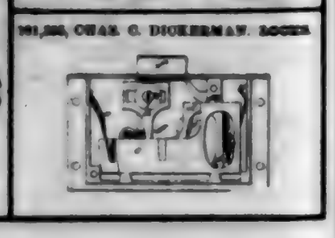
101,280, ALBERT BETTELEY. WOOD PAVEMENTS.



NATH. L. BLANCHARD. 101,281, WATER AND GAS-METERS.

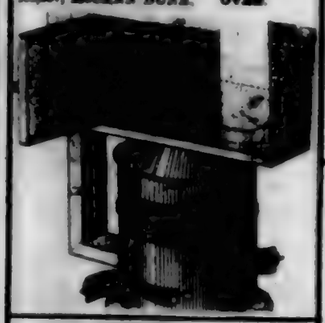


SAMUEL REEVE REVOL. MEASURING 101,282, APPARATUS FOR GAS-WORKS.

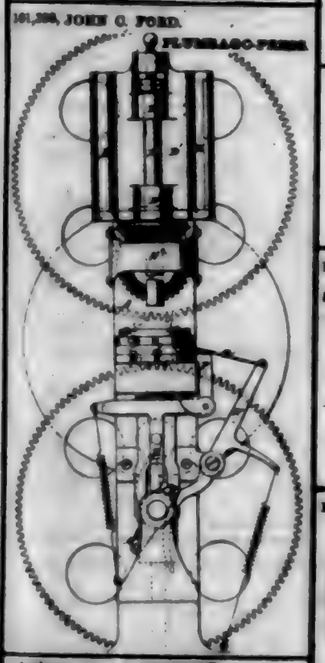


TRUMAN BROCKWAY. 101,283, CORE-PLASTERING.

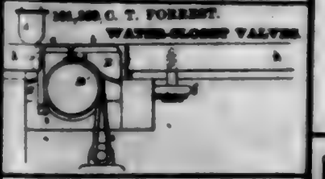
MACHINERY FOR MAKING PAPER BOXES. 101,284, C. G. CROSBY.



101,285, CHAS. C. DICKERMAN. LOCKS.



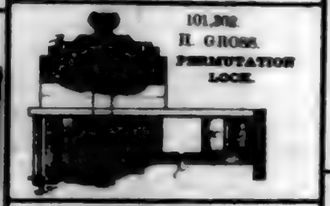
101,286, ELLIS DOTY, H. RICHARDSON. MACHINE FOR SHEARING METAL.



101,287, McCANN DUNN. OVEN.

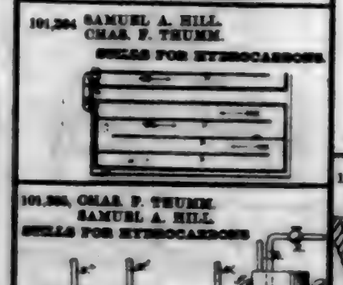
101,288, JOHN C. FORD. FLUTE-BASS-PEDAL.

101,289, C. T. FORREST. WATER-CLOSET VALVE.

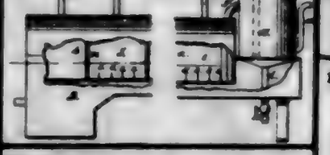


101,290, WILLIAM H. FORTNEY, WILLIAM B. SHRAFFER. HORSE-RAKE.

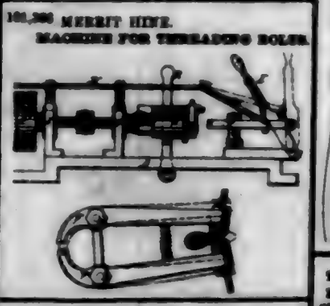
101,291, ANN L. H. GRAHAM. [illegible]



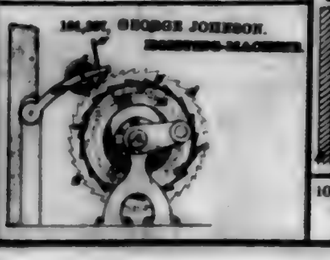
101,292, H. GROSS. PERMUTATION LOCK.



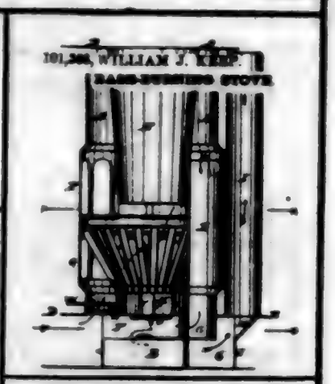
101,293, THOS. HALL. IMPROVED COVER FOR SEWING-MACHINES.



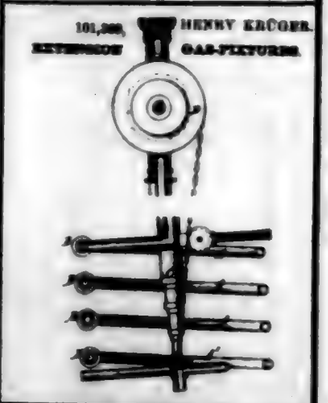
101,294, SAMUEL A. HILL, CHAS. F. THUMM. STILLS FOR HYDROCARBONS.



101,295, CHAS. F. THUMM, SAMUEL A. HILL. STILLS FOR HYDROCARBONS.

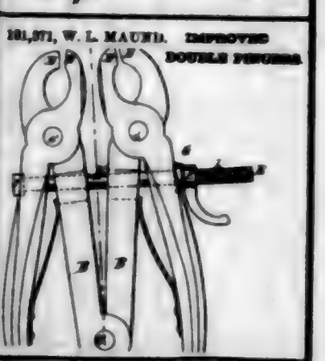


101,296, MERRIT HINE. MACHINE FOR THREADING BOLTS.



101,297, GEORGE JOHNSON. SEWING-MACHINE.

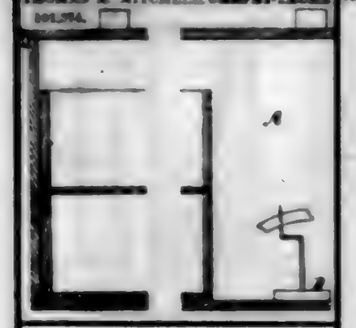
101,298, WILLIAM J. KERR. BASE-BURNING STOVE.



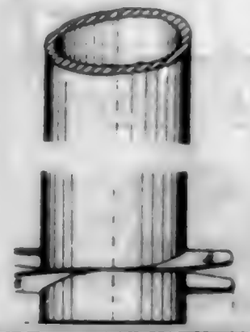
101,299, HENRY KRÜGER. EXTENSION GAS-FIXTURE.

101,300, G. A. LLOYD. IMPROVED CARRIAGE-AXLE.

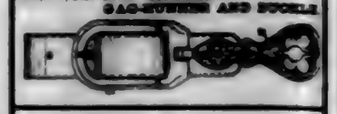
101,301, W. L. MAUND. IMPROVED DOUBLE PISTONS.



101,302, WM. N. McINNIS. ELECTRO-MAGNETIC ANNUNCIATORS.

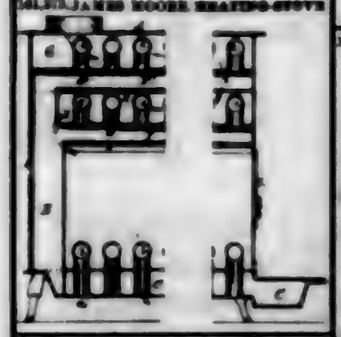


101,303 D. M. MEFFERD. PRESERVING VEGETABLES, FRUITS, &c.

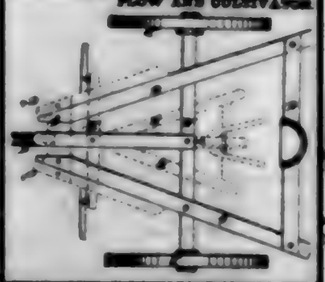


THOMAS A. MITCHELL, CARPET-TACKS
101,374.

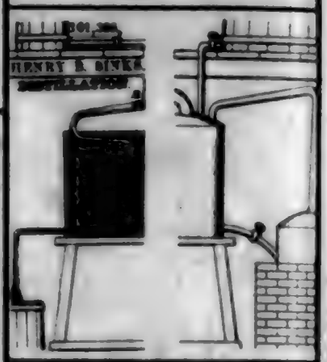
101,378, CHAS. H. PARKER.
SCREW-PILING



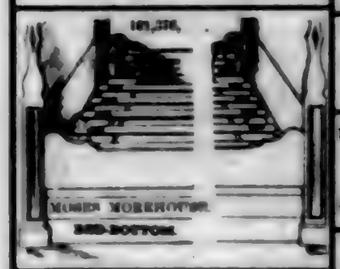
101,386, SEVERIN SIEBOLD.
BAG-RUNNER AND BUCKLE



101,387, SEVERIN SIEBOLD.
THRUST LINING.



101,373, JAMES MOORE, HEATING-STOVE



101,382, C. L. REID. CONVERTIBLE PLOW AND CULTIVATOR.

101,384, HENRY B. SIVER. [illegible]

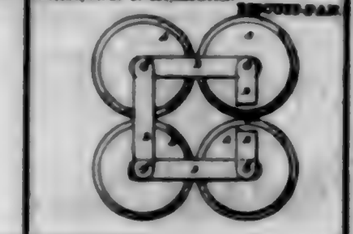
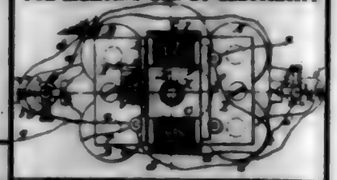
101,486, JOHN S. McGLUMPHY. SASH-FASTENER.

101,487, H. D. McMASTER, ABRAHAM DALE. GOVERNOR FOR STEAM-ENGINES.

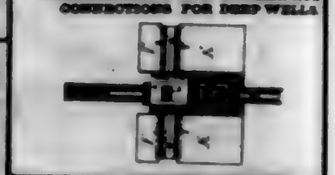


101,488, WILLIAM MENDHAM. STEAM-HEATING PIPES.

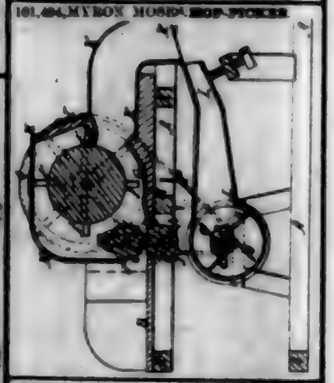


101,489, FERDDK. MEXER. RETURNING SEED.

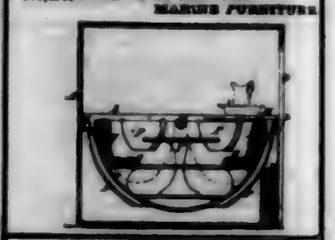
101,490, JNO. C. MILLIGAN. BISCUIT-PAN.



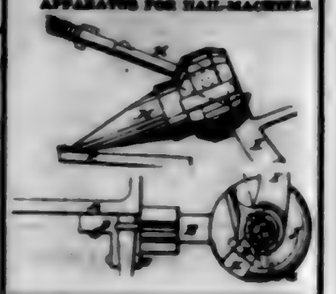
101,491, WALTER J. MORRIS, WM. J. REID. APPARATUS FOR LIGHTING GAS BY ELECTRICITY.



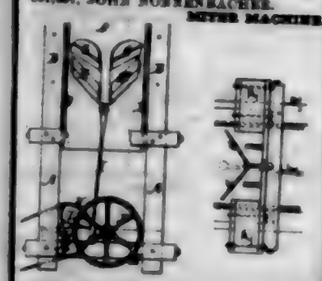
101,492, L. MORRISON. SAW-SWAGING A. G. HARMS.



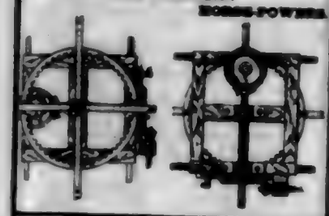
101,493, MAWELLUS A. MORSE. WALKING-BEAM AND SUCKER-ROD CONNECTIONS FOR DEEP WELLS.



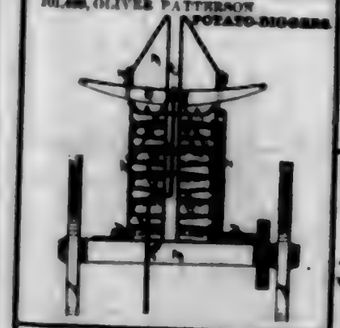
101,494, MYRON MOSHER. HOP-PICKER.



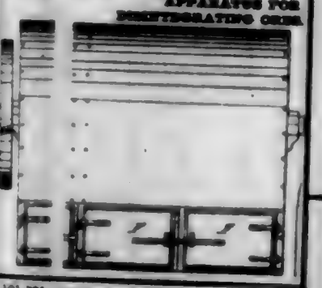
101,495, LORENZO D. NEWELL. MARINE FURNITURE.



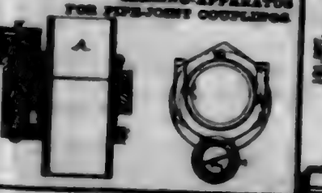
101,496, JAMES BOLAN. FEEDING APPARATUS FOR NAIL-MACHINES.



101,497, JOHN NOFFSINGER. MYER MACHINE.

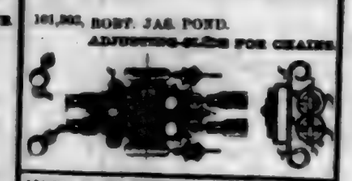


101,498, GEORGE OEHLEIN. HORSE-POWERS.

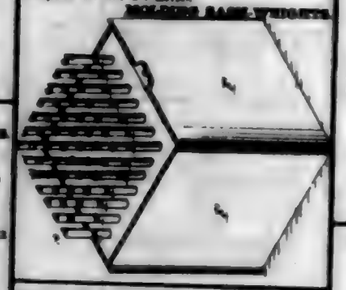


101,499, OLIVER PATTERSON. POTATO-DIGGERS.

101,500, ALMARIN B. PAUL. APPARATUS FOR DESULPHURATING ORES.

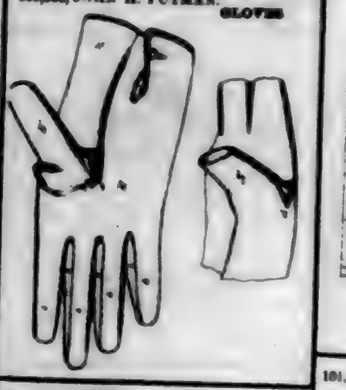


101,501, CHARLES PERKER. SEALING APPARATUS FOR PIPE-JOINT COUPLINGS.

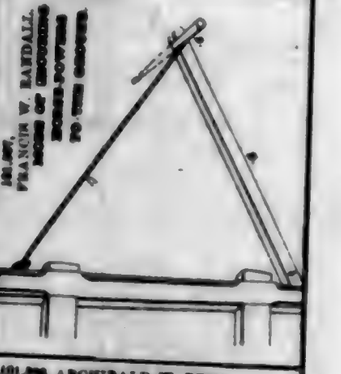


101,502, OLIVER H. PERRY. WOOD-TURNING LATHES.

101,502, ROBT. JAS. POND. ADJUSTING-SLIDE FOR CHAINS.

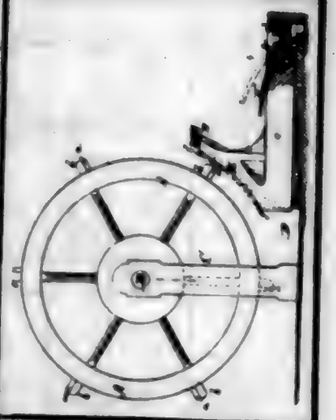


101,504 W. W. PULLIS. MOLDING SASH-WEIGHTS.

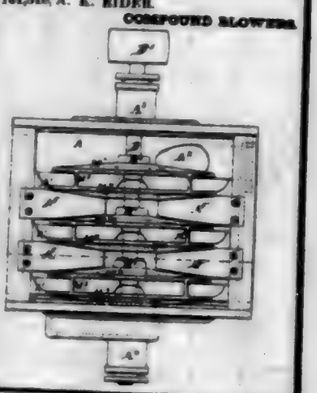


101,505, T. C. PURDY. FRUIT-JARS.

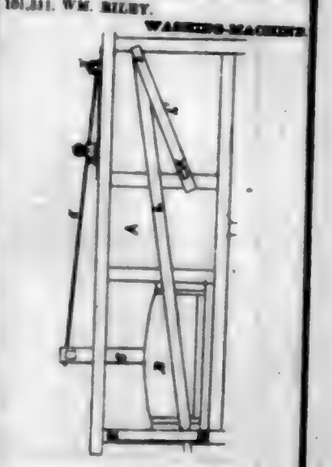
101,506, JOHN H. PUTMAN. GLOVE.



101,507, FRANCIS W. RANDALL. MODE OF SECURING HANDLES TO THE BODIES OF SPOONS.



101,508, ARCHIBALD W. REID. MACHINES FOR COOLING AND RETURNING OUT LEADERS.



101,509, MERRITT RICHARDS. REVOLVING PLOW-COLTER.

101,510, A. K. RIDER. COMPOUND BLOWERS.

101,511, WM. RILEY. WASHING-MACHINE.

101,312. D. C. BEPLEY, Jr. GLASS LAMPS

101,317. T. SAVAGE. OAT-FEED-POTS

101,323. GEO. V. SOOBEY. SEATING

101,313. L. D. ROBERTS. MACHINES FOR MAKING HORSESHOES

101,318. LEONARD SAWYER. CARRIAGE-PROP

101,324. E. C. SCOVILLE. HORSE HAY-FORKS

101,314. I. L. RUNK. FARMING-MILLS. B. R. THARP.

101,319. WILLIAM SCARLETT. CARRIAGE SEATING

101,325. GEORGE SCOTT. BRICK AND TILE-MACHINES

101,320. JOHN D. SCHAUB. CABBAGE-CUTTERS

101,315. HENRY SANGSTER. DOOR-COLLAR

101,321. FRANCIS SCHERR. CARRIAGE-AXLES

101,316. HUGH SANGSTER. TIN PAIL

101,322. JOHN SCHROEPFEL. WILLIAM DELL. HARROW AND BARK-CUTTER

101,326. D. N. SELLEN. SPRING-BED BOTTOM

101,327. JAMES E. SHARP. ELEAZER AINSWORTH. FREDERICK A. RABBATON. COVERING FOR STEAM-BOILERS

101,328. E. SHOPBELL. PATTERNS FOR SHOES

101,333. THOS. SOMERVILLE-FAUCHER

101,329. FREDK. J. SMITH. JIG FOR MAKING CHORD-BAR SEAMS

101,334. S. R. SPRING. SODA-FOUNTAINS

101,330. BENJ. H. SNAVELY. SEPARATORS

101,335. HENRY STEPHENSON. WM. THOMPSON. WILLIAM GREAVES BLAKE. ORNAMENTAL-SCROLL TYPE

101,331. P. SNYDER. G. PASTORE. SAW-SETS

101,336. GARLAND B. ST. JOHN. CULTIVATORS

101,332. WM. H. SOLEY. GEORGE SUTER. FRICTION CALENDER ROLLS FOR PAPER

101,337. GARLAND B. ST. JOHN. ATTACHMENT TO SEEDING-MACHINES

101,338. ROBERT STOUT. BOREHOLDING-TOOL

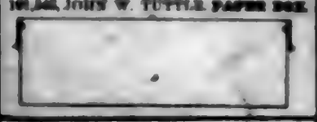
101,339. J. W. SURSA. GANG-PLOWS

101,340. AUGUSTIN L. TAVEAU. REVOLVING GULLY-HARROW AND SEEDER COMBINED

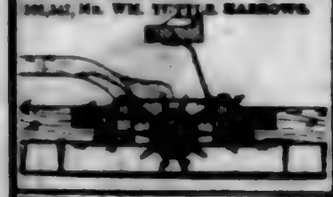
101,341. ISAAC D. TAYLOR. NUT-LOCK PLATE

101,342. JOHN TEED. COUNTER RIVET

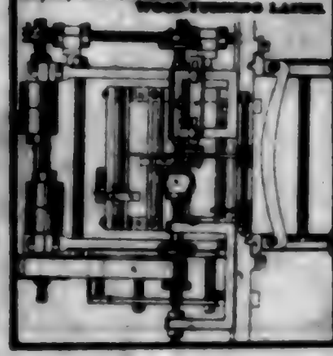
101,343. JAMES TEMPLE. CAR-COUPLINGS



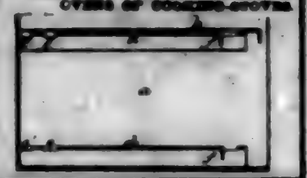
101,544, JOHN A. THOMPSON.
PROCESS AND APPARATUS FOR SUPPLYING PURE WATER TO BOILERS.



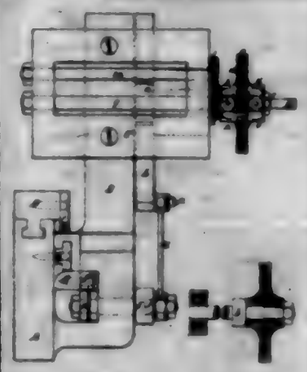
101,545, EMILIE TILTON.



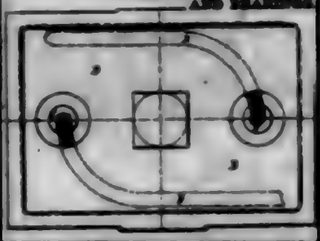
101,546, JOHN W. TUTTLE. PAPER BOX.



101,547, Mrs. WM. TUTTLE. HARROWS.

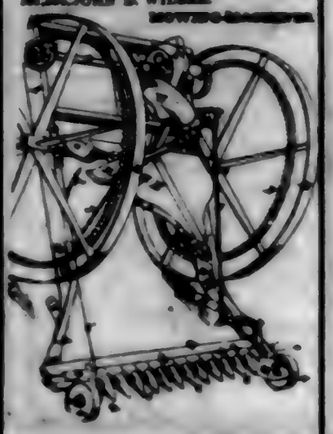


101,548, J. J. URMSTON.
WOOD-TURNING LATHE.

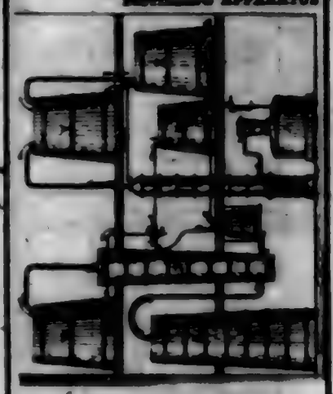


101,549, SAMUEL S. UTTER. HEATING THE OVENS OF COOKING-STOVES.

101,550, HORATIO B. WEAVER.
FEED FOR IRON-PLANERS.

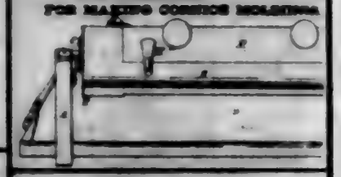


101,551, ISAAC P. WENDELL.
LUBRICATING JOURNALS AND BEARINGS.



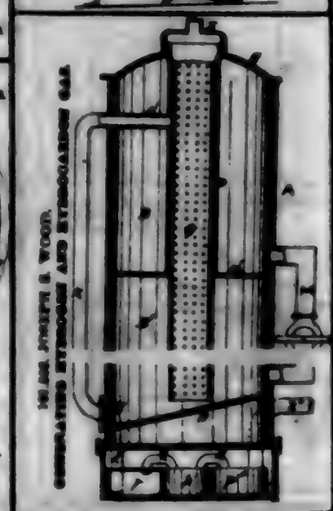
101,552, SYLVESTER P. WHEELER.
MANUFACTURE OF ARTICLES OF COMPRESSED WOOD.

101,553, SYLVESTER P. WHEELER.
PROCESS OF TREATING WOOD.

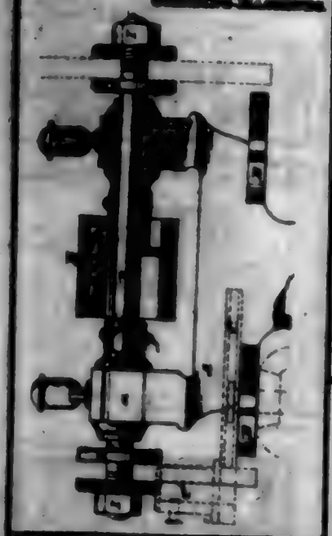


101,554, JOHN D. WILDER.
MOWING-MACHINES.

101,555, LUDWIG WOLFF.
CONDENSATION AND FEEDING APPARATUS.



101,556, C. L. WOOD. MACHINE
C. A. SHERIDAN.
FOR MAKING CORRUGATED MOLDINGS.

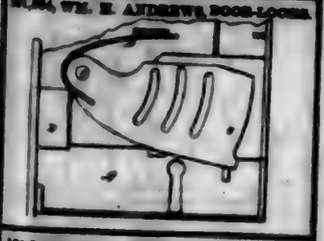


101,557, JOSEPH S. WOOD.
APPARATUS FOR GENERATING AND CARBURETING HYDROGEN GAS.

101,558, JOSEPH S. WOOD.
GENERATING HYDROGEN AND HYDROCARBON GAS.

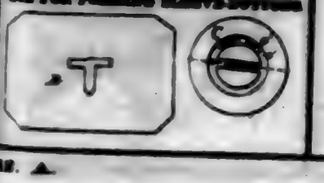
101,559, THOS. H. WORRALL.
CORNICE-MACHINERY.

101,560, EDMUND TESSE.
TELE-COUPLINGS.

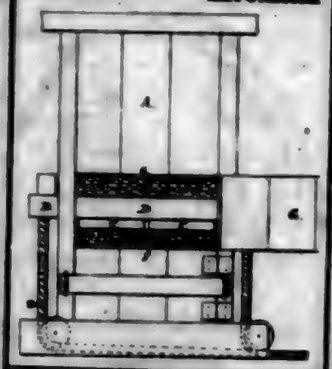


101,561, WILLIAM D. YOUNG.
CURLING-ROD FOR PAPER CIGAR-LIGHTERS.

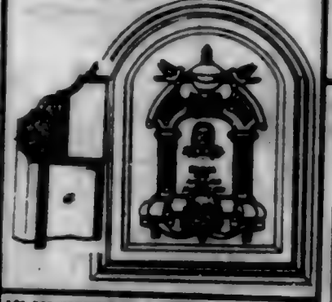
101,562, C. ALDEN.
PREPARING TOMATOES AND OTHER FRUITS AND VEGETABLES TO BE USED AS FOOD.



101,563, TIMOTHY P. ALLYN.
AIR-GUN.



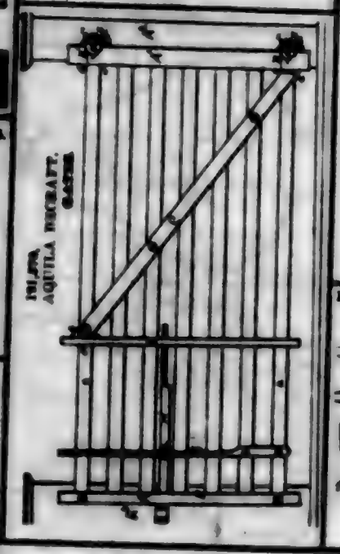
101,564, WM. H. ANDREWS. DOOR-LOCKS.



101,565, HENRY ASHLEY.
MILK FOR FURNISHING SLEEVE-BUTTONS.

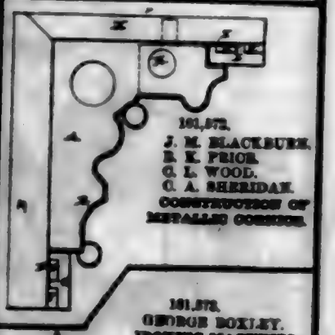
101,566, G. H. ATLWORTH.
HAY-PRESSES.

101,567, H. F. BAILEY.
TABLETS FOR TOMBS.

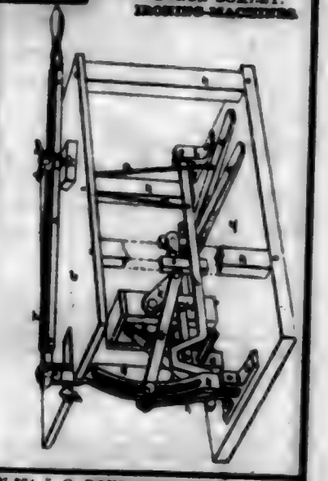


101,568, HENRY B. BARBER. GUN-SIGHTS.

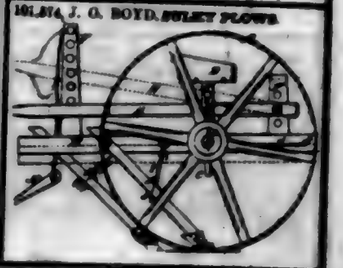
101,569, RILEY L. BASSETT. HARROWS.



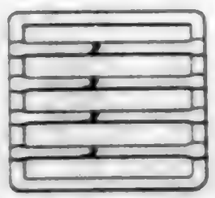
101,570, AQUILLA BREWART. GATE.



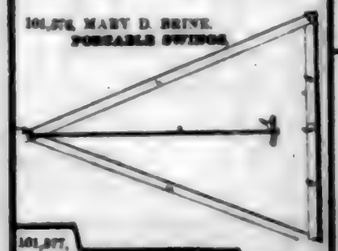
101,571, O. BRIGNER.
PRUNING-SHEARS.



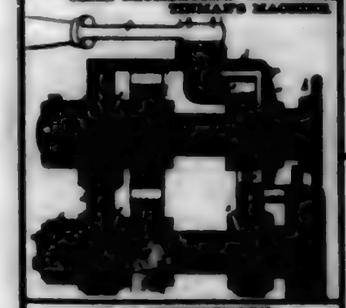
101,572,
J. M. BLACKBURN.
B. K. PRIOR.
C. L. WOOD.
C. A. SHERIDAN.
CONSTRUCTION OF METALLIC CORNICE.



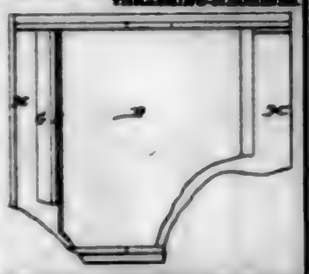
101,573,
GEORGE BOXLEY.
IRONING-MACHINES.



101,574, J. G. BOYD. SULKY PLOWS.

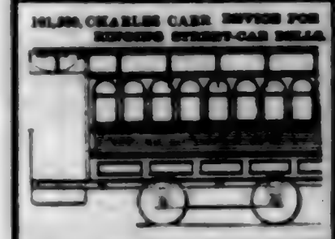


101,575, SEDINA L. BRAGDON. SEWER-GRATE



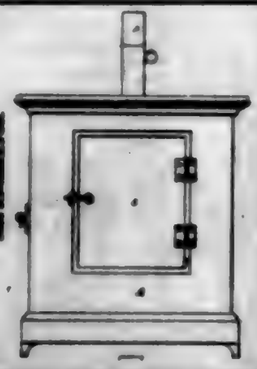
101,576, MARY D. BRIVE. PORTABLE SWING.

101,577, CHAS. BROMBACHER. TENDER'S MACHINE.

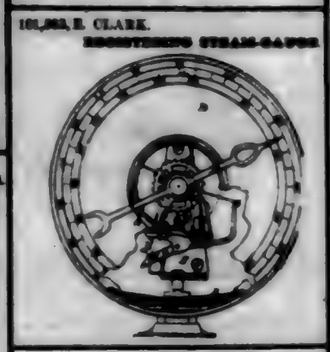


101,578, WM. H. BUTTERWORTH. THRASHING-MACHINE.

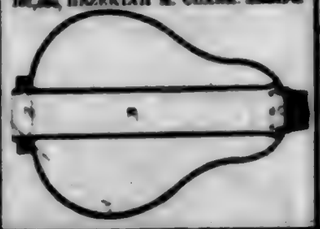
101,579, JOHN BUSBY. WATER-WHEELS.



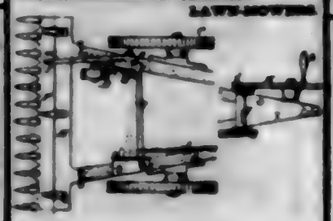
101,580, CHARLES CARR. DEVICE FOR RINGING STREET-CAR BELLS.



101,581, EBENEZER CATE. HORSESHOE.

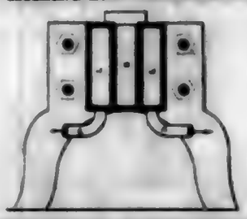


101,582, A. J. CHASE. REFRIGERATOR.



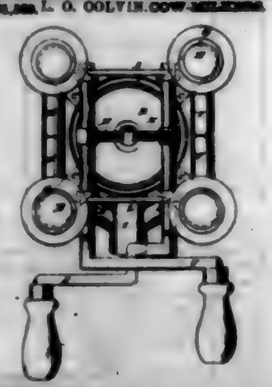
101,583, E. CLARK. REGISTERING STEAM-GAUGE.

101,584, HEZEKIAH M. CLARK. LAMPS.



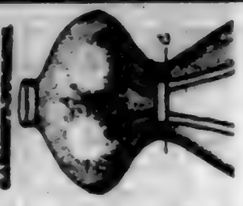
101,585, CHARLES M. CLINTON. LAWN-SPRINKLER.

101,586, T. M. CLUXTON. WAGON-AXLES.

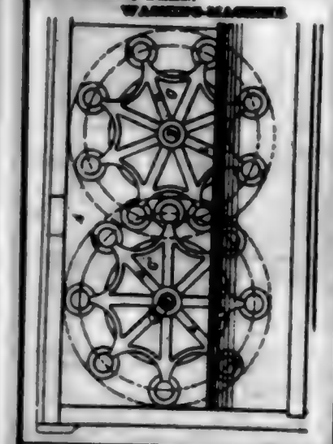


101,587, EDWARD F. COFFIN. MOLDING AND CLARIFYING SUGAR.

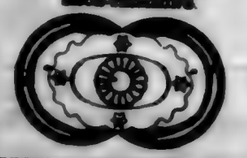
101,588 EDWARD S. COLTON. REFRIGERATOR.



101,589, L. O. COLVIN. COW-MILKING.

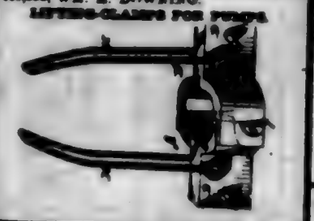


101,590, T. COWING. WOOD PAVEMENT.

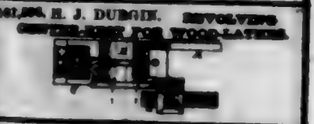


101,591, A. H. DAVIS.

101,592, CYRUS DEAN. WASHING-MACHINE.



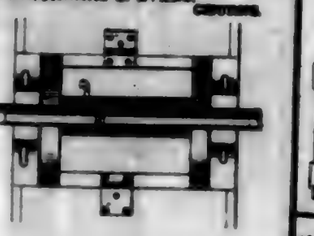
101,593, WILLIAM P. DEMAREST. HOOP-TENSIONER.



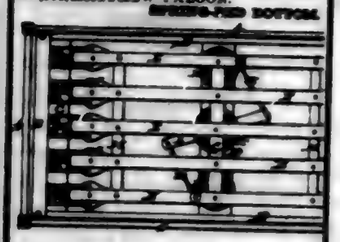
101,594, H. J. De GROOT. COMPOSITION ROOFING, PAVING, &c.

101,595, WM. H. DOWNING. LIFTING-CLAMPS FOR PUMPS.

101,596, H. J. DUBOIS. REVOLVING CENTRE-REST FOR WOOD-LATHES.



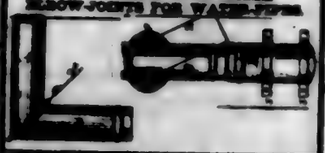
101,597, GEORGE W. ELDRIDGE. FIRE-KINDLING.



101,598, ROBERT ENGELS. TOOTH-PUNCH.

101,599, THOMAS R. EVANS. CRUSHER.

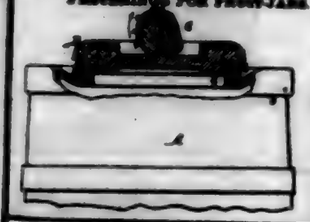
101,600, MATTHEW FALOON. SPRING-PAD BOTTOMS.



101,601, P. FANNING. WIRE-CONNECTOR FOR WIRE FENCE.

101,602, Dr. JOSEPH FANTOU. GALVANIC SHOE-SOLES.

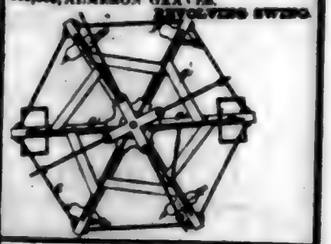
101,603, J. D. FIELD. ADJUSTABLE ELBOW-JOINTS FOR WATER-PIPES.



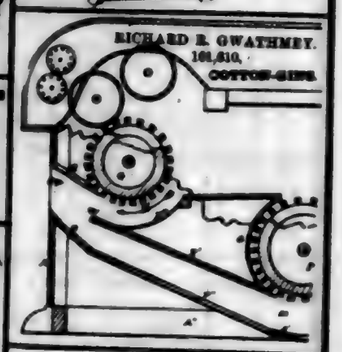
101,604, A. C. FLETCHER. ARCHIVE FOSCAL AND REVENUE STAMP.

101,605, CARL FOGELBERG. MELODY ATTACHMENT FOR ORGANS.

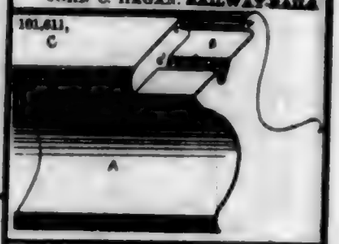
101,606, WM. GALLOWAY. FASTENING FOR FRUIT-JARS.



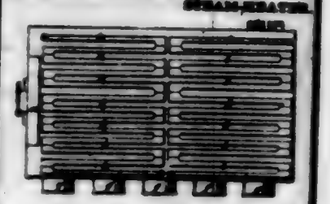
101,607, CHARLES T. GIBSON. PAIL-COCK.



101,608, M. T. GLIMDAL. BRICK-MOLD.



101,609, ALMERON GRAVES. REVOLVING SWING.



101,610, RICHARD R. GWATHMEY. COTTON-GIN.

101,611, JOHN C. HAGAN. RAILWAY-RAILS.

101,612, FREDRICK P. HALLBERG. STEAM-HEATER.

101,613. VALENTINE H. HALLOCK. HOE-CUTTING MACHINE

GEORGE HORTER. 101,618. HORSE-COLLARS

A. A. HOTCHKISS. 101,620. HORSE-RAKE

101,621. JNO. HULBERT, Jr. PORTABLE FURNACE

101,622. DANIEL H. HULL. BOILER AND WASHING-MACHINE

101,623. R. HUMPHREY. HORSE COLLAR.

101,624. OLIVER E. HUNTER. MANUFACTURE OF STEEL.

101,625. J. J. KARLEY. CONSTRUCTION FOR THE MANUFACTURE OF FEMORIS MACHINES.

101,626. A. S. KEAGY. FIELD-ROLLERS

101,627. J. M. KEEP. SLOTTING-PADS

101,628. FR. KILIAN. FOLDING CHAIR

101,629. TOBIAS KOHN. PICTURE-CORD

101,630. BENJAMIN F. KOLLER. SCRUBBING-BRUSH

101,631. H. P. C. KRUMM. GOVERNOR FOR REGULATING LOCOMOTIVES

101,632. JOHN H. LARBY. PERMUTATION LOCK

101,633. DANIEL LEW. Jr. WINDMILL-PANCHES

101,640. S. P. McELVEY. SEWING-MACHINE

101,641. L. O. F. MEYER. MANUFACTURE OF SAFETY MATCHES

101,642. C. H. MILLER. CANE FASTENER.

101,643. JOHN MILLER. WASHING-MACHINE

101,644. D. MILIA. SEWING MACHINES FOR BOOTS AND SHOES.

101,645. JAMES MOORE. FIRE-PLACES

101,646. JOHN H. MORRIS. HORSE HAY-RAKES

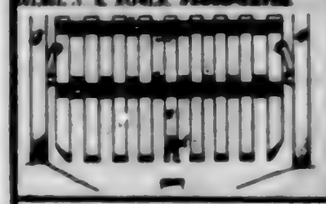
101,647. MARCUS MORTON. BEE-HIVES.

101,648. WM. B. MOSES. FURNITURE-PAD.

101,649. A. L. MUNSON. HAND STAMPS.

101,650. HIRAM NELSON. FOR CROZING BARRELS.

101,615. C. V. HEMENWAY. HOOP-MACHINES

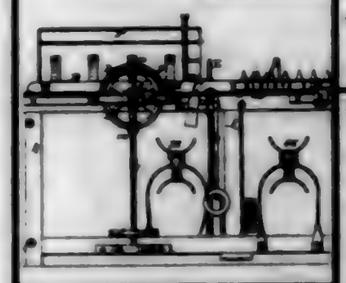


101,616. JOSEPH H. HANEL. SELF-FEEDING SAWS.

101,617. W. M. HENDERSON. DIRECT ACTING CONDENSING STEAM ENGINE.

101,618. JOHN E. HAWKINS. BRAID-MACHINE.

101,619. GEORGE A. HIGGINS. CLOSET FOR CANS.



101,671. A. R. TOWLE, FLOOD-GATES.

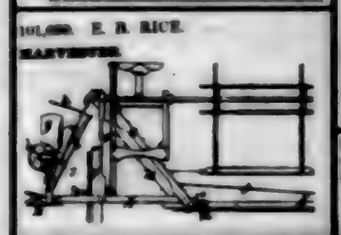
101,672. M. V. TOWLE, CHECKED-CASE.

101,673. JOSIAH OUTHOUDT, LATH-MACHINE.

101,674. JOHN FELT OSGOOD.

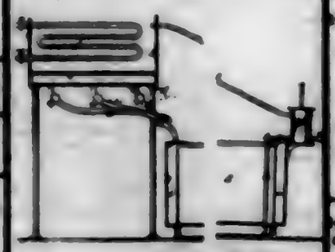
101,675. FREDERIC INGERSOLL PALMER, DRAWL.

101,676. OLIVER PALMER, HAND-FASTENING.



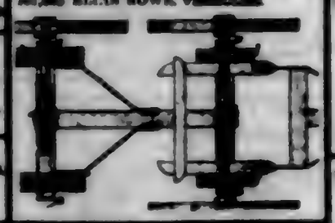
101,677. WALTER W. POWERS, REVERSING-PORT.

101,678. THOS. E. PURCHASE, FURNACES AND OTHER FURNACES.

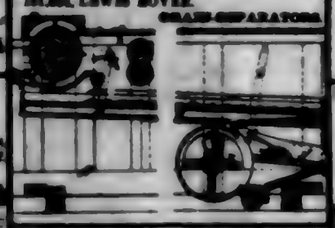


101,679. E. B. RICE, HARVESTER.

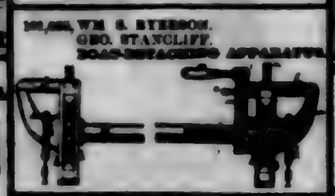
101,680. CAM CELED.



101,681. LOUIS T. ROBERTSON, PARSING BY INCLINATION.



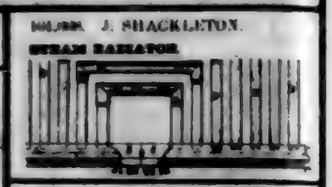
101,682. JOHN A. ROBERTS, [illegible].



101,683. ELIAS ROWE, VEHICLE.

101,684. LEWIS ROYER, GRAIN-SEPARATOR.

101,685. WM. S. BYERSON, GEO. STANCLIFF, ROAD-SCRAPING APPARATUS.

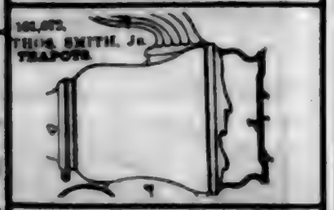


101,686. JOHN B. SHUETTE, [illegible].

101,687. GEO. H. SEYMOUR, CAR-BRAKE.

101,688. J. SHACKLETON, STEAM RADIATOR.

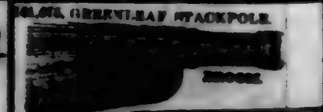
101,689. J. SHACKLETON, STEAM HEATER.



101,690. CALVIN W. SHERWOOD, SCHOOL-DESK.

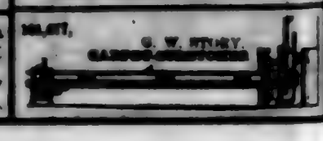
101,691. CALVIN D. SMITH, CHAIN-BRAT.

101,692. THOS. SMITH, Jr., TRAP.



101,693. W. A. SMITH, [illegible].

101,694. CHRIS. S. SOUTHWICK, DAVID H. BARKER, RUT-LOCK.

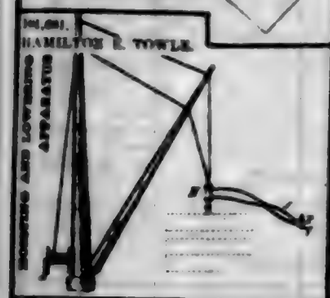


101,695. GREEN-SAW STACKPOLE, [illegible].

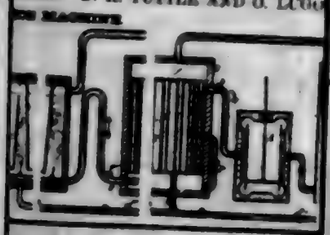
101,696. RUFUS O. STEVENSON, SUPERIOR COOKING-FURNACE.

101,697. [illegible], G. W. STONEY, CANNON-[illegible].

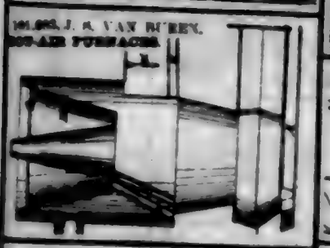
101,670. M. V. TAFT, SUSPENSION RAIL-TRUCK.



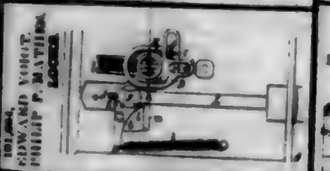
101,671. HERMANN TEATS, COMPOSITION FOR CLEANING PLATE AND GLASS.



101,672. EDGAR C. TEN EYCK, CAR-HOLDING.

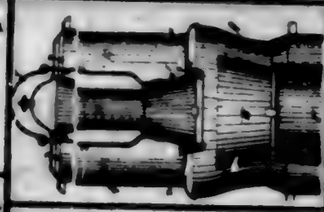


101,673. HAMILTON E. TOWLE, HOISTING AND LOWERING APPARATUS.



101,674. D. K. TUTTLE AND O. LUCO[illegible], [illegible] MACHINE.

101,675. J. S. VAN BUREN, HOT-AIR FURNACE.



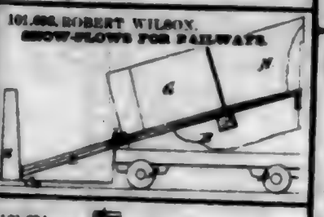
101,676. EDWARD VOIGT, PHILIP P. MATHER, LOCKS.

101,677. CHARLES W. WESTOVER, COMPOSITION FOR PAINT. CEMENT.

101,678. ALEXANDER WHITE, CAST-BUSHING STOVES.

101,679. A. L. WHITMORE, [illegible] CALIPERS.

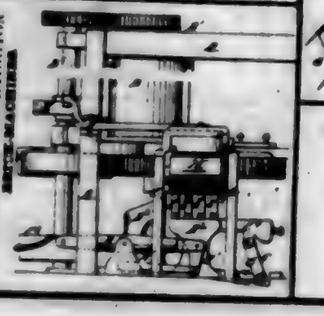
101,680. CARMI H. WILLIAMS, HOOP-MACHINE.



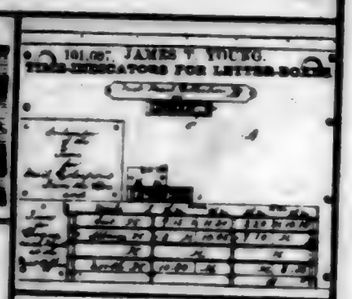
101,681. WILLIAM H. WILLIAMS, STREET-PAVEMENT.

101,682. L. B. WILSON, BLOW-[illegible].

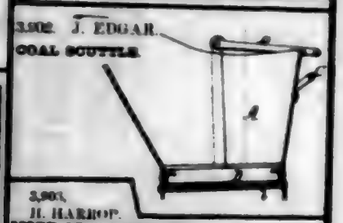
101,683. ROBERT WILSON, SNOW-FLOWS FOR RAILWAYS.



101,684. WILLIAM WIMER, CAR-COUPLINGS.

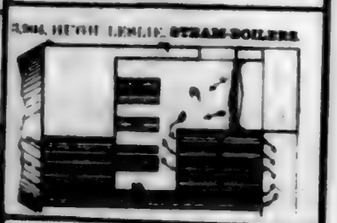


101,685. REUBEN WOTTRING, CULTIVATORS.

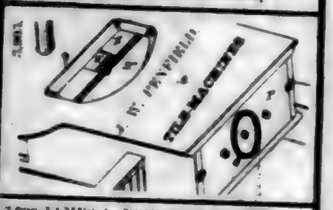


101,686. CHAUNCEY H. WHITTINGTON, [illegible] MACHINE.

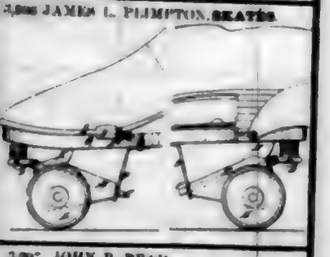
3,901. JAMES V. YOUNG, STEAM-INDICATORS FOR LETTER-BOXES.



3,902. J. EDGAR, COAL SCUTTLE.



3,903. H. HARROP, MODE OF ORNAMENTING.



3,904. HUGH LESLIE, STEAM-BOILERS.

3,905. [illegible], [illegible] MACHINES.

3,906. JAMES L. PLIMPTON, SKATES.

3,907. JOHN B. READ, MANUFACTURE OF PAPER.

3,908. EDWARD P. WOODS, DANIEL SHERWOOD, C. H. LATHAM, COTTON-STRAINER.

3,909. NORWALK LOCK CO., E. BEARD, Secretary, REVERSIBLE KNOB-LATCHES.

ILLUSTRATIONS OF PATENTS

ISSUED FROM

THE UNITED STATES PATENT OFFICE

APRIL 12, 1870.

JOHN QUINCY ADAMS, SAMUEL B. GOODSELL.
101,709. IMPROVED KELP-SCOURER.

101,710. J. CHENOWETH
ROTARY SPADER.

101,711, GEORGE O. CHOATE.
SHOVEL-HANDLE.

WILLIAM ALLPORT.
DOOR-SILLS.

101,713. JAMES V. CLARK.

101,714. B. COSTETTE.
FANNING-MILLS.

101,715. JOHN A. BANCROFT.

101,716. JAMES M. BOORMAN.
HAY LOADER.

101,717. M. C. BUFFINGTON.
CORN-PLOW.

101,718. R. J. BARBER. CUTTER-HEAD FOR PLANING-MACHINES.

JOHN JOSEPH BURKERT. THE GAME.
101,719.

W. H. COX. WASHING-MACHINE.
101,720.

101,721. WILLIAM CASSIDY.
APPARATUS FOR SEALING PIPE-JOINTS.

JESSE BARLOW.
101,722.

JULES ALFRED CHAUFOURIER.

THOMAS H. DAVIS.
CANE-SEEDER.

101,716. HEZEKIAH DODGE.
IMPROVED MOP-HEAD.

101,717. JAMES A. DRAKE, W. R. C. CLARK.
BARTH-CLOSETS.

101,718. WM. R. DUNNING.
BASE-BURNING STOVE FOR A STEAM HEATING BOILER.

101,719. R. EICKEMEYER.
HARVESTERS.

101,720. FRANK FARNSWORTH.
SULKY CULTIVATORS.

101,721. HENRY FLESHER.
CORN-HARVESTERS.

101,722. A. J. FLETCHER.
HAIR MIRRORS.

101,723. SAMUEL W. FOWLER. LAMPS.

101,724. CARLOS FRENCH.
GAS-STOVES.

101,725. JOHN L. FRISBIE.

101,726. THOMAS GRAHAM.
SWIVELS FOR TRIPOD-SCREWS.

101,727. JOHN A. HALL
WASHING-MACHINE.

JAMES H. HAMILTON. PHOTOGRAPHIC PRINTING APPARATUS.
101,728.

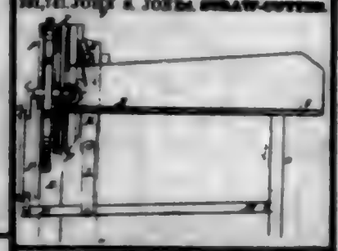
101,729. DANIEL HARMON.
DITCHING-PLOW AND RIDGE-CRASHER.

101,730. E. F. HARRINGTON.
CORK-CUTTING MACHINES.

RICHARD HAVILAND.
POTATO-SEPARATORS.
101,731

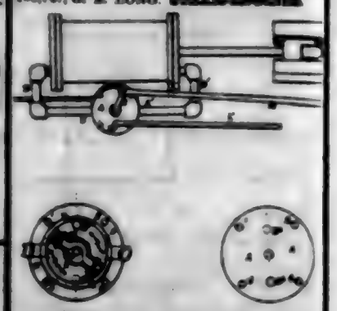
101,732.

JOHN HEIST.
MACHINE FOR COLORING PAPER-HANGINGS.

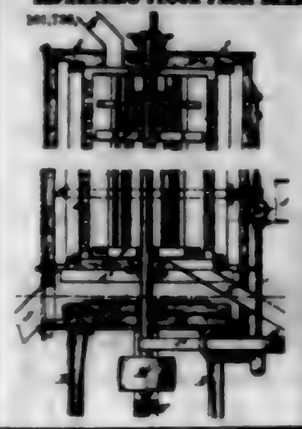


101,733. M. C. HULL.
HEATING-STOVES.

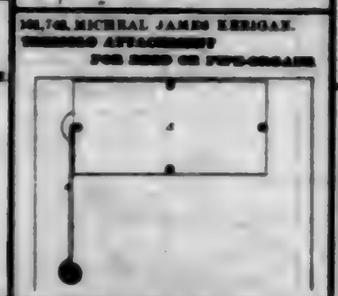
JOSHUA HUNT, PICKER FOR LOOMS. ALBERT STOCKWELL.
101,734.



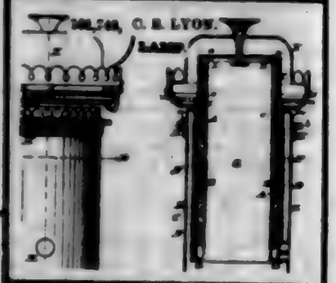
JAMES HUNTER. APPARATUS
101,735. FOR EXTRACTING MAGGOTS.



101,741. JOHN S. JOHNS. STRAW-CUTTER.

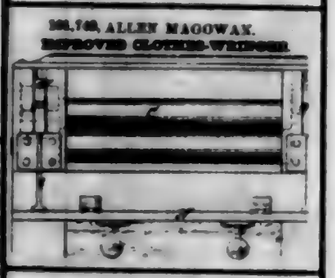


101,747. O. S. LONG. STEAM-ENGINE.



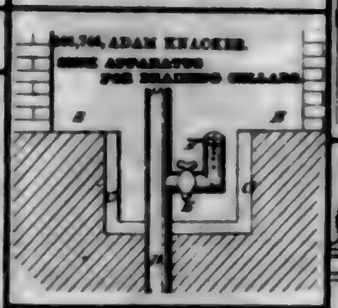
WM. W. HUNTLEY,
ALPHEUS BABCOCK.
IMPROVED MACHINE FOR
SEPARATING FLOUR FROM BRAN.
101,736.

101,742. MICHEAL JAMES KERIGAN.
TELEGRAPH APPARATUS.
FOR SEND OR PUSH-CHARGE.

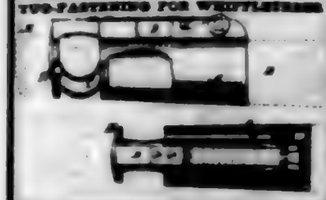


101,748. C. S. LYON.
LAMP.

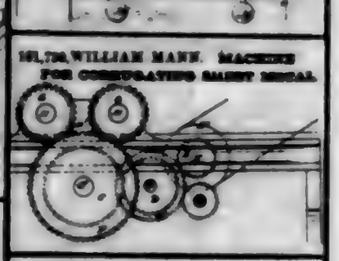
101,743. GEO. S. KING.
SPLINTS FOR FRACTURED LIMBS.



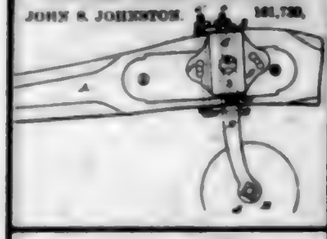
101,749. ALLEN MAGOWAN.
IMPROVED CLOTHES-WRINGER.



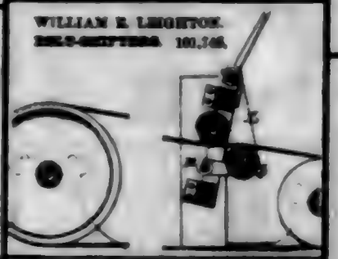
101,737. CHAS. H. JENKINS.
MANUFACTURE OF GLASS.



101,744. ADAM KNACKER.
COKE APPARATUS
FOR DRAWING COKE.



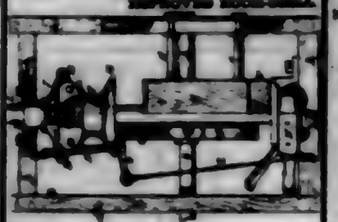
101,738. LEONARD A. JOHNSON.
TUG-FASTENING FOR WHIFFLETREES.



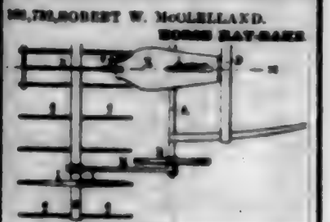
101,750. WILLIAM MANN. MACHINE
FOR CORRUGATING SHEET METAL.

VIBRATING COATER FOR FLOWER.
JOHN S. JOHNSTON. 101,739.

WILLIAM R. LEIGHTON.
SHIP-SCUPPERS. 101,745.

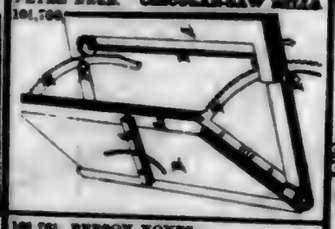


101,751.
EDWARD G. MARKLEY.
RAILWAYS.



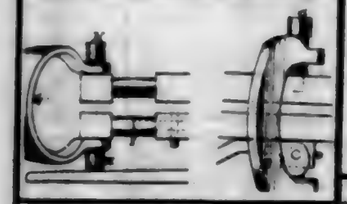
101,740.
G. B. G. JONES IMPROVED
FAN ROCKING-CHAIR.

101,746. SAMUEL LEWIS.
IMPROVED ROCK-DRILL.

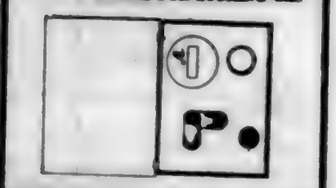


101,752. ROBERT W. McCLELLAND.
HORSE HAY-RAKE.

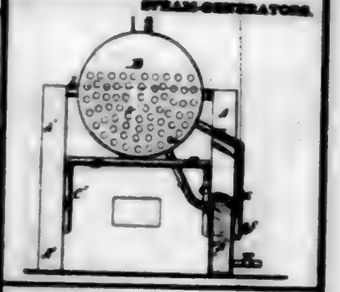
101,732. SAM. MEREDITH.
RAILROAD-CAR COUPLING.



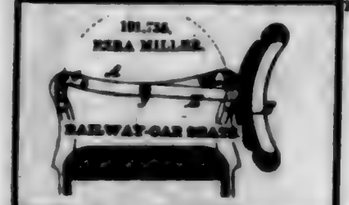
PETER BEER. CIRCULAR-SAW MILLS.
101,733.



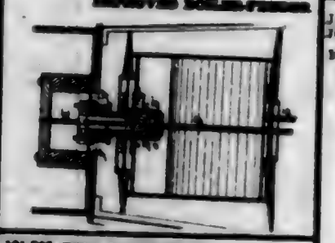
JOSEPH RICHARDSON.
101,766. FOWL-FEEDER.



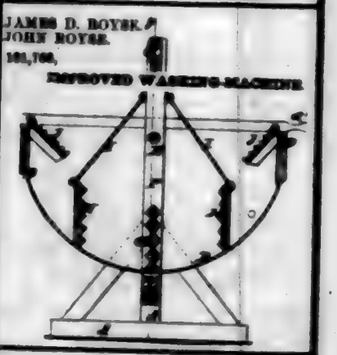
101,734. PLATT MERRILL. SAW-CLAMP.



PERSON HOYES.
TANKS FOR STORING OIL.

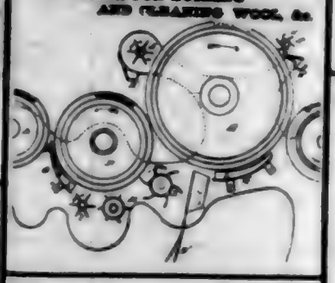


101,767. MICHAEL RITCHEY.
STEAM-GENERATORS.

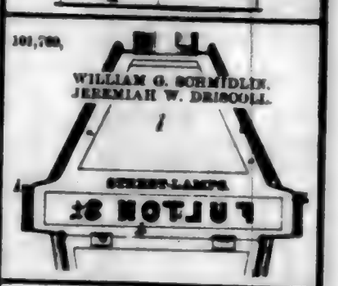


101,735.
EZRA MILLER.
RAILWAY-CAR SEAT.

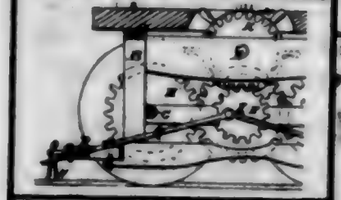
101,768. SAMUEL J. PARKER.
IMPROVED BOILER-FURNACE.



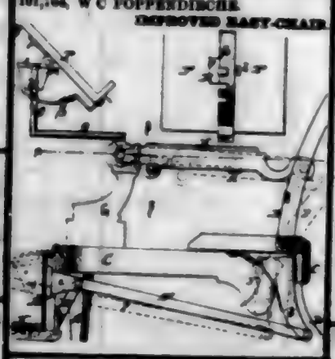
JAMES D. BOYER.
JOHN BOYER.
101,769.
IMPROVED WASHING-MACHINE.



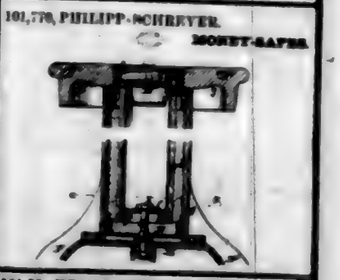
101,736. ALBERT W. MORRELL.
FEED-WATER REGULATOR AND
LOW-WATER-ALARM.



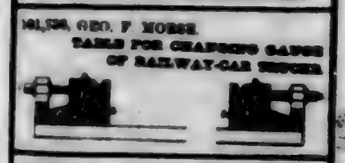
101,753. EZRA PARKHURST.
MACHINE FOR BURRING
AND CLEANING WOOL, &c.



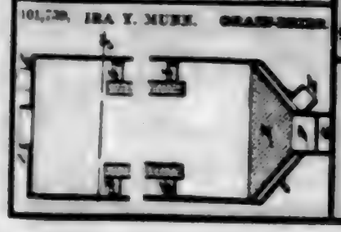
101,770.
WILLIAM G. SCHMIDLIN.
JEREMIAH W. DRISCOLL.
STREET-LAMPS.



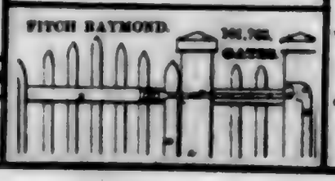
101,737. SAB. A. MORRISON.
TRACK-CLEARER FOR STREET-CARS.



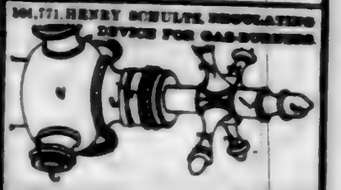
101,754. W. C. POPPENDIECK.
IMPROVED EASY-CHAIR.



101,771. PHILIPP SCHREYER.
MONEY-SAFES.



101,755. GEO. F. MOSER.
TANKS FOR CHARGING GASES
OF RAILWAY-CAR WHEELS.



101,739. IRA Y. MUHR. GRAIN-DRIER.

PITCH RAYMOND. 101,756.
GATES.

101,771. HENRY SCHULTE. REGULATING
DEVICE FOR GAS-BURNERS.

101,772. JOHN SELTZER.
IMPROVED SHOES AND HOUSEHOLD GRAFFLE

101,773.
W. A. SHARP. INVENTOR.

101,774 J. SHAW. TUBULAR WELLS

101,775 GEO. SHOVE.

101,776 HAMILTON BRASTUS SMITH.
IMPROVED

101,777, HAMILTON BRASTUS SMITH.
IMPROVED LOOP MAS
AND WEIRS-CONNEC

HAMILTON BRASTUS SMITH.
IMPROVED WATER-MACHINE
PLATE

101,778. FREDERICK SPOHER.
MECHANISM FOR OPERATING
THE FEEDING-WIRES IN ICE WIRE
MACHINES

APPARATUS FOR MOVING CARS
HERA SPRINGER.
101,780.

JOHN H. SQUIER, 101,781,
HERA J. WARNER. PICTURE-HANG

101,782, WM. STEELE. VEHICLE-CUTTER

101,783. STEN STENBERG.
MANUFACTURE OF SUGAR
AND ALCOHOL FROM LICHENS

A. ROTHERLAND
PLOW, SUBSOIL

101,785. S. C. TAFT.
WOOD PULP MACHINE

101,786. GEORGE P. THOMAS, Jr.
PAPER FOR CHECKS,
DRAFTS, NOTES, &c.

101,787, WM. W. K. THORNTON.
DUST-ARRESTER
FOR RAILROAD-CARS

ELIPHALET A. TRIPP.
101,788, SCROLL-SAWING MACHINE

101,789.
WILKES TUBLE
IMPROVED JOINT
AND SUPPORTING

101,790.
LOUIS F. VIENOT.
IMPROVED COUNTER
AND SHOW-CASE

EDWARD P. VIENOT. 101,791,
RAILWAY-CAR BRAKE

101,792. E. A. WALKER.
PISTON PACKING

101,793, WM. WARD.
COAL-DIGGING APPARATUS

101,794, EFFINGHAM H. E. WARNER.
SHIFT-BOSOM AND WRISTBANDS
CONFINED

101,795, MARSHALL D. WELLMAN.
GRATE-BARS FOR
STEAM-GENERATORS

101,796, ASA WHEELER.
IMPROVED COUNTERSINK

101,797,
HORACE G. WILCOX.
IMPROVED BEDSTEAD

WILLIAM A. WILDE. SLATE-FRAME.
101,798.

IMPROVED STOVE-PIPE SHELF.
101,799.
JOSEPH W. WILDER.

PHILIP WISDOM,
JOHN H. WILCOX.
HAVE GETTING AT
CHEMICAL TOP HEREOF

101,801, CHAS. B. WITHINGTON.
GRAIN-BINDER.
Suspended.

101,802, WILHELMINA JULIANNA ZAKRZEWSKA.
IMPROVED ROCKER FOR CHAIRS

101,803.
A. H. ADAMS.
PANELOCKS

101,804, OLIT ABELL.
WOODEN BOX

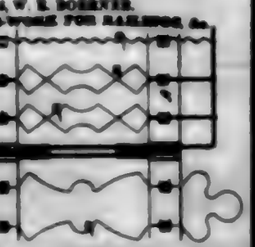
101,805.OLIT ABELL. WOODEN BOX

APPARATUS FOR LIGHTING
101,806. AND EXTINGUISHING GAS
ALMON N. ALLEN.
RODNEY H. DEWEY.

101,807. A. C. AKOONA. GAS-GUN.

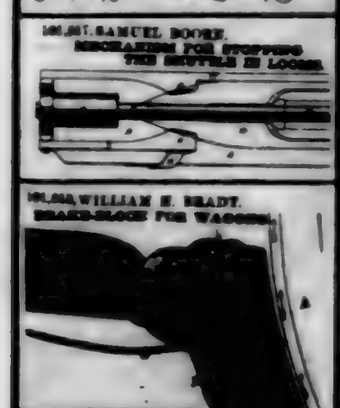
ATTACHING SPOKES TO SPINDLES.
101,808.
MATTW. ANDREW.

101,809, L. AUGS. ASPINWALL.
CORN-HUSKERS.



101,810, MAHLON B. ATKINSON.
CHURNS

101,811 SOLOMON H. AUSTIN.
CLOTH-STRETCHING MACHINES.



101,812,
JOHN G. BAKER.
APPARATUS FOR TANNING
BY INFILTRATION.

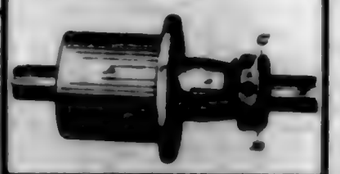
JONAH H. BIGELOW.
IMPROVED STAND
FOR TEA AND
COFFEE-POTS.
101,813.

101,813 G. H. BLAKESLEY.
TUBULAR SHAFTS FOR CLOSETS.

101,814 W. B. BOERNER.
WIRE-WORK FOR RAILROADS, &c.

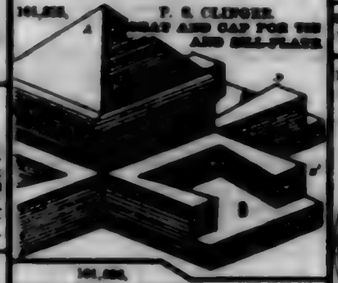
101,815 SAMUEL BOORE.
MECHANISM FOR STOPPING THE SHUTTLE IN LOOMS.

101,816 WILLIAM H. BRADY.
BRAKE-BLOCK FOR WAGONS.



101,817 R. L. BRAESTON.
SCREW-COLLAR BLOCK.

101,818 CHAUNCEY BUCKLEY.
SPECTACLE-FRAMES.



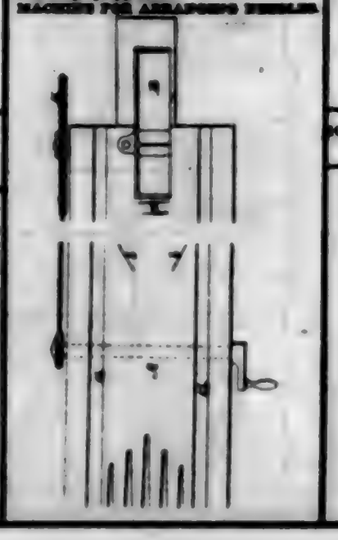
101,819 A. J. CARLETON.
SPOKE-SOCKET FOR CARRIAGE WHEELS.

101,820 JOHN M. CHERVER.
SHEA-STRIPE CARPETING AND EMBOSSED MATTING.

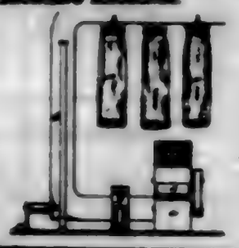
101,821 MILTON W. CLARK.
COMBINED PULLEY AND CLAMP.

101,822 P. S. CLIPPER.
HEAD AND GAG FOR THE AXLE-BLOCK.

101,823
JOHN JOSEPH CLOSE.
BREECH-LOADING FIRE-ARMS.



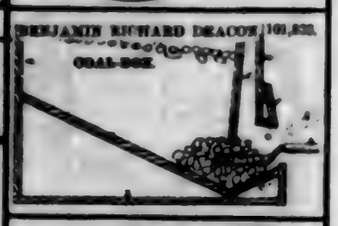
101,824 MARSHALL COWING.
RAILROAD-GAME VALVES.



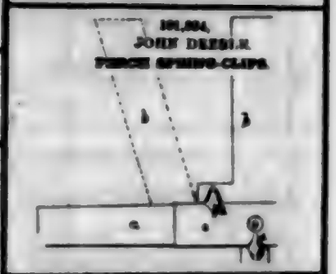
JAMES P. CRAMPTON.
JEREMIAH H. BANKS.
101,825, JOHN H. INGERSOLL.
MANUFACTURE OF ARTIFICIAL FUEL.

101,826 C. O. CROSBY.
MACHINE FOR ARRANGING FIBRILLÆ.

101,827 H. CRUMP.
DROPPER COLLECTING ATTACHMENT TO BROADCAST MACHINES.



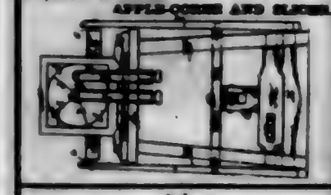
101,828 GEO. CUSTER.
TOOL-CASE FOR BLACKSMITHS.



101,829 H. CHWATAL.
PENDULUM-GAUGES.

BENJAMIN RICHARD DRACOTT 101,830.
COAL-BOX.

101,831
JOHN DESSIR.
PERCH SPRING-CLIPS.

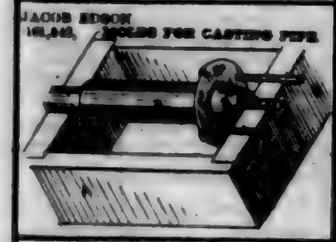


101,832 CHAS. DIEBOLD, MANUFACTURE OF BUILDING-BLOCKS FROM SLAG.

101,837.
SAMUEL O. DIX.
BAG-FASTENING.

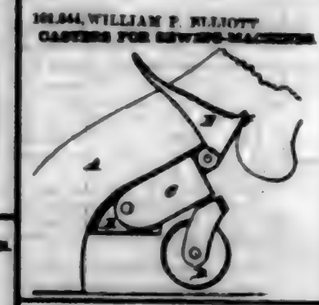
101,838 R. J. DODD.
APPLE-CORER AND SLICER.

101,839
PATK. J. DWYER.
OIL-CANS.

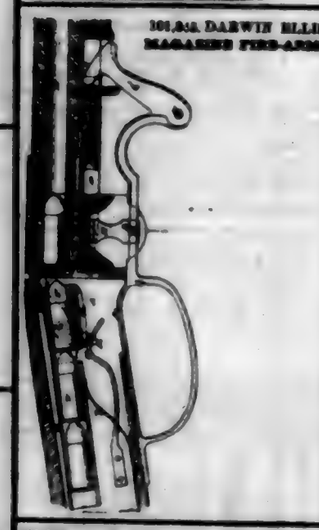


PETER ECKFORD.
JAMES ECKFORD.
PISTON-ROD PACKING.
101,840.

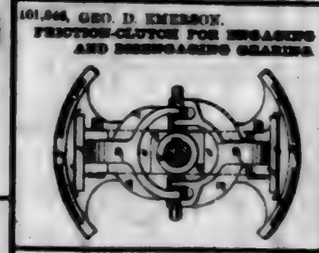
JACOB EDSON.
HOSE-COUPLINGS.
101,841.



JACOB EDSON.
101,842. MOLDS FOR CASTING PIPE.

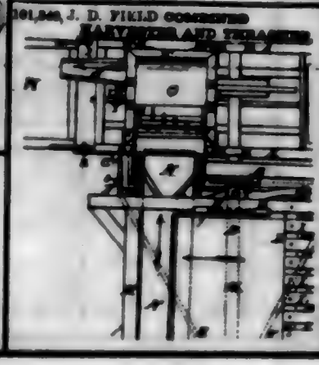


CASTING FOR SEWING-MACHINES.
101,843, WILLIAM P. ELLIOTT.



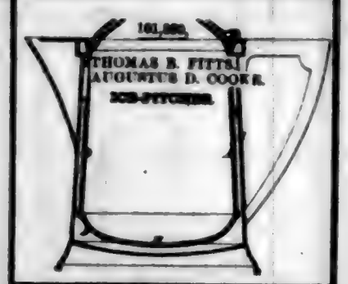
101,844, WILLIAM P. ELLIOTT.
CASTERS FOR SEWING-MACHINES.

101,845 DARWIN ELLIS.
MAGAZINE FIRE-ARMS.

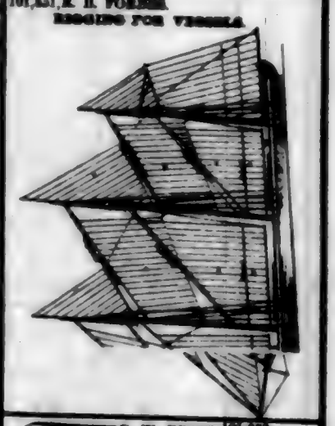


101,846, GEO. D. EMERSON.
FRICTION-CLUTCH FOR ENGAGING AND DISENGAGING GEARING.

CHRISTIAN L. FEHRENEN.
101,847. PERFUME EJECTOR.

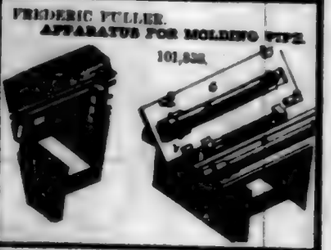


HORACE EVERETT.
SHEET-METAL CANS.



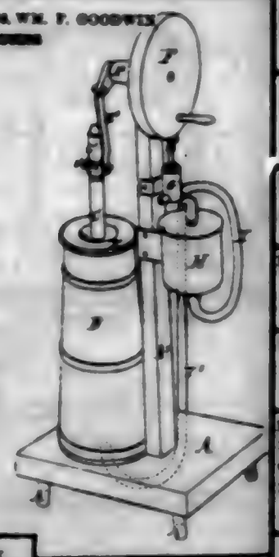
101,849 J. D. FIELD ASSIGNOR TO [illegible]

101,850 THOMAS B. FITTS.
AUGUSTUS D. COOKE.
BOB-PITCHERS.



101,851, R. B. FORBES.
RIGGING FOR VESSELS.

F. W. FROST, 101,852.
STEPHEN L. HAYWARD.
ROTARY BLOTTERS.



FREDERIC FULLER.
APPARATUS FOR MOLDING PIPE.
101,853.

OLIVER S. GARRETSON, SASH-PULLEYS.
101,854.

101,858. WM. F. GOODWIN.
OVENS

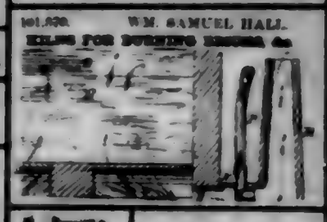
101,859.
PETER B. GOTTSTEIN.
IMPROVED CABOLE FOR MINING USE.

101,860. JAMES GRESHAM.
GUTTARD IMPROVED.

A. FIERRE GUTOT.
MEAN WHEEL WATER

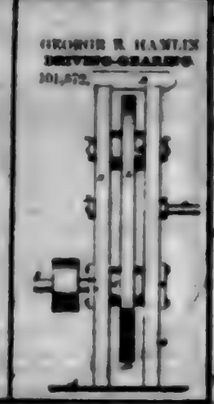
JOHN WILLIAM GUDDEN.
GARDEN-WEEDER.

101,862, STUART GWYNN. IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.



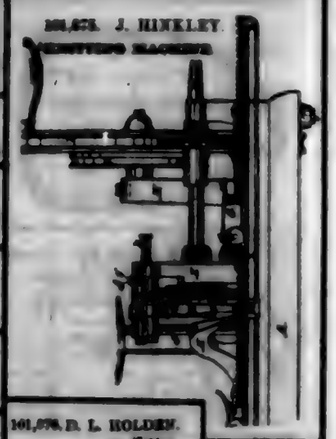
101,863, STUART GWYNN.
IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.

101,864, STUART GWYNN.
IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.



101,865, STUART GWYNN.
IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.

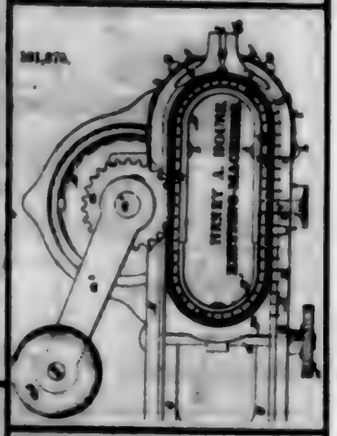
101,866. S. GWYNN. PROCESS OF FORMING COMPOSITIONS OF MATTER, CALLED METALINE, FOR JOURNALS, BEARINGS, STEPS, AND OTHER ARTICLES LIABLE TO FRICTION.



101,870. WM. SAMUEL HALL.
KILNS FOR BURNING BRICKS, &c.

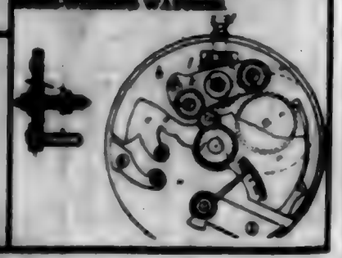
GEORGE R. HAWLIN.
SEWING-CHARMS
101,872.

101,873. J. HINKLEY.
SCOURING MACHINE.



101,876. D. L. HOLDEN.
APPARATUS FOR THE MANUFACTURE OF ICE

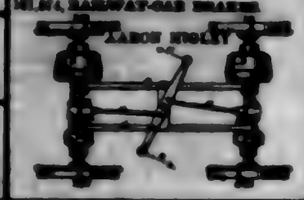
JOHN W. HOLLINGSWORTH.
MOLDS FOR METALS.
101,877.



101,878.

101,879. THEODORE HYATT. MEANS AND GOVERNING REFRIGERATORS AND REFRIGERATOR-CARS.

101,880. SAMUEL W. HEAM.
PAINTS AND VARNISHES.

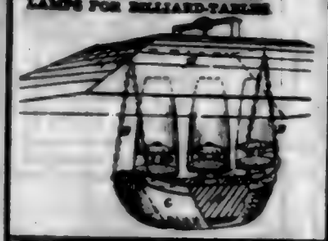


101,881. CHAS. E. JACOT.
SPEED-INDICATING WATCHES.

101,871. ANSON HARDY.

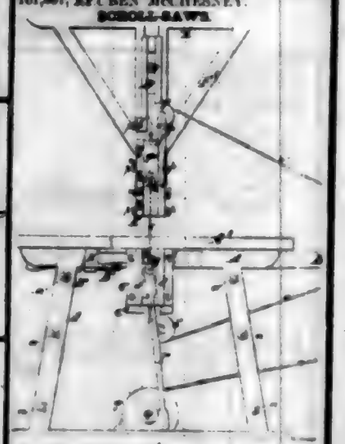
101,874. RAILWAY-CAR BRAKE.
JABOB HYOLY

IMPROVED
101,861, STUART GWYNN. COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.



101,867. STUART GWYNN. IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.

101,868. STUART GWYNN. IMPROVED COMPOSITION OF MATTER, CALLED "METALINE," FOR JOURNALS, BEARINGS, &c.

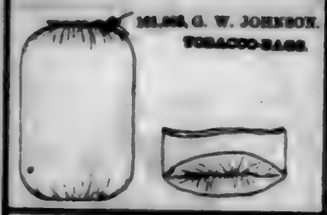


101,882. ROBERT JEWELL.
IMPROVED BEDSTEAD AND LOUNGE.

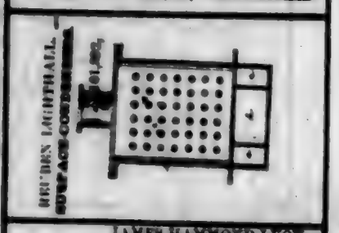
101,883. RUDOLPH KLEEMANN.
LAMPS FOR BILLIARD-TABLES.

101,885, ANGUS McALPIN.
MOULDS FOR METAL.

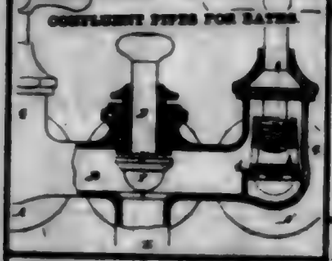
101,886, REUBEN McCHESNEY.
SCROLL-SAWS.



JOHN FREDERIC KUBLY. 101,884.
CHARLES FREDERIC CRAILSHEIM.
BOTTLES FOR GASEOUS LIQUIDS.



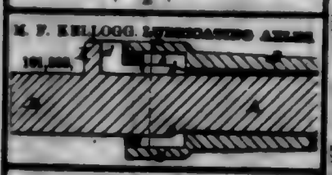
101,887.
N. H. LEBBY.
ORE-WASHING MACHINES.



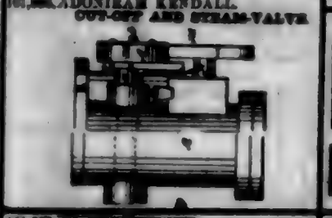
101,888. G. W. JOHNSON.
TOBACCO-BAGS.

T. GRAHAM LIEBENAU ASSIGNOR, FOR A. G. BRADLEY. 101,889. CLOCK-SEALS.

101,890. HENRY JONES.
CONSTANT FIRE FOR BATHS.

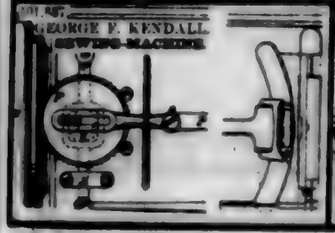


REUBEN LIGHTHALL.
SURFACE-CONDENSER.

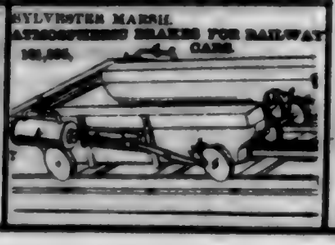


JAMES HAMMOND LYON.
PORTABLE FURNACE.

M. F. KELLOGG. LUBRICATING AXLES.
101,891.

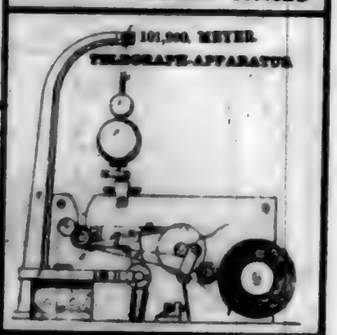


101,892. ADONIRAM KENDALL.
CUT-OFF AND STEAM-VALVE.



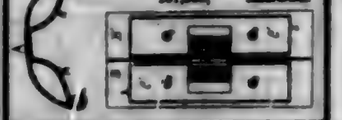
101,893. SAFES.
OBADIAH MARLAND.

101,894. GEORGE F. KENDALL.
SEWING-MACHINE.



SYLVESTER MARSH.
ATMOSPHERIC BRAKES FOR RAILWAY CARS.
101,895.

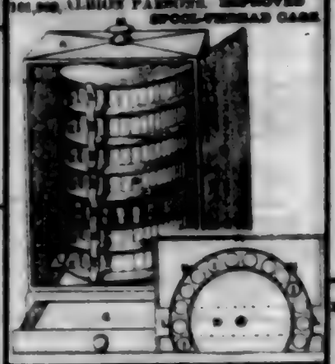
101,896. LEVIE ALBERT MESSINGER.
PAINT OR COATING FOR SHIPS' BOTTOMS.



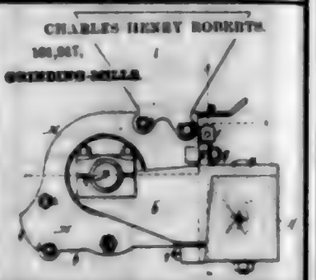
101,897. MEYER.
TELEGRAPH-APPARATUS.

101,891. WILLIAM A. MIDDLETON.
IMPROVED BROOM-HEAD

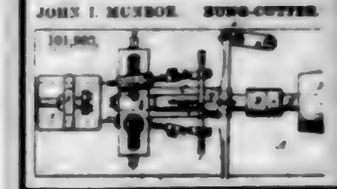
GEORGE FRANKLIN CUTTER.
101,899. RIVETS.



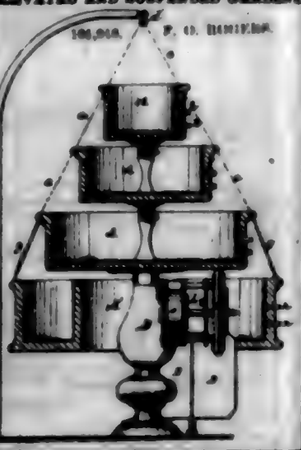
101,910. ALBION RANSOM.
RESERVOIRS FOR COOKING-STOVES



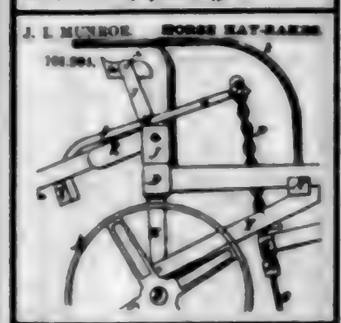
LEON EUGENE CAMERON MOORE.
JAMES SHOCKEY HAMILTON.
101,902. LAMPS



101,909. ALBION PARSONS. IMPROVED SPOOL-THREAD GAGE.



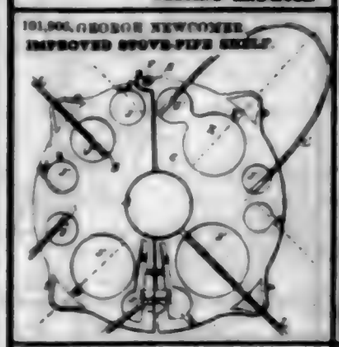
CHARLES HENRY ROBERTS.
101,917. GRINDING-MILLS.



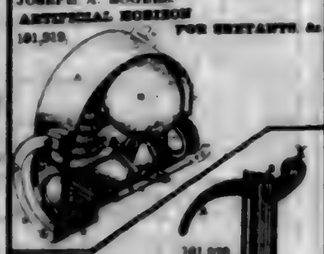
JOHN I. MUNROE. BUNG-CUTTER.
101,892.

ELEVATED AND SUSPENDED GARDENS.
101,918. F. O. RANDEL.

J. I. MUNROE. HORSE HAT-RACK.
101,894.



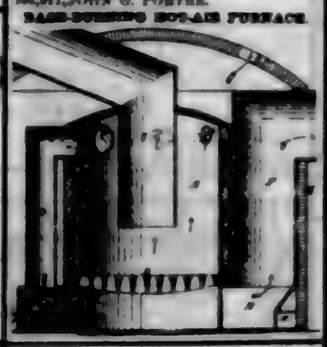
JULIA W. D. PATTEN.
101,910. IMPROVED EXTENSION TRAVELING-BAG



101,905. JOHN MURPHY.
INDIA RUBBER PACKING BELTING AND HOSE.

GEORGE NEWCOMER.
IMPROVED STOVE-PIPE SHELF.

JOSEPH A. ROGERS.
ARTIFICIAL HORIZON FOR SEXTANTS, &c.
101,919.



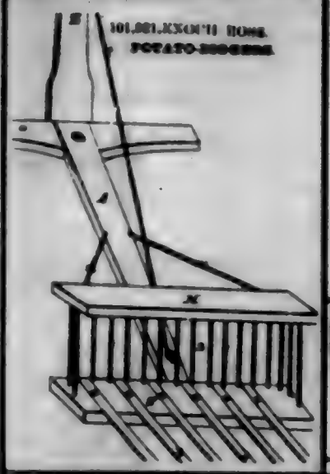
JOSIAH BORRAKER.
101,920. IMPROVED LIFTING-JACK.

101,907. J. H. O'NEIL.
NAPKIN-BASKETS

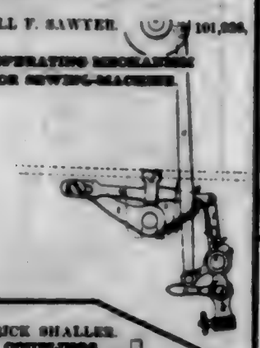
101,911. JOHN G. FOSTER.
BASE-BURNING HOT-AIR FURNACE.

101,913. ADDISON C. BAND. WEDGE.

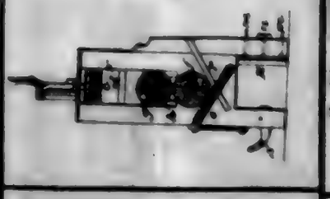
101,914. A. C. BAND. WEDGE.



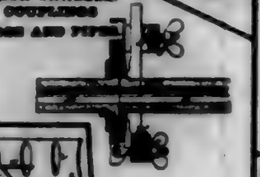
101,915. ADDISON C. BAND. WEDGE.



101,916. ADDISON C. BAND. WEDGE.

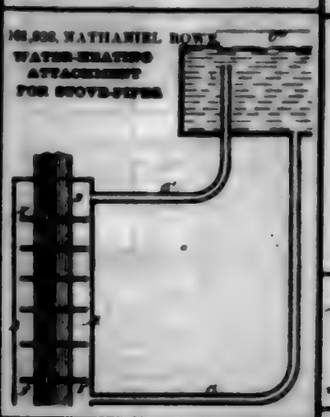


101,921. EXCELSIOR HOE.
POTATO-DIGGERS.

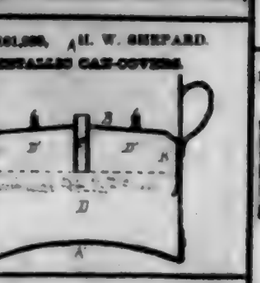


NOWELL F. SAWYER. 101,926.
FEED-OPERATING MECHANISM FOR SEWING-MACHINES.

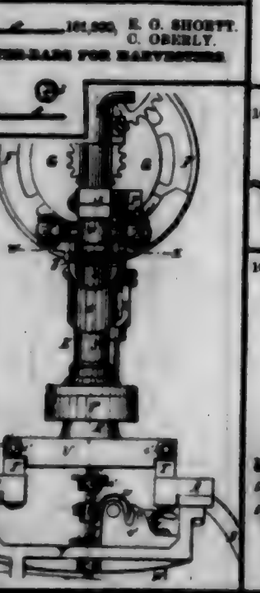
101,922. JOHN O. ROTH.
IMPROVED CLOTHES-WRINGER.



FREDERICK SHALLER.
101,927. COUPLINGS FOR HOSE AND PIPES.



101,928. JAMES SHEEDY.
GAS-HEATING.



101,923. NATHANIEL ROWE.
WATER-HEATING ATTACHMENT FOR STOVE-PIPES.

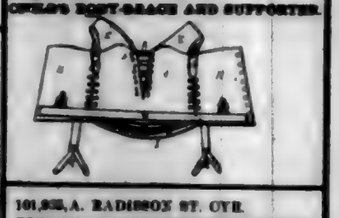
101,929. H. W. SHEPARD.
REFRIGERATED CAR-COVERS.

101,930. E. G. SHORTT. C. OBERLY.
CUTTER-BARS FOR HARVESTERS.

BENJAMIN F. SYDER. CASTERS FOR SEWING-MACHINES.
101,924.

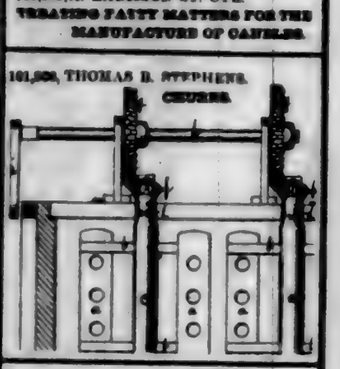
101,931. THOMAS SANDBACH. JOSEPH W. FOWLER. IMPROVED WELL-BORER.

101,931. E. J. STROUD. IMPROVED LEATHER CUTTING-PRESS.

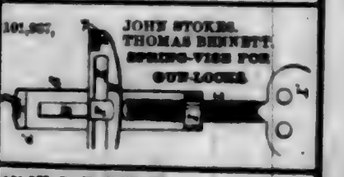


101,932. DAVID FRANCIS SMITH.
PAPER-COLLARS.

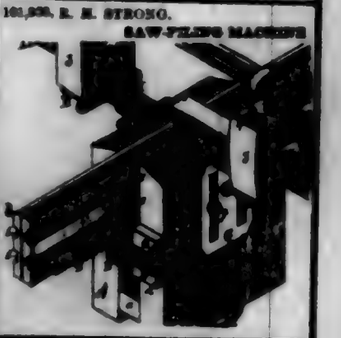
101,933. THOMAS S. SPEAKMAN.
LUBRICATING AXLE-BOXES.



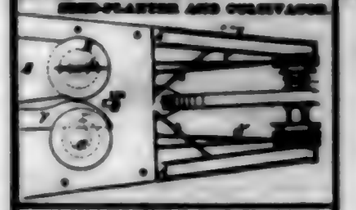
101,934. LINDA SPIGELMYER.
CHILD'S BODY-GRASP AND SUPPORTER.



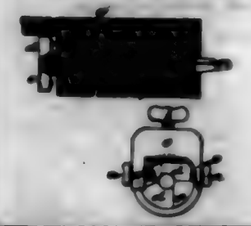
101,935. A. RADISSON ST. CYR.
TREATING FATTY MATTERS FOR THE MANUFACTURE OF CANDLES.



101,936. THOMAS B. STEPHENS.
CHURNS.

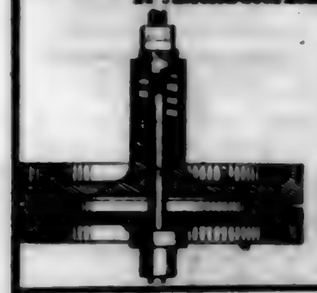


101,937. JOHN STOKES. THOMAS BENNETT.
SPRING-VISE FOR GUN-LOCKS.

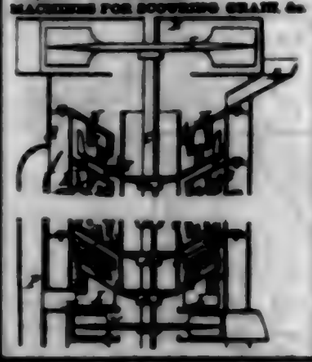


101,938. E. H. STROUD.
SAW-FILING MACHINE.

101,940, W. B. STROUD. SEED-PLANTER AND CULTIVATOR.

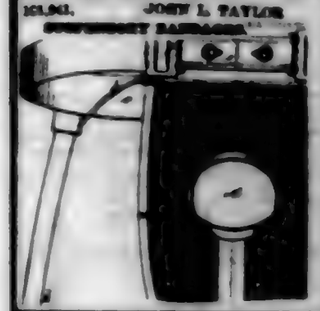


101,941, G. W. TOMPKINS. DEVICE FOR TURNING SPOKES.



101,941, WM. WHARTON, Jr. RAILWAY-SWITCHES.

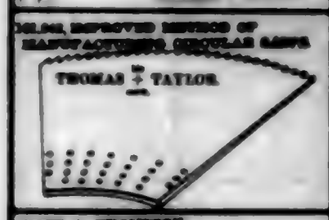
101,942, BENJ. TATHAM. REGULATING POWER CONVEYED BY TRAVELING BELTS OR BANDS.



101,943, B. T. TRIMMER. MACHINERY FOR SOWING GRASS, &c.

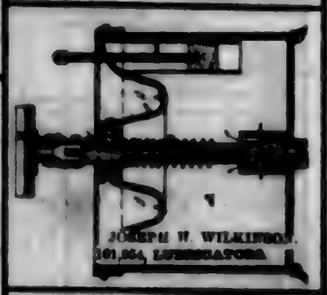
101,944, LE ROY S. WHITE. IMPROVED BOX FOR FORMING CARRIAGE-SHACKLES.

101,945, JOHN L. TAYLOR. SPRING-SEAT RAILROAD.



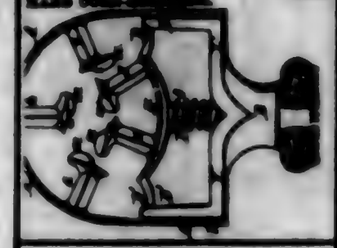
101,946, JOSEPH TRUMP. COTTON-SEED PLANTER.

CHARLES H. WIGHT. 101,947, HEDDLES.

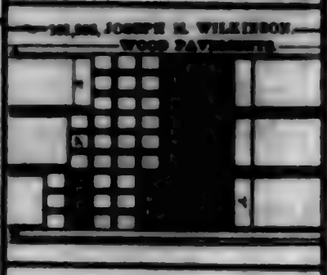


101,948, THOMAS J. TAYLOR. IMPROVED METHOD OF MANUFACTURING CIRCULAR LAMPS.

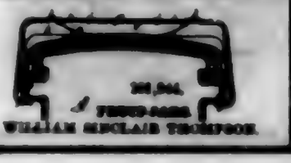
101,949, FERRAND G. WALLACE. WHEELS FOR VELOCIPEDES.



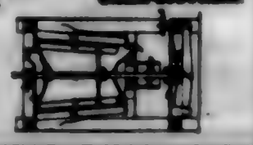
JOSEPH H. WILKINSON. 101,950, LUBRICATORS.



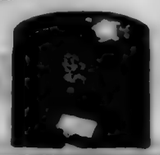
JOHN A. THOMPSON. 101,951, IMPROVED LADDER.



THEOPHILUS WEAVER. 101,952, HAND CORN-PLANTER.

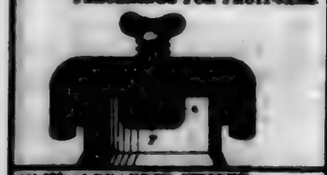


101,953, JOSEPH H. WILKINSON. WOOD PAVEMENTS.



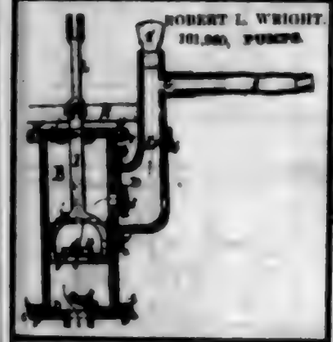
101,954, WILLIAM SINCLAIR THOMPSON.

VALENTIN WEINHARTER. 101,955, GRAIN-SEPARATOR.



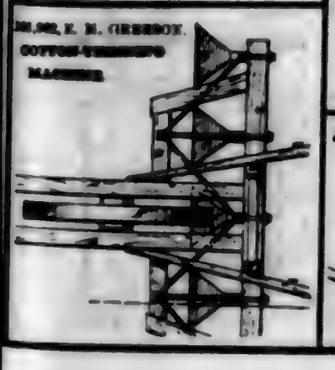
101,956, E. WILLARD. LAMPS.

HENDERSON WILLARD. IMPROVED CHAIR. 101,957,

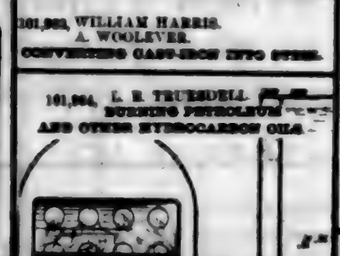


101,958, THEODORE F. WOODWARD. FASTENINGS FOR FRUIT-JARS.

101,959, ALEXANDER WRIGHT. ADJUSTABLE CARRIAGE-SEATS.

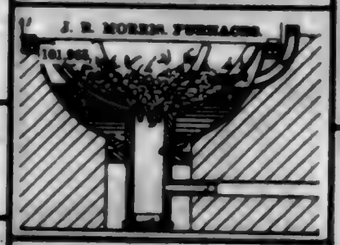


ROBERT L. WRIGHT. 101,960, PUMPS.



101,961, J. B. ALEXANDER. LAMPS.

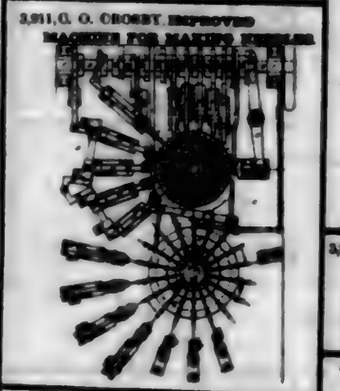
101,962, E. H. GIBBONS. COTTON-PLANTING MACHINES.



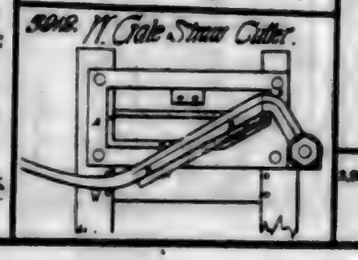
101,963, WILLIAM HARRIS, A. WOOLEVER. CONVERTING CAST-IRON INTO STEEL.

101,964, I. R. TRUESDELL. BURNING PETROLEUM AND OTHER HYDROCARBON OILS.

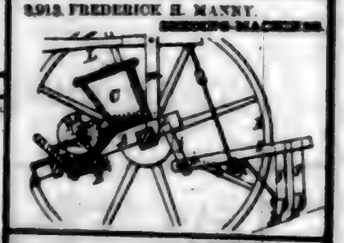
J. B. MORRIS. FURNACES. 101,965,



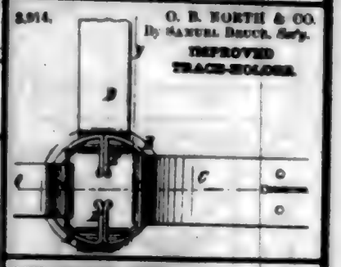
101,966, FELIX MAKE. RAIN-FAUCETS.



RAILROAD-CAR VENTILATOR. 3,910, P. R. HITCHCOCK.

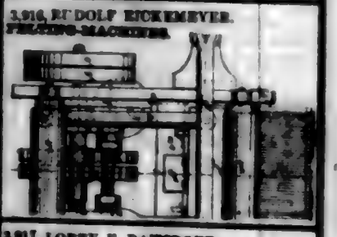


3,911, C. C. CROSBY. IMPROVED MACHINE FOR MAKING SPRINGS.



3,912, W. Gale Straw Cutter.

3,913, FREDERICK H. MANNY. REEDING-MACHINES.



3,914, O. B. NORTH & CO. By SAMUEL BRUCE, Sec'y. IMPROVED TRACE-HOLDER.

3,915, MORTON JUDD, A. D. JUDD. CASE-FASTENERS.

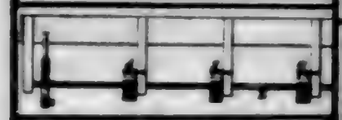
3,916, RUDOLF EICKEMEYER. FEEDING-MACHINES.

3,917, LOREY F. RAYCROFT. SPRINKLERS.

3,918, LORING COBB. WRENCHES.

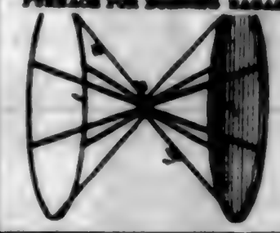
G. RATURF. RAILWAY-CAR WHEELS. 3,919,

3,920, SHELDON INGALLS KELLOGG. CONVERTING CAST INTO STEEL.



ILLUSTRATIONS OF PATENTS

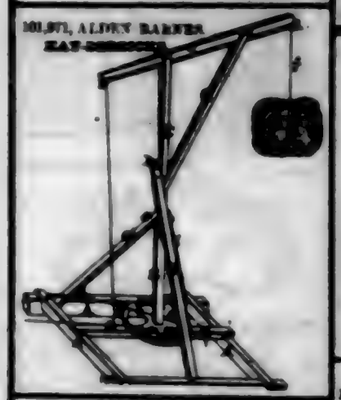
ISSUED FROM



THE UNITED STATES PATENT OFFICE

APRIL 19, 1870.

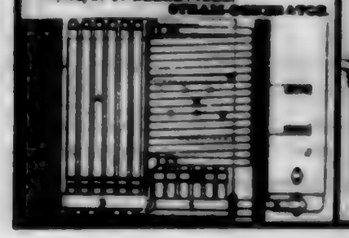
101,967, I. J. W. ADAMS. APPARATUS FOR MEASURING BOARDS.



101,968, JOHN ARTUS SPIRES. FURNACE FOR BURNING BAGASSE.

101,969, HAYDN M. BAKER. MANUFACTURE OF STEEL FROM CAST OR PIG-IRON.

101,970, H. G. BALFOUR. ROOFING MATERIAL.



101,971, ALDEN BARNES. HAT-BLOCKING.

101,972. ORLANDO BARTO. VENTILATOR.

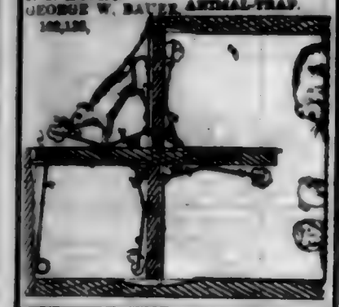
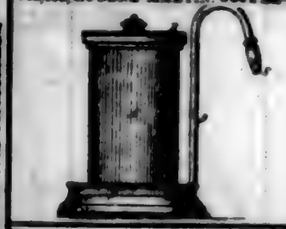
102,127, DAVID JEWETT. AXLE-BOX FOR CARRIAGES.

102,128, JOSEPH G. KITTREDGE. HINGE FOR SAFE-DOORS.

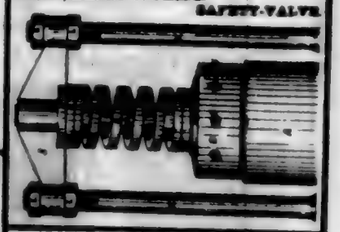


102,130, J. HEINE, JOHN VONFICHT. FAUCETS.



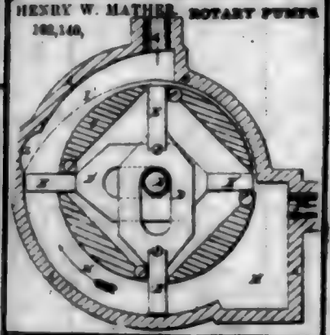
102,129, HARVEY GLOSSUP, GEORGE BAKER JEWETT

J. O. KOPAS, GEORGE W. BAUER. ANIMAL-TRAP. 102,133.

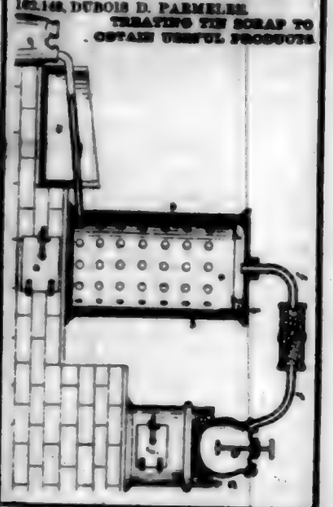


102,136, EUGENE MARTIN. COFFEE-URN.

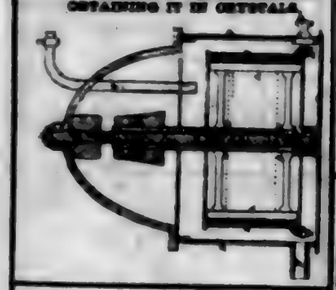
102,146, CHARLES MOTIER NEE. MANUFACTURE OF STEEL.



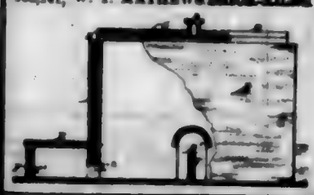
102,147, HENRY J. PAINE. SAFETY-VALVE.



102,134, J. O. KOPAS. ANIMAL-TRAP.

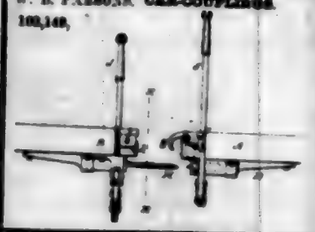


HENRY W. MATHER. ROTARY PUMPS. 102,140.



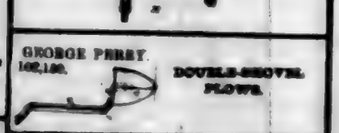
102,148, DUBOIS D. PARMELEE. TREATING TIN SCRAP TO OBTAIN USEFUL PRODUCTS.

102,135, FREDERICK LAMBE. TREATING PARAFFINE AND OBTAINING IT IN CRYSTALS.



102,141, W. T. MATHEWS. BRICK-KILNS.

102,142, FERDINAND C. D. McKAY. SELF-WINDING AND BALANCING CURTAIN-FIXTURE.



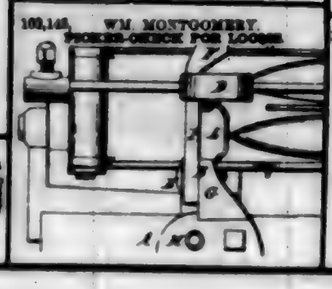
W. B. PARSONS. CAR-COUPLINGS. 102,149.

102,143, HENRY MINER. STOVE-GRATES.

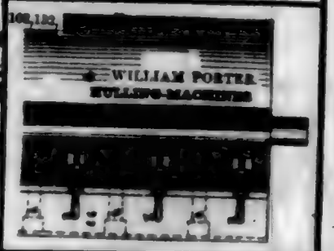
GEORGE PERRY. 102,150. DOUBLE-SHOVEL PLOWS.

102,138, ERWIN LAVERE, JAMES C. LAMB. ROTARY PUMPS.

DAVID MOFFAT, JOHN THOMSON. 102,144. PAVING-BRICKS.



102,151, IVA POPPENBERGER. JOINT FOR PITMAN-HEADS, SICKLES OF HARVESTERS.



102,137, HARVEY T. LEE. PISTON-ROD PACKING.

102,145, WM. MONTGOMERY. POKER-CHECK FOR LOOMS.

102,152, WILLIAM PORTER. ROLLING-MACHINES.

102,132, JOSIAH LETCHWORTH. HAMES FOR HARNESS.

102,168. JOHN P. QUARLES. PAPER-FILER.

102,169. NATHANIEL WILEY RICE. APPARATUS FOR SETTING SAWS.

102,170. THOMAS SHAFER DODGE. WINDOW FOR SEWING-MACHINES.

102,171. GEO. REED. WILLIAM G. BOAGLAND. JOHN J. HEWSON. SCREEN-ATTACHMENT FOR WINDOWS.

102,172. DAVID SMITH. WATCHMEN'S TIME-DETECTOR.

102,173. T. E. REED. MACHINE FOR UNITING BOOT AND SHOE-SOLES TO THE UPPERS.

102,174. EVERETT P. RICHARDSON. MACHINE FOR TURNING THE HEELS OF BOOTS AND SHOES.

102,175. CHS. P. A. SIMONIN. EDWARD W. COFFIN. CLEANING WOOL AND HAIR.

102,176. CORELLI W. SIMPSON. DEVICE FOR HANGING PICTURES.

102,177. JOHN H. ROBSON. MACHINE FOR JOINTING AND CLEANING EDGES OF CROSS-CUT SAWS.

102,178. FRANCIS VANVOST SLEETH. LAMP.

102,179. HERMANN BRUTTI. PHILIPP WINKELHAUS. APPARATUS FOR PITCHING BEER AND OTHER BARRELS.

102,180. JOHN B. RODGERS. MEDICATIONS AND OTHER MEDICAMENTS COMPOUNDED TO BE USED IN TREATING

102,181. SAMUEL D. SATER. PLOWS.

102,182. BENNETT B. SCHNEIDER. LAMP.

102,183. CHAS. E. SMITH. HENRY J. RICE. VAPOR-BURNER.

102,184. ISRAEL L. G. RICHEMOND. APPARATUS FOR SOLAR-PRINTING.

102,170. C. A. SMITH. E. L. MILLER. SEWING-MACHINE.

102,171. RUTH E. SMITH. DRIVE-POWER.

102,172. SOLOMON P. SMITH. BRAKE FOR WAGONS.

102,173. WALTER SMITH. HAY-TEDDER.

102,174. WILLIAM SMITH. GOVERNOR-VALVE.

102,175. SOLOMON A. STERRITT. APPARATUS FOR COOLING GRAIN.

102,176. JOHN J. STEIGER. SELF-ACTING EQUALIZING-VALVE.

102,177. C. C. STEVENSON. AMALGAMATOR.

102,178. ALEXR. W. STEWART. FOLDING CHAIR.

102,179. ALEXR. W. STEWART. FOLDING CHAIR.

102,180. ALEXR. W. STEWART. FOLDING CHAIR.

102,181. EDWIN STREET. METAL-CAPPED CORKS.

102,182. RICHARD TATTERSHALL. SPRING-BED BOTTOM.

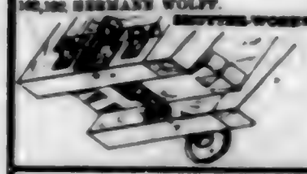
102,183. DAVID B. THOMPSON. TYPE-DISTRIBUTING MACHINES.

102,184. JOHN H. VOLK. MACHINE FOR GRINDING AND POLISHING MARBLE.

102,185. REDFORD W. WALKER. CARPET-FASTENER.

102,186. JOHN WARREN. STILLS FOR PETROLEUM.

102,187. ALBIN WARTH. FOR PETROLEUM STOP-VALVES PACKAGES.



102,188. ALBIN WARTH. CAPS FOR LIQUID PACKAGES.

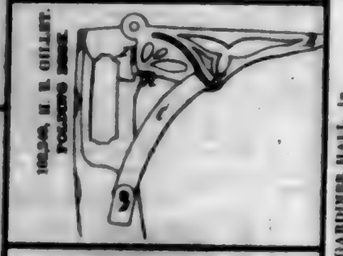
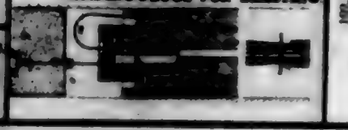
COMPOUND FOR CLEANING SILK.

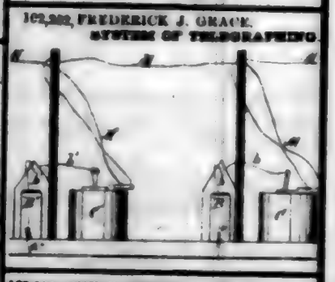


102,247. HENRY X. GALLAGHER.
REVOLVING BAR-TOY.



102,248, GEO. GARDNER.
BOOK-RACK OR STAND.

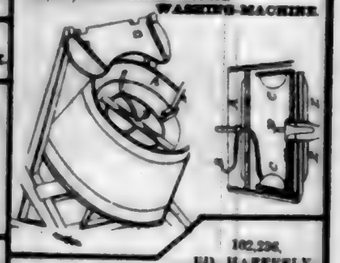
102,249, H. E. GILLET.
FOLDING BED.



102,250. ELWIN GOSNE.
TAMPING-PLUGS FOR BLASTING.

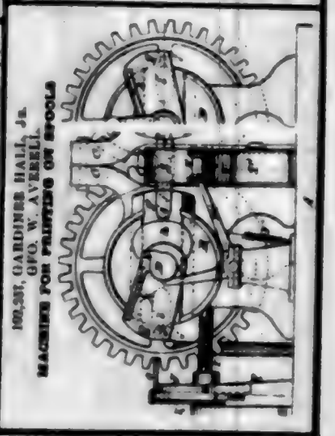
102,251. FRANKLIN GOULD.
VAPOR-BURNER.

102,252. FREDERICK J. GRACE.
SYSTEM OF TELEGRAPHING.

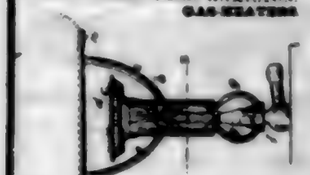


102,253. GUY E. GROSSE, ASSIGNOR.
CASTORS.

102,254. JOHN D. GRÜNEBERG.
COATING METALS.

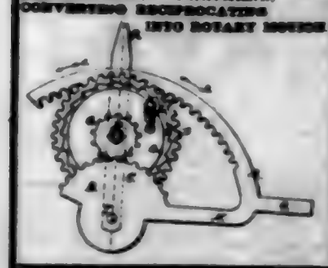


102,255. JOHN HABERMEHL.
WASHING-MACHINE.

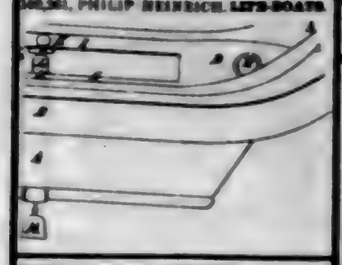


102,256.
ED. HAEFFELY.
YARN-WASHING MACHINE.

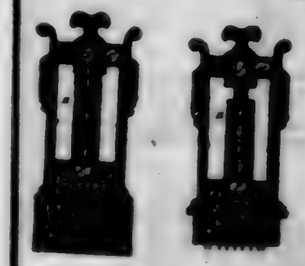
102,257. GARDINER HALL, JR.
OTTO W. AVERELL.
MACHINES FOR PRINTING CIRCULAR BOOKS OR SHEETS.



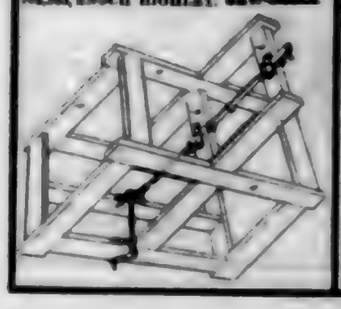
102,296. LAVINIA BUSH HAMILTON. GAS-HEATER.



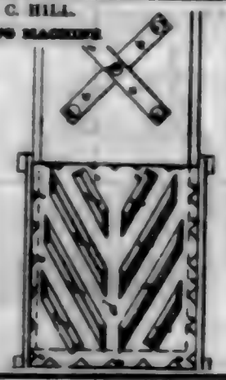
102,297. WM. HENRY HART, Jr. HOLDER FOR EXERCISE.



102,298. JOACHIM F. HARTMANN. CONVERTING RECIPROCATING INTO ROTARY MOTION.

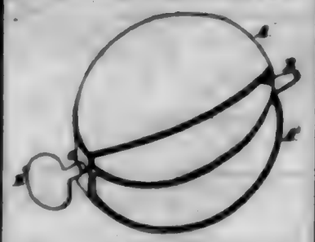


102,299. PHILIP HEINRICH, LIFE-BOATS.

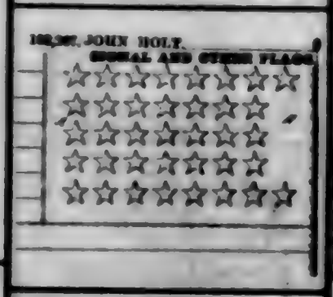


102,300. GARDNER HERRICK. ACOUSTOSCOPES [illegible]

102,301. ENOCH HIGHLEY. SAW-SETTER.

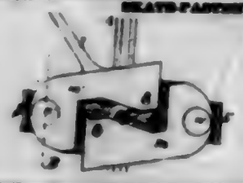


102,294. C. HILL. WASHING MACHINE.

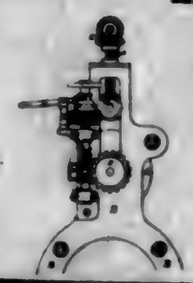


102,295. I. HOFFMAN. MANUFACTURE OF PAPER.

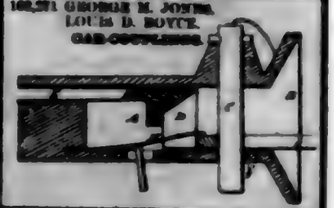
102,296. G. HOLLINGER AND [illegible] S. H. FRY.



102,297. JOHN HOLT. SIGNAL AND OTHER FLAGS.

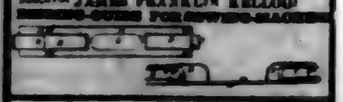


102,298. ALBERT H. HOOE. MANUFACTURE OF [illegible]



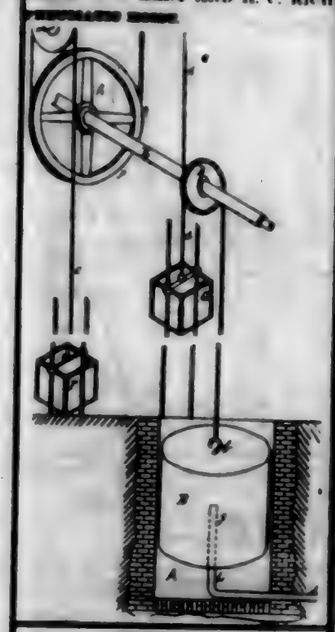
102,299. H. S. HOOKER. HEATH-FASTENING.

102,300. S. HUTCHINSON. MACHINERY FOR STRIKING OUT LEATHER.

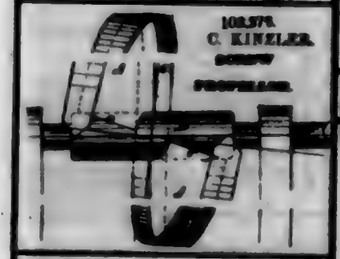


102,271. GEORGE M. JOYCE, LOUIS D. BOYCE. GAS-CONDENSER.

102,272. T. L. JONES. STEAM [illegible]

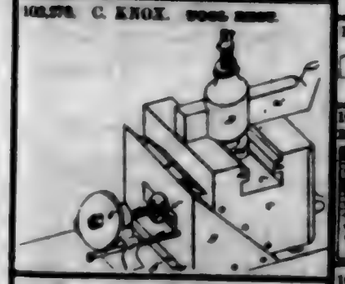


102,273. JAMES FRANKLIN KELLOG. [illegible] FOR SEWING-MACHINES.

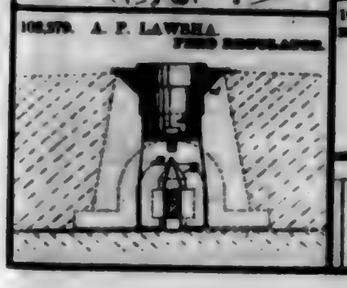


102,274. RICHARD A. KENDALL, WILLIAM KENDALL. SEWING-MACHINE.

102,275. J. C. KENT AND H. C. RICH. [illegible]

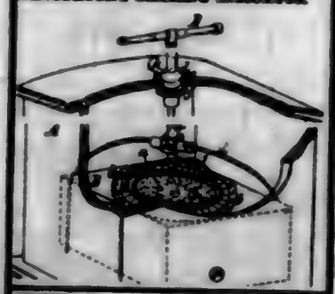


102,276. C. KINZLER. [illegible] PROPELLER.

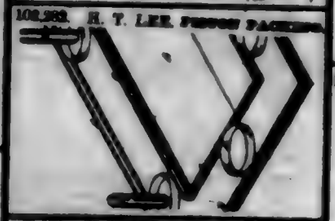


102,277. S. KNEASS. WOOD PAVEMENT.

102,278. C. KNOX. [illegible]



102,279. A. P. LAWSHA. [illegible] REGULATOR.



102,280. A. H. LEACH. CARRIAGE WHEEL.

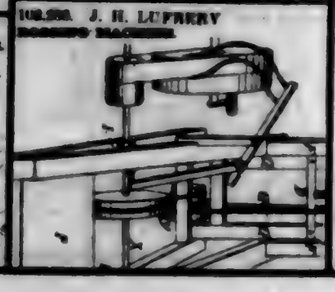
102,281. J. D. LEACH. NAVIGATOR'S MARINE INDICATOR.

102,282. H. T. LEE. PISTON-PACKING.

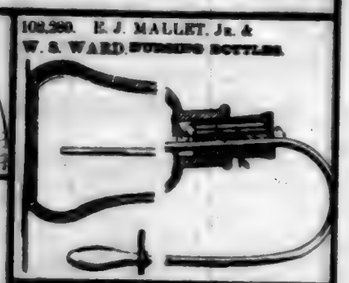
102,283. H. LEE. MANUFACTURE OF RAILROAD RAILS.

102,284. R. LENOX. LIGHTNING DEVICE.

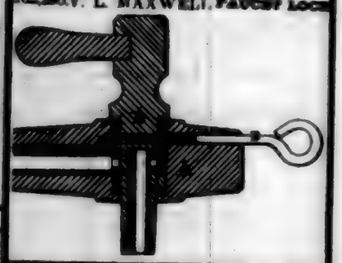
102,285. LICHTENSTADT & PENTLARGE. [illegible]



102,286. C. V.-LITTLEPAGE. SAW.

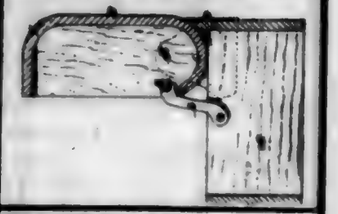


102,287. J. C. LUDWIG. [illegible] FURNACE.

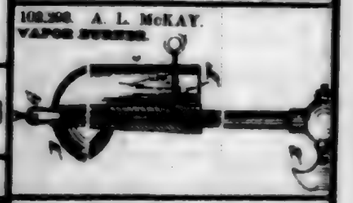


102,288. J. H. LUFBERY. [illegible]

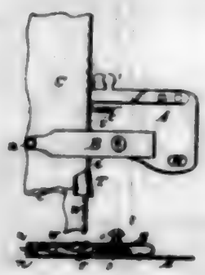
102,289. E. J. MALLET, Jr. & W. S. WARD. NURSING BOTTLE.



102,290. V. L. MAXWELL. FAUCET LOCK.

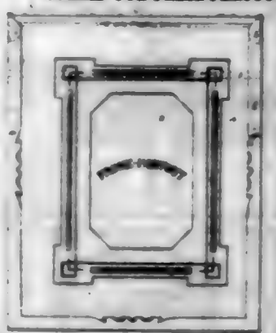


102,291. W. S. MAYO. TRUSS.



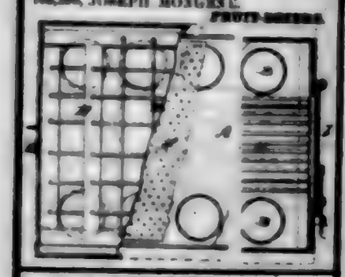
102,292. W. S. MAYO. TRUSS.

102,293. A. L. McKAY. VAPOR BURNER.

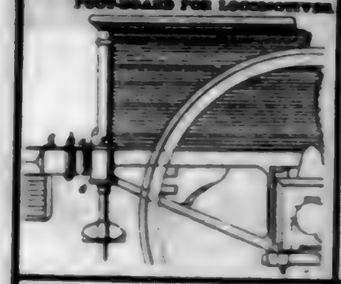


102,294. MELLEN, VAN SANDT & PALMER. SEWING-MACHINE BUFFLER.

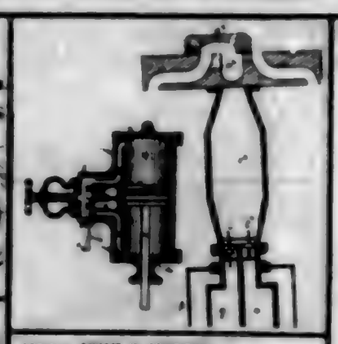
102,295. CURT W. MEYER.
POCKET INDUCTION APPARATUS.



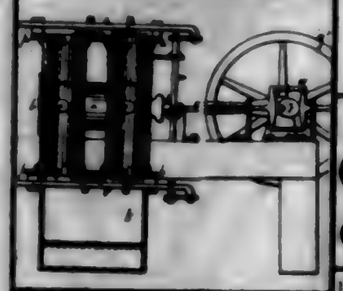
102,296. P. MIGNOT.
FRAME FOR PANES PANEPOUTE.



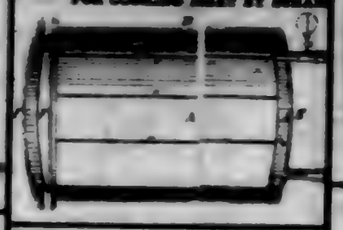
102,297. ROBERT A. MILLER.
BOOTS AND SHOES.



102,298. JOSEPH MOUGEOT.
FRUIT-DRYER.

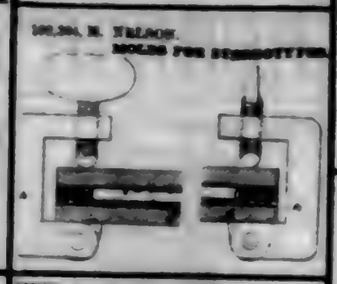


102,299. GEO. F. MORSE.
FOOT-BOARD FOR LOCOMOTIVES.



102,300. JOHN S. MORTON.
PNEUMATIC VACUUM-ENGINE.

102,301. JOHN S. MORTON.
JOS. H. LAMING.
PNEUMATIC VACUUM-ENGINE.



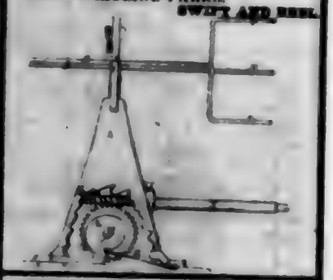
102,302. GEO. H. MUNROE, APPARATUS FOR COOKING MEAT BY STEAM.

102,303. GEO. H. MUNROE.
MOLDS FOR SUBMARINE TUBE.

102,304. N. NELSON.
MOLDS FOR SUBMARINE TUBE.

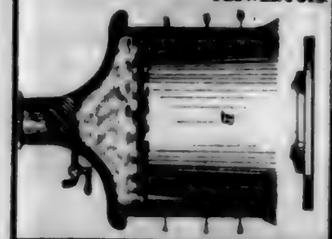
102,305. JOSEPH NEUMANN.
STREET-LANTERN.

102,306. JOSIAH H. NICHOLS, CUTLERY WILLIAM BOWER.

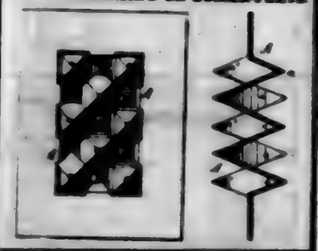


102,307. JOHAN F. NORDQUIST.
WRENCHES.

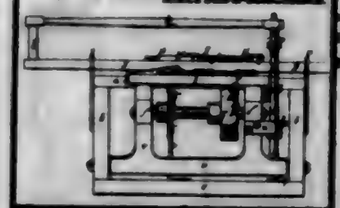
102,308. CHARLES H. OTIS.
PAINT-PAILS.



102,309. CAROLINE PARKS.
SWIFT AND REEL.



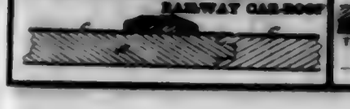
102,310. JOHN H. PARSONS, BROOM.



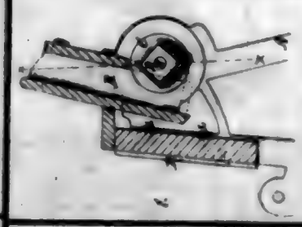
102,311. CHAS B. PENFIELD.
FLOWER-POTS.

102,312. ABRAHAM LIDDON PENNOCK.
RADIATING OR BOILER-PLATE.

102,313. JOHN PEPPER.
KNITTING-MACHINES.

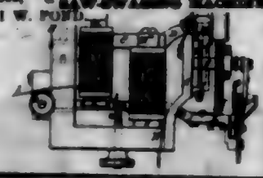


102,314. R. W. PERKINS.
VENTILATED SCREEN DOOR.



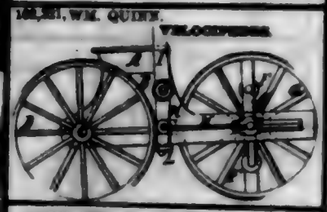
102,315. GEORGE W. PETERS.
ADJUSTABLE METALLIC FASTENER FOR VEHICLES.

102,316. BENJAMIN F. PICKETT.
RAILWAY CAR-ROOF.



102,317. JOHN & P. PIEHL.
SCHOOL-DESK.

102,318. LEVI W. POND. SAW-SWAGE.

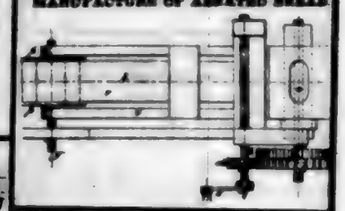


102,319. SAW-SWAGING MACHINE.
LEVI W. POND.

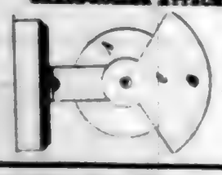
102,320. L. POPE AND T. A. EDISON.
PRINTING TELEGRAPH APPARATUS.

102,321. WM. QUINN.
VELOCIPEDE.

102,322. JOEL H. RHODES, M. D.
WM. REED.
VELOCIPEDE.



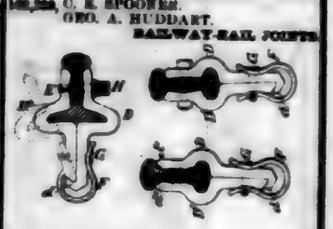
102,323. MARTIN A. ROWE.
CRANK-MOTION.



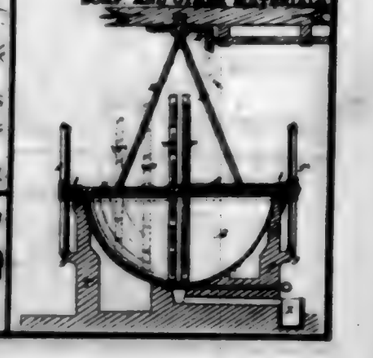
102,324. ELLIOT SAVAGE.
MANUFACTURE OF ALLOYS OF MANGANESE.

102,325. ALFRED SCATCHARD.
APPARATUS FOR THE MANUFACTURE OF AERATED BREAD.

102,326. PETER J. SHIETS.
SHADE-ROLLER ATTACHMENT.

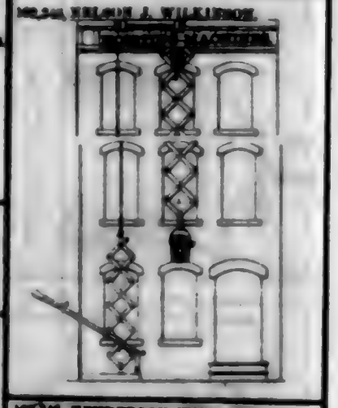


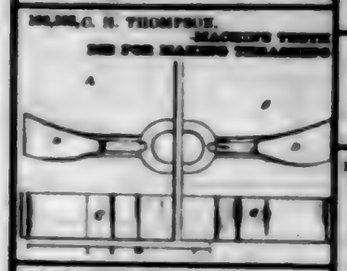
102,327. HUGH SMITH, SLEIGHS.



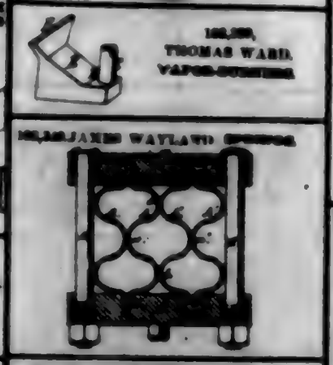
102,328. J. SPEAR.
COAL STOVE.

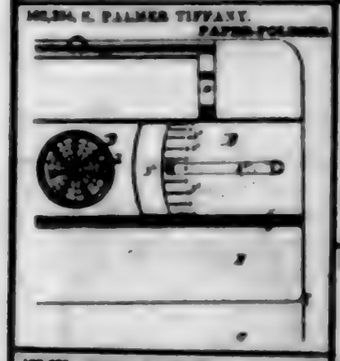
102,329. C. B. SPOONER.
GEO. A. HUDDART.
RAILWAY-RAIL JOINTS.

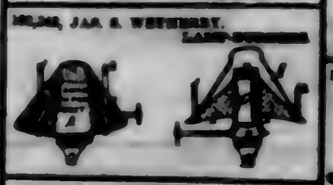


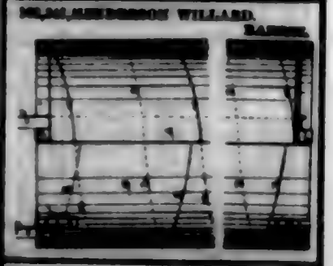


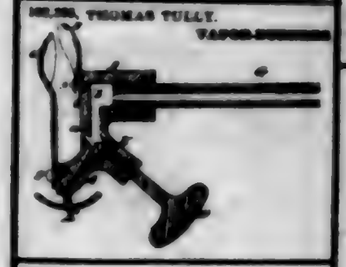
102,330. JOHN STAINTHORP.
ISAAC COLE.
MACHINE FOR MIXING PAINT, SOAP, AND OTHER MATERIALS.

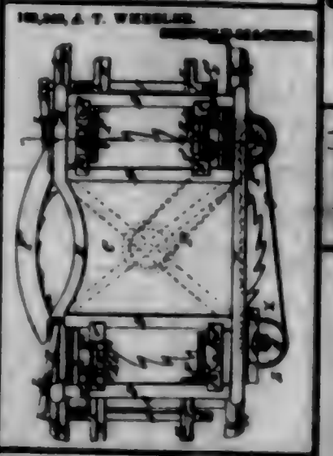


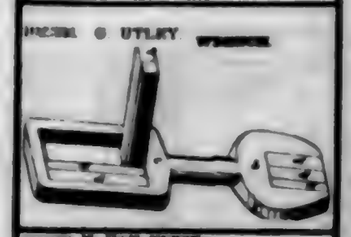


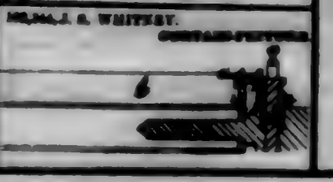


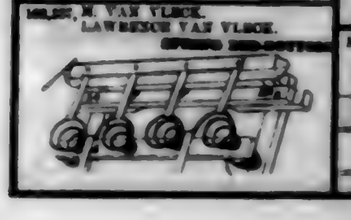


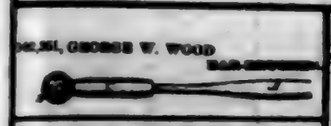


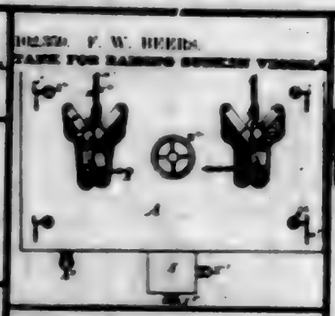


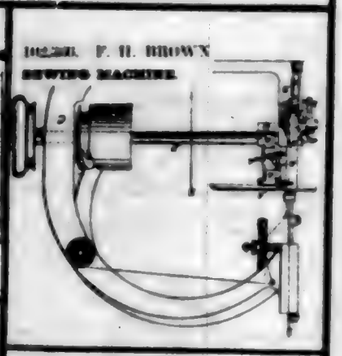


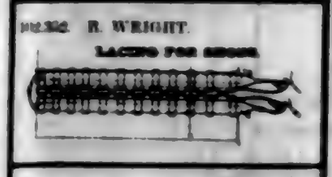


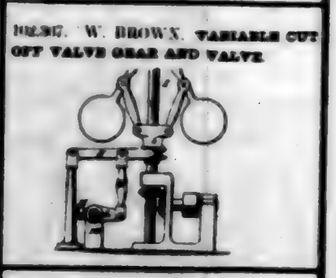


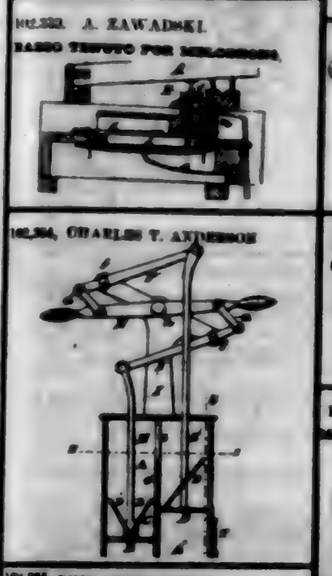


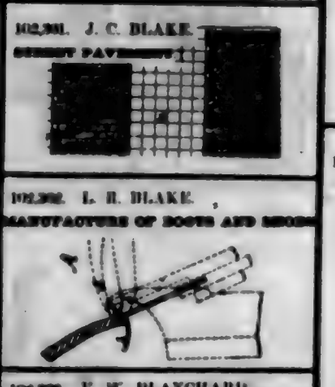


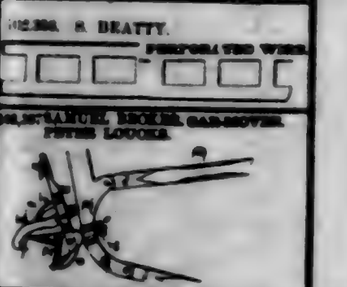


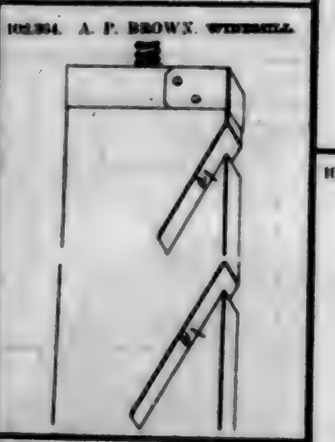


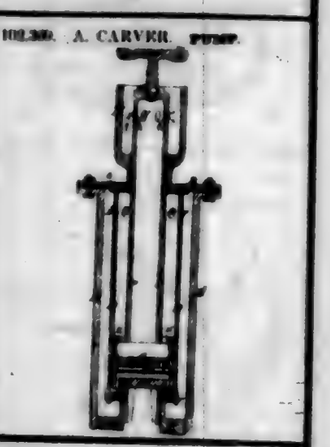


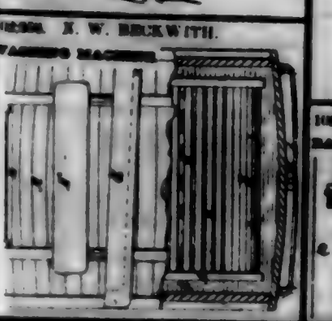


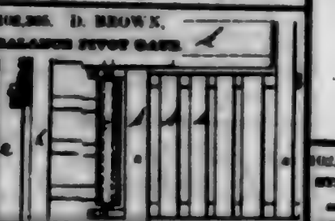


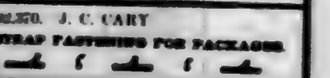


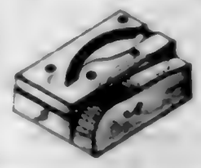


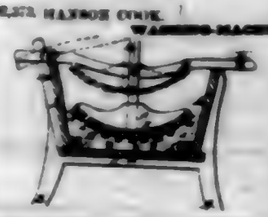








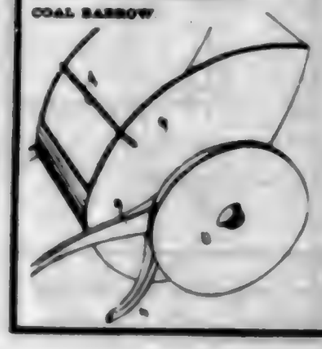




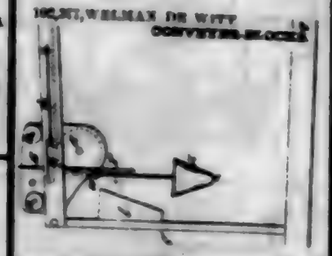
102,371, AUBY GATES COBB. PIPE-TONGS

102,372, HORACE CHUBBUCK. BOX FOR FORMING CHEESES

102,373 HARMON COOK. WASHING-MACHINE

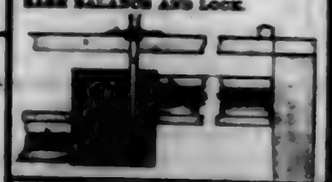


102,374 PATRICK H. COYLE. BOILER-TUBE CLEANER.



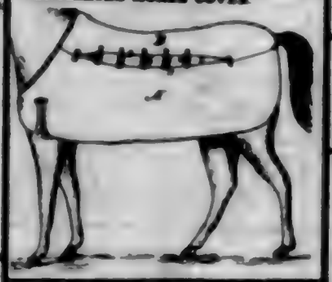
102,375 S. A. DAY. CARTRIDGE CASE.

102,376 P. A. DEDERICK. COAL BARROW

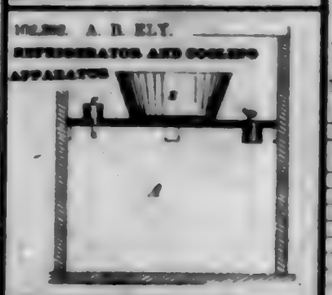


102,377, WELMAN DE WITT CONVEYING-BLOCKS

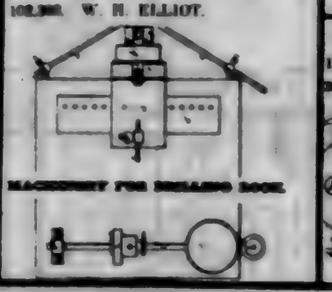
102,378 LANNING DOCKSTADER. COASTING AND BRONCHING SHOE



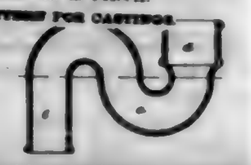
102,379 W. H. IDE. SASH BALANCE AND LOCK.



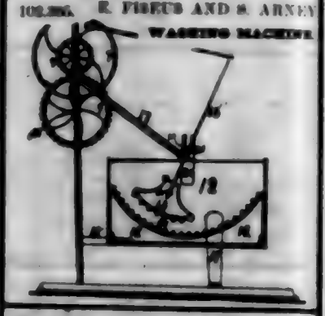
102,380 JAMES W. DONALDSON, DANIEL SHEETS. SPINDLES.



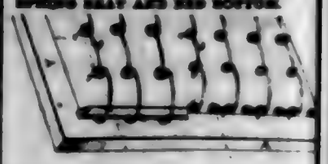
102,381 C. P. KAGER. VENTILATED HORSE COVER.



102,382 A. B. ELY. REFRIGERATOR AND COOLING APPARATUS

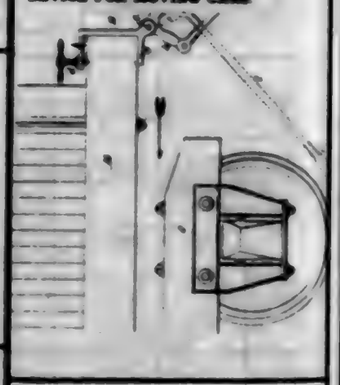


102,383 W. H. ELLIOT. MACHINERY FOR ROLLING BOOK.

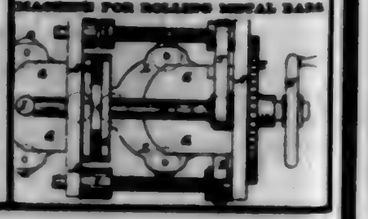


102,384 A. L. FITCH. PATTERN FOR CASTINGS.

102,385 E. FISHER AND S. ARNEY WASHING MACHINE.

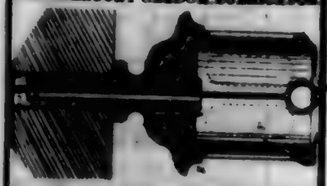


102,386 M. FLANIGAN. SPRING SEAT AND BED BOTTOM.

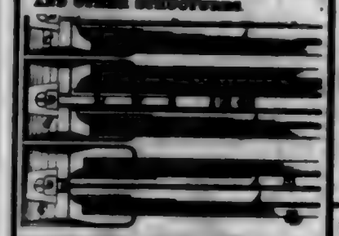


102,387 H. FLEISCHMANN. MANUFACTURE OF YEAST.

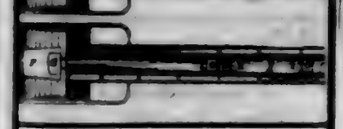
102,388 J. FOREMAN. DEVICE FOR MOVING CARS.



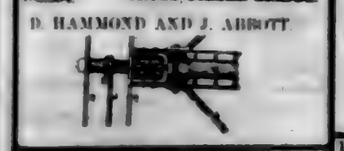
102,389 T. FOWLER. MACHINE FOR ROLLING METAL BARS



102,390, LOUIS FREY. GEORGE MACARDLE. PIPE AND BOLT-WRENCHES



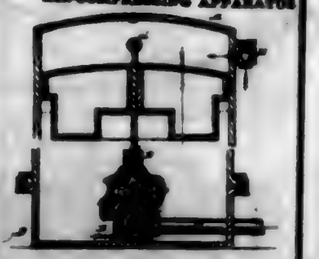
102,391 GREGORY GREDOM. LUBRICATOR



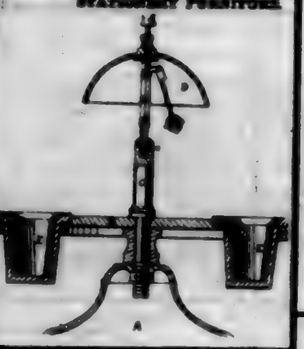
102,392 DAVID HAMMOND. JOB ABBOTT. TUBULAR ARCH GIRDER FOR BRIDGES AND OTHER STRUCTURES.

D. HAMMOND AND J. ABBOTT. 102,393 TUBULAR ARCH GIRDER.

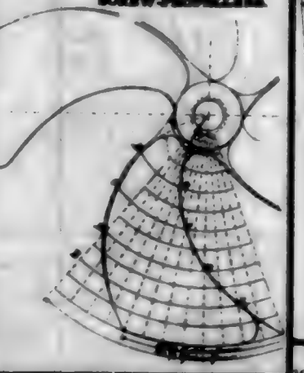
102,394 TRUSS GIRDER BRIDGE. D. HAMMOND AND J. ABBOTT.



102,395 B. R. HAND. WASHING MACHINE.



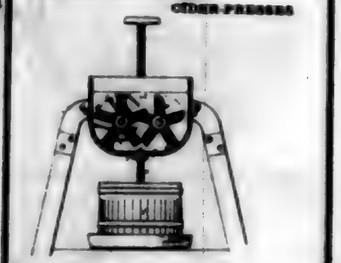
102,396 M. HART. MACHINE FOR SAWING SEGMENTS [illegible]



102,397, MICHAEL HEY. HYDRAULIC AIR-COMPRESSING APPARATUS

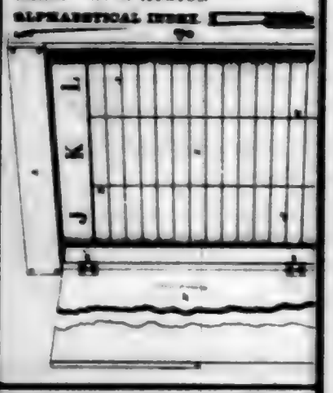
102,398, ADALINE D. HIRES. STATIONERY FURNITURE.

102,399, HERMANN HIRSCH. SCREW-PROPELLER.

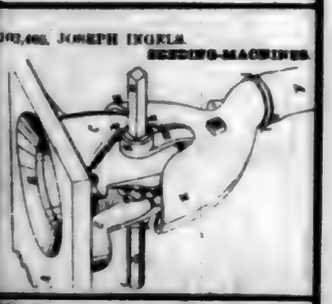


102,400, PATRICK J. HOGAN. DETACHABLE SAW-TEETH.

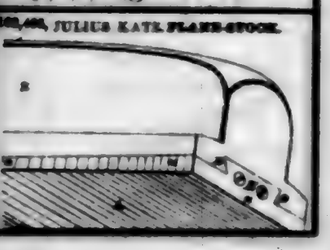
102,401, GEO. HOUGHTON, ASSIGNOR TO STEPHEN MOORE, DEFIANCE, AND HOMER ROGERS.



102,402, FRANCIS HOVEY. CIDER-PRESSES



102,403, JAMES S. HUSTON. HORSE-COLLAR PAD

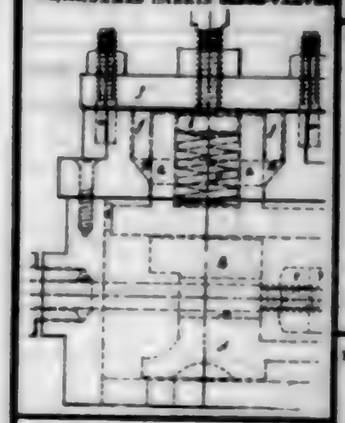


102,404, W. C. HUSTON. ALPHABETICAL INDEX.

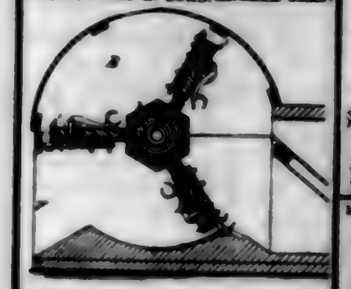
102,405, JOSEPH INGELS. SEEDING-MACHINES.

102,406, JULIUS KATZ. PLANE-STOCK.

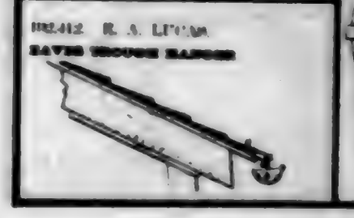
102,407. WILLIAM J. KEEP.
STOVE-PIPE DAMPER.



102,408. JOHN KILLEFER.
CARRIAGE-GEARING.
LITHOGRAPH.

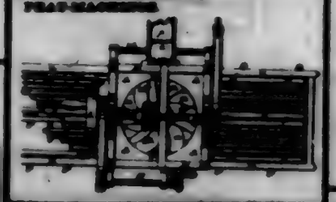


102,409. A. H. KNAPP.
GEORGE W. BAILEY.
CUTTER-HEAD-PIVOT.

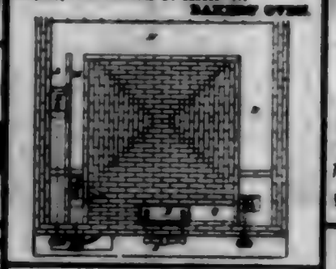


102,410. JAMES LARKIN. SLIDE-VALVE.

102,411. JAMES B. LORD. ANIMAL TRAP.

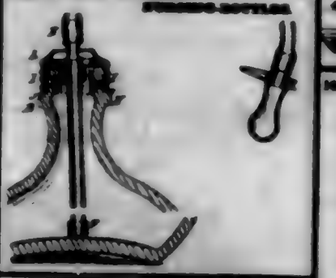


102,412. R. A. LITTLE.
SAVES HOUSE RAFTER.

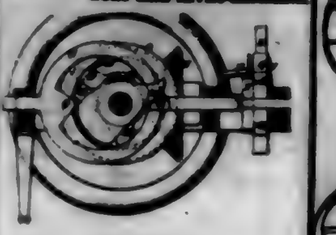


102,413. O. H. LUTHER.
ADJUSTABLE PIPE FOR CLOSET-CASES.

102,414. JAMES B. LYON.
PEAT-MACHINE.

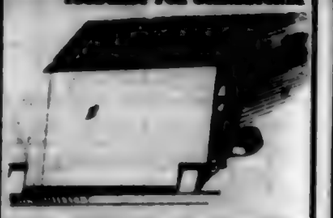


102,415. TERRENCE P. MAHON.
BAKERY OVEN.

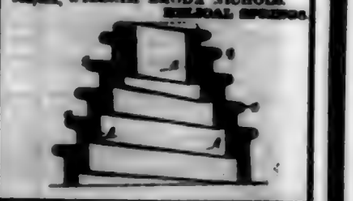


102,416. S. MALES.
PUBLIC URINAL.

102,417. JOHN L. MASON.
FENDER-SUPPORT.

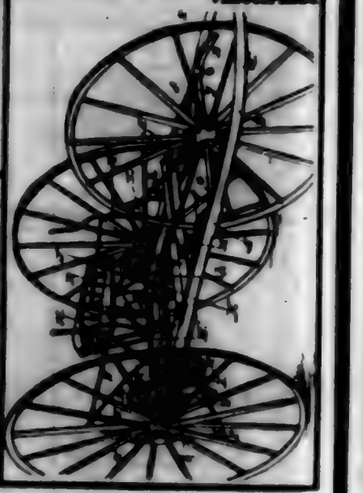


102,418. JOHN MORGAN, Jr.
BELT AND PULLEY-CONNECTION.

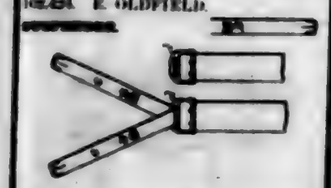


102,419. WILLIAM MORRIS, M. D.
LIFE-PRESERVING GARMENTS.

102,420. WILLIAM HORSTELLER.
TOOL-REST FOR GRINDSTONES.

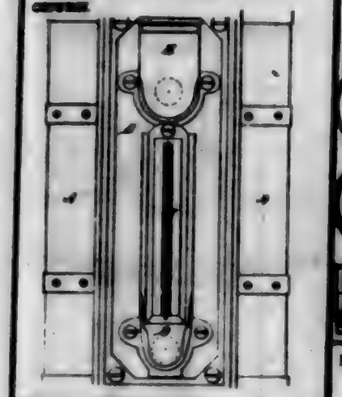


102,421. WILLIAM RHODA NICHOLS.
HELICOAL SPRINGS.

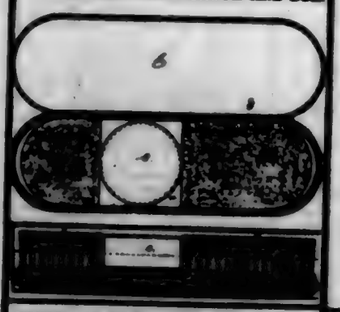


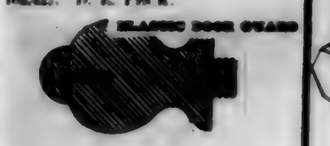
102,422. WILLIAM RHODA NICHOLS.
CHARLES WILLIAMS PICKERING.
SPRINGS FOR RAILWAY CARS AND OTHER VEHICLES.

102,423. STAS ZBILOSKUTY.
VELOCIPEDE.

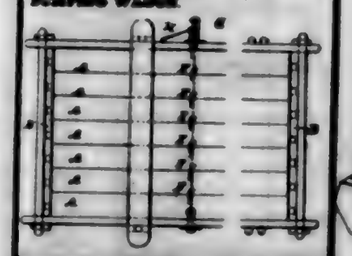


102,424. E. OLDFIELD.
SUSPENDER.



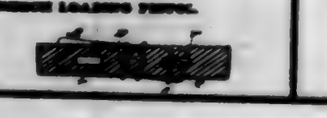


102,425. G. N. PALMER.
CHURN.

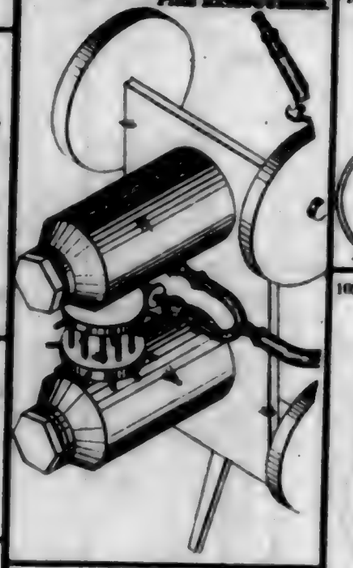


102,426. R. A. PIERCE.
PORTABLE SHOE BRUSH AND BOX.

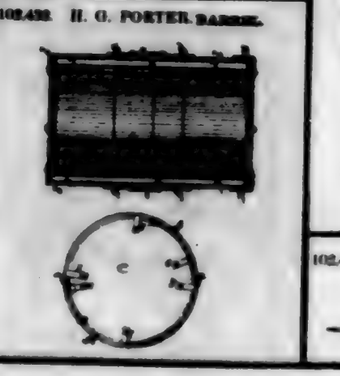
102,427. D. R. PECK.
ELASTIC SOCK GUARD.



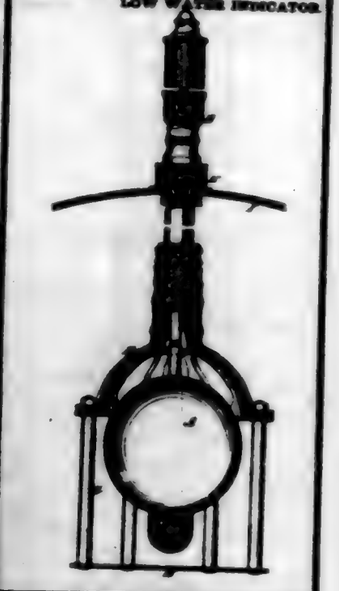
102,428. C. F. PARKER.
PUMPING WAGON.



102,429. D. W. PEPPER.
SPRINGS FOR CARS.

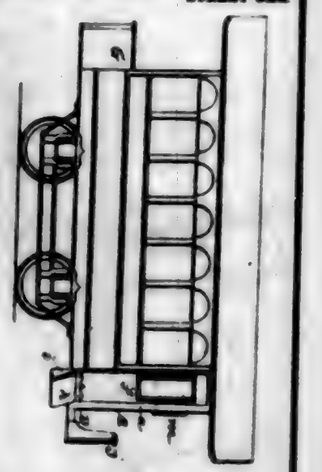


102,430. S. M. PERRY.
BREECH-LOADING PISTOL.

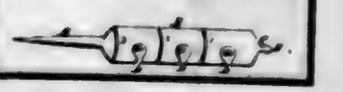


102,431. G. F. PINKHAM.
FIRE EXTINGUISHER.

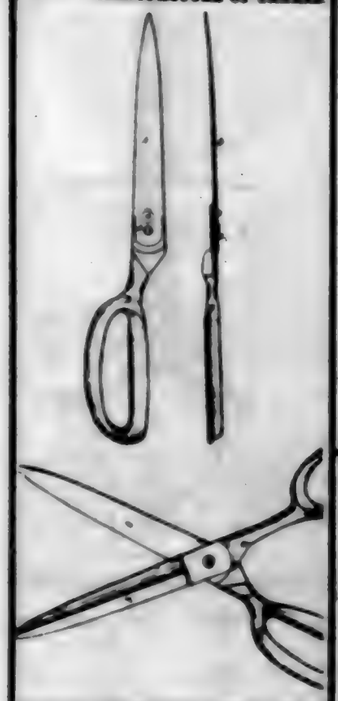
102,432. H. G. PORTER. BARREL.



102,433. P. W. REINSHAGEN.
LOW WATER INDICATOR.



102,434. F. S. RENWICK.
BREECH LOADING FIRE ARM.



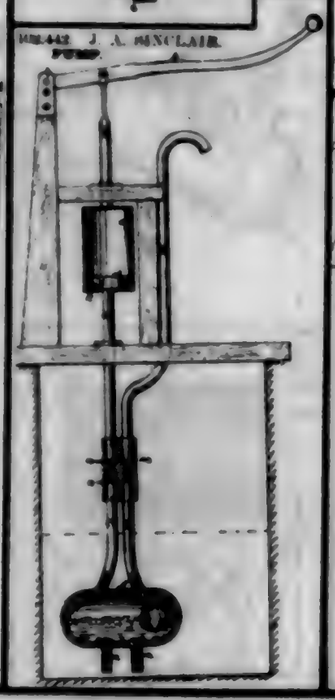
102,435. J. R. RIDGWAY.
STREET CAR.

102,436. J. P. RUSSELL.
BUTTON SHANK GAGE.

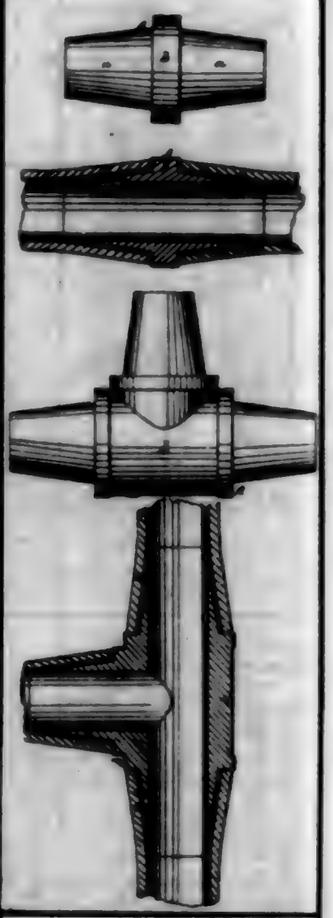
102,437. J. RYAIS.
MANUFACTURE OF SHEARS.

102,438. W. I. SAPP.
MANUFACTURE OF FERTILIZER.

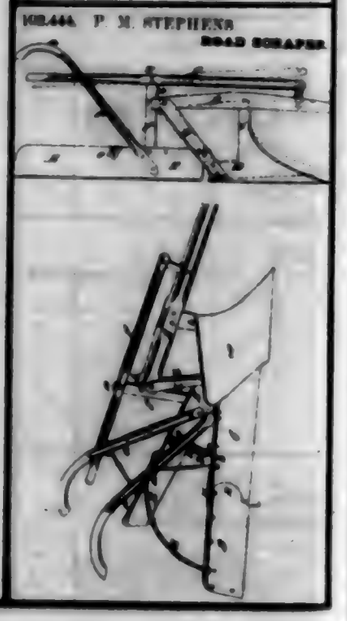
102,439. J. B. SAWYER.
DROPPING PLATFORM
FOR HARVESTERS.



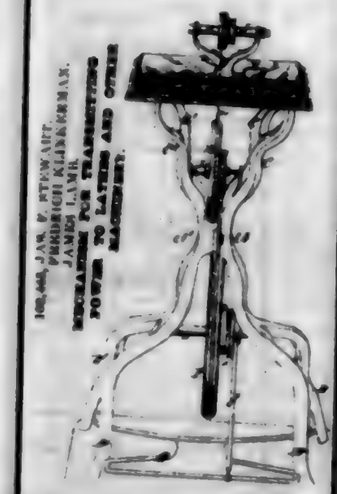
102,440. A. S. SHEPARDSON.
PADLOCK.



102,441. J. SIDDONS.
METALLIC ROOFING.



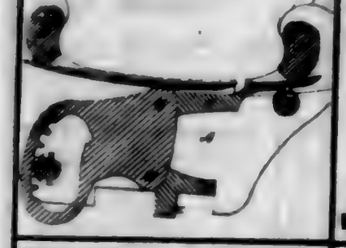
102,442. J. A. SINCLAIR.
PUMP.



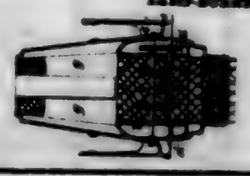
102,443. I. SMITH.
CONNECTION FOR LEAD PIPE JOINTS.

102,444. P. M. STEPHENS.
ROAD SCRAPER.

102,445, JAS. F. STEWART.
FREDERICK KLEINSCHMAN.
JAMES LAWS.
MECHANISM FOR TRANSMITTING
POWER TO LATHES AND OTHER
MACHINERY.

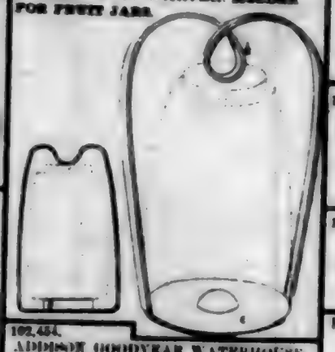


102,446.
GEO. W. STREET.
SEATS-FASTENING.

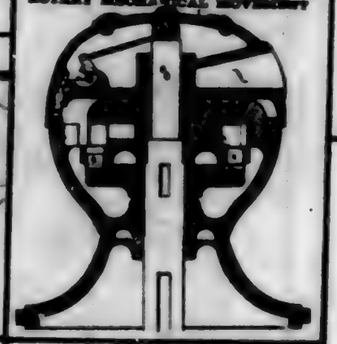


102,447.
JOHN G. STREET.
MACHINES-BELTING.

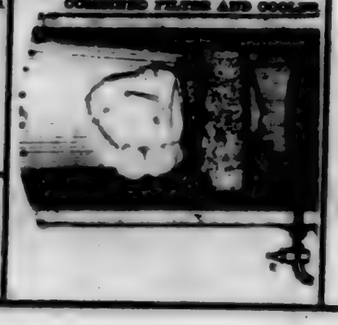
102,448. THOMAS SULLIVAN.
TIRE-UPSETTING MACHINE.



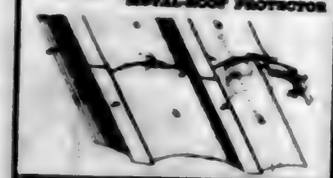
102,449. ALVIX TAPLIN.
LAMP-BURNERS.



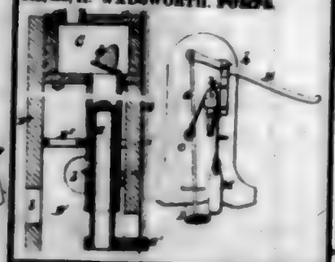
102,450. WILLIAM A. TORREY.
PREVENTING MILDEW AND DECAY
IN SAILS, AWNINGS, TENTS,
TARPAULINS, AND OTHER
ARTICLES AND FABRICS.



102,451. W. P. WALTER. HOLDER
FOR FRUIT JARS.



102,452.
ADDISON GOODYEAR WATERHOUSE.
ROTARY MECHANICAL MOVEMENT.



102,453. JAMES E. WHITE.
COMBINED HEATER AND COOLER.

102,431. GEO. D. VOLKMAR.
METAL-ROOF PROTECTOR.

102,432. H. WADSWORTH. PUMPS.

102,433. CHARLES W. WILSON.
JOSEPH D. WILSON.
POLE-SOCKET.

102,466, J. E. ADAMS, TIN-CUTTING MACHINE.

102,467, J. E. ADAMS, TIN-FLUTING MACHINE.

102,468, M. PASCAL ADAMS, SHAVE-SHEARING MACHINE.

102,469, J. D. ALVORD, DIES FOR DRAWING WIRE.

102,470, J. S. ALTER, GUIDE FOR SEWING-MACHINE.

102,471, JULIUS AMBRUE, STRAW-CUTTER.

102,472, WILLIAM AVERY, ALBERT PENTON, BRIDLE-CARRIER.

102,473, WILLIAM BADGER, IMPROVED WASHING-MACHINE.

102,473, JAMES M. BAIRD, IMPROVED FASTENER FOR BRIDGE-RAIL TABLES, &c.

102,474, JOSEPH BARKER, SAND-PAPER HOLDER.

102,475, JOHN D. BARRIE, DEVICES FOR ATTACHING FINGERS TO HORSE-RAKE STAFF.

102,476, THOS. BATES, CORN-SHUCKER.

102,477, CHARLES BEAN, MURT. LOCKE, IMPROVED WASHING-MACHINE.

102,478, WILLIAM C. BETTS, VENTILATOR FOR WINDOWS.

102,479, JOSEPH H. BILLMEYER, IMPROVED POTATO-DIGGER.

102,480, W. H. BLISS, EARTH-CHARGED VESSEL.

102,481, CHARLES A. BOONE, CHURN.

ALBERT BRIDGES.
IMPROVED RACK FOR CANS.

LAUREN CARPENTER.

WILLIAM ROBERT COTTON CLARK.
BARTH-CLOSETS.

JOHN BRUNTON.
WORKING AND LOCKING RAILWAY-SWITCHES AND SIGNALS.

JOHN L. CHAPMAN.
IMPROVED DRAWER-SLIDE.

J. CLARKSON AND G. W. DECKER.

ARON S. CHENOWETH.
SECURING THE FEATURES OF A CORPSE IN PLACE.

WILLIAM W. BRYANT.
PREPARING THE PITH OF CORN-STALKS FOR USE IN THE ARTS.

CORNELIUS H. CAIN.
FEED-CUTTERS.

PHILO W. CLARK.
HORSE-POWER.

A. P. CLEMONS.
CATTLE-POLES.

WILLIAM CLARK.
LIFTING-JACKS.

PHILO W. CLARK.
EXCAVATING APPARATUS.

THOS. J. CLOSE.
REVERSIBLE SEATS FOR RAILWAY-CARS.

CHARLES B. CANFIELD.
CLAMP.

W. H. G. CLARK.
EARTH-CLOSETS.

FRANK H. COLEMAN.
HARNESS.

JOHN COLEMAN.
CAR-COUPLINGS.

LET-OFF MECHANISM FOR LOOMS.
JOHN DAY.

ANDREW DOWNER.
PRUNING-HOOKS.

JOHN J. G. COLLINS.
MANUFACTURE OF MALLEABLE IRON.

WM. F. DRAPER.
JOSEPH B. BANCROFT.
IMPROVED SPINDLE-STEP CAP.

EPHRAIM E. DEAN.
COVER FOR KETTLES AND OTHER VESSELS.

CHARLES G. DUDLEY.
JACOB GULDEN.
DRAFT OR POLE-COUPLING FOR CARRIAGES.

ROY COMBS.
HENRY J. LEASURE.
POTS FOR MELTING GLASS.

MICHAEL DEVAULT.
PLOW-SHEATHS AND POLISHERS.

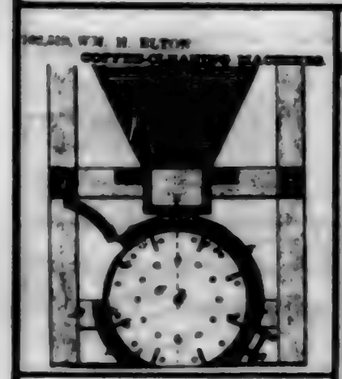
J. M. EASON.
STUMP-EXTRACTORS.

J. L. DEVOL.

M. COOKE.
APPARATUS FOR MAKING LOOPS.

THOMAS DE WITT.
IMPROVED PUNCHING-APPARATUS.

O. L. ELIASON.
MAINSPRING-BARREL ATTACHMENT FOR WATCHES.

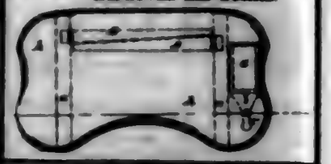


GEORGE COPELAND.

THOMAS DE WITT.
PUMPS.

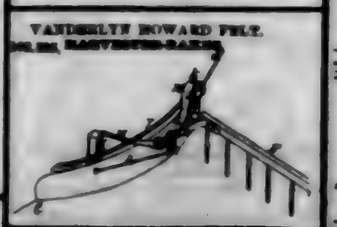
WILLIAM G. CUMMER.

A. W. ELLIOTT.

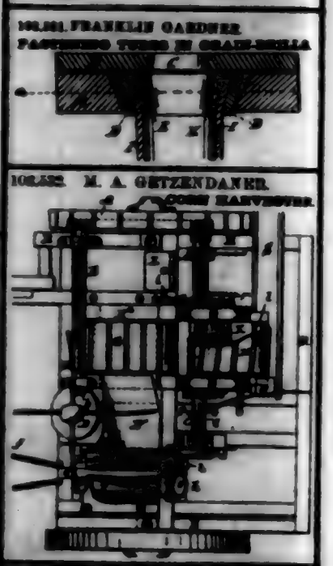


THOMAS DE WITT.
IMPROVED WASHING-MACHINE.

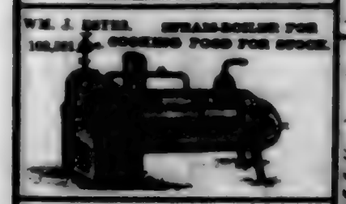
WM. H. ELTON
COFFEE-CLEANING MACHINE



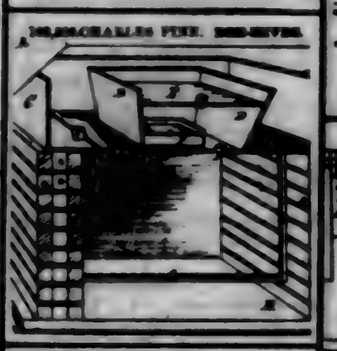
JOHN FASIG.
CORDING HAT AND FRONTING-KNIFE



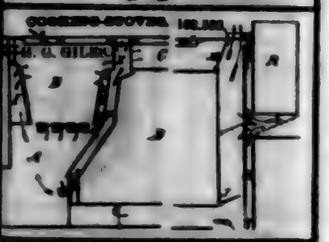
WILLIAM P. GAMMEL.
IMPROVED LAP-BOARD



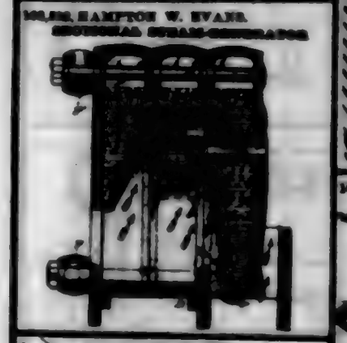
JAMES B. EMERSON.
SAWS



VANDERLYN HOWARD FELT.

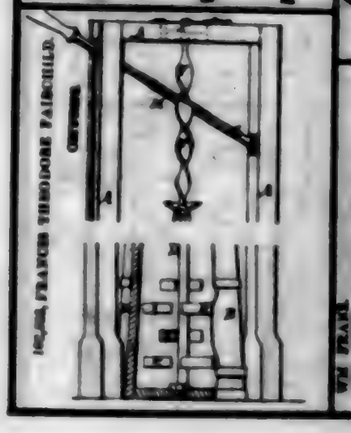


M. A. GETZENDANER.
CORN HARVESTER.

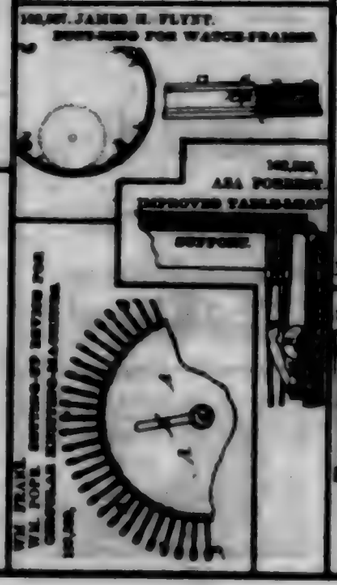


WM. J. ESTES.
STEAM-BOILER FOR COOKING FOOD FOR STOCK.

CHARLES FUNK.

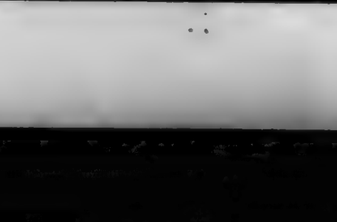


COOKING-STOVES.

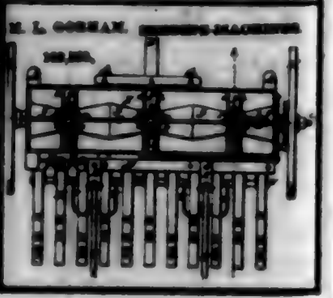


HAMPTON W. EVANS.
HORIZONTAL STEAM-GENERATOR.

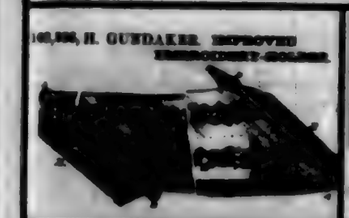
FRANKLIN GARDNER.
FASTENING TUBES IN GRAIN-DRILLS



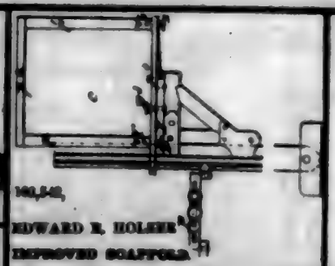
FRANCIS THEODORE FAIRCHILD.



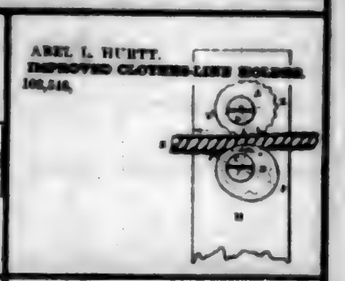
JAMES H. FLYNT.
RIVET-HEAD FOR WATCH-FRAMES.



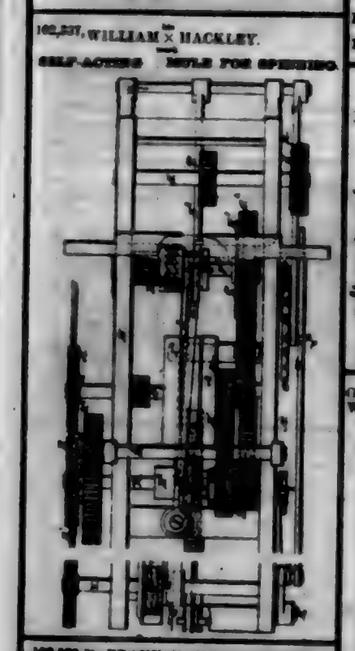
JANE S. GILMAN.
WOOL-HOLDERS.



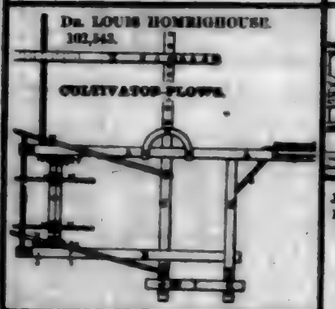
ARA FORBUSH.
IMPROVED TABLE-REST FOR SAWING.



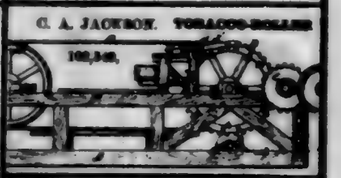
M. L. GORHAM.
SPINNING-MACHINES.



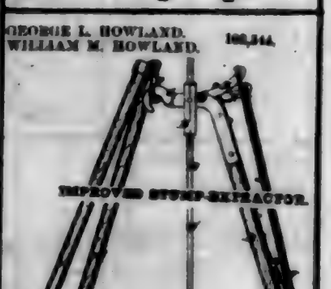
H. GUNDAKER.
IMPROVED SHOULDER-BRACE.



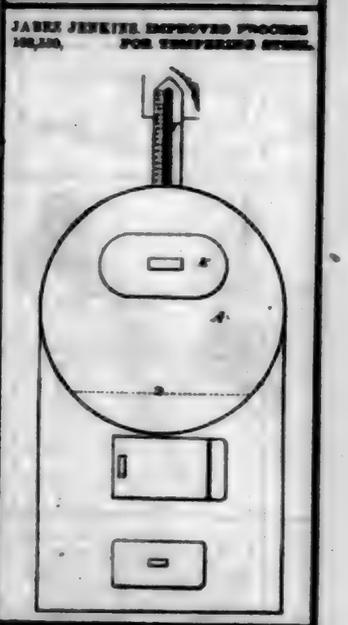
EDWARD B. HOLDEN.
IMPROVED SCAFFOLD.



ABEL L. HUFFT.
IMPROVED CLOTHES-LINE HOLDER.



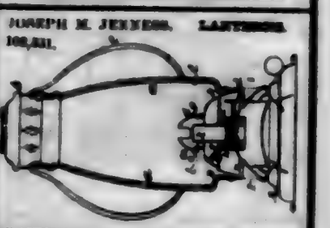
WILLIAM X HACKLEY.
SELF-ACTING MULE FOR SPINNING.



DR. LOUIS HOMRIGHOUSE.
CULTIVATOR-PLOWS.

C. A. JACKSON.
TOBACCO-ROLLER.

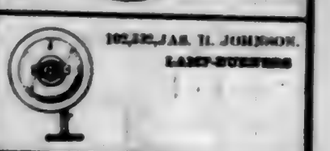
GEORGE L. HOWLAND.
WILLIAM M. HOWLAND.
IMPROVED STUMP-EXTRACTOR.



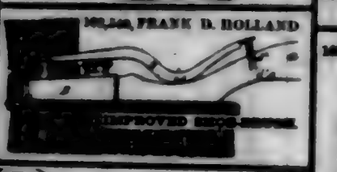
JAMES JENKINS.
IMPROVED PROCESS FOR TEMPERING STEEL.

D. FRANK HALE.

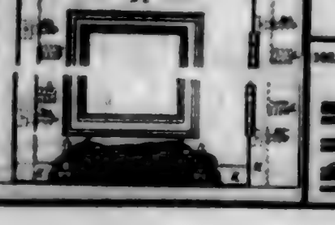
A. HUBBELL, Jr.
WASH-BOARD.



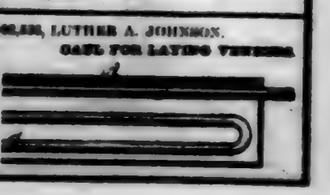
JOSEPH M. JENNER.
LANTERNS.



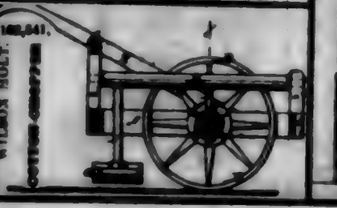
R. M. HERMANCE.
STOVE-SIDE DAMPER.



OMAR WAGER HULL.
MANUFACTURE OF SOAP.



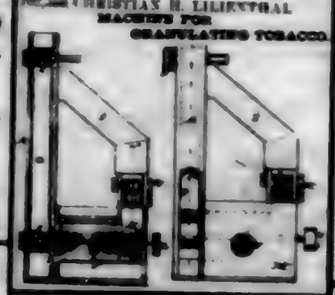
JAS. H. JOHNSON.
LAMP-BURNERS.



FRANK D. HOLLAND.
IMPROVED STOVE-DAMPER.

JAMES H. HULL.
IMPROVED WEATHER-STRIP.

LUTHER A. JOHNSON.
CASE FOR LAYING VENEERS.

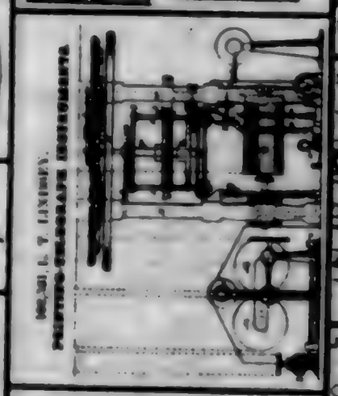


WILSON HOLT.
CUTTER-GRINDER.

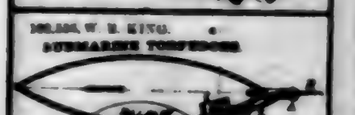
102,556, WILLIAM JONES. DRY-DOCKS.

102,557, CHRISTIAN H. LILIENTHAL. MACHINE FOR GRANULATING TOBACCO.

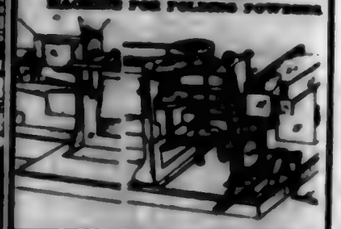
102,558, PATRICK MAGUIRE. IMPROVED COMPOSITION FOR FINISHING WAX-LEATHER.



102,559, ALEXANDRE MAILER. MANUFACTURE OF SOAP.

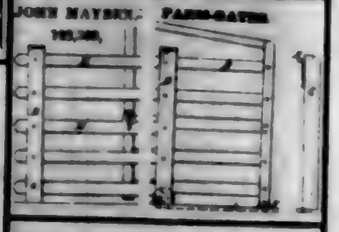


102,560, E. W. KIMBALL. SOLDERING FIRE-POT.

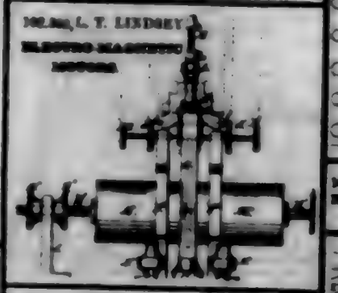


102,561, L. Y. LINDSEY. PRINTING-TELEGRAPH INSTRUMENTS.

102,562, W. H. KITO. SUBMARINE TORPEDOES.

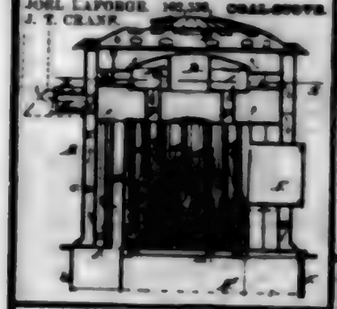


102,563, JOSEPH W. MAXWELL. MACHINE FOR FOLDING POWDERS.

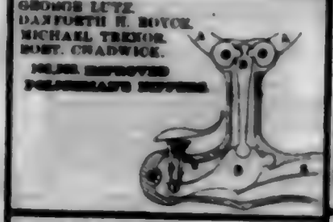


102,564, A. E. BARRIE. PATENT.

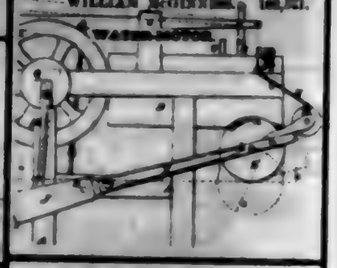
102,565, JOHN MAYBEE. PARK-GATE.



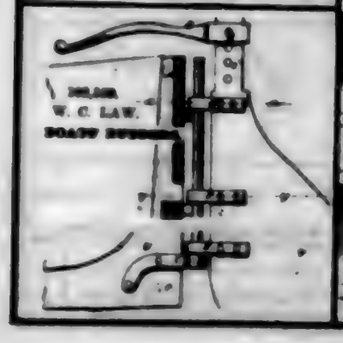
102,566, L. T. LINDSEY. PRINTING-TELEGRAPH INSTRUMENTS.



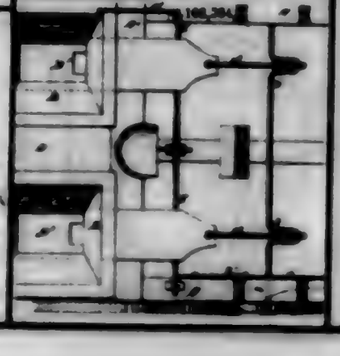
102,567, JOHN McGILL. IMPROVED COMPOUND FOR DRESSING TEXTILE FABRICS.



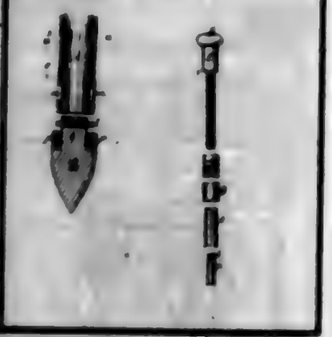
102,568, JOEL LAPORTE. COAL-STOVE. J. T. CRANE.



102,569, GEORGE LUTZ. DANFORTH H. BOYCE. MICHAEL TREMOR. ROBT. CRADWICK. IMPROVED PEARMAKE MOVING.

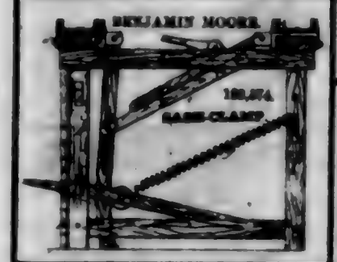


102,570, WILLIAM McGINNIS. WATER-MOTOR.

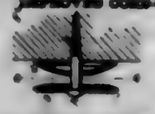


102,571, W. C. LAW. BOATS DAVIT.

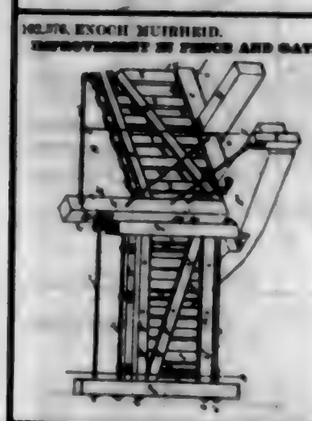
102,572, JAMES W. MAGUIRE. CROSS-PLAPTER.



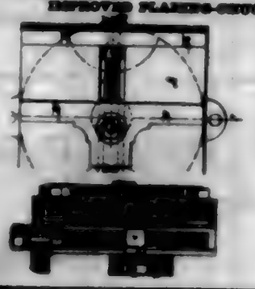
102,573, JAMES McMILLAN. FURD-WELLS.



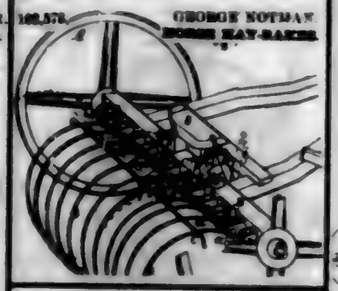
102,572, HENRY MILLER. KIDS-HOOKS.



102,573, BENJAMIN MOORE. 102,574. SASH-CLAMP.

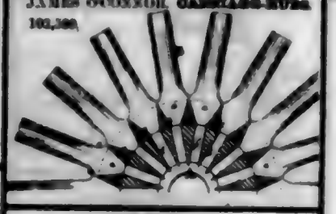


102,573, CHARLES C. MOORE. IMPROVED CORD-CATCH.



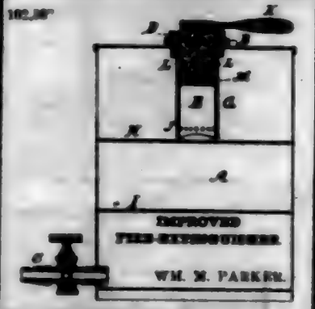
102,576, ENOCH MUIRHEID. IMPROVEMENT IN FENCE AND GATE.

102,577, AUGUSTUS NEWELL. WILLIAM PIM. IMPROVED PLANING-STOCK.



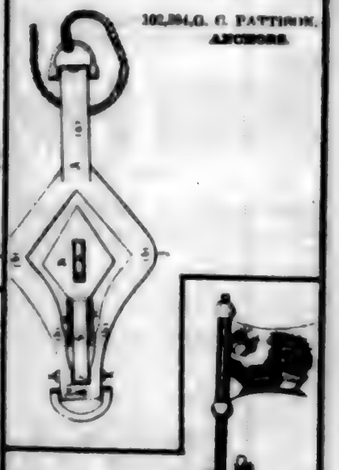
102,578, GEORGE NOTMAN. HORSE HAY-RAKE.

102,579, JAMES O. BRIEN. BRACKETS FOR RIGGING.

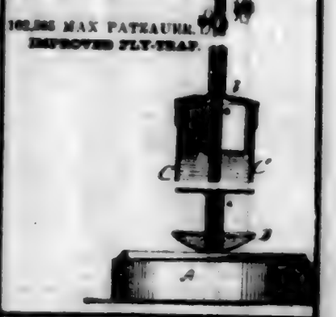


JAMES GODDOR. CARRIAGE-SUSPENSION. 102,580.

102,581, J. A. T. OVEREND. BOILER-FURNACES.



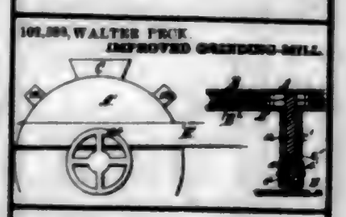
102,582, O. PEARL. IMPROVED FIRE-EXTINGUISHER. WM. M. PARKER.



102,583, G. G. PATTISON. ANCHORS.

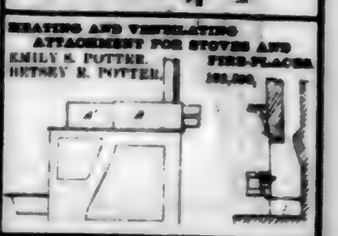
102,584, G. G. PATTISON. ANCHORS.

102,585, MAX PATEAUME. IMPROVED FLY-TRAP.



102,586, RUFUS H. PEABODY. SEWING-MACHINE.

102,587, O. PEARL. BOBBIN FOR SPINNING &c.



102,588, WALTER PECK. IMPROVED GRINDING-MILL.

FRANK M. PICKERILL. IMPROVED 102,589, AUTOMATIC WAGON-BRAKE.

HEATING AND VENTILATING ATTACHMENT FOR STOVES AND FIRE-PLACES. EMILY S. POTTER. HETSEY R. POTTER. 102,590.

102,598, T. RANDALL. APPARATUS FOR [illegible]

102,599, JOHN BUTLER. IMPROVED WATER-CLOSET.

102,600, ISAAC S. SHERTS. IMPROVED PLOUGH.

102,601, EDWIN S. SHEPARD. IMPROVED RAILWAY RAIL.

102,602, HENRY HITCHLER. OPEN-BURNER FOR KEROSENE.

102,603, GIDEON HYMEL. CORN-PLANTER.

102,604, EDWIN S. SHEPARD. IMPROVED COMPOUND RAILWAY-RAIL.

102,605, JOHN W. RICKER. CORN-SHELLER.

102,606, SILVANDER C. SHEPARD. IMPROVED RAIL-CHAIR.

102,607, JUDITH P. SHARP. BARLEY OR OAT-PUNNER.

102,608, S. L. SIDNEY, M. D. IMPROVED RAIL-HOLDER.

102,609, JACOB W. SLAIGHT, JACOB W. ANDROVATT. GRAND FOR [illegible]

102,610, CHARLES ROBINSON. RAIL FIST GUN.

102,611, WILLIAM D. STROUD. HAND CORN-PLANTER.

102,612, JOSEPH SURRUS, NAT-BLOCKING W. M. REMBERS. MACHINE.

102,613, ELI SWEET. MOLD FOR ARTIFICIAL TEETH.

102,614, CHARLES SWAIN. OVEN.

102,615, THOS. ST. JOHN. ROCK-[illegible] APPARATUS.

102,616, GEORGE D. SWEIGERT. BAG-HOLDER.

102,617, OWEN W. TAFT. CARVING-KNIVES.

102,618, LEVI R. TARBOX. CORN-PLANTER.

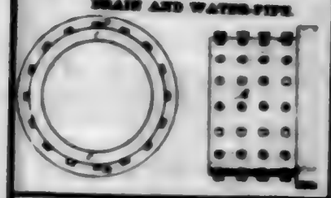
102,619, HOMER TAYLOR. APPARATUS FOR THE COMBUSTION OF PETROLEUM AND OTHER HYDROCARBON LIQUIDS.

102,620, GEO. THOMPSON. COMBINATION PARLOCHES.

102,621, H. F. THOMSON. WASHING-MACHINE.

102,622, ADDISON SMITH. SAWING-MACHINE.

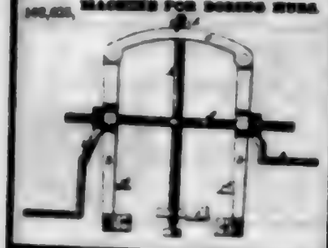
102,623, J. P. SMITH. CORRUGATED CORN-SHELLER AND VEGETABLE-SLICER.



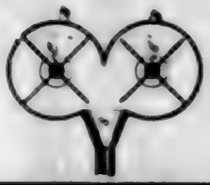
102,624, JOHN CORBETT SMITH. CULINARY VESSEL.

102,625, GEORGE A. SPRINGER. IMPROVED ROLL FOR MAKING RAILS FOR STREET RAILWAYS.

102,622. THEODORE B. TIMBY
RAKE-FASTENING

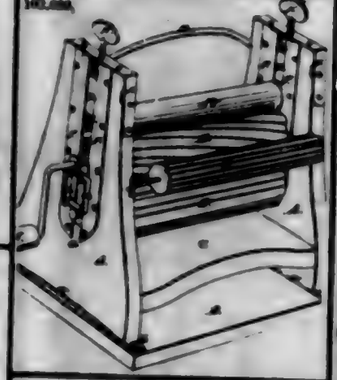


102,623. GEORGE H. TITCOMB.
JNO. P. CULVER.
DRAIN AND WATER-PIPE.

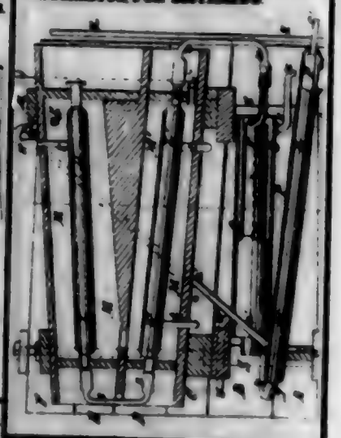


102,624. WILLIAM H. TRIMBLE.
FAUCETS.

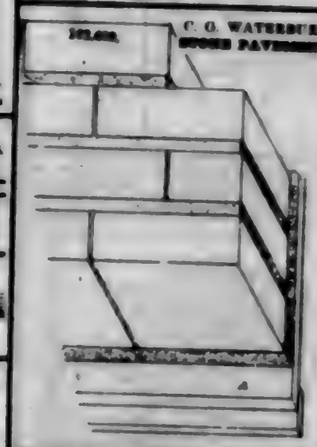
ABRAHAM TROUP.
MACHINES FOR BOXING HUBS.



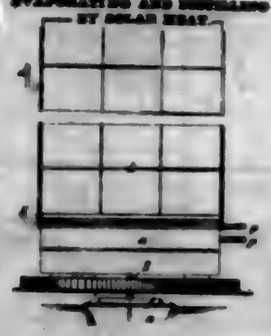
102,626. JOHN GEORGE PATRULIX.
BLOWERS FOR BLACKSMITHS' FORGES.



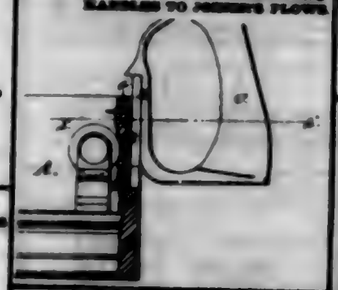
102,627. SILAS VAN PATTEN.
BRASSING TIP FOR LEGS OF CHAIRS, &c.



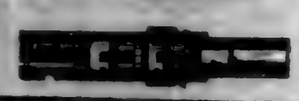
JOSEPH B. WAKEMAN.
ALFONZO R. FIELD.
WASHING AND WRINGING-MACHINE.
102,628.



102,632. JOHN M. WEYAND.
APPARATUS FOR DISTILLING.



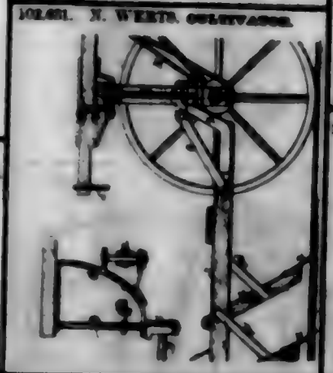
102,633. C. G. WATERBURY.
STONE PAVEMENT.



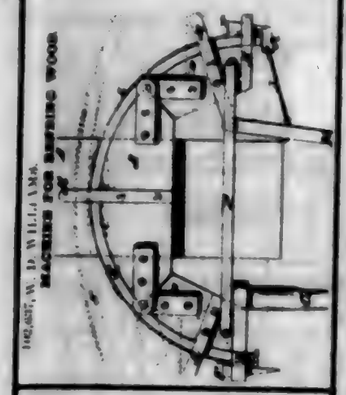
102,634. NORMAN W. WHEELER.
W. W. EVANS.
EVAPORATING AND DISTILLING BY SOLAR HEAT.

102,635. C. H. WRIGHT. ATTACHING HARNESS TO JOINTED PLOWS.

102,636. J. T. WHIPPLE. PUMP.

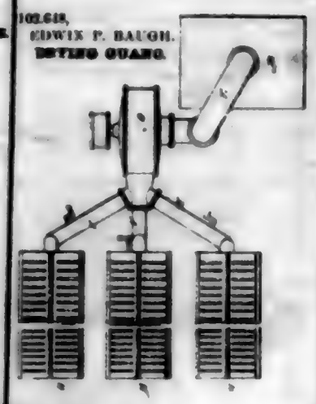


102,637. JOHN W. WHITEMAN.
SAFETY-SOCKET FOR WHIPS.
THE STELLAR BILLIARD-CUES &c.



102,638. HANUM C. WILDER.
WATER-COCK FILTER.

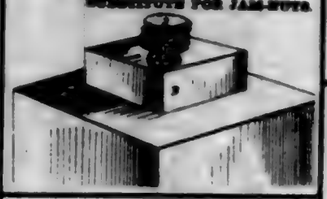
102,651. N. WERTS. CULTIVATOR.



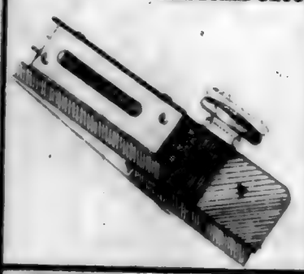
102,641. W. D. WILLIAMS.
MACHINE FOR BENDING WOOD.

102,642. LOUIS YENNE.
ADJUSTABLE AWNING-FRAME.

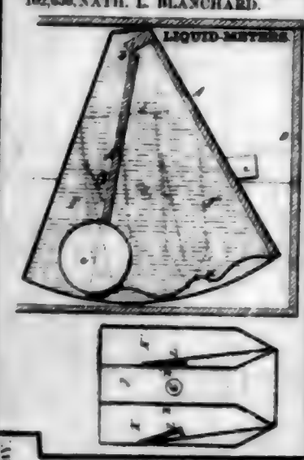
102,643. EDWIN P. BAUGH.
DRYING GUANO.



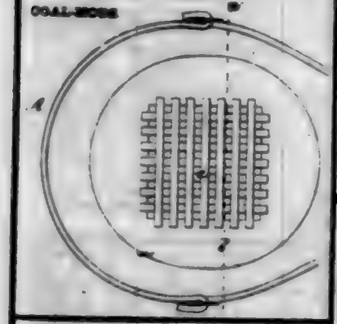
102,639. C. C. WILSON.
FORGING FOR HOOP-SKIRTS.



102,640. ALANSON YOUNG.
EVAPORATING APPARATUS.



102,644. THEODORE B. YOUNG.
SUBSTITUTE FOR JAM-NUTS.

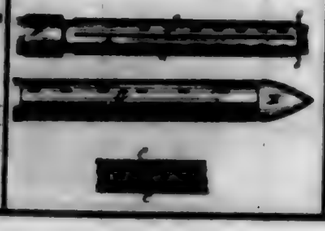


102,649. J. S. BIDDLEMAN.
CLAPBOARD-GAUGE.

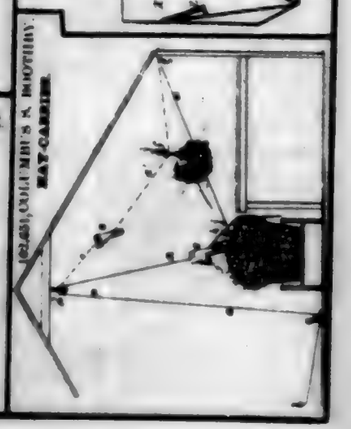
102,650. NATH. L. BLANCHARD.
LIQUID-METERS.

102,639. WILLIAM WILSON.
COAL-HODS.

CHS. ARLEX.
CHS. GAUTSCHI. SCREW-PROPELLERS.
102,645.



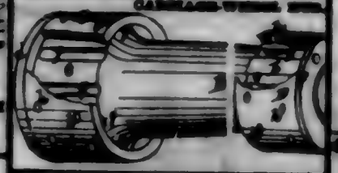
102,646. WILLIAM W. ARMISTOS.
SHOVE-BLACKING BOX.



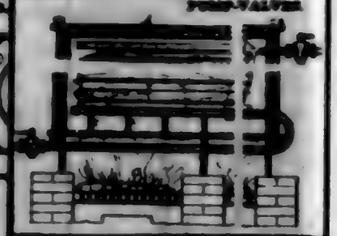
102,640. WM. R. WIXO.
SCRAP-FASTENER.

102,647. I. AYRES AND D. C. PAYNE.
WELL TUBE.

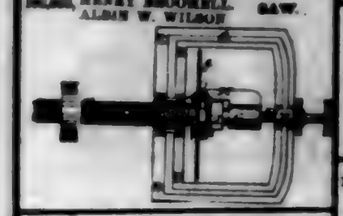
102,651. JOHN H. BOOTHBY.
HAY-CARRIER.



102,631. HENRY WINTER.
SEWING-MACHINE.

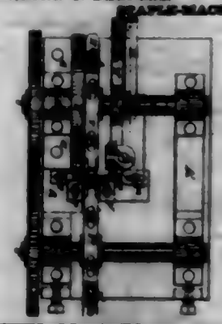


102,663, ALBERT E. C. BEELY. FLOW-GLOBE.



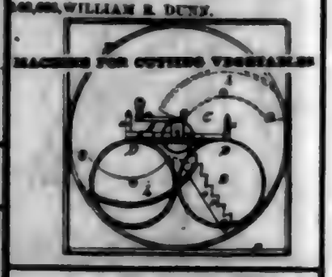
102,664, ALMOND F. COOPER.

102,665, JOS. W. DOUGLAS. PUMP-VALVE.

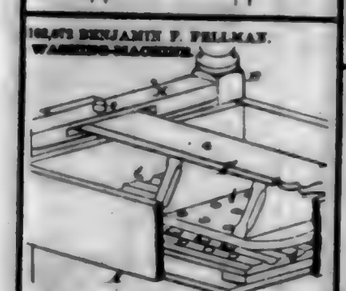


102,666, HENRY BROOKELL, ALBIN W. WILSON. SAW.

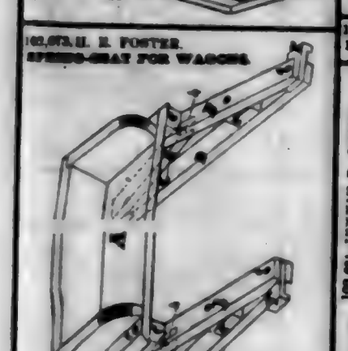
102,667, WM. DARNELL. SASH-BALANCE.



102,668, JOHN T. DARNELL. STAPLE-MACHINE.



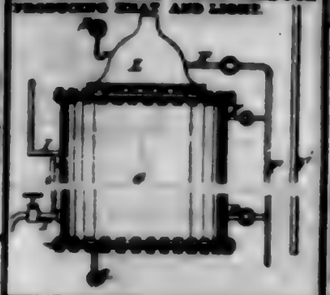
102,669, RICHARD A. DOUGLAS. BRACKING WOOD.



102,670, WILLIAM S. DUNN. MACHINE FOR CUTTING VEGETABLES.

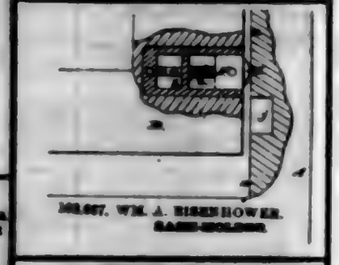
102,671, FRANCIS FARQUHAR. AGRICULTURAL BOILER.

102,672, BENJAMIN F. FELLMAN. WASHING-MACHINE.

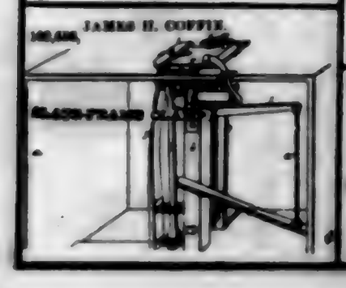


102,673, H. B. FOSTER. SPRING-SEAT FOR WAGONS.

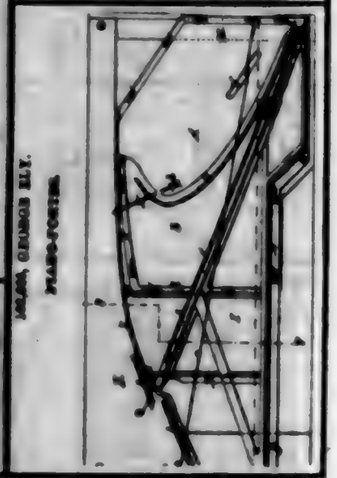
102,674, GEO. C. CAKFIELD. WATER-ELEVATORS.



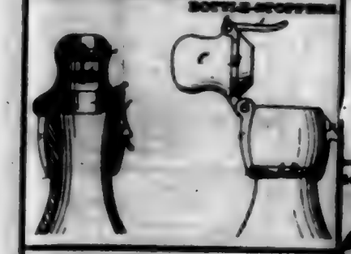
102,675, T. S. DICKERSON AND E. M. WHIPPLE. PROCESS AND APPARATUS FOR USING LIQUID FUEL FOR PRODUCING HEAT AND LIGHT.



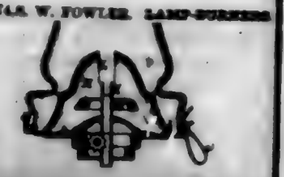
102,676, JONATHAN DILLEN.



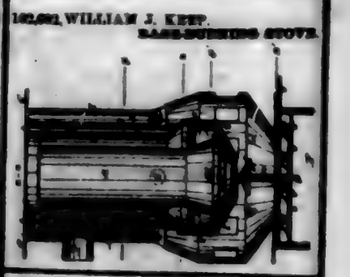
102,677, WM. A. EISENHOWER. GANG-MOLDER.



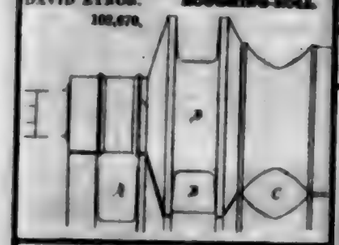
102,678, JAMES H. COFFIN. GLAZE-FRAME.



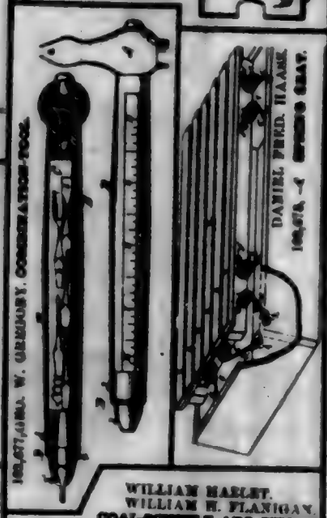
102,679, JOHN GRIFFITHS, JOHN EARLY, GEORGE ELY. PLOW-POINTS.



102,680, WILLIAM ELY. BOTTLE-STOPPERS.



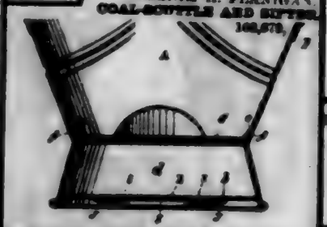
102,681, A. W. FOWLER. SAND-SCREENS.



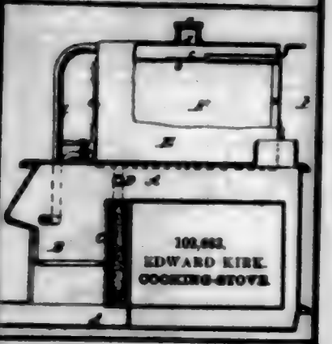
102,682, WILLIAM J. KEEP. BASE-BURNING STOVE.

102,683, DAVID ETNOR. ROOFING-BOAR.

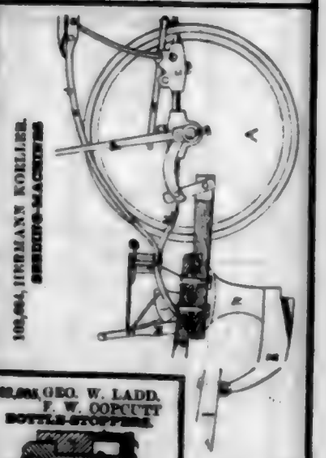
102,684, GEORGE GEE, Jr. MASON-GAGE.



102,685, DANIEL FRED. HAASE. GRATE-BAR.

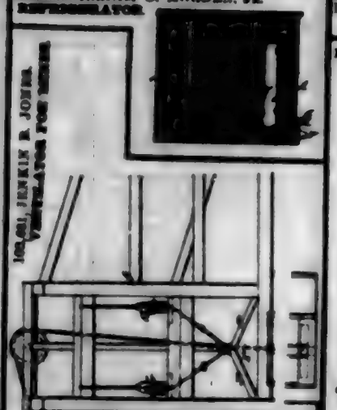


102,686, RICHARD J. GATLING. REPEATING GUN.



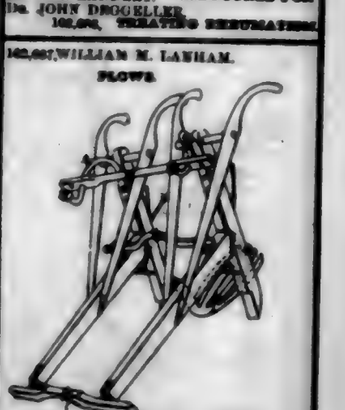
102,687, WILLIAM HASLET, WILLIAM W. FLANIGAN. COAL-SCUTTLE AND SIFTER.

102,688, EDWARD KIRK. COOKING-STOVE.

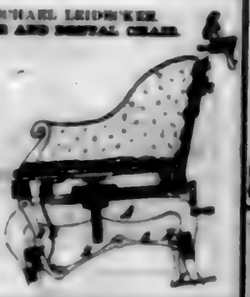


102,689, HERMANN KOELLER. BRICK-MACHINE.

102,690, GEO. W. LADD, F. W. COPCUTT. BOTTLE-STOPPERS.



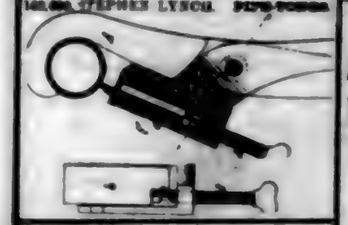
102,691, JENKIN R. JONES. VENTILATOR FOR TOMBS.



102,692, WILLIAM G. HOLDEN, Jr. REFRIGERATOR.

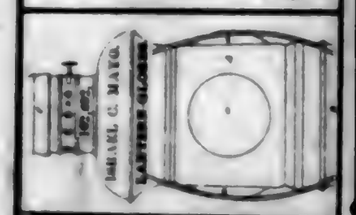
Dr. WM. LANDERT. COMPOUNDS FOR
Dr. JOHN DROGELLER. TREATING RHEUMATISM.
102,693,

102,694, WILLIAM M. LAWHAM. PLOWS.

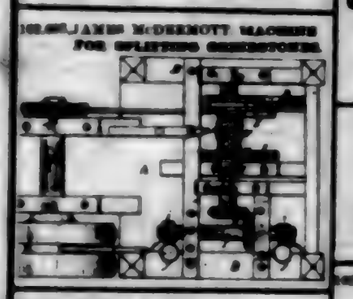


102,698. MICHAEL LEIDWEKER. BARBER AND DENTAL CHAIR.

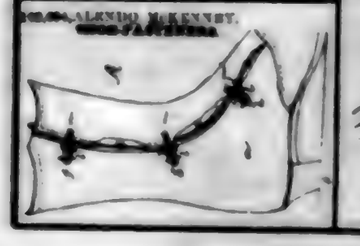
102,699. MARIO LUGO. MANUFACTURE OF FERTILIZERS AND OIL FROM FISH.



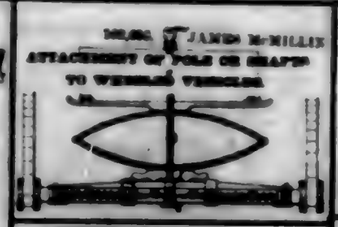
102,700. STEPHEN LYNCH. PUMP-WORKS.



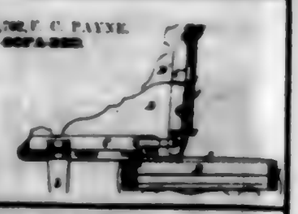
102,701. JAMES W. LYON. GRAIN-HOLDERS FOR LAMPS.



102,702. MICHAEL C. MAYO. WATER-WHEEL.



102,703. JAMES McDERMOTT. MACHINE FOR SPLITTING SHINGLE-BOLTS.



102,704. ALEXIS McKENNEY. SHOE-PLASTERER.

CULTIVATORS.

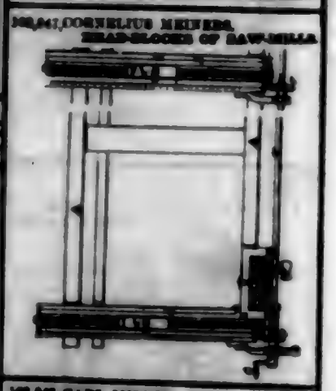
102,854, GEORGE H. MANSFIELD.
PLASTING-MACHINES.

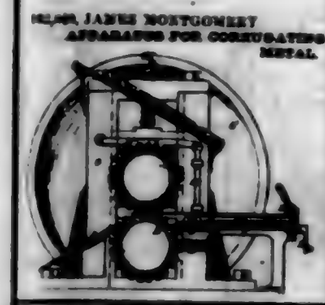
102,855, THOMAS C. MARTIN,
JAMES OTTINGER.
BRACE-BUCKLE.

102,856, THOMAS W. McCUNE.
TWYERS OF BLAST-FURNACES.



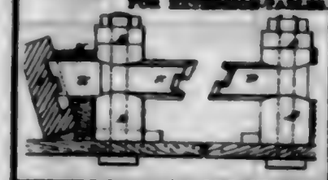
102,857, W. H. McHENCH, Lardner.

102,858, A. B. McKEON, Pavements.

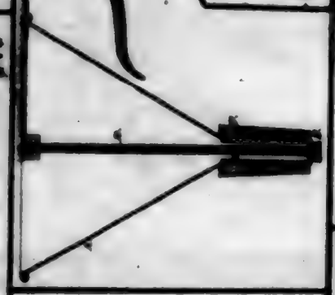


102,859, CORNELIUS MEIJERS,
HEAD-BLOCKS OF SAW-MILLS.

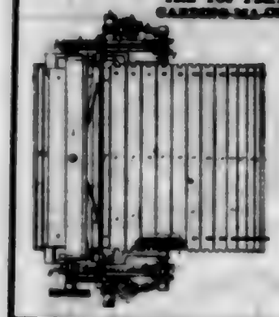
102,860, CARL MILLER.



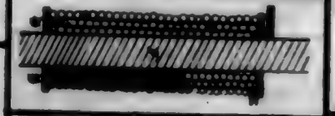
102,861, JAMES MONTGOMERY.
APPARATUS FOR CORRUGATING METAL.



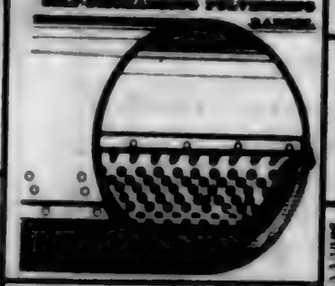
102,862, W. E. NEWTON.
APPARATUS FOR CREASING AND PERFORATING BAGS FOR SALT.



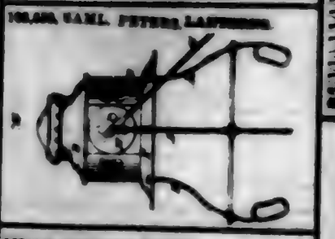
102,863, S. J. MOORE,
G. A. BUCKMAN.
TOOLS FOR MAKING BLANKS FOR EXTENSION-TABLES.



102,864,
P. H. NILES.
PUMP-BOX.

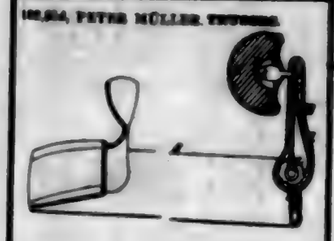


102,865, FERDINAND MORF.
MECHANISM FOR STRETCHING THE TOP PLATE OF CARDING-MACHINES.

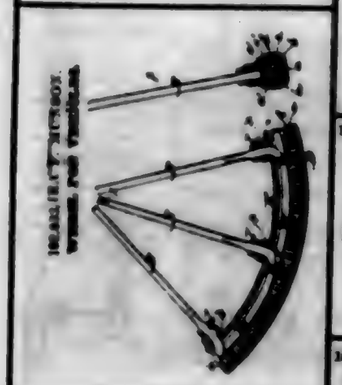


102,866, HENRY H. PAINE.
ELECTRO-MAGNETS.

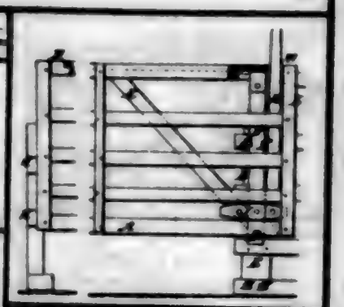
102,867, ALMARIN B. PAUL.
SELF-SUSTAINING PULVERIZING SAMPAN.



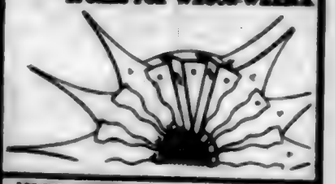
102,868, SAML. PETERS, Lanesboro.



102,869, HOWARD PIPER.
FARM-GATES.



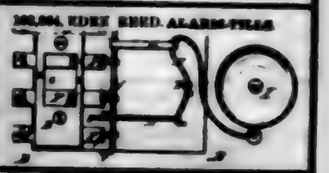
102,870, PETER MÜLLER, Trumbull.



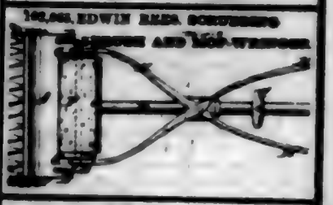
102,871,
JAMES RATCLIFF.
WHEEL FOR VELOCIPEDES.

102,872, S. W. POPE.
PLOWS.

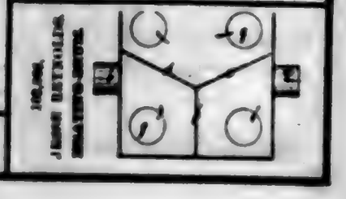
102,873, ROBERT POTTS,
NATHANIEL ODDEN.
SPOKES FOR WAGON-WHEELS.



102,874, ALBERT T. PUTNAM.
BEDS, SIDING AND BOTTOM-BOARDS.

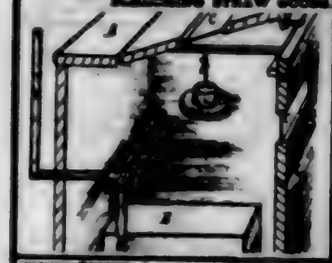


102,875, ADDISON C. RAND, Whips.



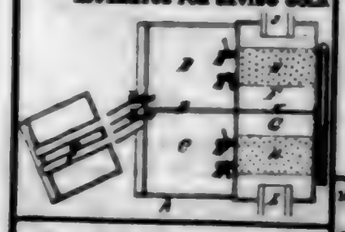
102,876, EDES REED, Alarm-Tills.

102,877, EDWIN REED, Somerville,
ASSIGNOR TO HIMSELF AND LEVI WHITCOMB.



102,878,
JESSE RITTENHOUSE.
HEATING-STOVE.

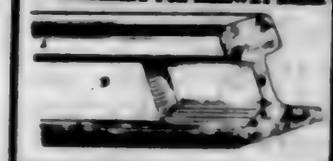
102,857, CHARLES ECK. CONSTRUCTION OF SPRINGS FOR BED-BOTTOMS, CHAIR &c.



102,858, AMANDA M. BURBRUGH. BRACKING STRAW GOODS

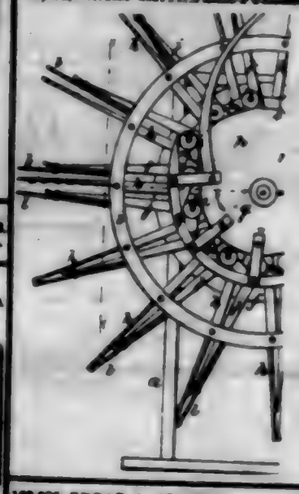
102,859, ELMOR J. SALISBURY. PRESERVING AND HARDENING STONE, BRICK, &c.

102,860, CHARLES SCHOFIELD. APPARATUS FOR SAVING GOLD



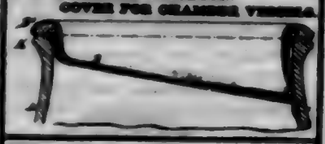
102,861, HENRY A. SEYMOUR, WILLFORD H. NETTLETON. REVERSING-HARNESS

102,862, GEORGE SHATSWELL. WINDOW-SCREEN



102,863, GEORGE SHATSWELL. FASTENING FOR RAILWAY BARS

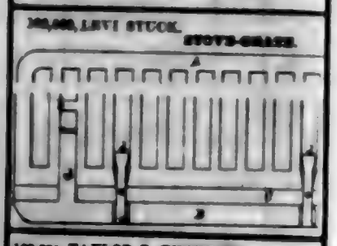
102,864, E. H. SHAW. STALLS FOR FEEDING ANIMALS



102,865, JAMES SMITH. FLAX-PULLING

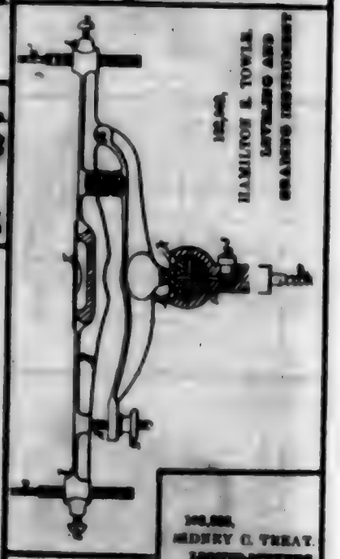
102,866, EDGAR A. STANLEY. AXLE-NUT

102,867, WILLIAM STOCKTON. COVER FOR CHAMBER VESSELS

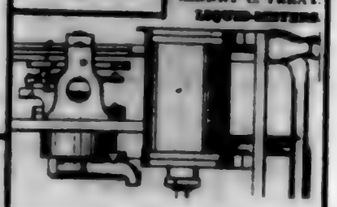


102,868, WM. TELL STREET. BAILING APPARATUS

102,869, BRYANT F. STROUD. BALING-PRESSES

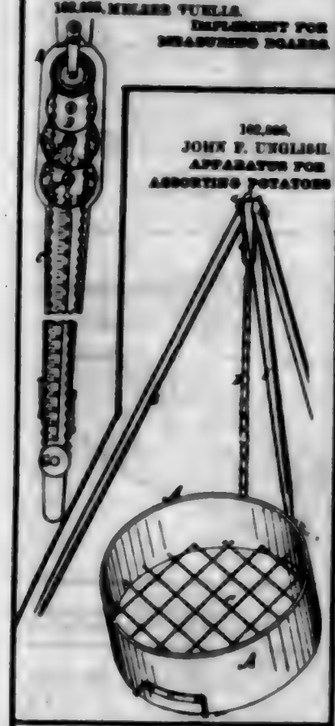


102,870, LEVI STUCK. STOVE-GRATE

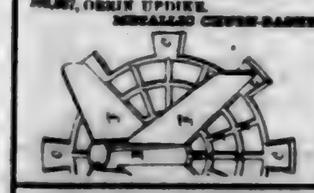


102,871, TAYLOR P. THOMPSON. FURNACE

102,872, HAMILTON E. TOWLE, LEVI C. LATHAM, and CHARLES HEINEMANN. CHAMBER

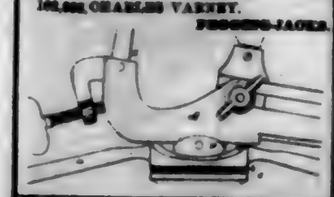


102,873, MIDDEY C. TREAT. LIQUID-METERS



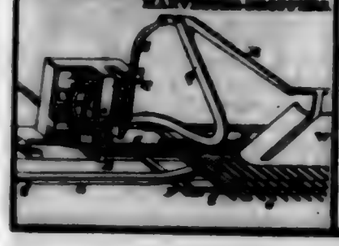
102,874, A. TRESAUNAY. WOODEN-BLOCK PAVEMENTS

102,875, MILES TUELL. REPLEMENT FOR MEASURING BOARDS

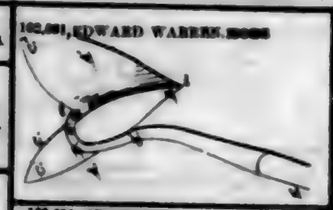


102,876, JOHN F. ENGLISH. APPARATUS FOR ASSORTING POTATOES

102,877, ORRIN UPDIKE. METALLIC CHIMNEY-BANDS



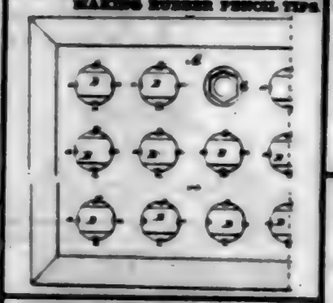
102,878, CHARLES VARNEY. PEGGING-JACKS



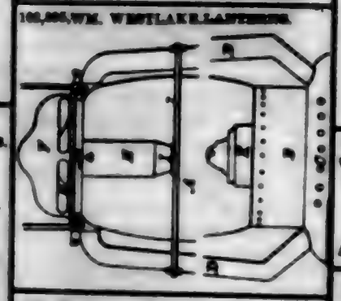
102,879, DAVID VOST. HARROWING-ATTACHMENT

102,880, AARON WARD. HARVESTING-MACHINES

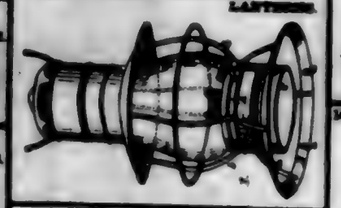
102,881, EDWARD WARREN. HOOKS



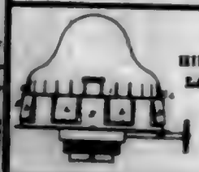
102,882, SILVESTER W. WARREN. LAMP-CHIMNEYS



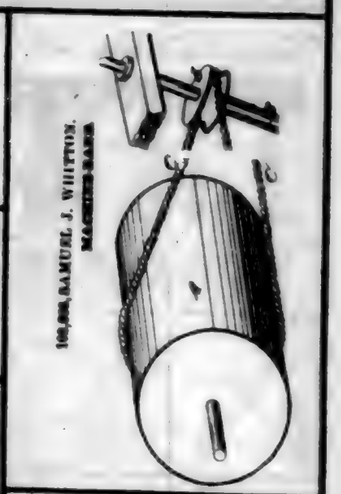
102,883, ALBIN WARTH, PH. HUPELAND, GEORG BRAUN. VARNISHING PENCILS &c.



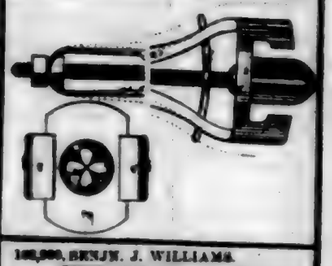
102,884, WILLIAM WEICKER. MOLDS FOR MAKING RUBBER PENCIL-TIPS



102,885, WM. WESTLAKE. LANTERNS



102,886, WILLIAM WESTLAKE. LANTERNS

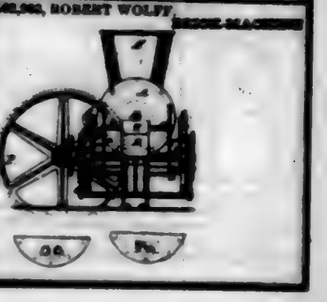


102,887, HIRAM J. WHITE. LAMP-BURNERS

102,888, SAMUEL J. WHITTON. MACHINES

102,889, THOS. WIGHTMAN. SPRING CLAMP FOR GLASS-BLOWERS

102,890, BENJN. J. WILLIAMS. BLIND, SCREEN, AND SHUTTER

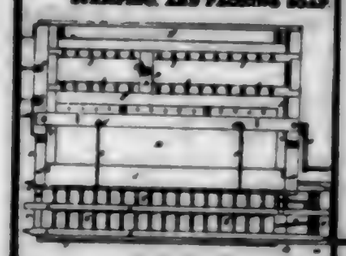


102,891, PETER B. WIMER. GRIPPERS

102,892, HENRY C. WIRE. WIRE AND STONE FENCE COMBINED

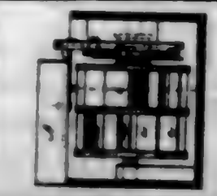
102,893, ROBERT WOLFF. BRIDGE-MACHINE

102,904, ELIJAH S. ALVORD.
STAMP-HEADING FOR SHOEING CASTILE.

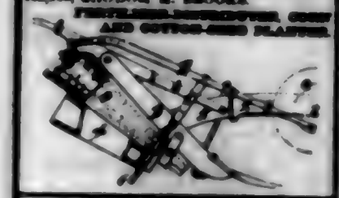


102,911, J. B. AUGUR.
FOOST-GRADING

102,912, HAYDN M. BAKER.
MANUFACTURE OF SOAP.



102,907, LURANDUS BEACH.
LURANDUS L. BEACH, Jr.
MACHINES FOR CUTTING, STAMPING, AND PACKING SOAP.



102,908, CHAS. E. BRADFORD.
RAILWAY-CAR WHEEL.

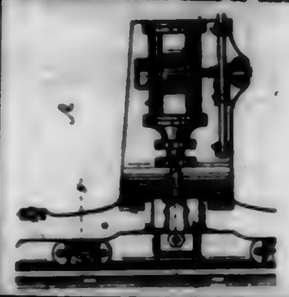
102,909, THOMAS BRISTOL.
WATER-WHEEL.

102,910, RHODOM H. BROOKS.
PORTABLE SUBSOILING, CHIP AND CUTTER-BED PLANTER.

102,911, H.T. BROWNING.
COMPOSITION FOR VARNISHES, &c.

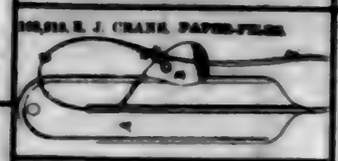
102,912, J. PALMER BUDD.
MANUFACTURE OF IRON AND STEEL.

102,913 J. L. MASON. PUMP-BAR.



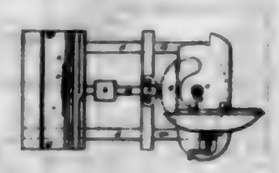
102,914, E. P. CADY. ROOFING PLATFORM FOR HAYMAKING.

102,915 JAMES MARSHALL CALDWELL, GEORGE W. CALDWELL.
SPRING-BED WITHOUT SLATS OR SACKS.



102,916, ETHAN B. CHENEY. MACHINE FOR STRAIGHTENING BARS OF METAL.

WILLIAM COURTNEY. BED-RIVER.

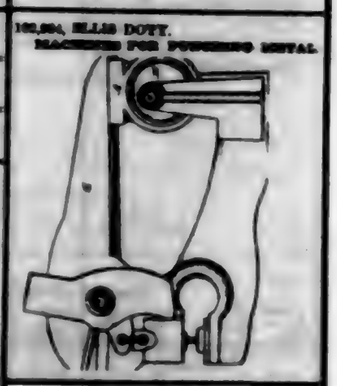


102,918, E. J. CRANE. PAPER-PULPS.

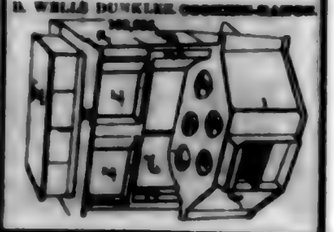
102,919, EDGAR CRAWLEY, THOMAS T. BAYLISS
TUBE.

102,920,CHARLES HENRY DANA
MACHINE FOR THE MANUFACTURE OF WOODEN TRAYS.

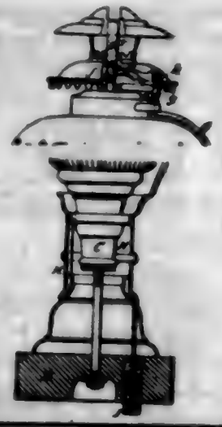
102,921, MARCUS E. DEAN
SAWING-MACHINE.



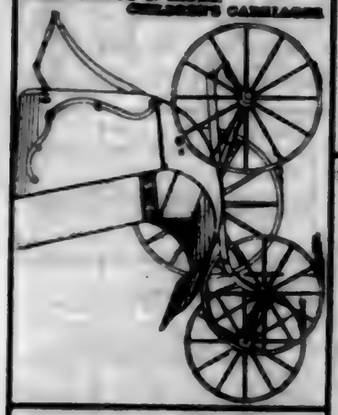
102,922, P. S. DEVLAN. COMPOSITION FOR COATING WOOD, METAL &c.



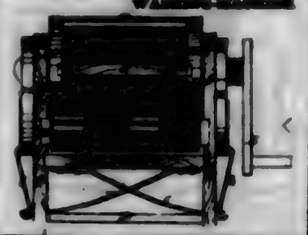
102,923 ERNEY DISTON.
PACKING-CASE FOR SAWS.



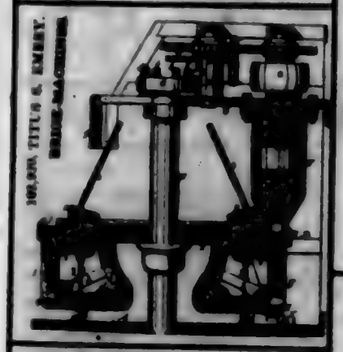
102,924, ELIAS DOTY.
MACHINES FOR PUDDLING METAL.



B. WELLS DUNKLEE. CHECKING-RAPPER.

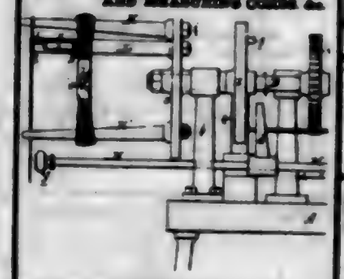


102,925, WILLIAM C. EBERT.
LAWN-SPRINKLING-MACHINE.



102,926, BOSCOE G. ELDER.
CHILDREN'S CARRIAGE.

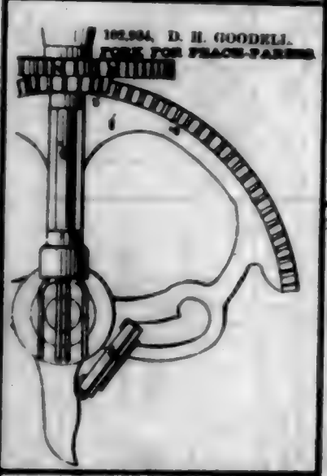
102,927, DANIEL ELICKER.
WASHING-MACHINE.



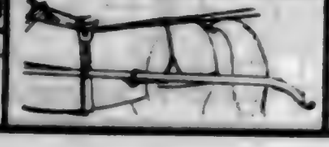
102,928, TITUS G. EMERY.
BRICK-MACHINE.

WILLIAM EVANS.
102,929.
MOULD-LOOM.

102,931, GEORGE PENDICE FARMER.
MACHINE FOR FOLDING OR WINDING AND MEASURING CORDS &c.

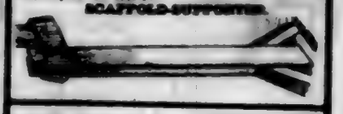


102,932, PHILIP FELKER. SPOKE-WHEEL.



102,933, JAMES M. FIFE.
CASTING LUGS IN STOVE-PLATES.

102,934, D. H. GOODELL.
FORK FOR PEACH-PARERS.

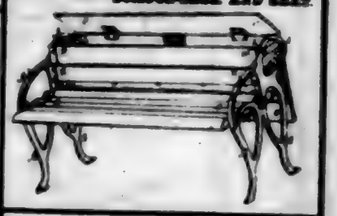


102,935, W. H. GROESBECK.
SEED-RACK FOR VEHICLES.

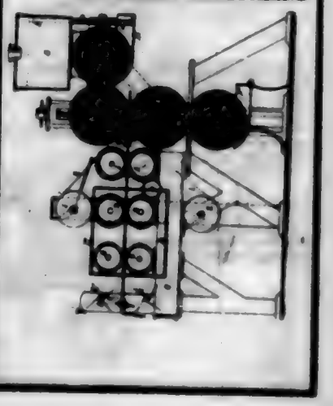
102,936, WILLIAM S. HANCOCK. BROOM.

102,937, D. B. HAY.
SCAFFOLD-SUPPORTER.

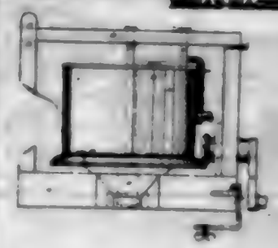
ALLEN HEMINWAY. BAKING-PAN.
WILLIAM A. PAGGETT.
102,938.



102,939. WM. H. HUBBARD.
WATER-WHEELS.



102,940, JOSEPH INGELS.
DOUBLE AND SINGLE-TREE FASTENINGS FOR CARRIAGES.



102,941, JOSEPH INGELS.
SCHOOL-DESK AND SEAT.

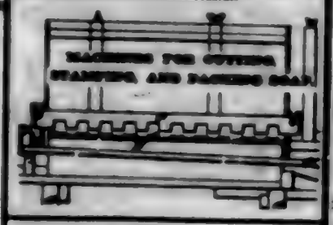
102,942, GUSTAV L. JAEGER.
MACHINE FOR LINING AND DRYING PASTEBOARD.

102,943, LEMUEL P. JEFFS. BREAD-MACHINE.

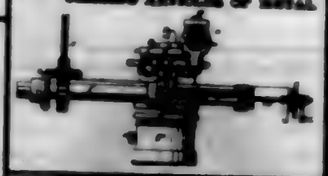
102,944, CHARLES C. JOHNSON. SHEARS AND SCISSORS.

MORTON JUDD. H. L. JUDD. 102,945. COAT AND HAT-RACK.

P. KILBURNER. 102,946. HORSE.



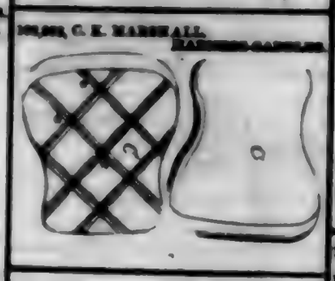
102,947, DANIEL H. KRAUSER. COOPERS' ADZ.



102,948, A. B. LAWS. HYDRAULIC ENGINE.

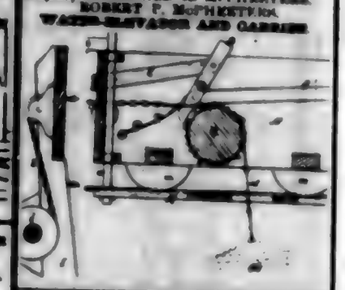
102,949, CHARLES LEHMANN. MACHINE FOR CUTTING, STAMPING, AND PACKING SOAP.

102,950, THOS. LIPPIATT. MACHINE FOR ENGRAVING AND CHASING ARTICLES OF METAL.

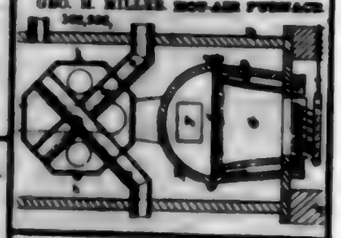


102,951, WILLIAM W. LYMAN. APPARATUS FOR PRESERVING FRUIT.

102,952, STIMMEL LUTZ. FRUIT-CAGE.



102,953, C. E. MARSHALL. BASTING-SADDLE.



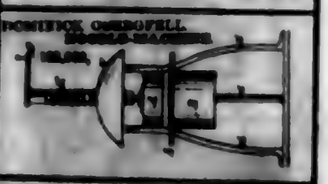
102,954, ALEXANDER E. MARSHALL. MODE OF CONSTRUCTING METTINGS FOR MACHINERY.

102,955, ARCHIBALD A. McPHERTERS, ROBERT P. McPHERTERS. WATER-ELEVATOR AND GARDEN.

GEO. H. MILLER. HOT-AIR FURNACE. 102,956.

102,957, DAVID M. MOORE. UNIVERSAL SQUARE.

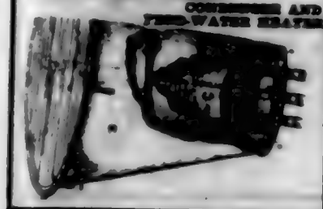
102,958, ELIZA D. MURPHY. MACHINE FOR PACKING JOURNALS AND BEARINGS.



102,959, S. F. NEELY. CLOD-PULVERIZER AND CULTIVATOR COMBINED.

102,960, GORDON H. NEWCOMB. BOOT AND SHOE-HEEL.

POMEROY, OSBORNE. BOOKS-BACKING. 102,961.



102,962, WILLIAM PENDLETON, HENRY H. BOARDMAN. COTTON-CONDENSER.

102,964, JOSEPH PERRAULT. PNEUMATIC BLOWING.

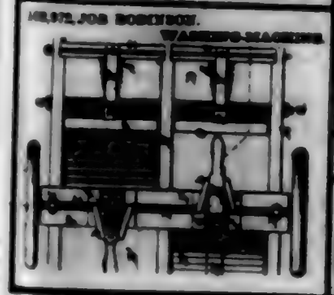
102,963, WILLIAM PHELAN. CONDENSER AND FEED-WATER HEATER.

102,966, STEPHANIAH PHILLIPS. CARPENTERS' PLANE.

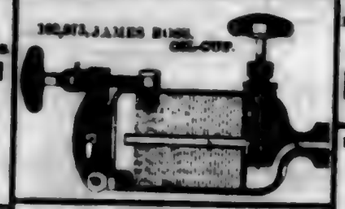
102,967, HUGH M. PHINNEY. VENTILATOR-REGISTER.

102,968, WILLIAM PICKENS, PETER DALRYMPLE. MACHINES FOR REDUCING HELLEBORE.

102,969, JUAN POSEY. MANUFACTURE OF SUGAR.



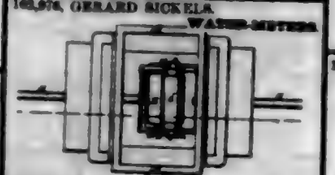
102,970, JOHN H. RHODES. ATMOSPHERIC VALVE FOR HOUSE BOILERS.



102,971 MIRAM ROBBINS. ROLLER-SEATING.

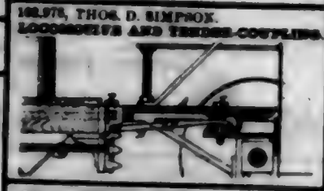
102,972, JOB ROBINSON. WASHING-MACHINE.

102,973, JAMES BUSH. OIL-CUP.



102,974, CARL BUF. FURNACE.

102,975, J. J. H. SERCOMBE. BRIDGING-MACHINE.



102,976, GERARD SICKELS. WATER-METER.

102,977, SIGMUND SIMONSON. TABLETS AND COUNTERS.

102,978, THOS. D. SIMPSON. LOCOMOTIVE AND TENDER-COUPLING.

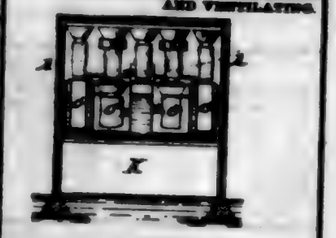
102,979, LUTHER SIMSON. GARDEN-RAKES.

102,980 GEO. H. SMITH. MEDICAL COMPOUND.

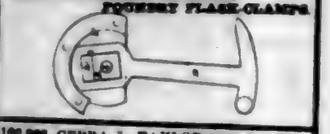
102,981, JOHN C. SMITH. WASHING-SOAP.

102,982, JOHN E. SMITH. HAY-CRIBBLE.

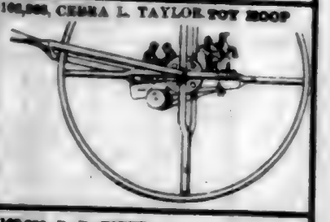
102,983, THOS. FRANKLIN SMITH. MEDICATED SOAP.



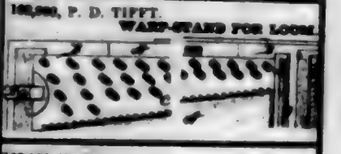
102,984, CHARLES EDWARD SNEIDER. HOOP-CARTRIDGE.



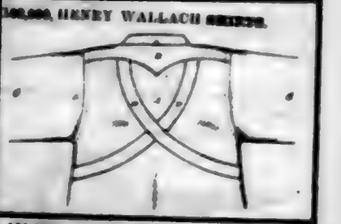
102,985, WILLIAM B. SNYDER. VAGINAL SYRINGE.



102,986, D. E. SONNE. APPARATUS AND PROCESS FOR REFRIGERATING, PRESERVING, AND VENTILATING.

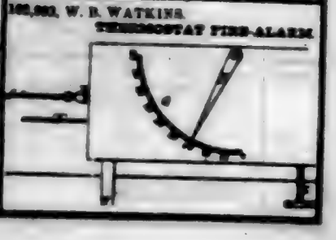


102,987, CHARLES C. STEWART. PYCNEMY FLASK-CLAMPS.



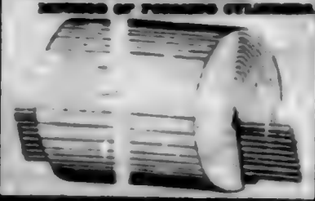
102,988, CERRA L. TAYLOR. TOY ROOF.

102,989, P. D. TIFFT. WARP-GUARD FOR LOOMS.



102,990, HENRY WALLACH SEIZER.

102,991, C. G. WATERBURY. WOODEN STREET PAVEMENTS.



102,992, W. B. WATKINS. THERMOSTAT FIRE-ALARM.

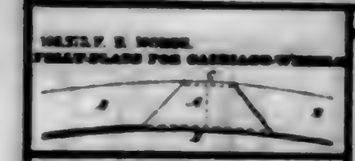
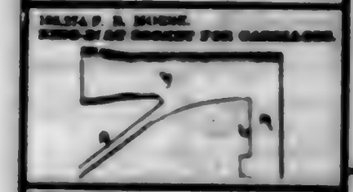
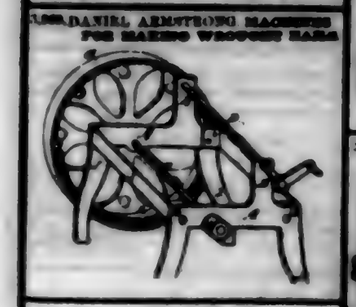
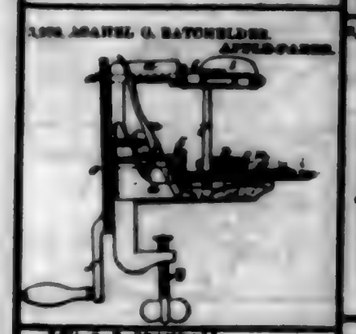
103,372, WILLIAM YORKE.
MACHINERY FOR CROSSCUTTING &c.



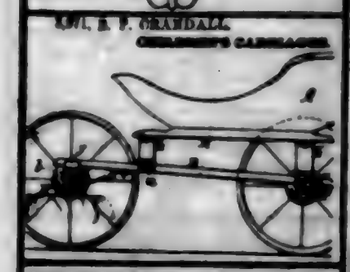


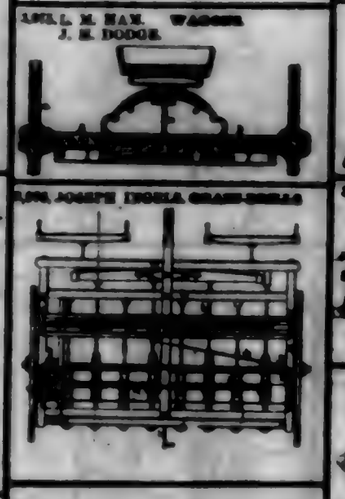
103,347, JOHN NAPOLEON VALLEY.
CLOTHES-DRIER.

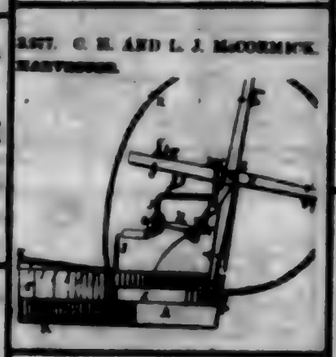


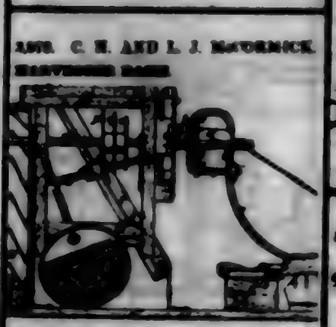


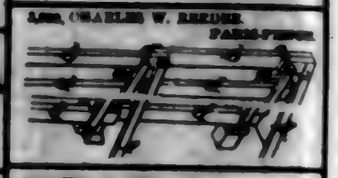
103,348, CHARLES H. WESTON.
JOHN DENNIS.
CLOTHES-PRESS.

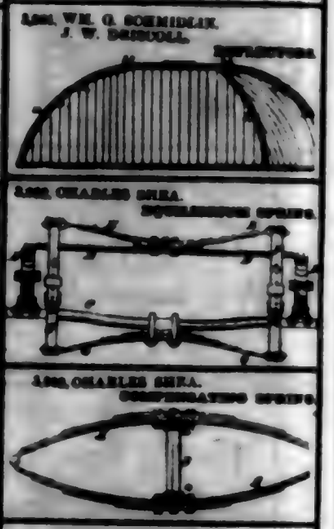


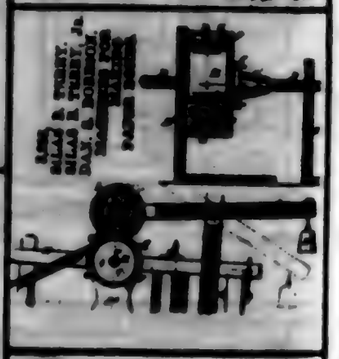


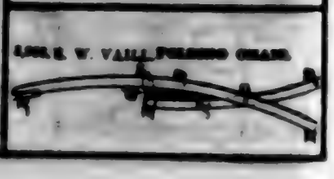


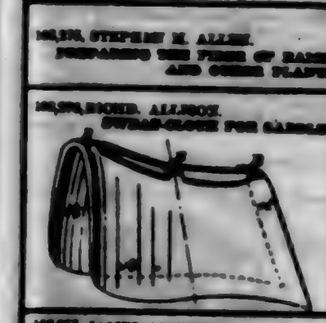


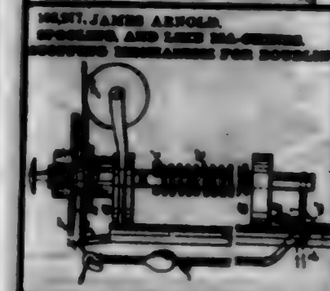


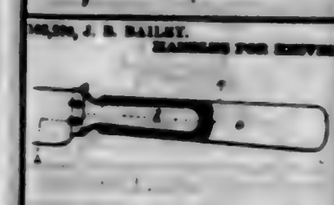






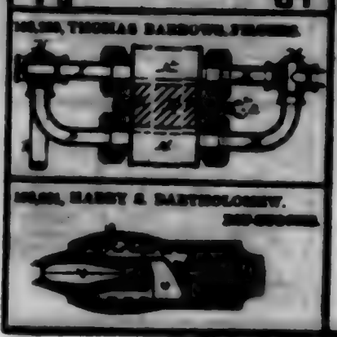




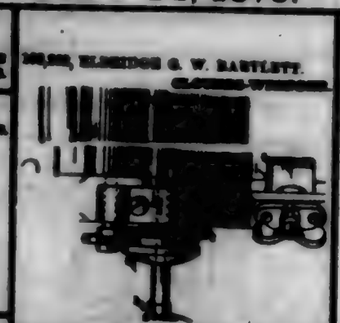


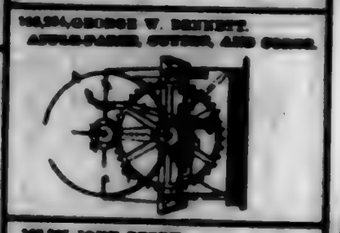
ISSUED FROM

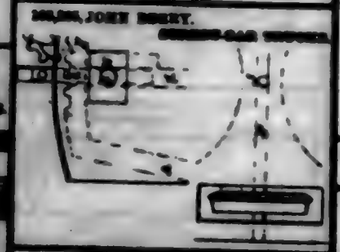
THE UNITED STATES PATENT OFFICE

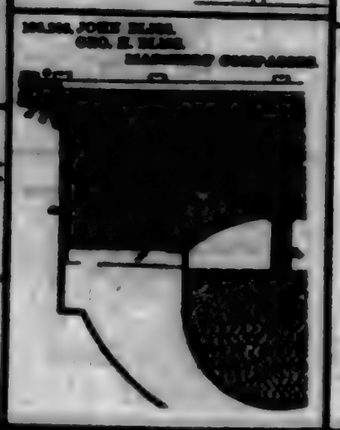


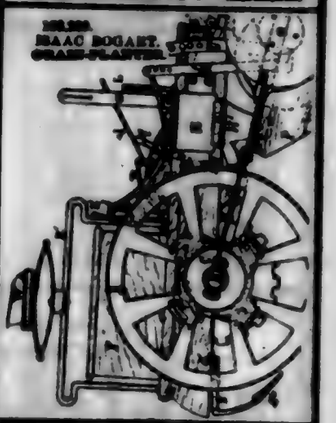
MAY 24, 1870.

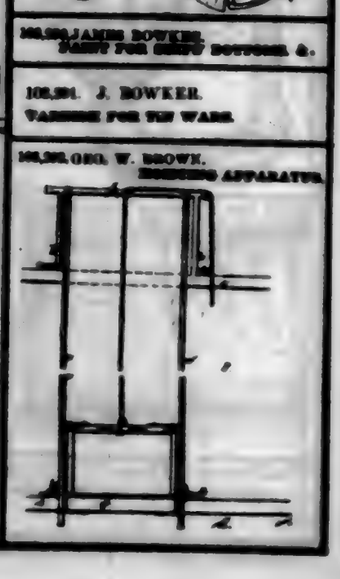


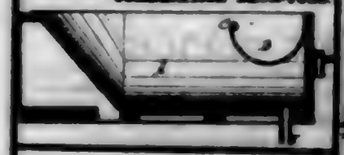


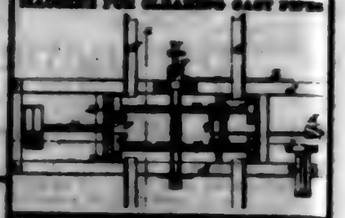




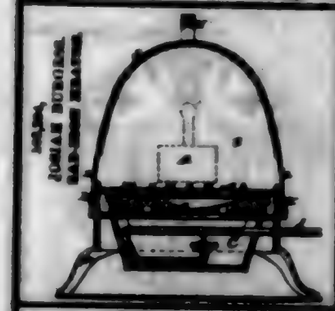




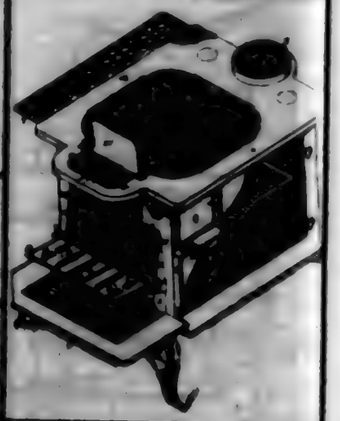




103,308 A. G. BROWELL.
COMBINATION BATH-TUB.

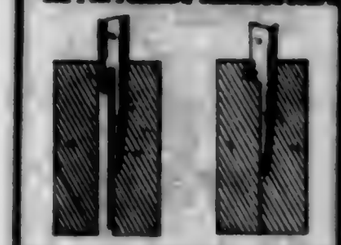


103,309, HENRY DAVIES.
MACHINES FOR CLEANING CAST PIPES.



103,310, JOSIAH BURDICK, Jr.
LAUNDRY-STOVE.

103,311, EUGENE CHAPIN.
BOOKING-CHAIR FOR INVALIDS.

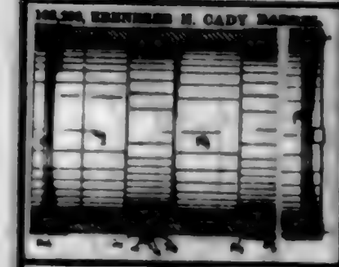


103,312, W. C. DAVIS.
J. W. GARRISON.
COOKING-STOVE.

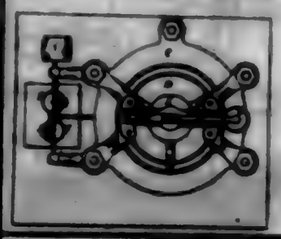
103,313, FREDERICK BURGHARDT.
APPARATUS COUPLING FOR FIREARMS AXLES.

103,314, LEANDER BURR.
SEED FOR PLANTING BROOM-CORN.

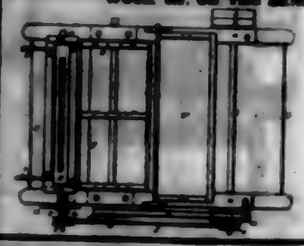
103,315, ERASTUS G. COVEY.
ADDISON BECK.
WEATHER-STRIPS FOR DOORS.



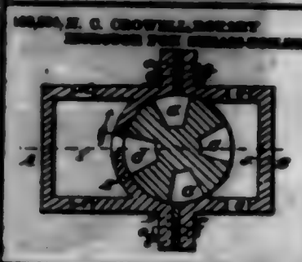
103,316, PRIOR DEMPSEY, Jr. GROVE-GRATE.



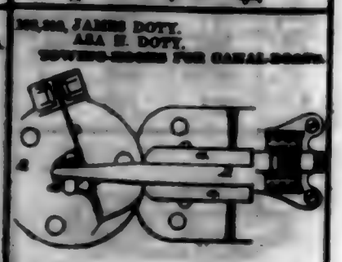
103,317, CALVIN C. HUFF.
GAS-REGULATOR.



103,318, HENRIETTA H. CADY, Admx.
BOOKING-CHAIR FOR INVALIDS.

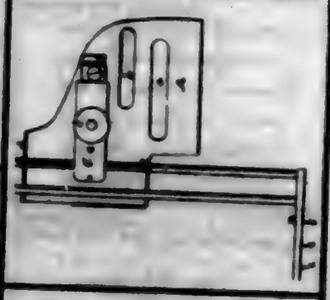


103,319, HARRY A. CROSBY.
MACHINES FOR BEVELING AND GROOVING LASTS.



103,320, GEO. F. DOOKHAM.
MACHINE FOR REMOVING WOOL, &c. OFF THE SKIN.

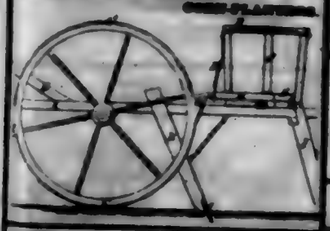
103,321, H. G. CROWELL, Assignor
MACHINES FOR GRAIN-CRADLES.



103,322, JAMES DOTY.
ASA H. DOTY.
MOVING-BOOMS FOR CANAL-BOATS.

103,311, GEORGE L. DU LANEY, Assignor of one-half to
JAMES S. HUSTON.
LOOP FOR HARNESS.

103,312, A. E. EATON.
TOOLS AND WHEELS FOR CUTTING AND POLISHING IRON, STEEL, AND OTHER MATERIALS.



103,313, WILLIAM H. ELLIOTT.
MOVING-WAGONS.

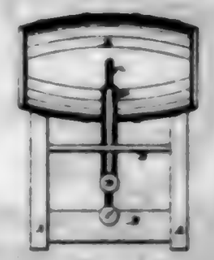
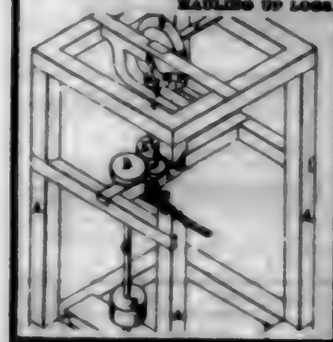
SAFETY SOCKET FOR WHIPS.

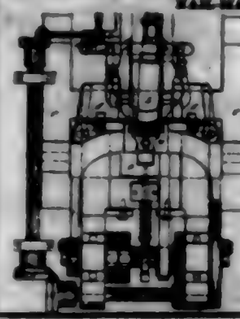


No. 369, THOMAS L. REED.
FLEXIBLE TUBING OR HOSE.

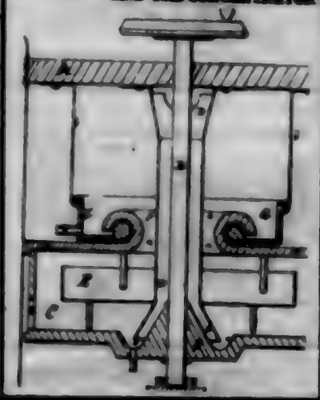


103,370, BARNIS T. REYNOLDS.
ROOFING-PLATFORM FOR RAILWAY-CARS.

103,371, THOMAS & REYNOLDS.
MACHINES FOR WASHING BARRELS.



103,372, SIMON H. RICHARDSON.
HAULING UP LOGS.

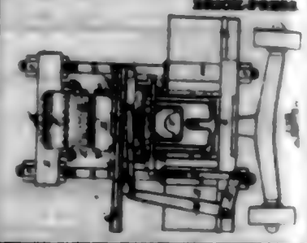


103,373, CHARLES B. SAWYER.
BALANCE ELEVATOR.

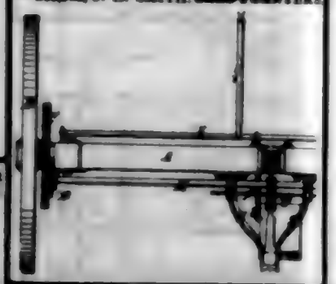
103,374, HENRY SCHEUERLE.
HAY-MACHINE.

103,377, JOSEPH SCOTT, AMALGAMATOR AND ORE-CONCENTRATOR.

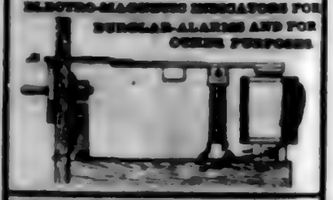
103,378, JOHN P. SHEPARD, GRATING, SPINNING, AND SEWING-MACHINE.



103,379, GERARD SIOUSA.
WATER-METER.

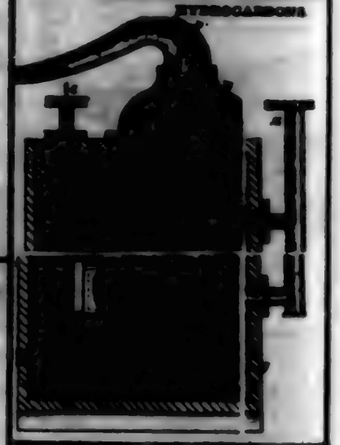


103,380, FREDERICK H. SMITH.
ROLLED IRON OR STEEL COLUMN.

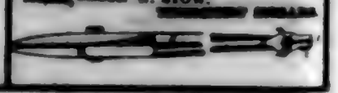


103,381, J. NOTTINGHAM SMITH.
BRICK-PRESS.

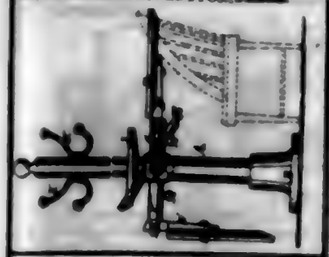
103,382, T. H. SMITH, SEED-PLANTER.



103,383, JAMES P. SNYDER.
ELECTRO-MAGNETIC INDICATORS FOR BURGLAR-ALARMS AND FOR OTHER PURPOSES.

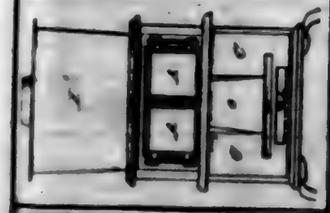


103,384, J. W. SPEYER.
SEWED GOUSSET AND OTHER FABRICS.

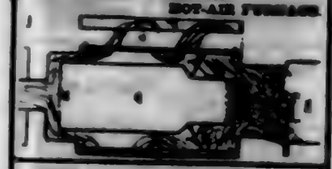


103,385, HENRY A. STRAENS.
APPARATUS FOR REFINING HYDROCARBONS.

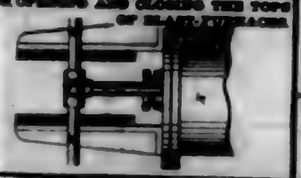
103,386, OSCAR W. STOW.
SEWING-MACHINE.



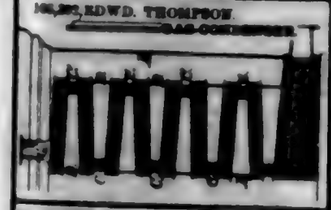
103,387, CHARLES T. SUTTON, SABLE.



103,388, FREEMAN AUGUSTUS TABER.
MANUFACTURE OF TUBULAR CANDLES.

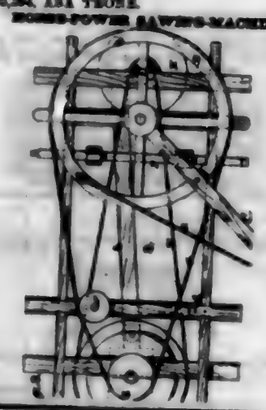


103,389, C. TEMME.
COOKING-STOVE.



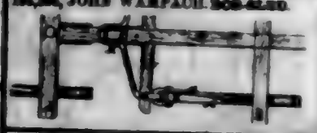
103,390, MOSES A. THAYER.
HOT-AIR FURNACE.

103,391, JAMES THOMAS, APPARATUS FOR OPENING AND CLOSING THE TOPS OF BLAST-FURNACES.

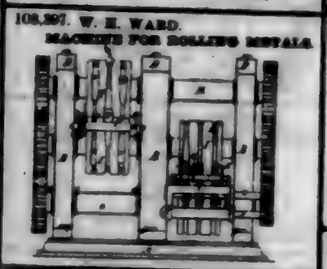


103,392, EDWD. THOMPSON.
GAS-GOVERNOR.

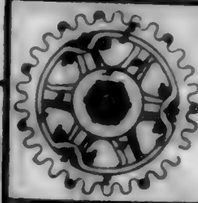
103,393, WM. F. TRAUTMAN.
PAPER-HANGING APPARATUS.



103,394, ASA TROTT.
HORSE-POWER SAWING-MACHINE.



103,395, CHARLES H. TROTT.
ATTACHMENT FOR BUCKLES.

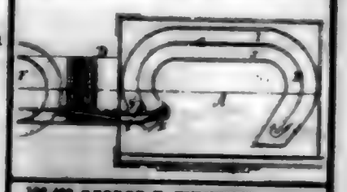


103,396, JOHN WAMPACH, BOB-SLED.

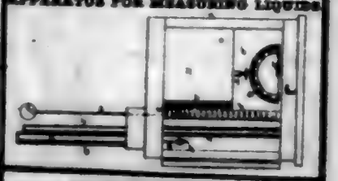
103,397, W. H. WARD.
MACHINE FOR ROLLING METALS.

103,398, W. H. WARD.
GEAR-WHEEL.

103,399, W. H. WARD.
ROUGHING FOR METAL-ROLLING MILLS.



103,400, HORACE WELLS.
SHUTTLES FOR LOOMS.



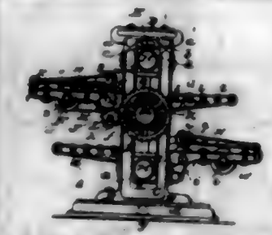
103,401, JAMES WESTERMAN.
FURNACES FOR BOILING AND PUDDLING IRON.

103,402, GEORGE P. WHITNEY.
COMPOUND FOR OILING, POLISHING, AND BLACKING LEATHER.

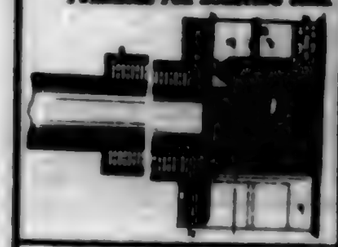
103,403, L. A. WILDER.
ROOFING-COMPOUND.

103,404, MOSES H. WILEY, THOMAS MILLER.
APPARATUS FOR MEASURING LIQUIDS.

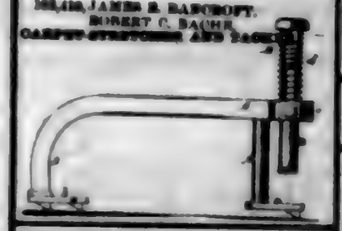
103,405, CHARLES P. WINSLOW.
WASHING-MACHINE.



103,406, THOMAS J. WOOLCOCKS.
SPEAKING-TUBE WHISTLE.



103,407, JAMES D. AKLEY, RICHARD ENGLISH.
DEVICE FOR ADJUSTING CROSS-HEADS OF LOCOMOTIVES.



103,408, JONATHAN AMORY.
STEAM-GENERATORS AND FURNACES.

102,409, CHAS. M. ATKINS, ALEXANDER GOVAN, FURNACES FOR ROASTING ORES.

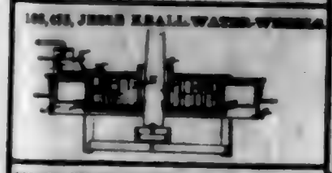
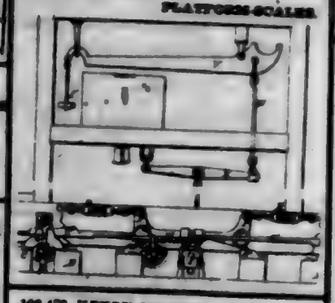
SEWING-MACHINE TABLE.



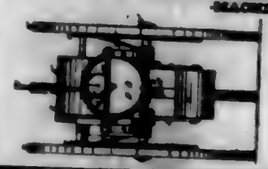
103,473, LEOPOLD KLEE.
ANDREW PATTERSON.
REFRIGERATING VESSEL.

103,474, VICTOR KNIGHT.
PULLEY-SHEAVE.

103,475, JESSE KRALL. WATER-WHEELS.

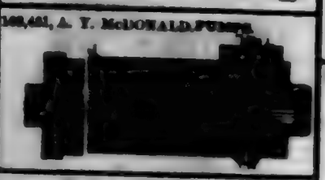


103,476, HUGH LAIRD. CULTIVATOR.



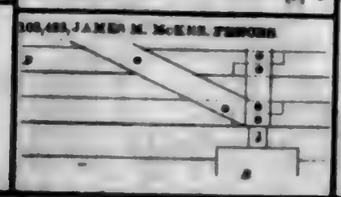
103,477, JOSEPH LINK. PROPELLER.

103,478, CHESTER G. LYMAN.
PLATFORM-SCALES.

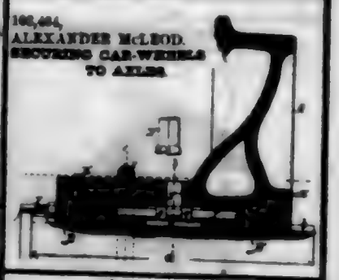


103,479, HENRY MAHOER.
SELF-REGISTERING SURVEYING MACHINE.

103,480, THOS. B. McCONAUGHEY.
JAMES ADAMS.
RAILWAY RAIL-JOINT FASTENING.

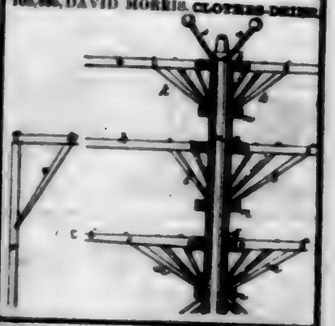


103,481, A. Y. McDONALD. PUMPS.



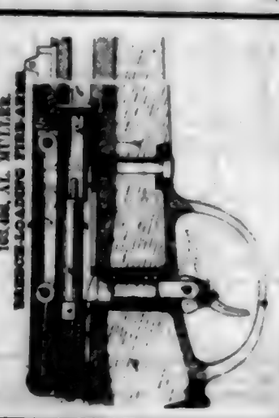
103,482, HENRY C. McILWAIN.
ALONZO BRUMFIEL.
ROTARY BLOWERS.

103,483, JAMES M. McKEE. PURSES.



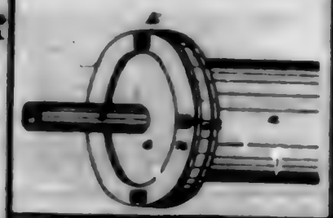
103,484,
ALEXANDER McLEOD.
SECURING CAR-WHEELS TO AXLES.

103,485,
SAMUEL P. MECAY.
HORSE HAY-FORKS.



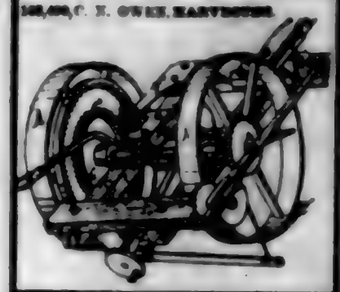
103,486, DAVID MORRIS. CLOTHES-DRIER.

103,487, I. MOSES. TAILORS' MEASURES.

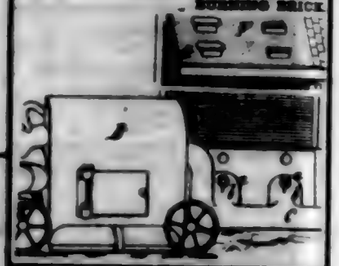


103,488, AL. MULLER.
REMOVABLE FIRE-BACK.

103,490. CASTILE TOCK.
FURNACES FOR PRODUCING "SPONGE" FROM IRON-ORE.

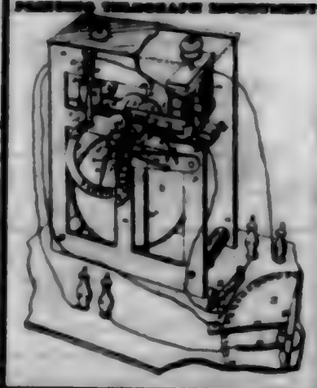


103,499. BENJAMIN FOSTER.
COAL-PLANTING.

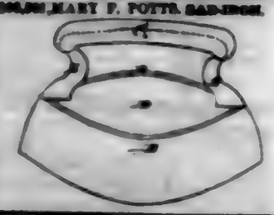


103,495. C. E. OWEN. HARVESTER.

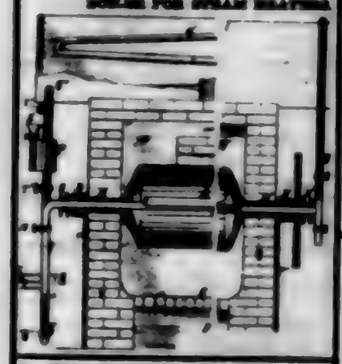
103,496. GEO. PENROYER.
HARVESTER RAKING-WHEEL.



103,498. NATHANIEL F. POTTER.
KILN FOR MELTING AND BURNING BRICK.

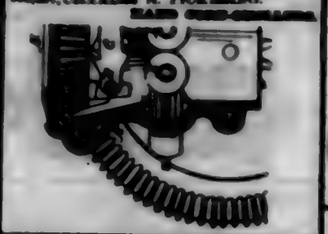


103,491. JOHN B. PADON.
WASHING-MACHINE.



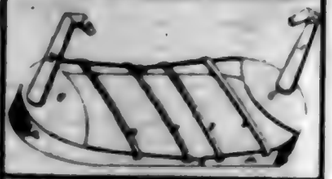
103,492. W. F. PHELPS AND W. J. PHILIPS.
PRINTING TELEGRAPH INSTRUMENTS.

103,500. MARY F. POTTS. SAD-IRON.

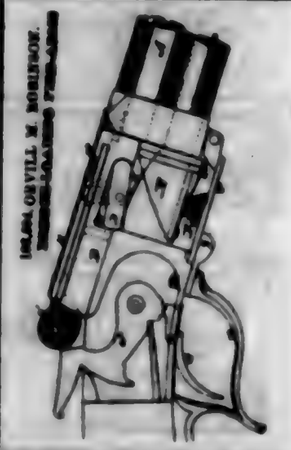


103,493. JAS. W. PAIGE.
DEXTER REYNOLDS.
BOILER FOR STEAM HEATING.

103,494. A. S. PARKS. TOOLS FOR FITTING SOFTENS TO FIRE-BARRELS.

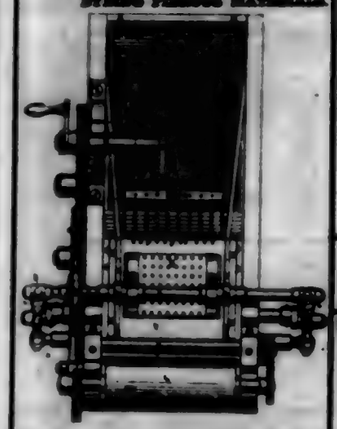


103,497. CHARLES H. PICKERING.
RAKE FOR HARVESTERS.

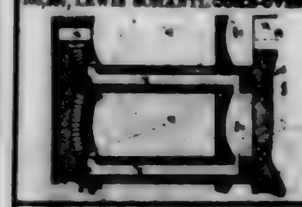


103,502. J. A. PRESTON. COAL-BARROW.

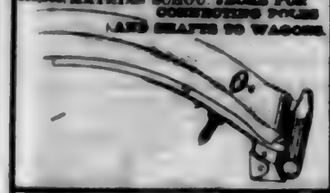
103,503. ADONIJAH H. PROCTOR.
WAGE-BOILER ATTACHMENT.



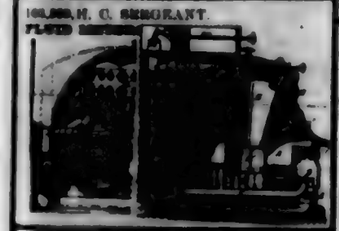
103,504. ORVILLE M. ROBINSON.
HARVESTING MACHINE.



103,505. FREDERIC ROTIG.
STOP-WATCHES.



103,506. CHARLES G. SARGENT.
MACHINERY FOR WASHING AND DYEING FIBROUS MATERIALS.

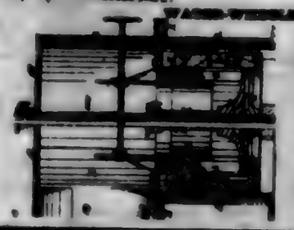


103,507. LEWIS SCHANTZ. COKE-OVENS.

103,508. MATHIAS SORGU. JACKS FOR CONNECTING POLES AND SHAFTS TO WAGONS.

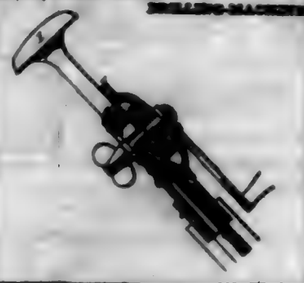
103,509. H. C. SERGEANT.
FLUID METERS.

103,510. E. A. SEXTON.
BASE-BURNING FIRE-PLACE STOVE.



103,511. ALFRED B. SHEAFFER.
SPRING-FASTENER.

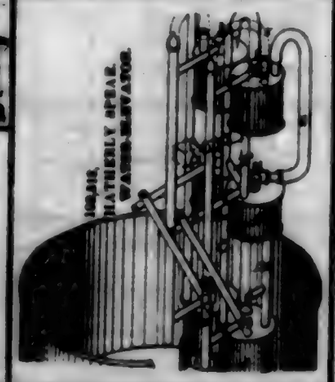
103,513. HARDY I. SHEFFER.
MEDICAL COMPOUND FOR THE CURE OF DYSPEPSIA.



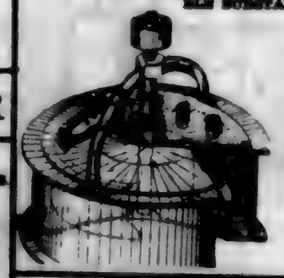
103,514. H. W. SHIPLEY.
WAGON-WHEELS.

103,514. WM. H. SHOOK.
PROPELLERS.

103,516. JAMES SMITH.
SPINNING-MACHINES.

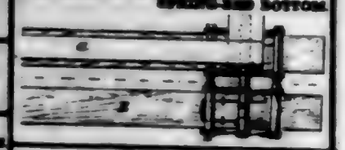


103,516. WILLIAM J. SMITH.
TRUSSES.



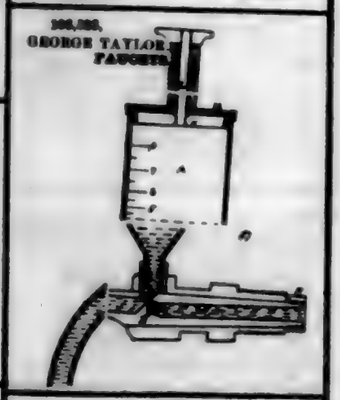
103,517. A. SORENSON.
PREPARATION OF ARTIFICIAL LEATHER FROM SCRAP-LEATHER, &c.

103,518. HATHERLY SPEAR.
WATER-ELEVATOR.

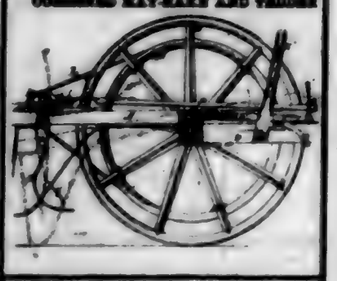


103,519. HENRY A. STEARNS.
APPARATUS FOR EXTRACTING OIL FROM ANIMAL AND VEGETABLE SUBSTANCES.

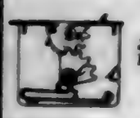
103,520. CHARLES STEPHENS.
MANUFACTURE OF ARTIFICIAL STONE.



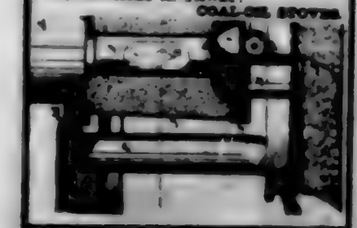
103,521. CYRUS S. STEVENS.
SPRING-SEAT BOTTOM.



103,522. WM. W. SWANN.
OVERSHOE.

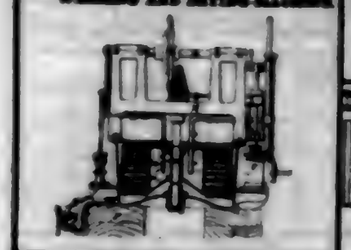


103,523. GEORGE TAYLOR.
FAUCETS.



103,524. S. J. TAYLOR.
COMBINED HAY-RAKE AND TEDDER.

103,525. JOHN THIELMANN. PHILIPP MEYER.
PIANO-LOCKS.



102,326, JAMES H. TROUP.
COAL-OIL STOVES.

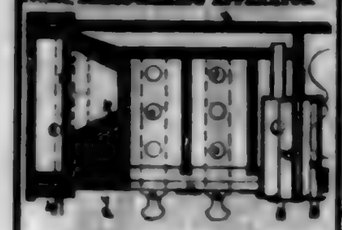
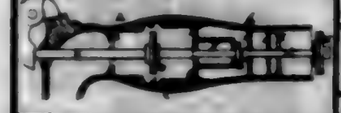
104,654, IRVING W. SEARLES. CLOTHES-PIN.

104,655, D. F. STEPHENSON. [illegible] SUPPORTERS.



104,656, CAMILLE ST. GERMAIN. SHOEMAKING TOOL.

104,657, JOHN STORER. STOP MOTION FOR STEAM-ENGINES.

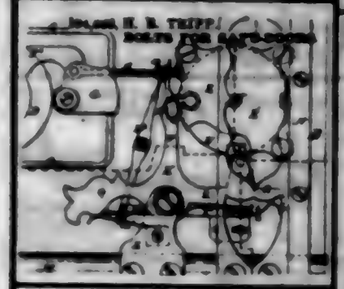


104,658, EDWIN STRAIN. NEEDLE FOR SEWING-MACHINE.

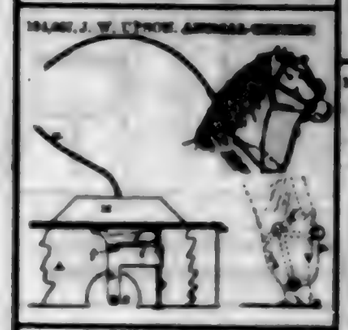
104,659, GEORGE TANNER. COW-TAIL HOLDER.

104,662. BREAD-MAKING APPARATUS.

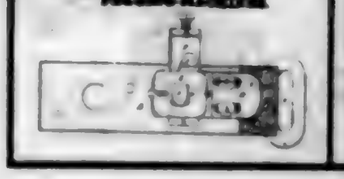
104,663. ROBERT TILLY. PADDING.



104,664. BENJAMIN F. TOMER. CORN-PLANTER.

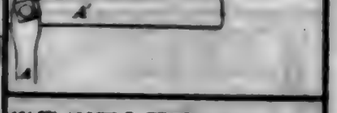


104,665. ARTHUR TOWER. COMPOSITION BORDER-PAVE.

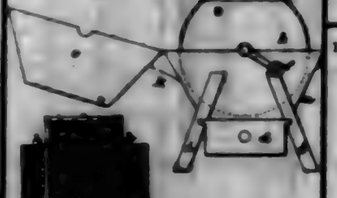


104,666. H. B. TRIPP. HOLD-TO FOR GATE-COUPLING.

104,667. J. W. UNDY. APPRAISE-CHECKER.



104,668. CHARLES VARNEY. PEG-MIND-MACHINE.



104,669. HORACE WARREN. HAY-MAKER.

104,670. PAUL WEATHERBEE. CAR-COUPLING.

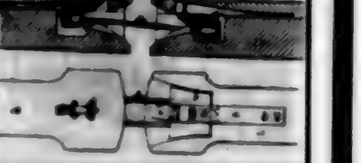
104,671. ALLEN P. WEBB. WHEEL-SPOKER.

104,672. JONATHAN R. WEBBER. LADDER OR SCAFFOLDING FOR DOORS.

104,673. ELIJAH WELCH. WHEEL-CAR STANCHION.

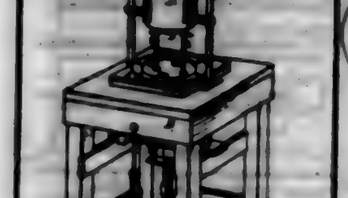
104,674. E. F. WOLCOTT. CAR-COUPLING.

104,675. E. WHITEHEAD. SEWING-CHAIR.

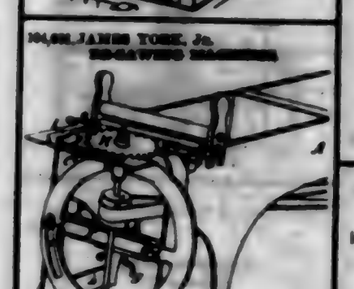


104,676. GEORGE R. WIGGIN. WATER-MOTOR.

104,677. ELIJAH A. WILDER. ARRANGEMENT FOR GUIDE OF BRIDGES IN GATES.



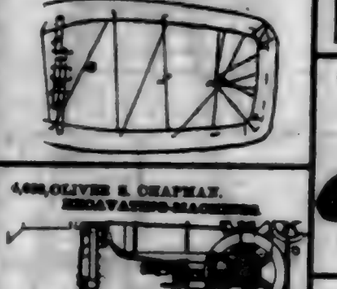
104,678. R. F. WOLCOTT. CAR-COUPLING.



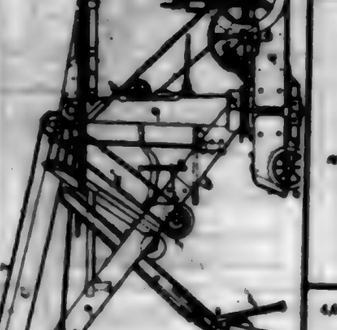
104,679. J. C. WEBSTER. CAR-COUPLING.

104,680. J. C. WEBSTER. PROCESS AND APPARATUS FOR PURIFYING PETROL VAPORS. Filed Jan. 4th.

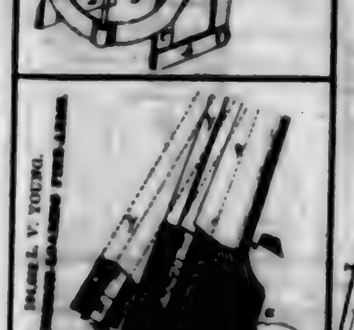
104,681. JAMES TOBE, Jr. HEDGE-TRIMMING MACHINE.



4,682. J. C. WEBSTER. CAR-COUPLING.



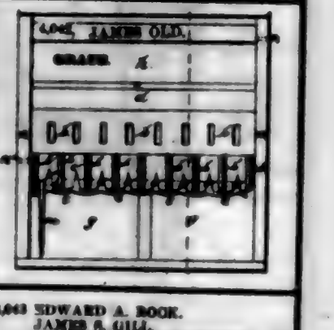
4,683. CHARLES BUFFUM. SPOKE.



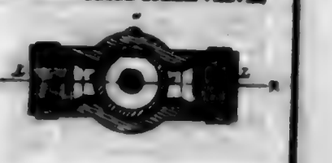
4,684. OLIVER S. CHAPMAN. EXCAVATING-MACHINE.

4,685. OLIVER S. CHAPMAN. EXCAVATING-MACHINE.

4,686. ISAAC V. YOUNG. PEG-CUTTING PEG-MACHINE.



4,687. JOSE F. DE NAVARRO. LIQUID-METER.



4,688. GEO. T. GATHRIGHT. SIDE-SADDLE.

4,689. JAMES OLD. GRATE.

4,690. EDWARD A. BOOK. JAMES S. GILL. GEO. BROWDER REDFIELD. GLOBE STEAM-VALVE.

ILLUSTRATIONS OF PATENTS

ISSUED FROM

THE UNITED STATES PATENT OFFICE

JUNE 28, 1870.

104,694, I. ALEXANDER. [illegible]

104,695, RICHARD BALL. HAY AND COTTON-PRESS.

104,696, W. E. BARTON. [illegible]

104,697, WILLIAM JAMES BEACH. RAILROAD-CAR SPRINGS.

104,698, GEO. W. BLAKE. [illegible]

104,699, CHARLES ANGLE. ANIMAL TRAP.

104,700, JOHN ANGUS, JOHN P. ANGUS. QUILTING-FRAME.

104,701, GEORGE F. ANSELL. MANUFACTURE OF [illegible]

104,702, WILLIAM ARNHALL. LATCH AND [illegible]

104,703, AARON BALDEN. PUMP.

104,704, JAMES BIRCH, ADDISON CRANBY, THOMAS BIRCH. HARVESTER.

104,705, THOMAS J. BURGESS. [illegible]

104,706, W. G. BURNETT. [illegible]

104,707, OLIVER J. BOLLINGER. WATER-WHEEL.

104,708, EDWIN BOYSTON. [illegible]

104,709, [illegible]

104,710, WILLIAM S. BREWSTER. PREPARATION OF WHEAT FOR FOOD.

104,711, FRANKLIN W. BROOKS. STEAM-GAS ENGINE.

104,712, GEORGE A. BROWN. SNAP-HOOK.

104,713, ROBERT B. CROSBY. LADY'S [illegible]

104,714, GEO. BUCHANAN. [illegible] BRAKE, GRATE AND [illegible]

104,715, JAMES P. CUTLER. [illegible] APPARATUS.

104,716, SAMUEL P. CABELL, AMOS GROTE. CAR-COUPLING.

104,717, STEPHAN HOIL. WINDOW-BLINDS.

104,718, GEORGE ELLIOT. BED-FASTENING FOR CAR-SPRINGS.

104,719, ELIHU ENGLAND. COMPOUND FOR STUFFING AND TANNING SKINS.

104,720, CYRUS CHAMBERS, Jr. CUT-SHARING APPARATUS FOR REDGE-MACHINES.

104,721, GEO. K. FARRINGTON. CLOTHES-PIN.

104,722, GEORGE L. FEARIS. LINIMENT FOR TREATING NEURALGIA.

104,723, JOHN DAVIS. WOOD-SATURNER.

104,724, F. W. CODDING. DEVICE FOR [illegible] OR CROOTING NEAR.

104,725, R. G. FITZHUGH. WASH-BOILER.

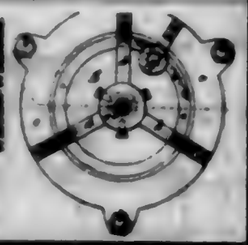
104,726, J. B. DAVIS. [illegible]

104,727, ALEX. A. CONSALVI. FEEDER-SWEEPING MACHINE.

104,728, POSCIUS FESTUS DEAN. BRAKE FOR VEHICLES.

104,729, CHARLES S. FORD. GAS-BURNERS.

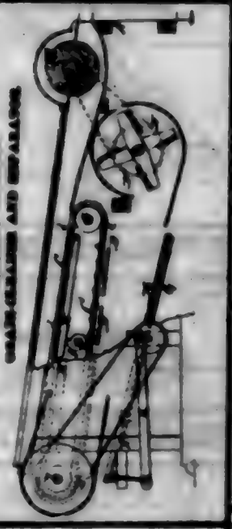
104,730, WILLIAM DILLON. BALANCE SLIDE-VALVES.



104,731, JOLIVILLE F. FOWLER. BOWS FOR CARRIAGE-TOPS.

104,732, G. W. COTTINGHAM. WASHING-MACHINE.

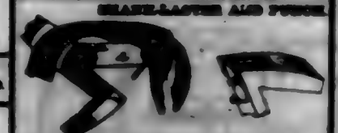
104,733, A. B. DUPAR, ARTHUR BARBARIN. APPARATUS FOR CARBURETTING AIR.



104,734, SAMUEL C. FRISK. WASHING-MACHINE.

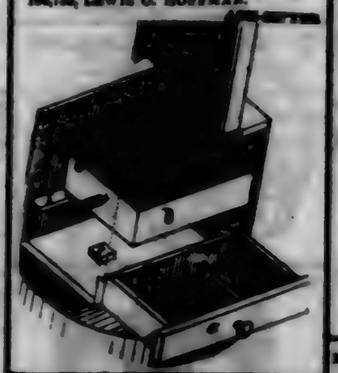
104,726 OLIVER FULLER. WATER-WHEEL.

104,727, GEORGE C. FOBES. MEDICAL COMPOUND.

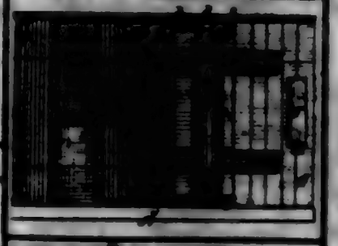


104,728 WILLIAM GARDNER. CHAIN-GRIPER AND SPREADER.

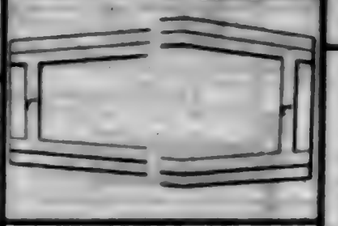
104,729, EDGAR E. HAYNE. [illegible]



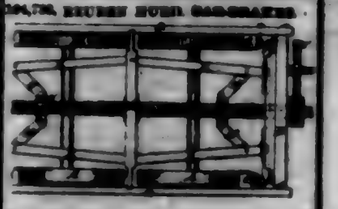
104,730, FREDERICK HENDERSON. SHAVE-LASTER AND PUNCH.



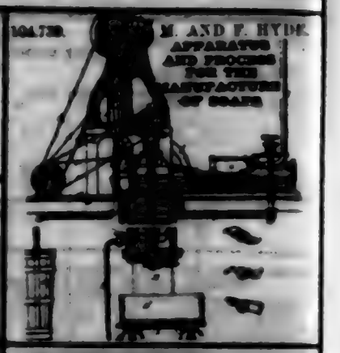
104,731, JOHN HENRY. SEPARATING AND TANNING SKINS AND HIDES.



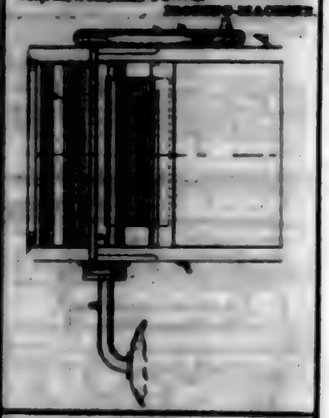
104,732, LEWIS G. HOFFNAN. [illegible]



104,733, GEO. W. HOUGH. WM. A. HOUGH. [illegible]

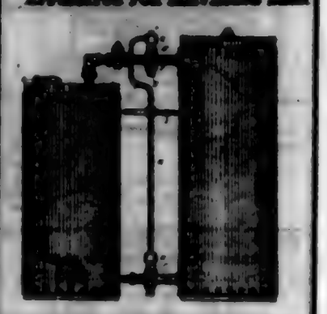


104,734, DANIEL M. SPROGLE. [illegible]



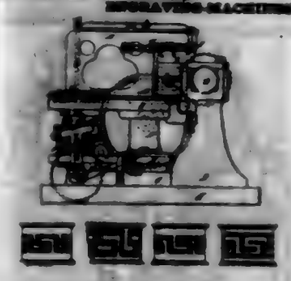
104,735, REUBEN HUBB. CAR-COUPLER.

104,736 M. AND F. HYDE. APPARATUS AND PROCESS FOR THE MANUFACTURE OF SOAPS.

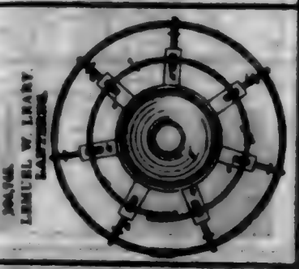


104,737, WILLIAM JONES. [illegible]

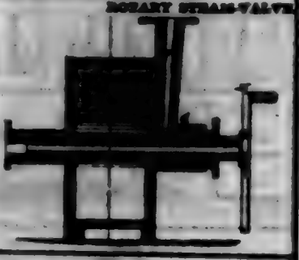
104,738, JAMES KIDDER. TANNING.



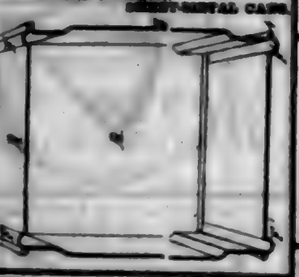
104,739, ALBERT H. LADUKE. THOMAS P. PERLIN. APPARATUS FOR ELEVATING BEES.



104,740, CYRUS B. LATHAM. [illegible]

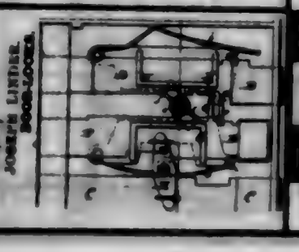


104,744, JOHN D. LATHROP. ENGRAVING-MACHINE.

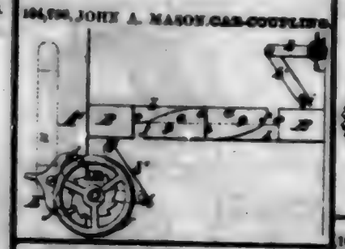


104,745, LEMUEL W. LEAVY. LANTERN.

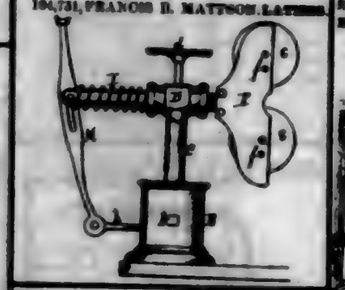
104,746, GEORGE LOCKERBY. ROTARY STEAM-VALVE.



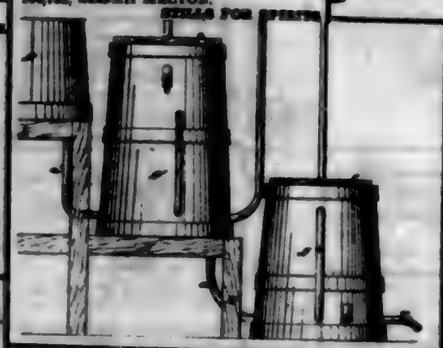
104,747 JOS. Le COMTE. GEO. H. PERKINS. [illegible]



104,748, LUTHER LINCOLN. FLAT OR BAR-IRONS.



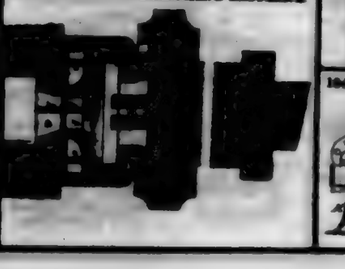
104,749, JOSEPH LISTER. DOOR-LOCKS.



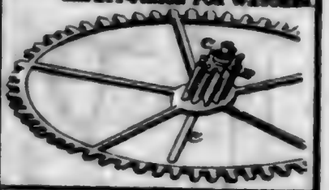
104,750, JOHN A. MASON. CAR-COUPLING.

104,751, FRANCIS B. MATTSON. LASTING.

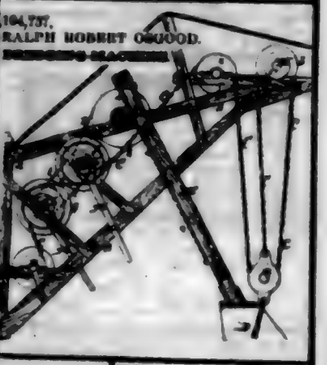
104,752, ELIJAH MELTON. STILLS FOR SPIRITS.



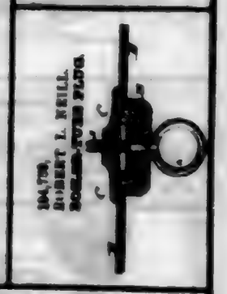
104,753, CHARLES G. MILLER. CARPENTERS' PLANES.



104,754, J. G. MINER. CULTIVATOR-FLOW.

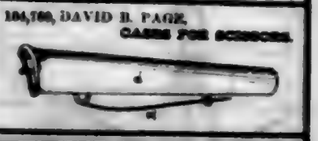


104,755, CHAS. S. MOSELEY. PUNCHING-MACHINE.



104,756, CHAS. S. MOSELEY. SAFETY-PISTON FOR WATCHES.

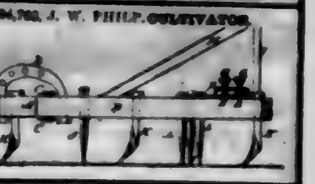
104,757, RALPH HOBART OSGOOD. [illegible]



104,758, EDWARD MYERS. MEDICAL COMPOUND.

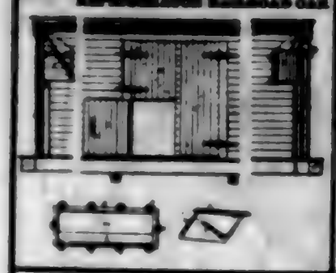
104,759, ROBERT L. NEILL. [illegible]

104,760, DAVID B. PAGE. CASES FOR SCISSORS.

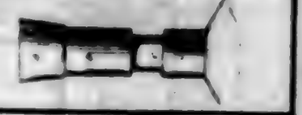


104,761, ARAHEL H. PATCH. CLOTHES-DRIER.

104,762, JOSEPH R. PERRY. DANIEL W. PERRY. JAMES PERRY. STREET-RAILWAY CAR-TRUCK.



104,763, J. W. PHILP. CULTIVATOR.

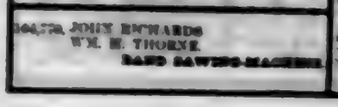


104,764, NATHAN PLIMPTON, Tea-Pot.

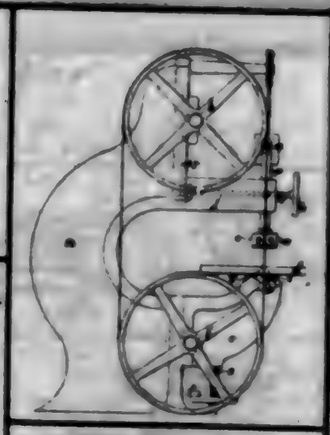
104,765, JOHN D. POTTS, R. P. LAWSON, Refrigerator Railroad Car.

104,766, HENRY C. PRATT, Bottle-Stopper.

104,767, JOSHUA PUSEY, Window-Shade Hook.

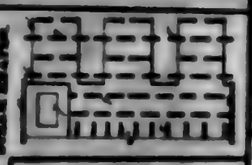


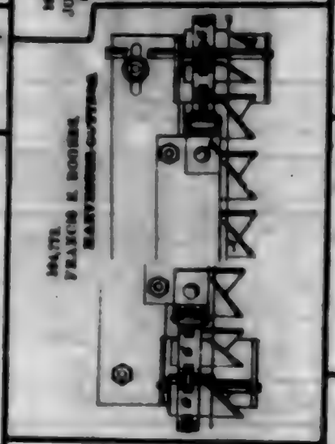
104,768, DAVID RAMLER, Automatic Fan.



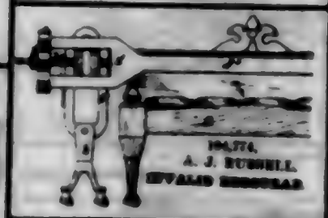
104,769, ISAAC P. RICHARDS, Pumping.

104,770, JOHN RICHARDS, WM. H. THORNE, Band Sawing-Machine.



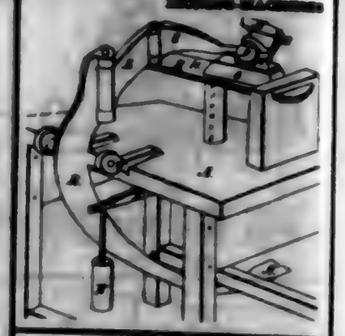


104,772, HENRY R. ROBBINS, Stove and Furniture-Leg.



104,773, JOHN J. ROEPEL, Grain-Drill.

104,774, FRANCIS E. ROGERS, Harvesting-Machine Cutting-Apparatus.



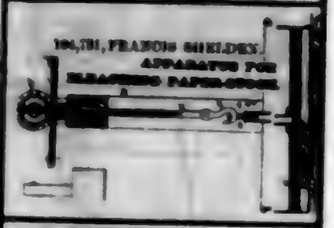
104,774, A. J. RUSSELL, Invalid Bedstead.

104,775, JAMES RYDBECK, Breech-Loading Fire-Arms.

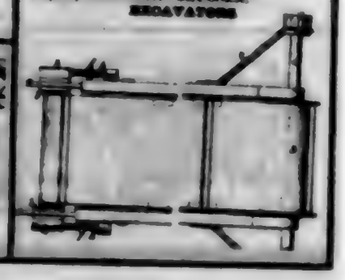
104,776, A. C. SAWYER, Mowing-Machine.

104,777, JOHN K. SAX, Boxes for Car-Wheels.

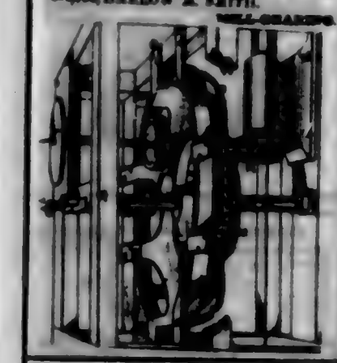
104,778, JOSEPH J. SCHNUTER, Wood Pavement.



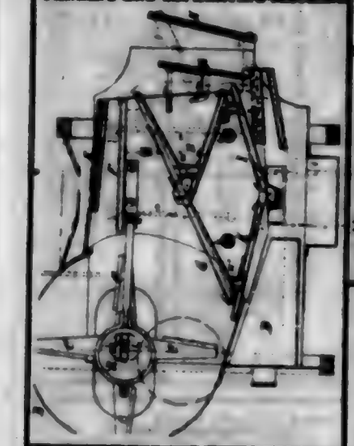
104,779, HENRY SEARS, EDMUND B. SEARS, Knife for Cutting Cheap Razors.



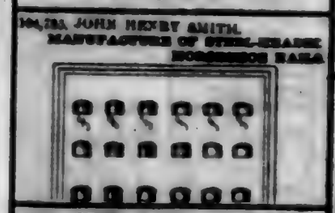
104,780, RAPHAEL M. SEIDA, Hoe.



104,781, FRANCIS SHIELDS, Apparatus for Measuring Paper-Stock.

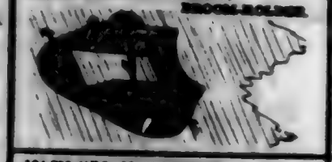


104,782, BENJAMIN SLAWSON, Excavator.



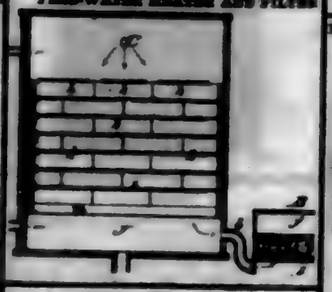
104,783, HARLOW M. SMITH, Self-Gearing.

104,784, JAS. J. SMITH, M. D. GRAM, WM. H. WOODBRIDGE, Fanning and Separating-Machine.



104,785, JOHN HENRY SMITH, Manufacture of Steel-Shank Horseshoe Nails.

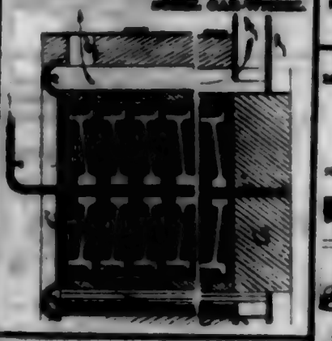
104,786, PETER M. SNELL, Forge, OSCAR SNELL.



104,787, CHARLES P. SNOW, Broom-Holder.

104,788, GEO. M. STEINBERG, Fever-Spoon.

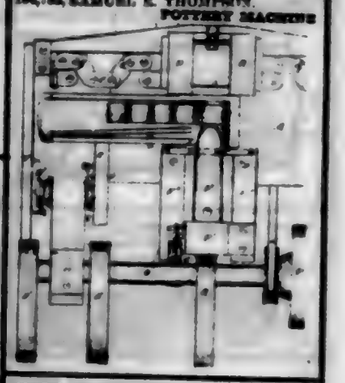
104,789, EDWIN R. STILWELL, Feed-Water Heater and Filter.



104,790, OLIVER TAFF, Floor-Clamp.

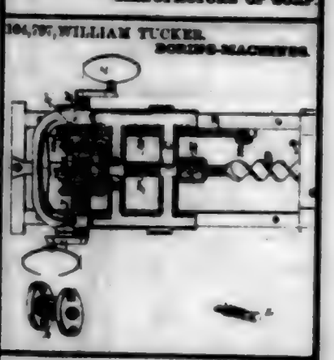
104,791, WILLIAM C. TAIT, Musical Composer.

104,792, JOHN BLAKE TARR, Steel Gas-Stopper.

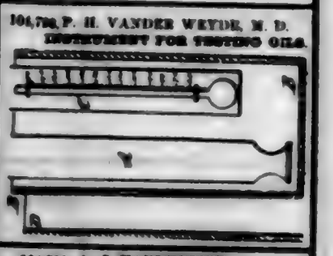


104,793, HENRY C. THOMPSON, Bottle-Stopper.

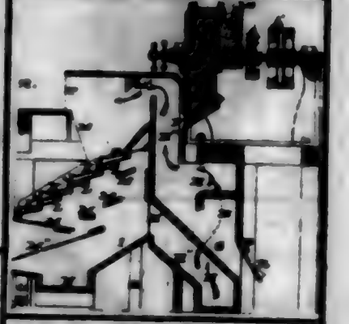
104,794, NATHAN THOMPSON, Bottle-Stopper.



104,795, SAMUEL R. THOMPSON, Pottery Machine.



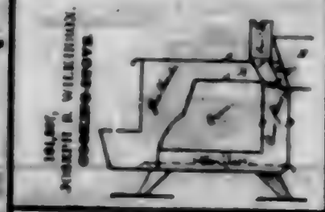
104,796, JOSEPH TREAT, Manufacture of Soap.



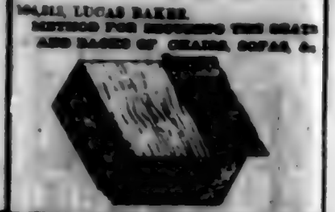
104,797, WILLIAM TUCKER, Boring-Machines.

104,798, P. H. VANDER WEYDE, M. D., Instrument for Testing Oils.

104,799, A. J. VANDERIFT, Machine for Breaking Cotton-Seed.



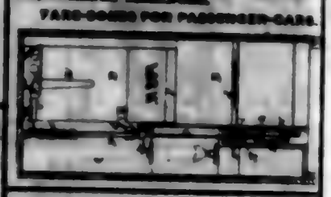
104,800, STROUD VAN METER, Cutter.



104,809, CHARLES S. WARRING. HEATING-STOVES.

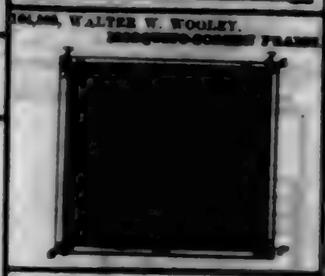
104,810, JOSEPH S. WILKINSON. [illegible]

104,811, LUCAS BAKER. METHOD FOR HOLDING THE SEAT AND BACKS OF CHAIRS, SOFAS, &c.



104,812, ALFRED WATSON. [illegible]

104,813, JOHN S. WILLIAMS. [illegible]



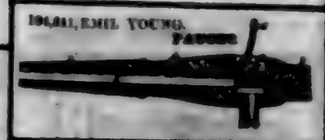
104,814, HENRY BARAFORD. FARE-BOXES FOR PASSENGER-CARS.

104,815 SUSPENDED

104,816, WALTER W. WOOLEY. [illegible]

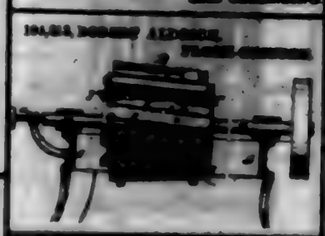
104,817, PETER L. WEIMER. TWINE.

104,818, WILLIAM BATES. FREDERICK BATES. MACHINES FOR SCOURING AND WASHING FABRICS.



104,819, ISAAC P. WENDELL. [illegible]

104,820, HARRISON YOST. WASH-BOILER.

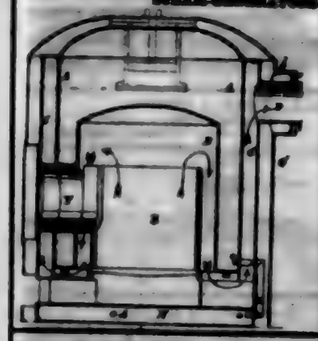


104,821, EMIL YOUNG. FABRIC.

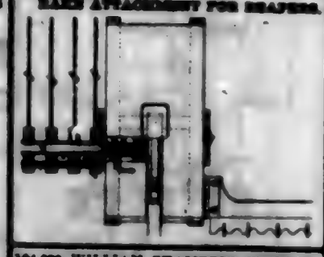
104,822, DEXTER D. W. ABBOTT. [illegible]

104,823, ROBERT ATKINSON. [illegible]

104,824, L. WHITEHEAD. HARROW.



104,825, LAWRENCE ANSTER. [illegible]

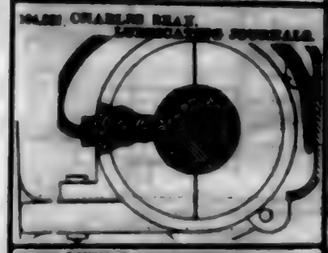


104,826, WILLIAM BATES, FREDERICK BATES. [illegible]

104,826, WILLIAM BAXTER. STEAM-GENERATORS.

104,827, M. C. CHAMBERLIN. RAKE ATTACHMENT FOR REAPERS.

104,828, S. M. CRANDAL. BROOMS.



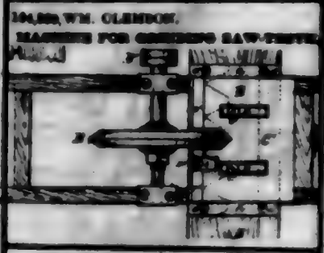
104,829, WILLIAM CHAMBERS. METHOD OF LASHING HOOPS AND HOOPS.

104,830, PETER CRANE, Jr. [illegible]

104,831, CHARLES HEAT. [illegible]

104,832, LUCAS C. CLARK. [illegible]

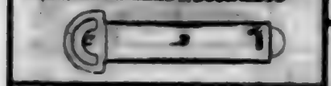
104,833, J. A. CRAWFORD. FIRE-PLACE GRATE.



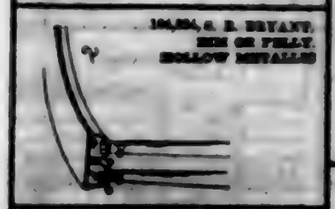
104,834, LUTHER BOARDMAN, NORMAN S. BOARDMAN. SPOKE-SHAVES.

104,835, C. H. CUSHMAN. HOSE-COUPLINGS.

104,836, WM. CLENDON. MACHINE FOR GRINDING SAW-TEETH.



104,837, SIMEON W. DROWER. KEY-HOLE ESCUTCHEONS.



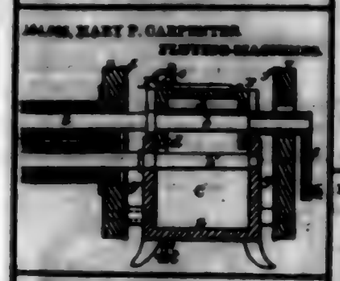
104,838, TIMOTHY EARLE. [illegible]

104,839, JAMES BRADY. DOOR-KEYS.

104,840, A. B. BRYANT. [illegible]

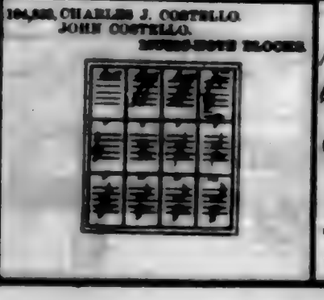
104,841, MACK DELORIMER CONVERSE, FRANK ATWILL BATES. [illegible]

104,842, THEODOR G. BISWALD. [illegible]

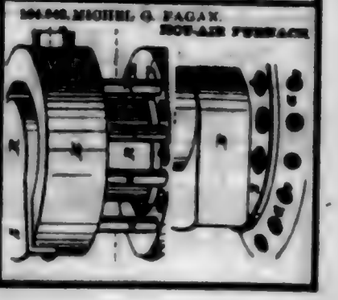


104,843, JAMES EWING. [illegible]

104,844, JEREMIAH COEY. [illegible]



104,845, MARY P. CARPENTER. PLAITING-MACHINES.



104,846, D. H. CHAMBERLAIN. [illegible]

104,847, CHARLES J. COSTELLO, JOHN COSTELLO. [illegible]

104,848, MICHEL G. FAGAN. HOT-AIR FURNACE.

104,842 GILBERT H. TERRIS, New-Haven

104,843 LYMAN GLEASON, Stoves

104,844 THOMAS P. HALL, Machine-Shuttle

104,845 O. B. HAMLIN, Car-Fastening

104,846 WILLIAM BAKER, Saw-Frame

104,847 WILLIAM S. HATCHER, Safety Double-Gate for Horses

104,848 WILLIAM S. HATCHER, WILLIAM L. LANCE, Hoe-Frame

104,849 JOHN E. HOLLEY, Grain-Cleaning Machine

104,850 HENRY E. KINYON, Wind-Vane Pump

104,851 CHAS. L. KIDDER, FLORENTINE A. JOHN, Stirrup-Welding and Lap-Setting Vault

104,852 P. M. HOLMES, Folding Chair

104,853 WM. T. JOHN, WILLIAM J. REAM, Harvesters

104,854 SALOMON KAUFMANN, Paper-Collar Box

104,855 JOHN F. KELLER, Machine for Distributing Fertilizers

104,856 JOSEPH KIETZ, Lantern-Guards

104,857 WM. H. KNIGHT, Mounting Vehicles to Wood

104,858 NATHAN LAWRENCE, Gate-Hinge and Slide-Bowl

104,859 G. W. LEE, JNO. A. LAFONTAINE, A. L. HARRIS, Railway Switch

104,860 PHILIPP FRIEDRICH LENNART, Water-Proof Sweat-Bands for Hats and Caps

104,861 HENRY LOEWENBERG, Compound for Printers' Use

104,862 O. B. MALLORY, Spring Carriage-Top

104,863 J. J. MARKI, Carpet-Fastening

104,864 EDWIN MAY, Combination of Piston Valve

104,865 WM. C. McCARTHY, Apparatus for Cleaning Cesspools, Vaults, Privies

104,866 DAVID McCURDY, Bridges

104,867 DAVID McCURDY, Bridge

104,868 DAVID McCURDY, Bridge

104,869 JOHN McINTYRE, Thread-Mills

104,870 THOMAS L. MELLEN, Machine for Cutting Veneers

104,871 THOMAS L. MELLEN, Machine for Cutting Veneers

104,872 EDGAR MURRAY, Wire-Cutter

104,873 CHARLES MOTIER NEU, Manufacture of Steel

104,874 FRANCIS M. OSBORN, Torque-Holder for Dentists

104,875 JOSIAH OOTHOUDT, Hitching-Post

104,876 ADDISON OVERBAUGH, Equalizing-Bars for Railway Car-Trucks

104,877 THOMAS B. PENICKS, JOSEPH REPPLY, Tunnelling

104,878 ADOLPH PFAFF, Machine for Cutting Fat, &c.

104,879 LUKE A. PLUMB, Composition Amalgam for Filling Teeth

104,880 ALVIN DAVIS PUFFER, Fastener

104,881 ALVIN DAVIS PUFFER, Soda-Fountains

104,882 DAVID A. REID, Scrogeum-Stripper

104,883 HIRAM A. REID, Harvester Attachment for Raking and Binding Grain

104,884 PETER W. REINSHAGEN, Shaft-Coupling

104,905. HENRY S. REYNOLDS. COAL-SCUTTLE.

104,906, WILLIAM C. BRODSHAEL. SCRUBBER AND CLEANER.

104,907, ISRAEL L. G. RICE. MACHINE FOR MAKING COMPOSITION BOX.

104,908, IRA A. SABIN. STEAM ROAD-VEHICLE.

104,909, DAVID SANDERS. STOVE-PIPE DAMPER.

104,910, WILLIAM EDMOND SCOTT. [illegible] FOR STOVES.

104,911, GEORGE W. SHADE. [illegible] HAT-FORMS.

104,912, NATHAN Y. SHAW. [illegible]

104,913, JOSEPH SHEARER. COTTON-SEED BOWING.

104,914, WILLIAM SKEILL. SCALE FOR LAYING OUT GIMP-PATTERNS.

104,915, D. P. SLANE. FEED-ATTACHMENT FOR THRASHING-MACHINES.

104,916, ELONZO SPRAGUE. [illegible] & BELT.

104,917, JOSEPH STEGER. CAR-BRAKE.

104,918, CORNELIUS ST. JOHN. LAMP-BRACKET.

104,919, THOS. M. TAYLOR. LIFTING-HANGERS FOR COTTON, &c.

104,920, ANDREW THALHOWER. DEVICE FOR OPERATING AWNINGS.

104,921, CHAUNCEY THOMAS. [illegible] AND AXLES.

104,922, L. E. TRUESDELL. IRON BRIDGES.

104,923, E. TURNER. [illegible]

104,924, SAMUEL VANSTONE. MEANS OF MANUFACTURING AXLE-BOXES.

104,925, SAMUEL VANSTONE. WROUGHT-IRON COUPLING-PIPE.

104,926, A. S. VOSSE. SCHOOL-DESK SEAT.

104,927, JAMES A. WILCOX. PIPE-WRENCH.

104,928, EMMED VOSS. RAILWAY CAR-[illegible]

104,929, JOHN G. WEAVER, Jr. MANUFACTURE OF CAST PIPE-BENDS.

104,930, GEORGE WEISMAN. PRESS-HEAD AND VALVE.

104,931, JAMES D. WHELPLEY. [illegible]-MACHINES.

104,932, ALEXANDER WHITE. [illegible] FOR GAS-STOVE.

104,933, NATHANIEL GILBERT WHITMORE. [illegible]

104,934, HENRY WILSON. [illegible] FOR STEAM-ENGINES.

104,935, ALFRED WOODWORTH, EDWIN W. WARREN. TOOL FOR SHAVING [illegible] POSTS.

104,936, A. B. TRIPLER. PRESERVING WOOD.

104,937, A. B. TRIPLER. PRESERVING WOOD FOR RAILROAD TIES AND FOR OTHER PURPOSES.

104,938, CHARLES H. C. CLAIR. [illegible]

4,945, JOSEPH C. DU BOIS. COTTON-GIN.

4,946, GODFREY AND R. LIGHTHALL. PREVENTING THE CORROSION OF IRON EXPOSED TO WATER OR DAMPNESS.

4,947, JOHN B. LYNDE. WATER-REGULATOR FOR BOILERS.

4,948, HENRY W. PUTNAM. APPARATUS FOR FILLING BOTTLES.

4,949, ASHER D. STRONG. VISIBLE APPARATUS.

4,950, DIRK ADRIAAN TER HORVEN. FERTILIZERS.

4,951, DIRK ADRIAAN TER HORVEN. MANUFACTURE OF FERTILIZERS.

4,952, WILLIAM H. TRIBBLE. PASSIVE.

4,953, J. VALE.

4,954, JOSEPH VALE.

4,955, JOHN AMICK. [illegible] FOR MOWING-MACHINES.

4,956, EDWARD H. ASHCROFT. NON-CONDUCTIVE VALVE-SEATS.

4,957, ELIAS BARTO. [illegible] PLASTER, AND COMPOSITION.

105,062, FRANKLIN FREY.
HAY-SPREADER.

105,063, GEORGE P. FULLER, Lansing.

105,064, ROBERT W. GEORGE.
PLOW.

105,065, ARTHUR GREENMAN.

105,066, NATHAN S. GREENWOOD.
GRADE AND SIDE-CUTTER.

105,067, HENRY G. HARDISON.
EDWARD H. HARDISON.
CORRUGATED BOOT AND SHOE FOR HORSES.

105,068, A. C. HALL.
A. C. RICHARDS.
PLOW-SHOVEL.

105,069, SAMUEL E. HALL.
COTTON-GIN.

105,070, GEORGE HILLS.

105,071, A. B. HARRIS.
APPARATUS FOR REGULATING THE DIRECTION OF MOTION OF MARINE-ENGINES.

105,072, J. G. HOADLEY, Strain-Engineer.

105,073, WILLIAM H. HART, Jr.
HIRAM H. THAYER.
KNOCK-DOWN BOLSTERS.

105,074, F. M. HOLMES.
FOLDING GRATE.

105,075, JOHN BRIGHTMAN HASKINS.
MEDICAL COMPOUND.

105,076, GEORGE HERTEL, Jr.
BRAM BURLEW.
CURB-BASKET.

105,077, C. P. HERRICK.
REVERSIBLE LASTS.

105,078, HENRY HILLIARD.
AWNING-FRAME.

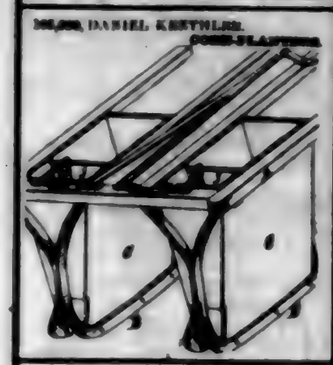
105,079, GEORGE HORTER.
RIDING-SADDLE.

105,080, GEORGE HORTER.
SADDLE FOR HARNESS.

105,081, RODNEY HUFF.
MACHINE FOR FULLING CLOTH.

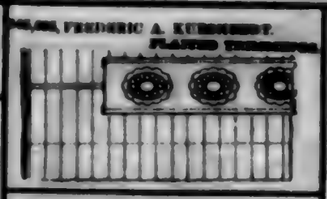
105,082, J. H. IRWIN, Lawrenceburg.

105,083, GUSTAV L. JABURG.
ADHESIVE COMPOUND FOR PREPARING PASTEBOARD.



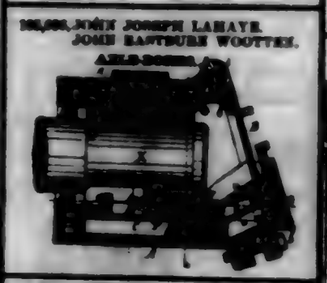
105,084, WM. S. JESSUP.
TRUSS-SADDLE GAP.

105,085, JOBES JOHNSON.
SLOTTER-BACK.

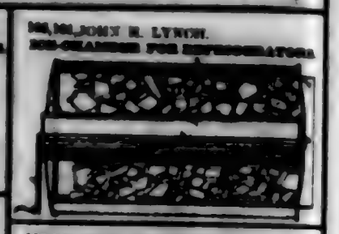


105,086, W. T. JOHNSTON.
ALLEN JOHNSTON.
EMBROIDERING ATTACHMENT FOR SEWING-MACHINES.

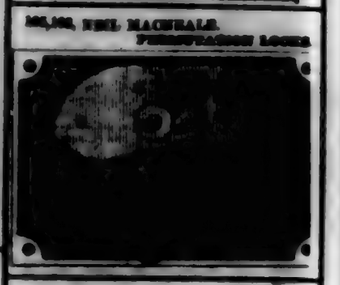
105,087, SOLOMON JONES.
E. TERFLOTH.
DEVICES FOR PROPELLING STREET-CARS.



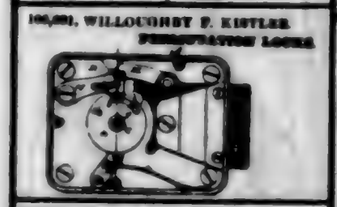
105,099, DANIEL KARSTEN.
CARL LIST.
GRINDING CHINA-CLAY TO
ESTATE HANDEL, BOSTON-OF PEARL.



105,100, DANIEL KESTNER.
CORN-PLANTER.



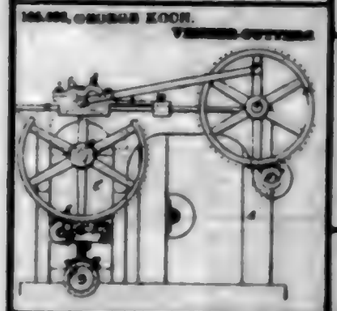
105,101, FREDERIC A. KUHNHEIT.
PLAITED TRIMMING.



105,102, JOHN F. LAHAYE.
JOHN BAPTISTE WOOTTEN.
AXLE-BOXES.

105,103, JOHN H. LYNCH.
ASH-CHAMBER FOR REFRIGERATORS.

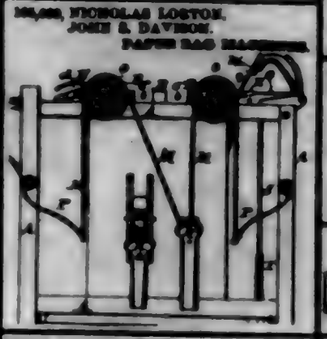
105,104, NEIL MACHEALE.
PERCUSSION LOCKS.



105,105, WILLOUGHBY P. KISTLER.
PERCUSSION LOCKS.

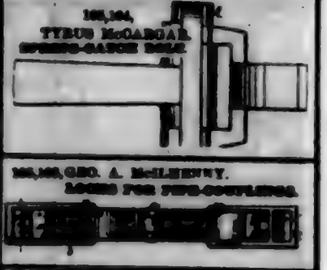
105,106, JAMES LEWIS.
TOP-CHEST FOR CARRIAGES.

105,107, J. T. LIGON.
PROPELLING APPARATUS.



105,108, CHARLES KOOB.
VENEER-CUTTING.

105,109, NICHOLAS LOSTON.
JOHN S. DAVISON.
PAPER BAG MACHINE.



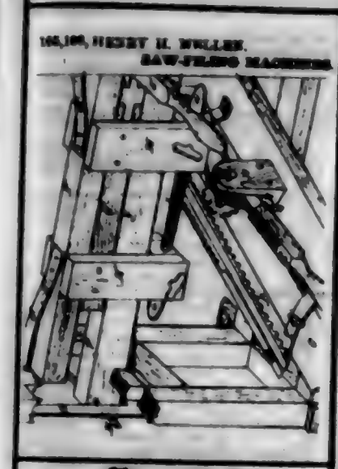
105,110, JULIUS KRAFFERT.
MAGAZINE FIRE-ARMS.

105,111, JAMES B. LUCE.
CIRCULAR-SAW MILLS.

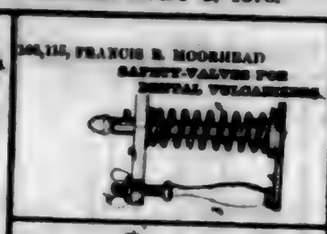
105,112, TYRUS McCARGAR.
SPRING-GAITER TOES.

105,113, GEO. A. McILHENNY.
LOCKS FOR FIRE-COUPLINGS.

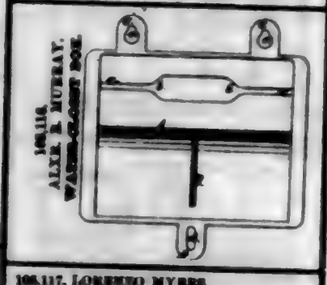
105,114, ALEX. McKENNA. ETHRAIM.
JOHN McKENNA.
THOMAS McKENNA.



105,115, WILLIAM JAMES MEHARY.
LOCOMOTIVE
SMOKE-STACKS.



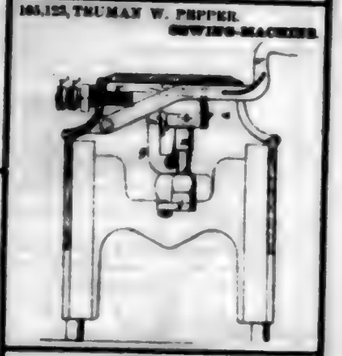
105,116, CHAS. P. KRAMER.
SPITTOON, RUG, AND FENCE.



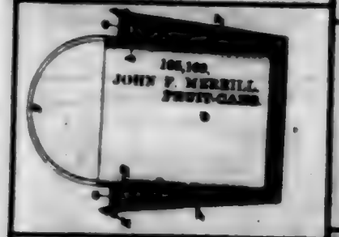
105,117, HENRY H. WELLES.
SAW-FILING MACHINES.

105,118, FRANCIS B. MOORHEAD.
SAFETY-VALVES FOR
STEAM VULCANIZERS.

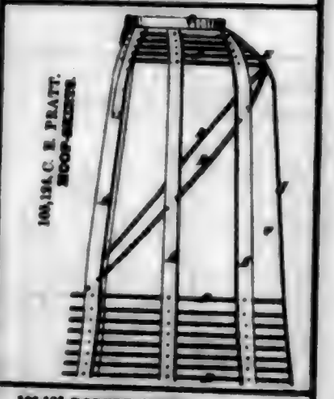
105,119, ALEX. B. MURRAY.
WATER-CLOSET SOIL.



105,120, JOHN D. OTSTOT.
CORNERED BEVEL, SQUARE RULE, &c.



105,121, WM. A. PARMELE.
ADJUSTABLE LIFTER
FOR WATER-WHEEL GATES.



105,122, TRUMAN W. PEPPER.
SEWING-MACHINE.

105,123, JOHN F. MERRILL.
FRUIT-CANS.

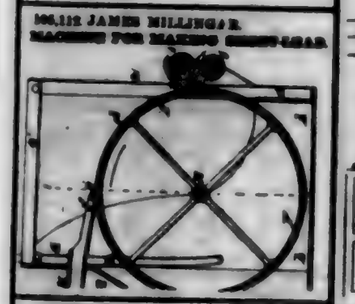
105,124, C. E. PRATT.
ROOF-SCREEN.

105,125, JOSHUA MERRILL.
SHAVE-HOOKS.

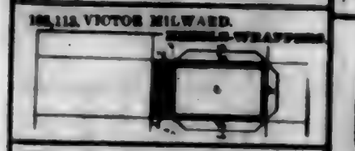
105,126, ROBERT PRICE.
PAPER FOR DOUBLE DRAFT CURVES.

105,127. CANCELED.

105,128, NATHANIEL PULLMAN.
EXTENSION LADDERS.



105,129, FRANKLIN ROBERTS.
VALVES FOR
REGULATING COMPRESSED AIR.

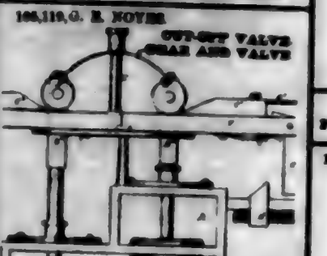


105,111, HENRY MEWIS, GUTTING
APPARATUS FOR HARVESTERS.

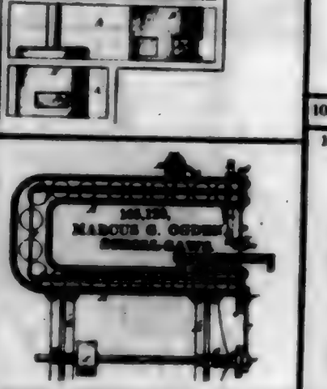
105,112, JAMES MILLINGAR.
MACHINE FOR MAKING CHEESE-CAKE.

105,113, VICTOR MILWARD.
SPINNING-WRAPPERS.

105,114, THOMAS E. MOORE.
PAPER-FILES.

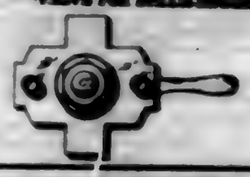


105,115, FRANCIS B. MOORHEAD.
SAFETY-VALVES FOR
STEAM VULCANIZERS.



105,116, JOHN F. MERRILL.
FRUIT-CANS.

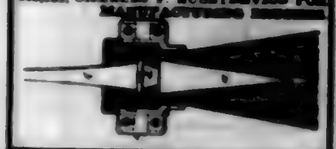
105,117, LORENZO MYERS.
DOUBLE HAT-BLOCKS.



105,118, F. NICHOLSON.
TABLETING-MACHINE FOR PERFUMERY.

105,119, G. E. NOYES.
CUT-OFF VALVE
STEAM AND VALVE

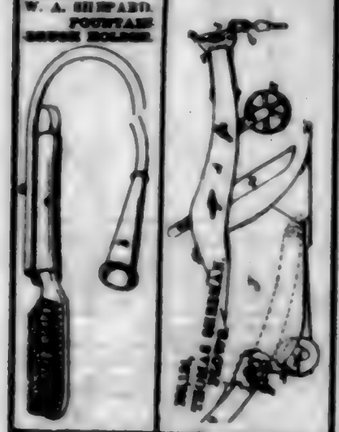
105,120,
MARCUS G. OGDEN.
SHINGLE-SAWS.



No. 139, THOMAS BODDA, Jr., REVERSING VALVE FOR STEAM-ENGINES.

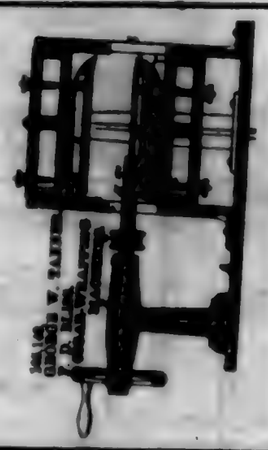
No. 140, CHARLES F. BUSBY, Jr., ENGINE.

No. 141, CHARLES F. BUSBY and DAVID W. FARNHAM, Jr., MANUFACTURING BOILERS.

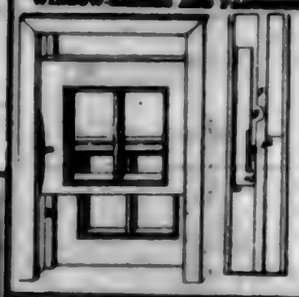


No. 142, CARL SCHAEFFER, MANUFACTURE OF ARTIFICIAL STONE.

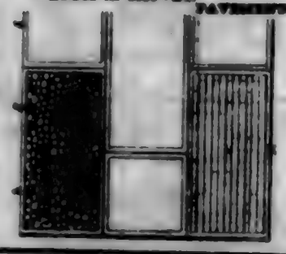
No. 143, J. SHAY, VAPOR-STEAMER.



No. 144, W. A. SHEPARD, FOUNTAIN-HOSE HOLDER.



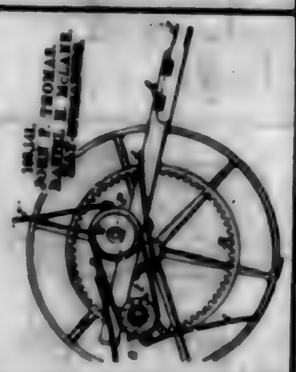
No. 145, EDGAR COLLINS, Jr., MACHINE FOR BENDING CURVES.



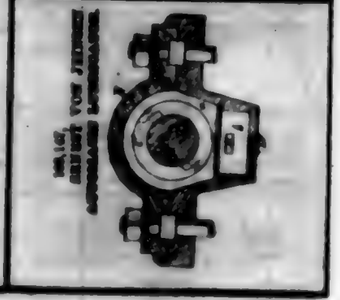
No. 146, ISAAC V. TATE, CHARLES A. BLAIR, and WILLIAM WALLACE, Jr., MACHINE FOR PLANING AND MATCHING BOARDS.

No. 147, ELIAS SMITH, WINDOW-SASHES AND FASTENINGS.

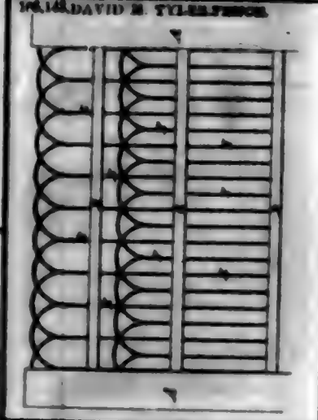
No. 148, ANDREW STEVENS and LOUIS A. GAUVET, PAVEMENTS.



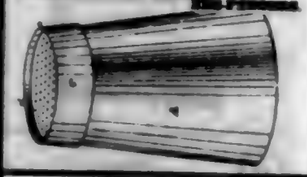
No. 149, OLE O. STORLE, EAVESTROUGH-GAUGE.



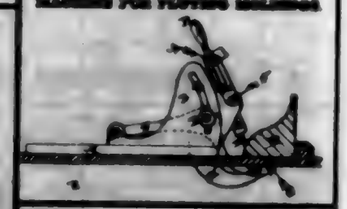
No. 150, DANIEL V. TATE, CHARLES A. BLAIR, and WILLIAM WALLACE, Jr., MACHINE FOR PLANING AND MATCHING BOARDS.



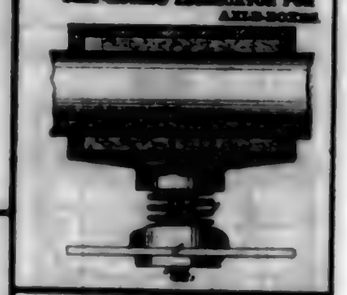
No. 151, ADOLF THOMAS and ADOLF E. SCHAAF, MACHINE FOR BENDING SHEET-METAL.



No. 152, CHARLES W. VAN HORNE, CONSTRUCTION OF CAR-ROOFS.



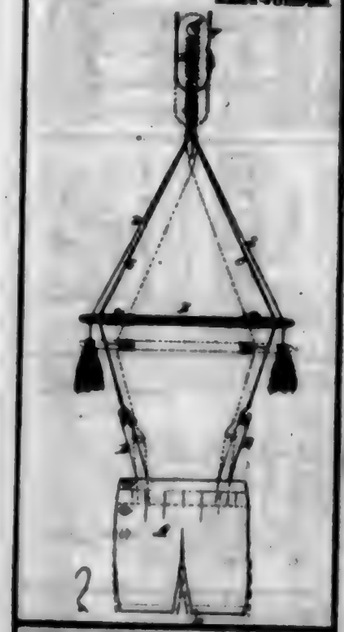
No. 153, DAVID M. TYLER, FENCE.



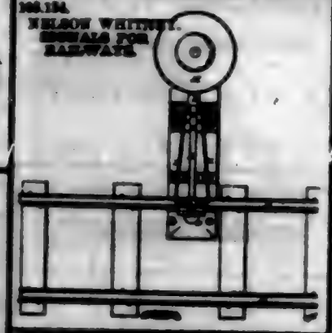
No. 154, C. G. VAN DEUSEN, BELL-FASTENING.

No. 155, RICHARD VAN RIPER, MACHINE FOR PLAITING BRAIDING.

No. 156, HENRY VON JEDLICKA, SELF-ADJUSTING LUBRICATOR FOR AXLE-BOXES.

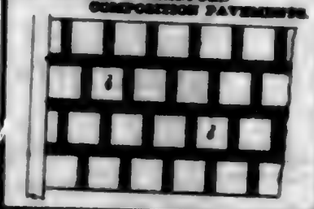


No. 157, HENRY VON JEDLICKA, ADJUSTABLE LUBRICATOR.



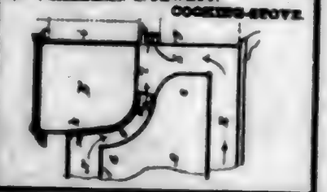
No. 158, EDWARD ROBERTS WARNER, JACOB WILLIAM WALTON, and ROBERT VINE, METAL-BACKED COMBS.

No. 159, ROBERT L. WARNER, HAIR-JUNIPER.

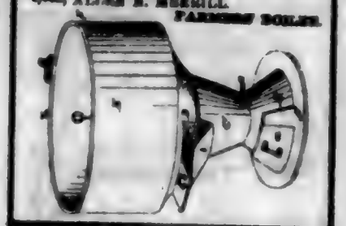


No. 160, NELSON WHITNEY, BRIDGE FOR RAILWAYS.

No. 161, DANIEL VIBBERT, STEAM-WATER REGULATOR.



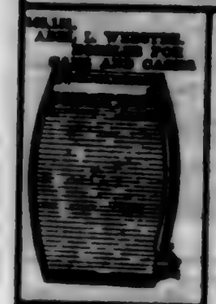
No. 162, HENRY L. CRAWFORD, COMPOSITION PAVEMENTS.



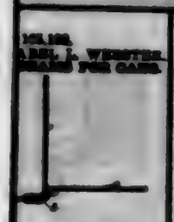
No. 163, FREDRICK FISCHBECK, TRAVELING-BASE.

No. 164, SHERMAN S. JEWETT, COOKING-STOVE.

No. 165, ALLEN H. MERRILL, FARMERS' BOILER.

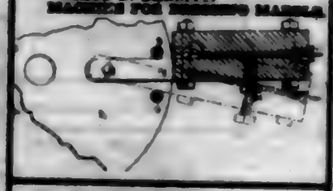


No. 166, GEO. H. PHILLIPS, COOKING-STOVE.



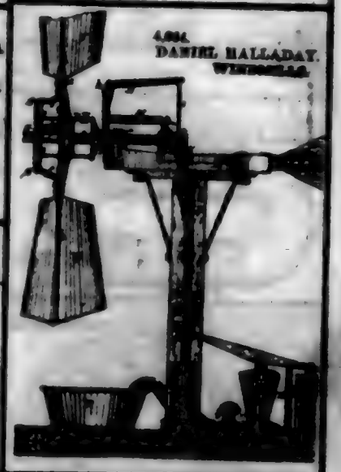
No. 167, ALBIN WARTH, TAPS FOR LIQUID PACKAGES.

No. 168, ABEL L. WEBSTER, MACHINE FOR SETTING AXLE AND GAUGE.



No. 169, ABEL L. WEBSTER, GAUGE FOR AXLE.

No. 170, A. T. WHITMORE, GAUGE.



No. 171, RALPH P. BAILEY, PLATT D. BARRITT, MACHINE FOR [illegible] MARBLE.

No. 172, ABRAHAM BUSTER, WM. D. LUDLOW, and MARY A. VAN ALEN, [illegible].

No. 173, DANIEL HALLADAY, WINDMILL.

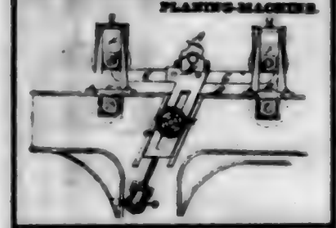
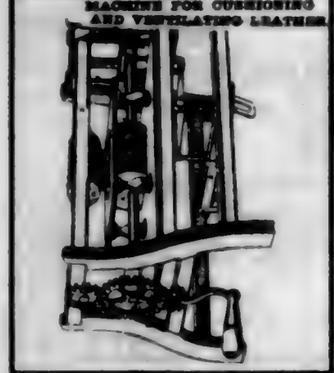
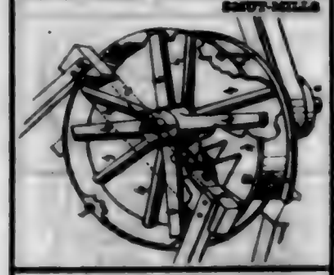
105,993. JAMES F. SPENCE.
APPARATUS FOR CARBURETING AIR.



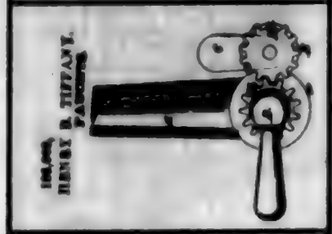
105,994. ANDREW J. STEPHENS.
[illegible]



105,995. PETER J. STOBE.
APPARATUS FOR CUTTING GRAIN UNDER WATER.

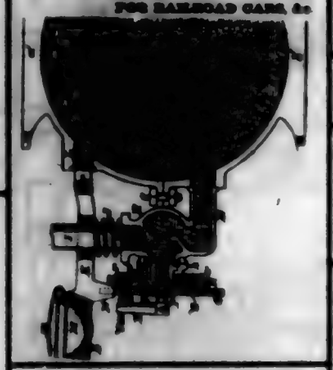


105,996. WILLIAM TEAL.
PLANING-MACHINE.



105,997. EDWIN THOMAS.
MACHINE FOR CUSHIONING AND VENTILATING LEATHER.

105,998. WILLIAM CARROLL THOMPSON.
SNUFF-MILLS.

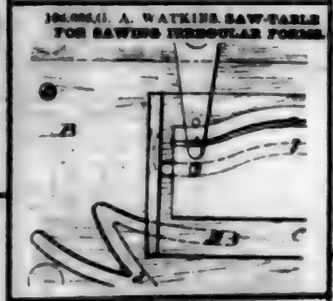


105,999. HENRY B. TIFFANY.
PASSENGER-[illegible]

106,000. FREDERICK H. TREVITHICK, Jr.
RAILWAY CAR-WHEEL.

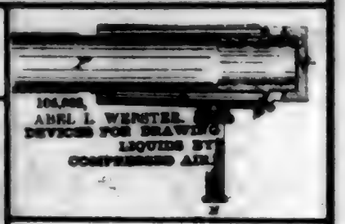
106,001. W. P. VAN DEUSEN.
WILLIAM C. DAVIS.
AUTOMATIC FIRE-EXTINGUISHER FOR RAILROAD CARS, &c.

106,002. JAMES L. VAN GORDER.
SULKY-PLOWS.

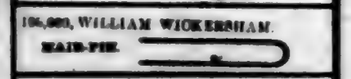


106,003. JACOB E. WAGNER.
COMBINED HARROW, CULTIVATOR, WHEELBARROW, AND SLED.

106,004. ROBERT H. WALKER.
CARRIAGE-SPRINGS.

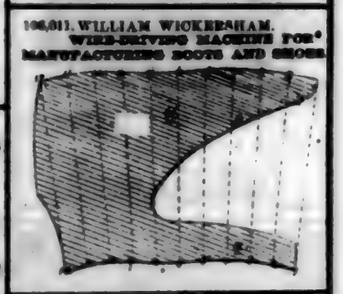


106,005. A. A. WATKINS.
SAW-TABLE FOR SAWING IRREGULAR FORMS.



106,006. ABEL L. WEBSTER.
FASTENER OR TAPE.

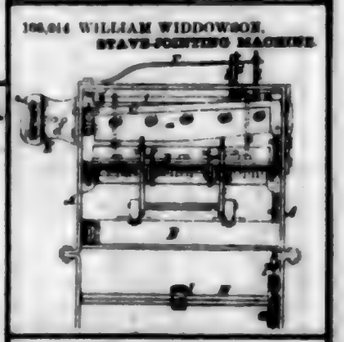
106,007. ABEL L. WEBSTER.
DEVICES FOR DRAWING LIQUIDS BY COMPRESSED AIR.



106,008. WILLIAM WICKERSHAM.
HAIR-PIN.

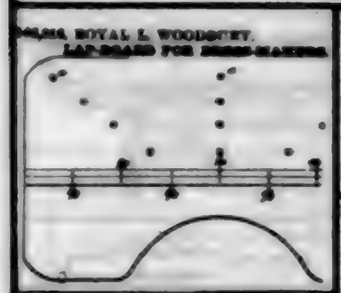
106,010. WILLIAM WICKERSHAM.
MEANS OF ATTACHING THE SOLES TO BOOTS AND SHOES.

106,011. WILLIAM WICKERSHAM.
WIRE-DRIVING MACHINE FOR MANUFACTURING BOOTS AND SHOES.

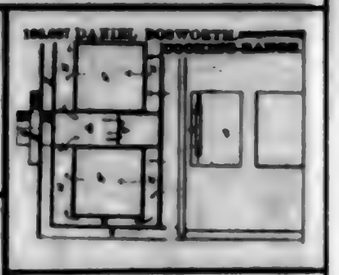


106,012. W. WICKERSHAM.
MANUFACTURE OF BOOTS AND SHOES.

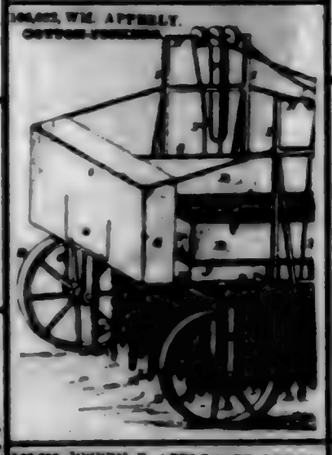
106,013.
WILLIAM WICKERSHAM.
BOOTS AND SHOES.

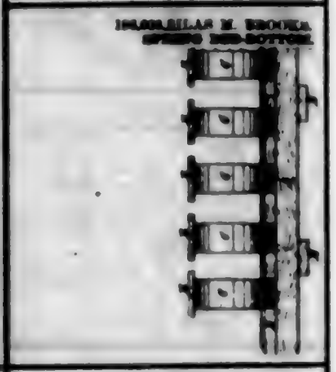


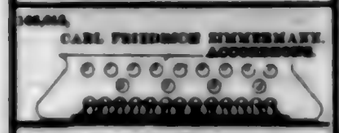
106,014. WILLIAM WIDDOWSON.
STAVE-JOINTING MACHINE.

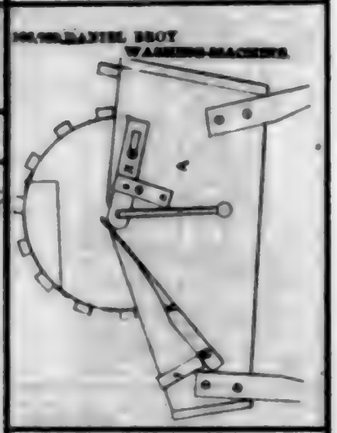


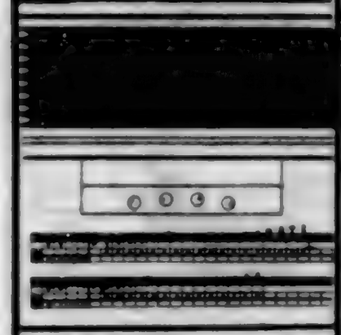
106,015. B. B. WOOD.
SPIKE-DRAWER.

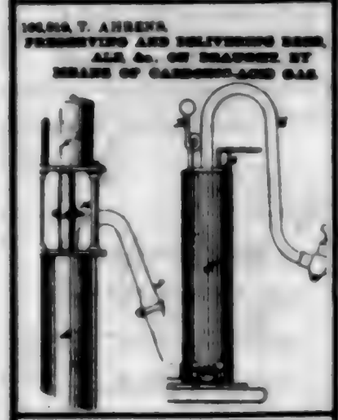


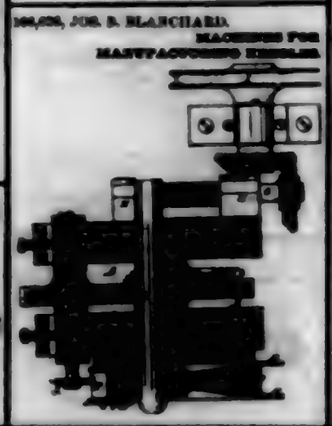


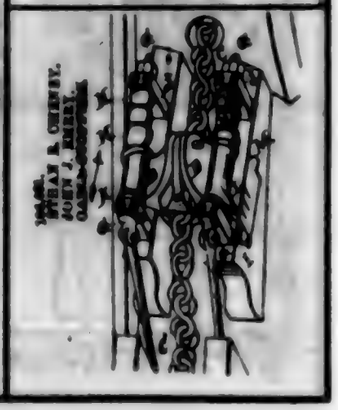


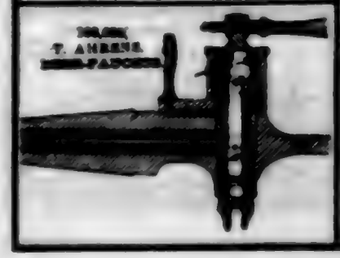


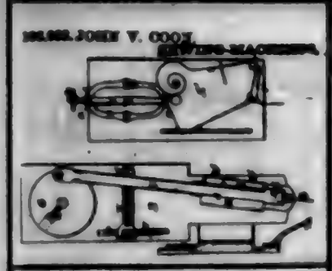


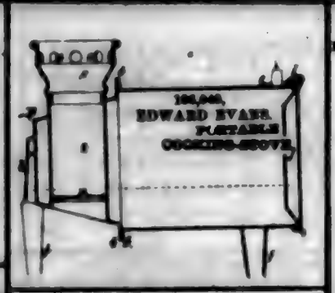


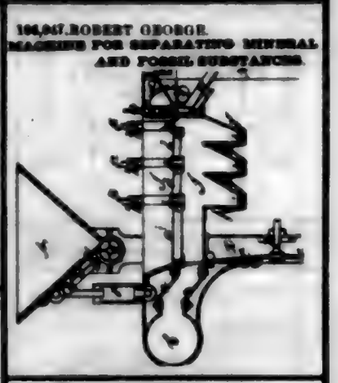


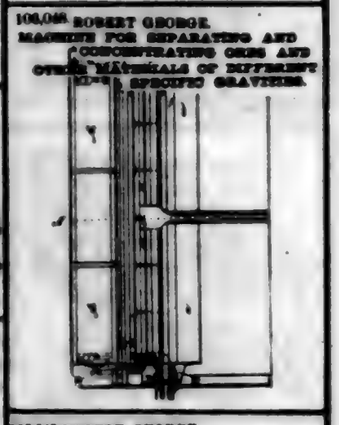


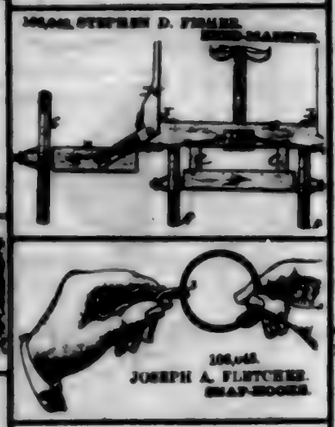


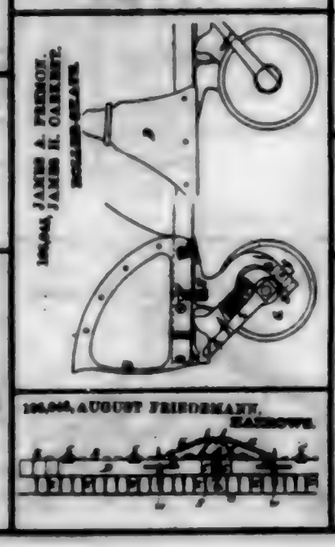


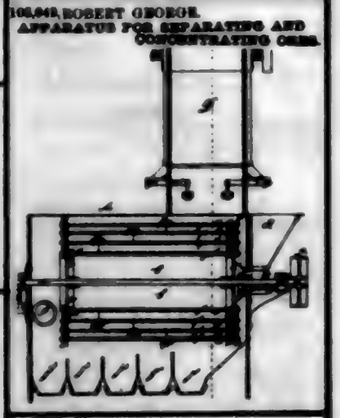


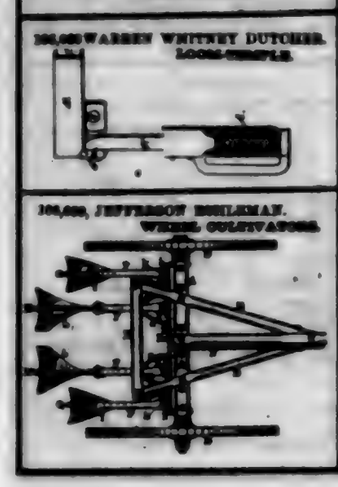


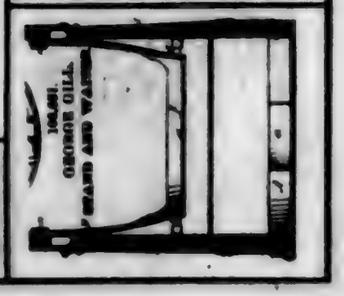


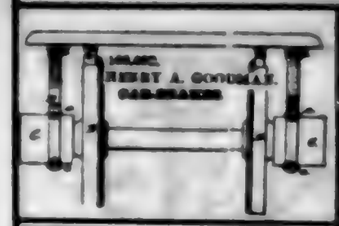


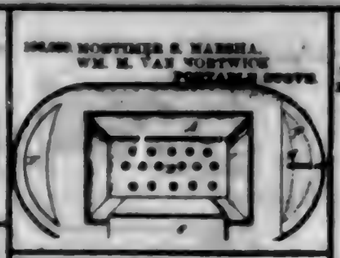


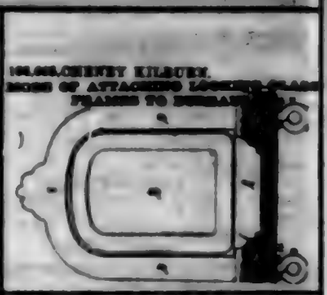




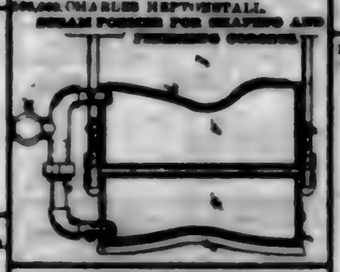




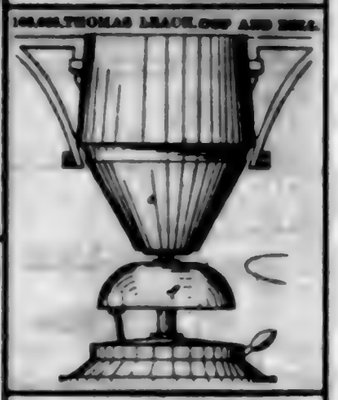




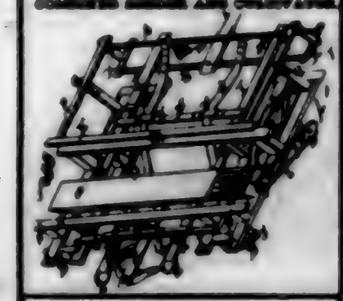
HENRY A. GOODALE.
CAR-SEATS.



MORTIMER S. MARSHA.
WM. M. VAN VORTWICK.
DOUBLE STOVE.

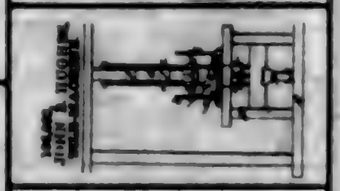


CHENEY KILBURY.
MODE OF ATTACHING LOOKING-GLASS FRAMES TO BEDSTEADS.



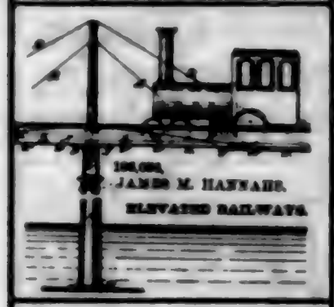
GERRAULT-GUICHARD.
LIME-KILNS.

CHARLES HEPPENSTALL.
STEAM POWERS FOR HEATING AND FORGING GOODS.

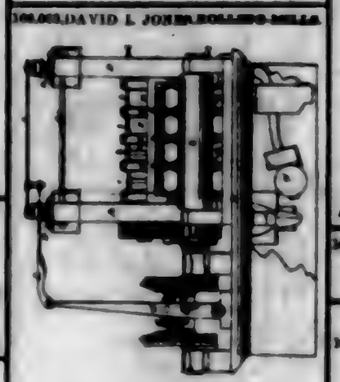


THOMAS LEACH.
CUP AND BELL.

HENRY HAINES.
CORDAGE-MACHINE AND CRAYON-APPARATUS.

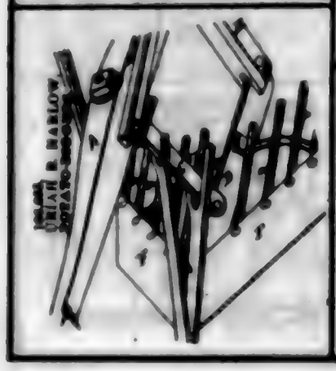


ROBERT A. ROSKING.
CHAIN-PUMPS.

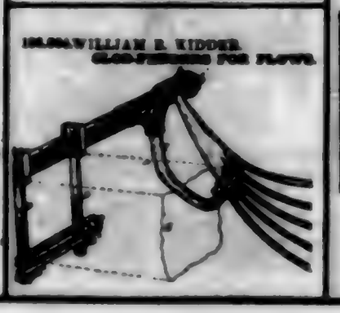


AUGUST LISCHE.
CORDAGE CHAIR AND STOP-LADDER.

JAMES M. HANNAH.
ELEVATED RAILWAYS.

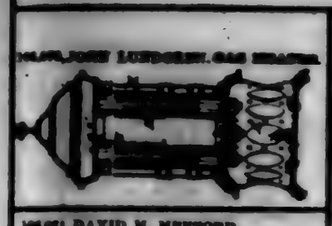


DAVID L. JOHNSON.
ROLLING-MILLS.

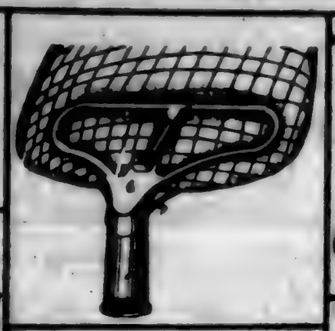


HENRY LOEWENBERG.
MANUFACTURE OF IMITATION BRAIDS, TRIMMINGS, &c.

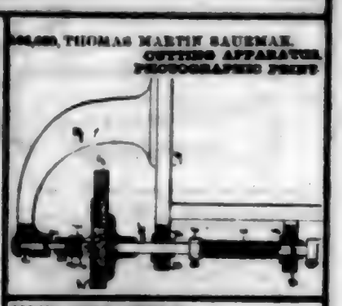
JOHN B. HARDS.
WILLIAM HODNETT.
CAR-COUPLING.



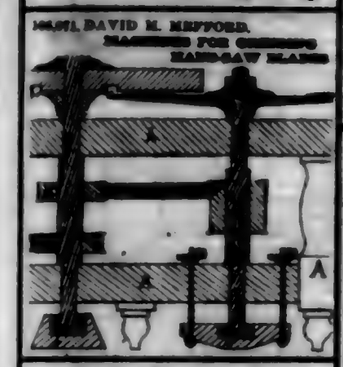
JOHN B. HARLOW.
SPRING-HOOK.



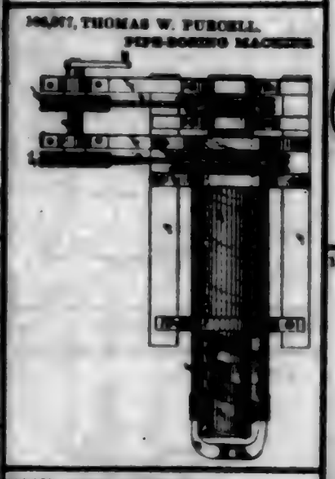
WILLIAM B. KIDDER.
CLOD-PULVERIZER FOR PLOWS.

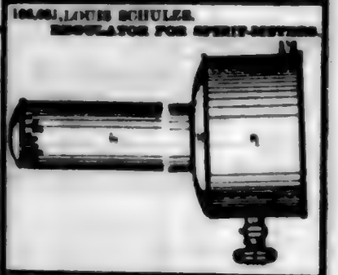


WILLIAM LORD.
SPRING FOR SEWING-MACHINES, &c.

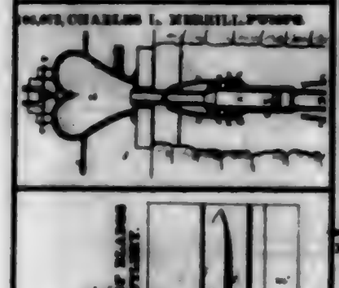


JOHN LUNDGREN.
GAS-REGULATOR.



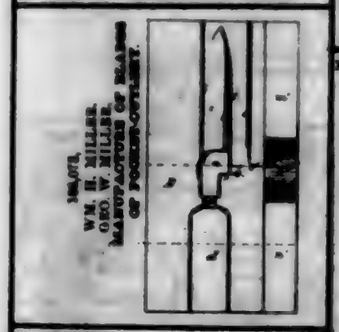


THOMAS MARTIN SAUERMAN.
CUTTING APPARATUS FOR PHOTOGRAPHIC PRINTS.

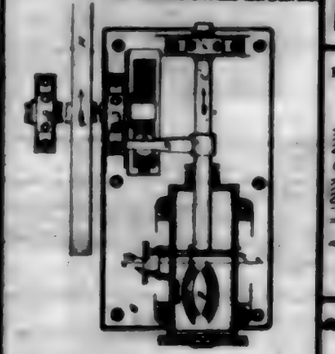


DAVID M. MEFFORD.
MACHINES FOR CUTTING HAND-SAW BLADES.

THOMAS W. PURCELL.
PIPE-BORING MACHINE.



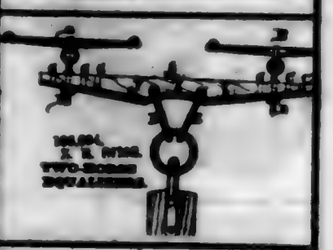
LOUIS SCHULZE.
REGULATOR FOR SPIRIT-METERS.



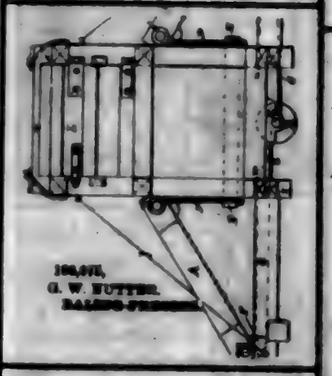
CHARLES L. MERRILL.
PUMPS.

NATHANIEL SHINER.
UMBRELLAS.

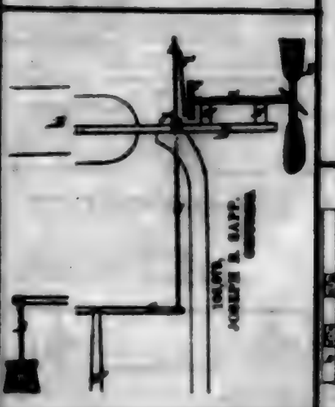
WM. H. MILLER.
GEO. W. MILLER.
MANUFACTURE OF SOCKETED CUTLERY.



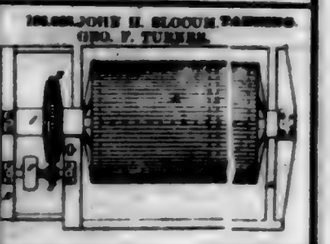
JAMES ROBERTSON.
MOTIVE-POWER ENGINES.



THOMAS D. SIMPSON.
G. B. GRAY.
J. H. ROMAIN.
BREECH-LOADING FIRE-ARMS.

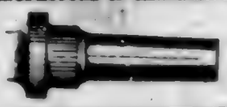


LAMB L. NEWMAN.
BED-BOTTOMS.

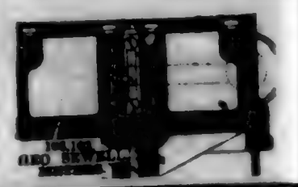


G. W. BUTTER.
BALING-PRESSES.

JOSEPH S. BAPP.

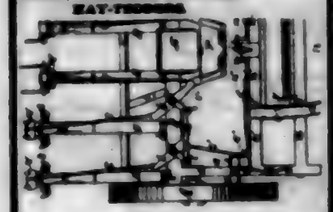


JOHN H. SLOCUM.
GEO. F. TURNER.

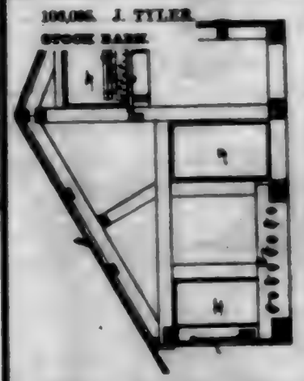


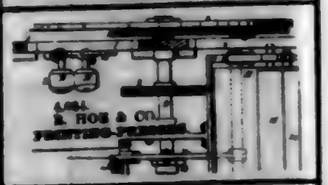
HENRY DIETRICH OELSEN.
COACH-CLEANING SPONGE.

105,094. ALFRED E. SMITH.
MANUFACTURE OF CARRIAGE-AXLES.



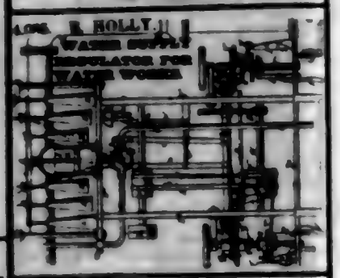
105,095, WM. H. TOPHAM.SPITTOON.



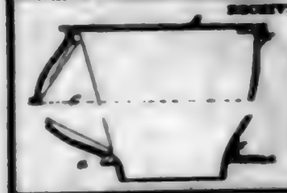


105,097, FRANKLIN E. SMITH.
HAY-TEDDER.

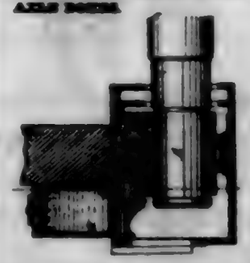
105,098, J. TYLER.
STOCK RACK.



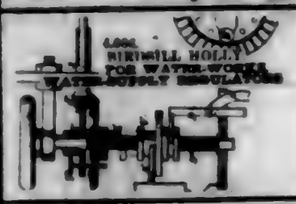
105,099, JOHN O. SMITH.
PORTABLE FENCE.



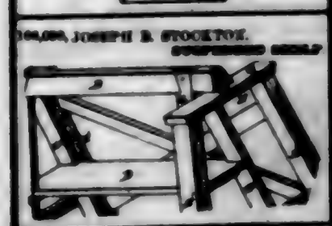
4,091. E. HOE & CO.
PRINTING-PRESSES.



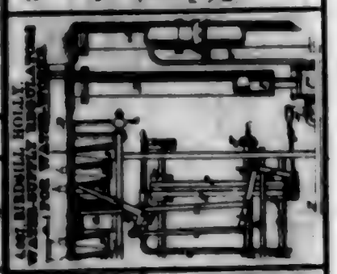
4,092. E. HOLLY.
WATER-SUPPLY REGULATOR FOR WATER-WORKS.



105,100. W. SMITH. WATER-CLOSET
APPARATUS.



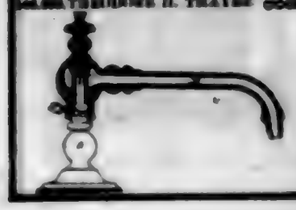
105,101. E. VON JEINSEN.
LUBRICATING-JOURNAL OF RAILWAY AXLE BOXES.



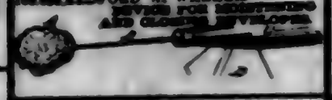
4,093. WIRTHILL HOLLY
FOR WATER-WORKS
WATER-SUPPLY REGULATOR.

105,102, JOSEPH B. STOCKTON.
SUSPENDED SHELF.

4,094. WIRTHILL HOLLY
FOR WATER-WORKS
WATER-SUPPLY REGULATOR.



105,103, JOHN STOWE.
APPARATUS FOR THE TREATMENT OF FRACTURES OF THE LOWER JAW.

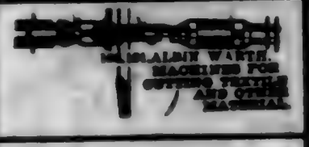


105,104, EDWIN STRAIN.
NEEDLE FOR SEWING-MACHINES.

105,105, THEODORE H. THAYER COOK.

105,106, REDFORD W. WALKER.
REVIVER FOR RESUSCITATING AND CLEANSING RIVULETS.

105,107. CANCELED.

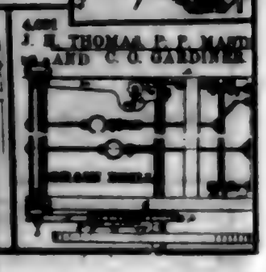


105,108, THO. S. WARREN.
ADJUSTABLE GAUGE.

105,109, ALBIN WARTH.
BRAKE.

105,110, ALBIN WARTH.
MACHINERY FOR SPINNING TEXTILE AND OTHER MATERIAL.

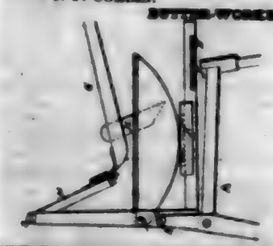
105,111, CHARLES H. WHANEY.
CORN-PLANTER.



4,095. JOHN N. LADD
PAPER-CUTTING MACHINE.

4,096. WIRTHILL HOLLY
FOR WATER-WORKS
WATER-SUPPLY REGULATOR.

4,097. J. H. THOMAS, P. P. MAST
AND C. C. GARDINER.



ILLUSTRATIONS OF PATENTS

ISSUED FROM

THE UNITED STATES PATENT OFFICE

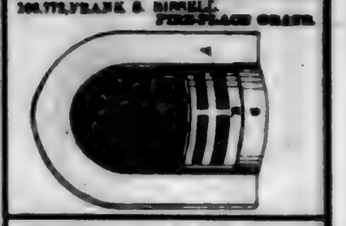
AUGUST 30, 1870.

106,769, JOHN S. ADAMS.
TRUSS-BRIDGE.

106,770, TIMOTHY BAILEY.
CORRUGATED HARROW AND ROLLER.

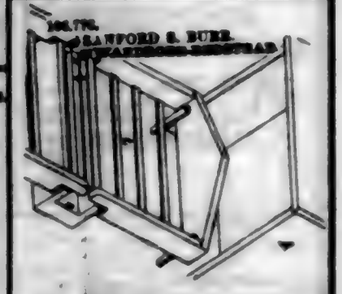


106,771, JOHN F. BACH.
OUTSIDE-CORD TIGHTENER.

106,771, GEO. C. BESTOR.
FIRE-PROOF RAILWAY-CARS.

106,772, FRANK S. BISSELL.
FIRE-PLACE GRATE.

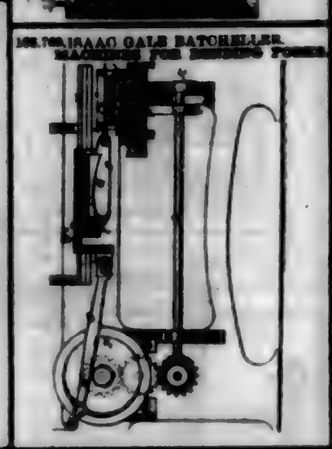
106,773, WILLIAM B. BLAKE.
TOOTH-PICKS.



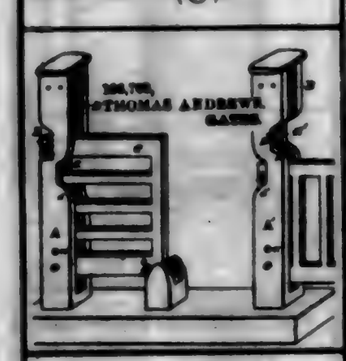
106,774, THEODOR BOSSHARD.
SHUTTLE-STOPPING DEVICE.

106,775, WILLIAM BOWDEN.
MACHINE FOR UPSETTING STEEL.

106,776,
SANFORD S. BURR.
WAGGON-BRIDGE.

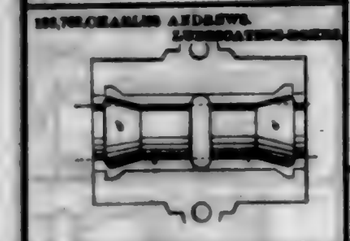


106,777, HENRY L. BUTLER.
THOS. A. CHRISTIE.
STEAM-ENGINE.



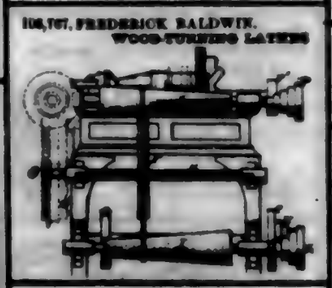
106,778, THEO. F. AUSTIN.
FIRE-PLACE.

106,779, ISAAC GALE BATCHELLER.
MACHINES FOR BENDING FELLOES.



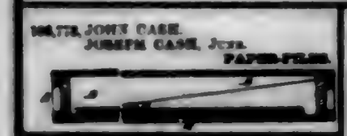
106,780,
THOMAS ANDREWS.
SAFE.

106,781, MORITZ ALTHAUS.
HOOK-EYE.

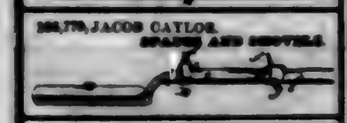


106,782, CHARLES ANDREWS.
LUBRICATING-CUP.

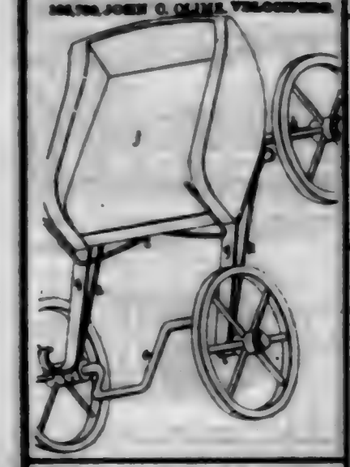
106,783, VINCENT M. BAKER.
WATER-WHEEL.



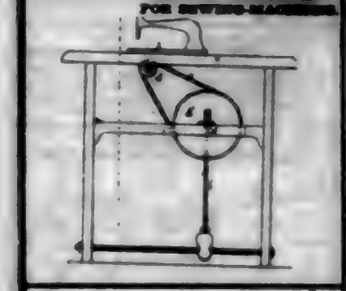
106,784, FREDERICK BALDWIN.
WOOD-TURNING LATHE.



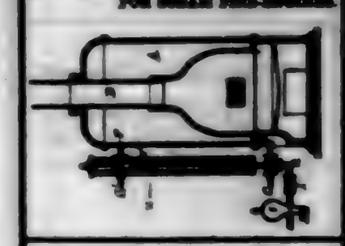
106,785, MARSHALL L. BASSETT.
DRAFT-COUPLING.



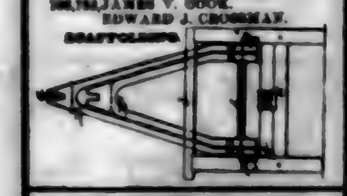
106,778, JOHN CASH.
JOSEPH CASH, Jun'r.
PAPER-FILER.



106,779, JACOB CAYLOR.
SHAFTS AND SHOVELS.

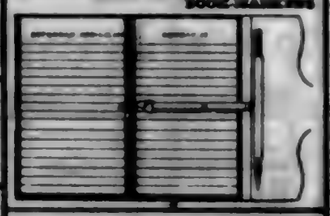


106,780, JOHN G. CLIME, Ph.-GOTHEB.



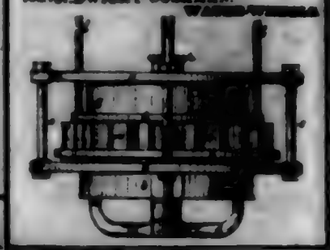
106,781, JOHN COCHRANE, Jr.
DRIVING MECHANISM FOR SEWING-MACHINES.

106,782, HENRY V. COLEMAN.
CIRCULATING WATER-HEATING FOR STEAM FIRE-ENGINES.



106,783, JAMES V. COOK.
EDWARD J. CROSSMAN.
DRAFT-CLIPPER.

106,784, G. F. CORNELIUS.
MANUFACTURE OF PAINT AND VARNISH.

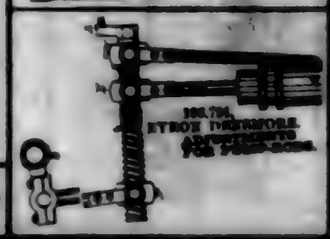


106,785, SAMUEL COTTLE.
DOOR-MAT.

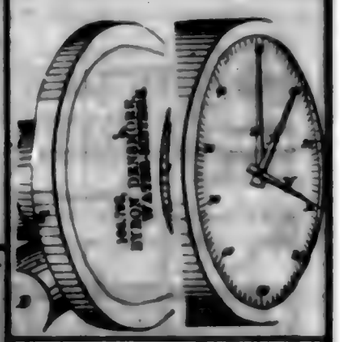
106,786, JOHN DIXIE CURRY, RAIL-ROAD CAR-BRAKE AND VENTILATOR.

106,787, DWIGHT CUSHMAN.
WATER-WHEEL.

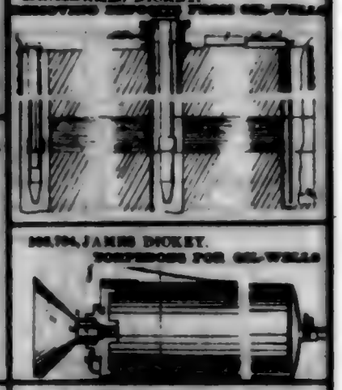
106,788, J. A. DAVIS.
GATHERING DEVICE FOR SEWING MACHINES.



106,789, JOS. A. DAVIS.
GATHERING ATTACHMENT FOR SEWING-MACHINES.



106,790, CLAYTON DENE.
SPOOLING SEWING-CHAIR.

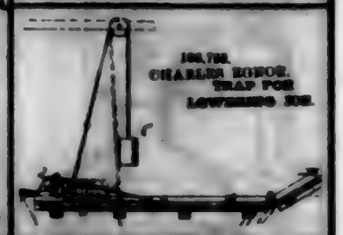


106,791, BYRON DENSMORE.
ADJUSTMENTS FOR PIPE-DIES.

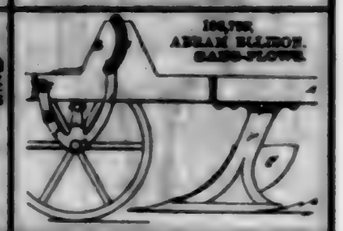
106,792, JAMES DICKEY.
IMPROVED SUSPENDER FOR OIL-WELLS.

106,793, JAMES DICKEY.
SUSPENDER FOR OIL-WELLS.

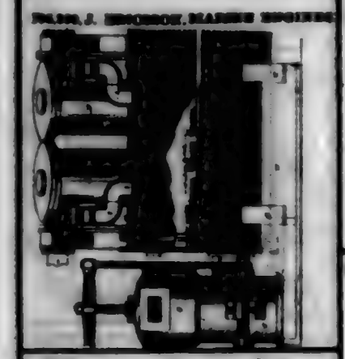
106,794, MORRIS W. DILLINGHAM.
BRUSH-CHARTERER.



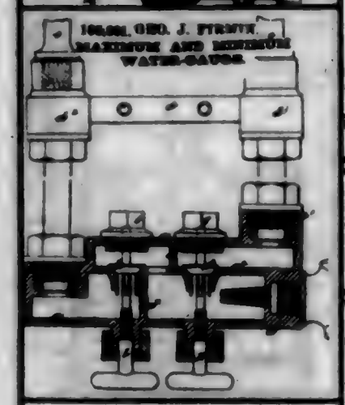
106,795, GEORGE L. DULANEY.
TENSION DEVICE FOR SEWING-MACHINES.



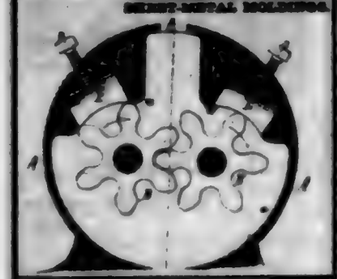
106,796, WARREN W. DUTCHER.
ROLLING-PINPLES FOR LOOMS.



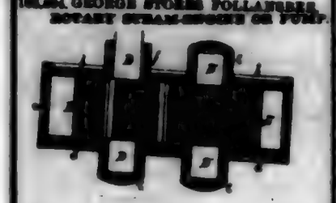
106,797,
CHARLES EDSON.
TRAP FOR LOWERING ROD.



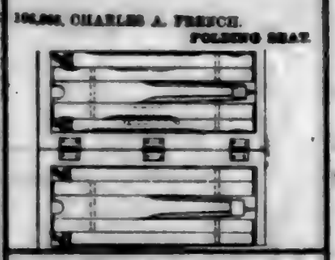
106,798,
ABRAM ELLISON.
GANG-PLOWS.



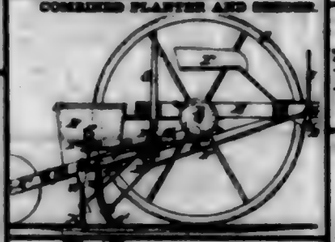
106,800, J. HENDRICK, MARINE ENGINES.



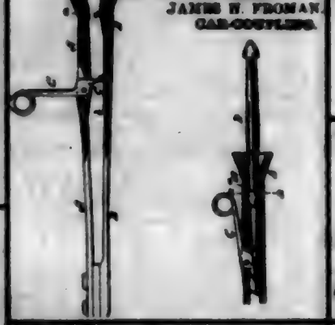
106,801, GEO. J. FINNEY.
MAXIMUM AND MINIMUM WATER-GAUGE.



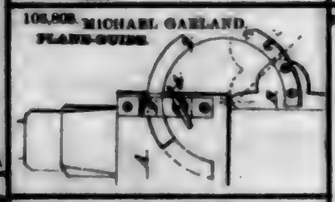
106,802, HENRY G. FISKE.
MACHINE FOR FORMING SHEET-METAL MOLDINGS.



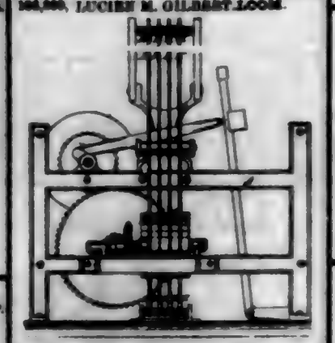
106,803, GEORGE STORRS FOLLANSBEE.
ROTARY STEAM-ENGINE OR PUMP.



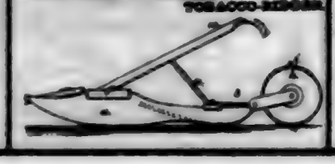
106,804, CHARLES A. FRENCH.
FOLDING SEAT.



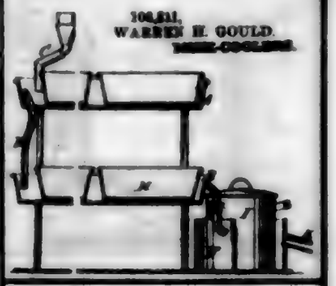
106,805, WILLIAM B. FRICK.
COMBINED PLANTER AND [illegible].



106,807,
JAMES H. FROMAN.
CAR-COUPLING.

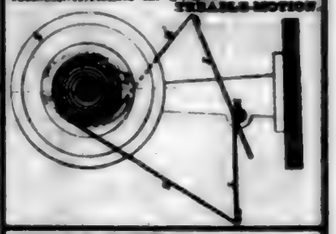


106,808, MICHAEL GARLAND.
PLANE-GUIDE.

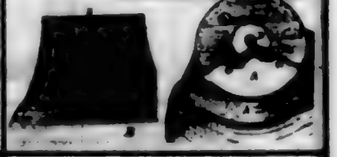


106,809, LUCIEN M. GILBERT, LOOM.

106,810, OZIAS W. GOSLEE.
TOBACCO-RINSER.

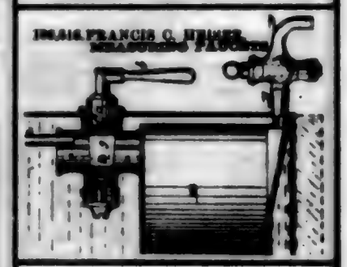


106,811,
WARREN H. GOULD.
[illegible]-COOLING.

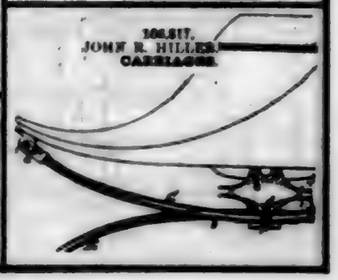


106,812, DR. JOHN A. GRISWOLD.
FIRE-ESCAPE.

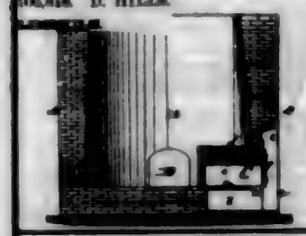
106,813, CHARLES M. GUESS.
TREADLE-MOTION.



106,814, H. F. HARRIS,
G. F. PINNEY
BOOT AND SHOE-HEELS.

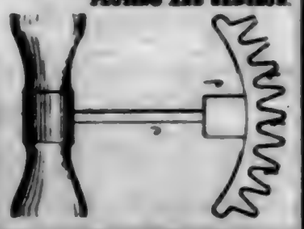


106,815, WILLIAM HART.
ESCAPEMENTS FOR WATCHES &c.



106,816, FRANCIS C. HEISER.
REGULATING PIVOT.

106,817,
JOHN R. HILLER.
CARRIAGE.

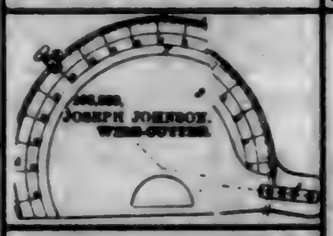


106,816. D. HILLS.

106,817. GEORGE M. HUNTLY, Easton, Pa.

106,818. CHARLES HYATT.
FLUSHING AND SAD-IRON.

106,819. CONSTANTINE HINONES.
COVERING METAL ARTICLES WITH INDIA RUBBER.



106,820. GEO. M. HOPKINS,
JOHN A. STRAIGHT.
LOW-WATER INDICATOR.

106,821. GEO. M. HOPKINS,
JOHN A. STRAIGHT.
LOW-WATER ALARM INDICATOR.

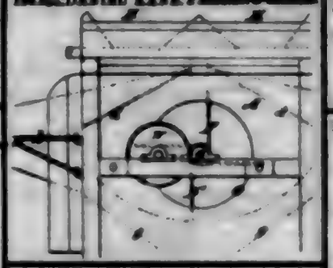
106,822. JOSEPH JOHNSON.
WIRE-CUTTER.

106,823. FRED'K W. JUDD.
GEORGE M. HUBBARD.

106,824. HIRAM HOPKINS.
HOOSE-CROUPE SUPPOSITORIA.

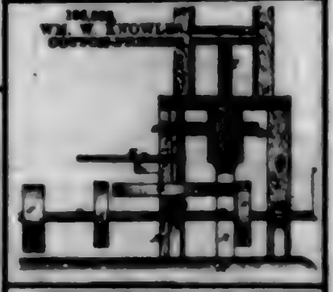
106,825. JAMES S. HOWARD.
COLORING GUN-BARRELS.

106,826. LEWIS HOWARD.
CHARLES HOWARD.
PROPELLER.



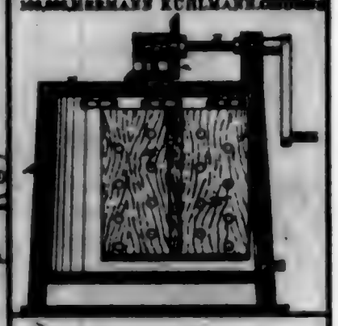
106,827. SEYMOUR HUGHES. ROOFING.

106,828. ELI HUNT. PORTABLE FENCE.



106,829. DANIEL KANE. PASSING-BELLS.

106,830. JOHN STAFFORD KELLY, U. S. A.
PAVEMENTS.



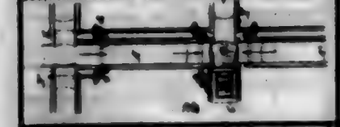
106,831. WM. W. KNOWLES.

106,832. JOSEPH KRAFT. MACHINERY FOR PRINTING OIL-CLOTH, &c.

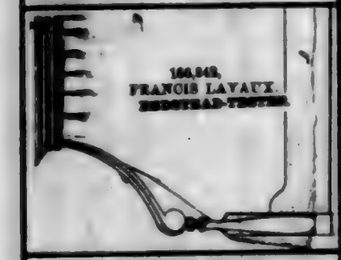
106,833. HERMANN KUHLMANN, Cincinnati, O.

106,834. JACOB M. LANDES, Cincinnati, O.
CONCRETE FLOW AND OBSERVATOR.

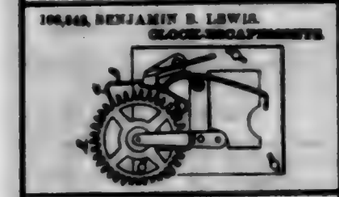
106,835. JOHN LANE.
MANUFACTURE OF SLOW-BURNING.



106,836. ALCIDE LANDRY.
SUGAR-CANE SCRAPER.



106,840. NATHAN LAWRENCE.
CALL-BELL AND VENDER.



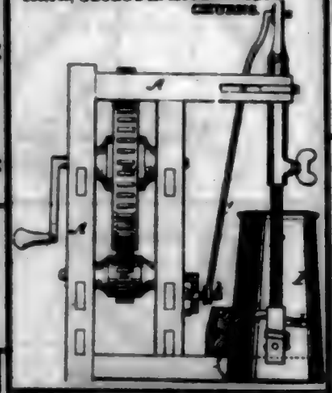
106,841. ALFRED LAWTON. ELEVATORS.

106,842.
FRANCIS LAVAUX.
BEDSTEAD-TENTER.

106,843. BENJAMIN B. LEWIS.
CLOCK-ESCAPEMENT.

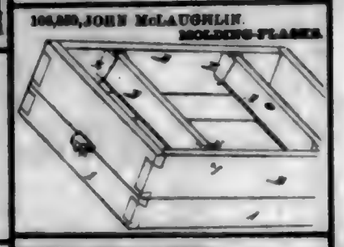
106,844. JAMES E. HALL.
USE FOR DYEING AND PRINTING, AND WATER-POWER FABRICS.

106,845. JOHN MARCHBANK.
CONSTRUCTION OF REVOLVER.



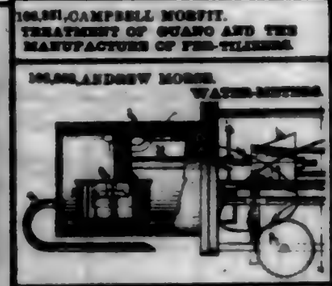
106,846. ANN AUGUSTA MABEL.
MEDICAL COMPOUND.

106,847. ANTHONY S. MARTIN.
AXLE-BOX FOR RAILWAY CAR-BRAKE.

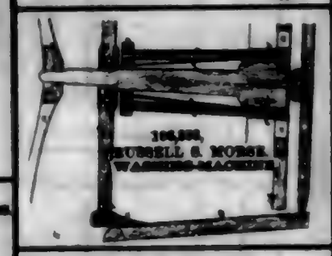


106,848. GEORGE H. McGLOTHLEN.
CHURN.

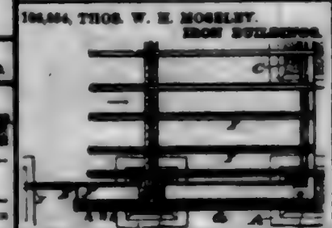
106,849. B. L. McGOWAN, Cincinnati, O.
LOCK-NUTS AND SPLICE-BARS.



106,850. JOHN McLAUGHLIN.
MOULDING-PLANER.

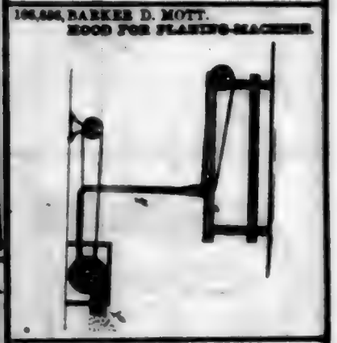


106,851. CAMPBELL MORFIT.
TREATMENT OF GUANO AND THE MANUFACTURE OF PER-TILIZERS.

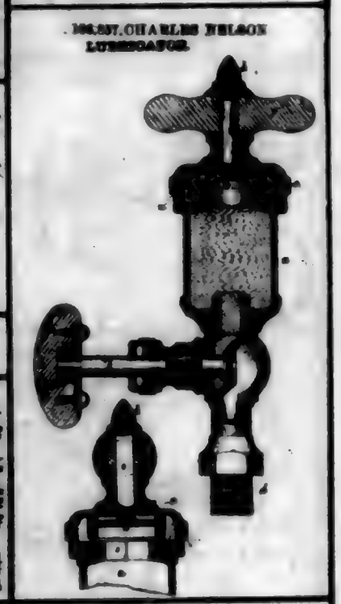


106,852. ANDREW MORSE.
WATER-METER.

106,853. RUSSELL G. MORSE.
WASHING-MACHINE.



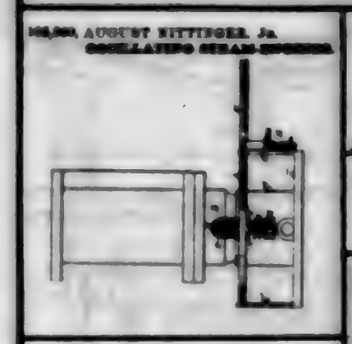
106,854. THOS. W. H. MOSELEY.
IRON BUILDING.



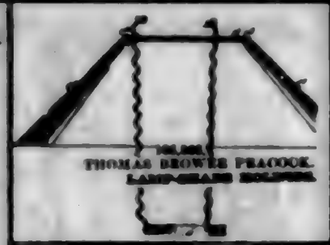
106,855.
THOS. W. H. MOSELEY.
BRIDGES.

106,856. BARKER D. MOTT.
HOOD FOR PLANING-MACHINE.

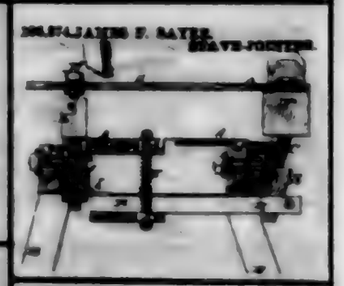
106,857. CHARLES NELSON
LUBRICATOR.

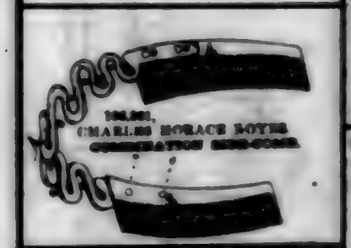


106,858.
ABNER NEWTON.
ANIMAL TRAP.



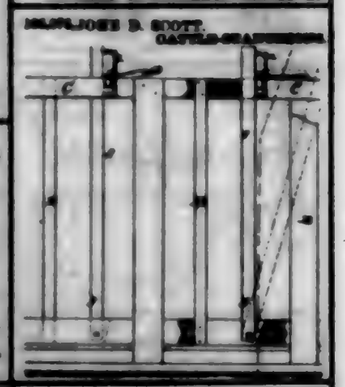
106,859. HENRY NICHOLLS.
COTTON-SEED PLANTER.



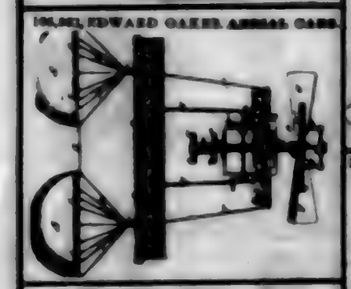


AUGUST KITTINGER, Jr.
OSCILLATING STEAM-ENGINE.

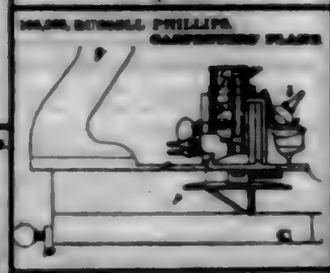
THOMAS BROWER PEACOCK.
LAND-SEARS BOLSTERS.



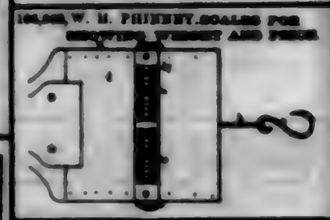
JAMES F. SAYER.
HEAVE-JOISTER.



CHARLES HORACE BOYER.
CONDENSATION SIDE-CORKS.



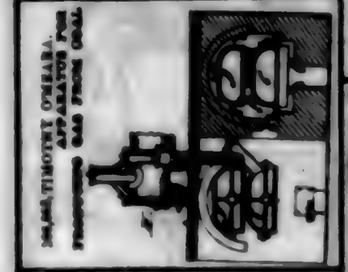
ABRAHAM L. PENNOCK.
OPERATING VALVES.



JOHN B. SCOTT.
CATTLE-GUARD FENCE.

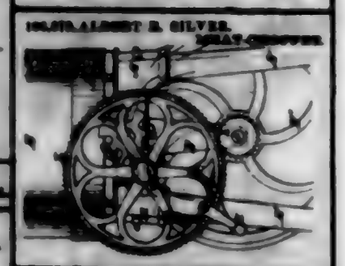
EDWARD OAKES, Assignor.
ANIMAL GAME.

RUSSELL PHILLIPS.
CARPET-SWEEPING PLANT.

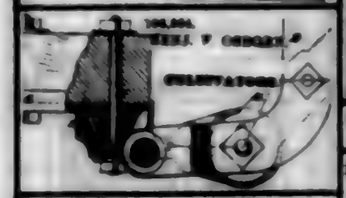


W. H. PHINNEY.
SCALING FOR WEIGHING CURRENT AND PRESS.

THOMAS C. SCOTTRON.
SIDNEY PLUMMER.
CORRUGATING FOR SHEATHING VESSELS, &c.

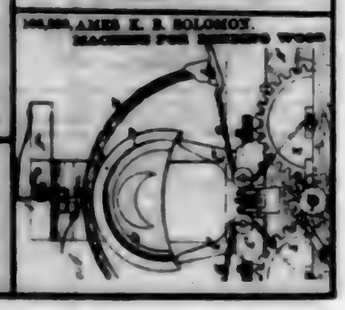


ROBERT C. GIBBONS.
LOCK-MECHANISM.

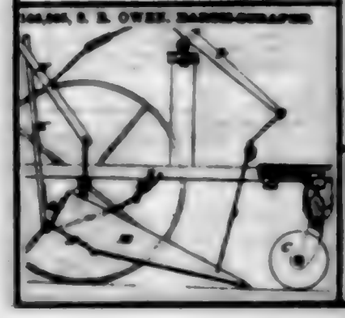


TIMOTHY O'NEILL, Assignor.
AIR-ADAPTOR FOR GAS FROM COAL.

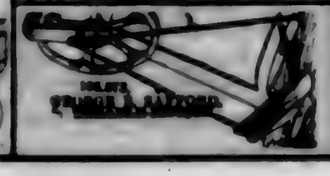
JAMES PEENE.
WASHING-MACHINE.



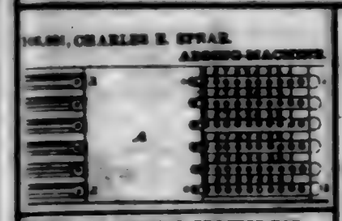
ALBERT B. GILVER.
HEAT-CONDUCTOR.



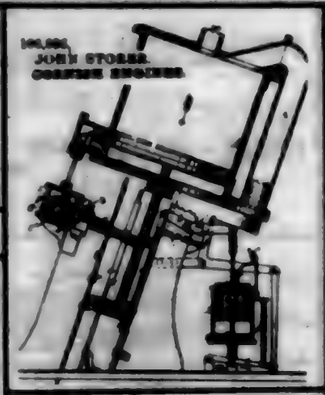
HENRY V. OSBORN.
CULTIVATORS.



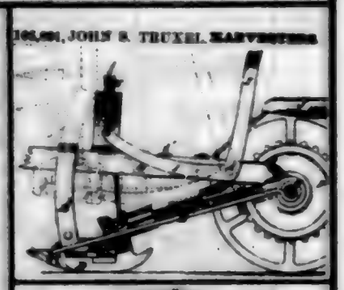
HENRY W. RUDOLF.
FENCING FOR GARDEN-PURPOSES.



AMOS K. B. SOLOMON.
MACHINE FOR SAWING WOOD.

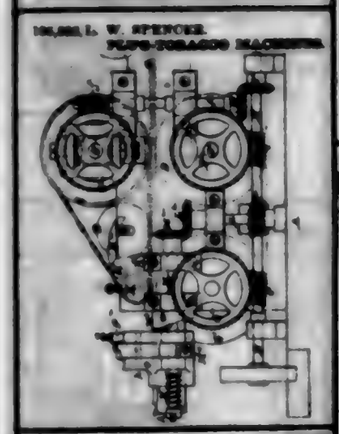


E. S. OWEN.
HARROW-ATTACHMENT.

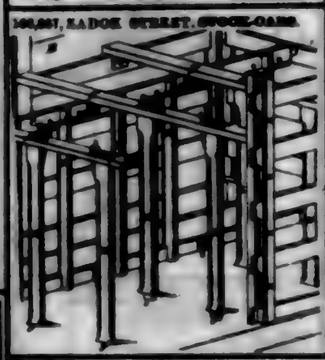


THOMAS L. SAYCORD.

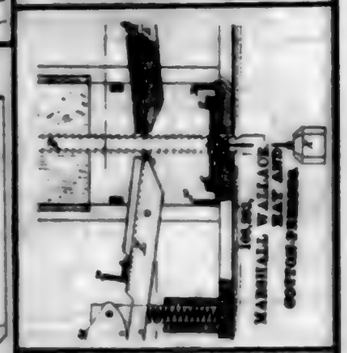
CHARLES E. STRAT.
ARMING-MACHINE.



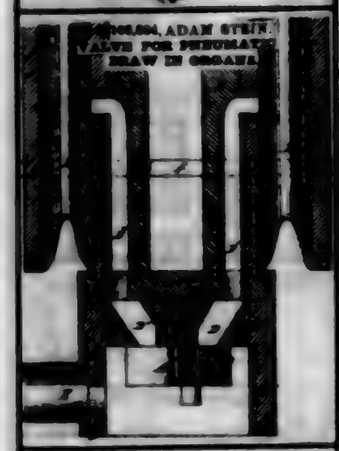
JOHN STOBER.
COOKING STOVES.



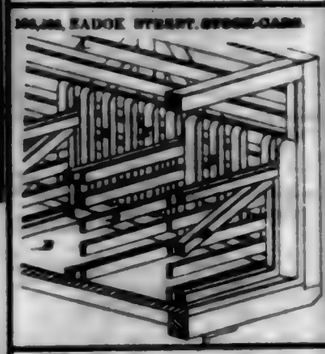
JOHN S. TRUXEL.
HARVESTER.



L. W. SPENCER.
MACHINE FOR MANUFACTURING PLUG TOBACCO.

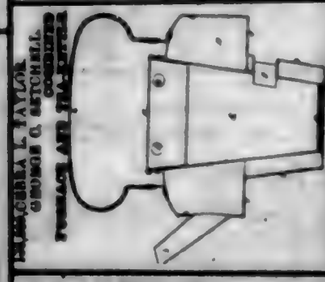


L. W. SPENCER.
PLUG-TOBACCO MACHINE.



RADOK STREET.
STOCK-GAGE.

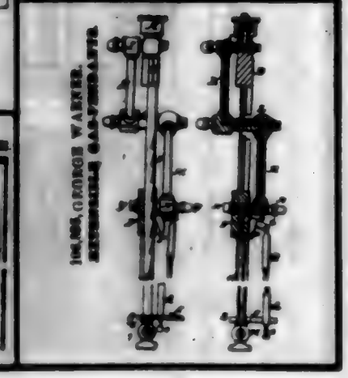
CHARLES VOGEL.
COMPRESSED-AIR FORCE-PUMP.



ADAM STEIN.
VALVE FOR PNEUMATIC DRAW IN GROANS.

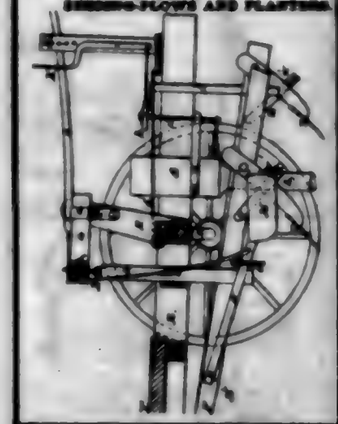
RADOK STREET.
STOCK-GAGE.

AUGUSTUS M. STOUT.
MACHINE FOR SAWING WOOD AND SHEARING WAX.

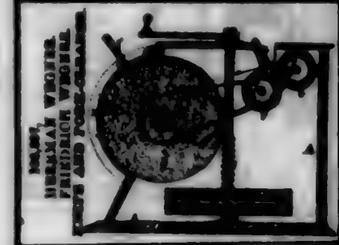


LAWRENCE L. TAYLOR.
GEORGE G. MITCHELL.
CONSTRUCTION OF PNEUMATIC AIR-BRAKES.

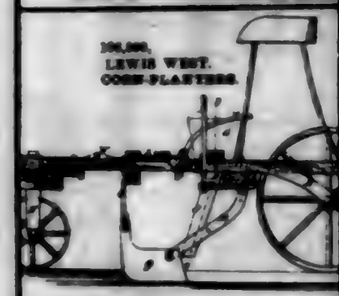
C. M. THURLOW.
CHURN-DASHER.



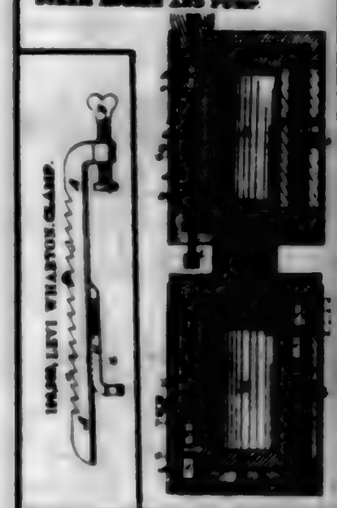
DANIEL B. WARE.



GEORGE WARNER.
REGULATING GAS-BURNERS.

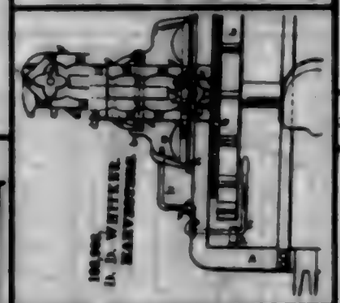


106,906, JAMES B. WATT.
JOHN C. WATT.
SEEDING-PLOWS AND PLANTERS.

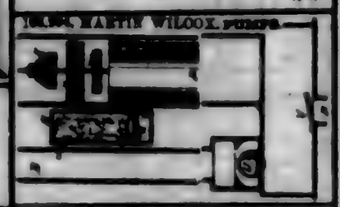


106,907, HERMAN VROTH.
FRIEDRICH WROTH.
HOPS AND POLE-GRAPPLE.

106,908, LEWIS WEST.
CORN-PLANTERS.



106,909, G. WESTINGHOUSE, Jr.
STEAM ENGINE AND PUMP.



106,910, LEVI THAYER, CLAMP.

106,911, J. D. WHITNEY, HARVESTER.

106,912, MARTIN WILCOX, PUMPS.

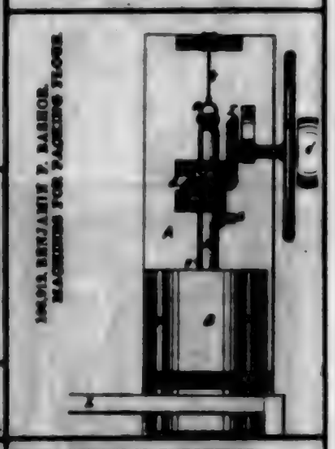
106,913, WILLIAM M. WILSON, and DALLAS S. DENTON, MEDICAL COMPOUNDS.

106,914, ALBERT WIEDEKE, PRESSING FABRICS.

106,915, GEORGE B. WOOD, APPARATUS FOR TREATING COAL TARS.

106,916, STEPHEN WOODARD, HARROW.
ALBERT WOODARD.

106,917, CHARLES E. TAGUE, MACHINE FOR BORING AXLE AND HUBS.

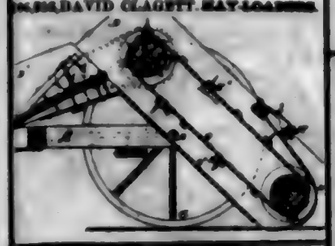


106,918, HENRY J. ALVORD, WOOD-SAWING MACHINE.

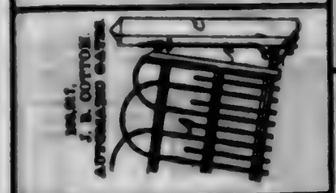
106,919, DANIEL ARNDT, CHIMNEY-TOP.

106,920, BENJAMIN F. BARNES, MACHINERY FOR PACKING PLOWS.

106,921, JOSEPH M. BATCHELOR, TRACE-LIFTER.

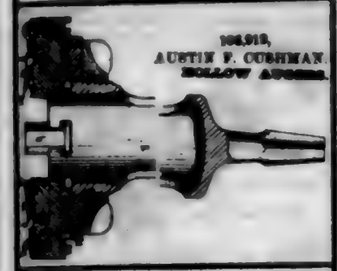


106,922, MICHAEL K. CARPENTER, BOXING APPARATUS.



106,923, G. CHEVRIER, TREATING ACID TARS FROM COAL.

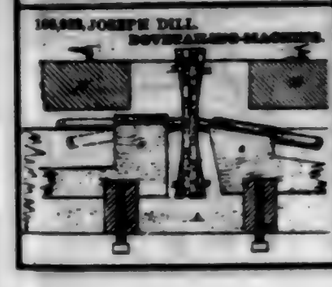
106,924, DAVID CLAGETT, HAY-LOADER.



106,925, J. B. COTTON, ADJUSTABLE GATE.

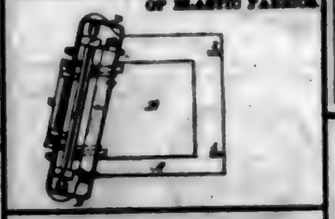
106,926, B. B. CROASDALE, FERTILIZER.

106,927, AUSTIN F. CUSHMAN, HOLLOW AUGER.

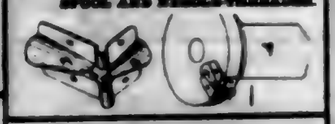


106,928, JOSEPH B. DALLON, FASTENING FOR GARMENTS.

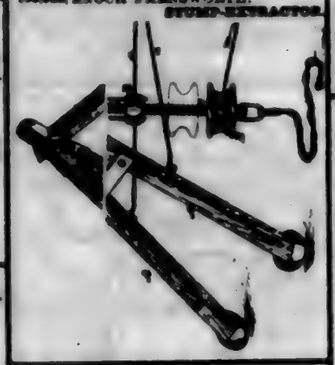
106,929, ALEXANDER T. DE PUY, CASH-STAND.



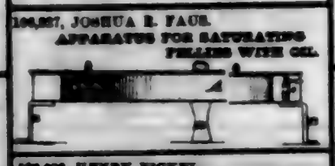
106,930, JOSEPH DILL, DOUBLE-SEWING MACHINE.



106,931, WILLIAM W. DUDLEY, LIQUID SIZING FOR FORMING BLACK-BOARDS, &c.

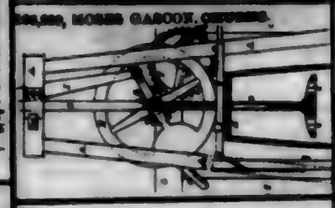


106,932, CHAS. A. ENSIGN, APPARATUS FOR THE MANUFACTURE OF ELASTIC FABRICS.

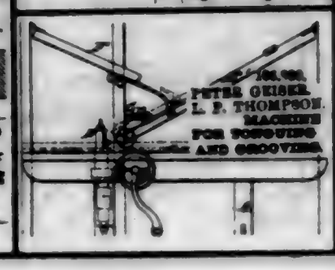


106,933, GEORGE PETERS FARMER, SPOOL AND BOBBIN-HEADING.

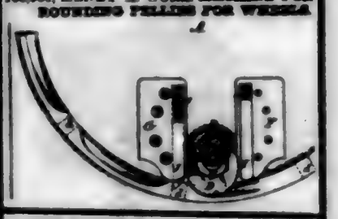
106,934, ENOCH FARNSWORTH, STUMP-EXTRACTOR.



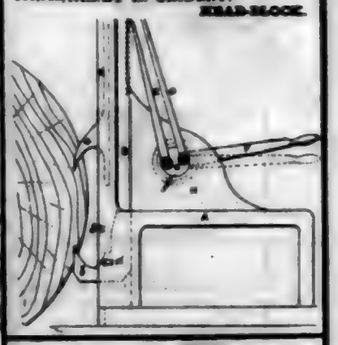
106,935, JOSHUA B. FAUL, APPARATUS FOR SATURATING FELLIES WITH OIL.



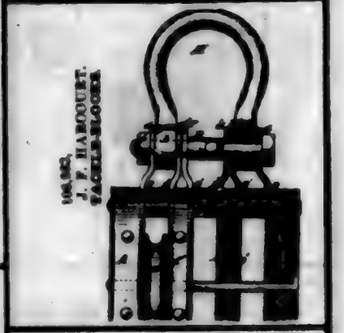
106,936, HENRY FICKEL, HARNESS-FASTENING.



106,937, MOSES GAGNON, CHURN.

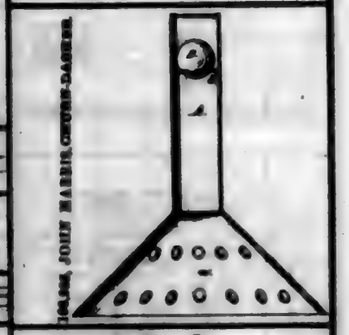


106,938, PETER GEISER, I. P. THOMPSON, MACHINE FOR TONGUING AND GROOVING.

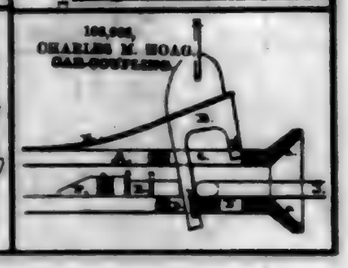


106,939, HENRY A. GORE, MACHINE FOR BOUNDING FELLIES FOR WHEELS.

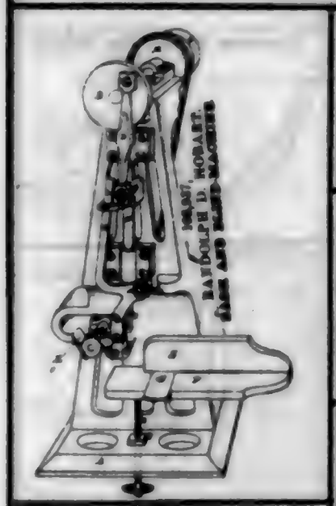
106,940, HENRY H. GRIDLEY, HEAD-BLOCK.

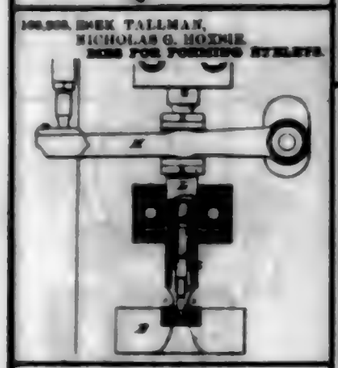


106,941, J. F. HARCOURT, FASTEN-BLOCKS.

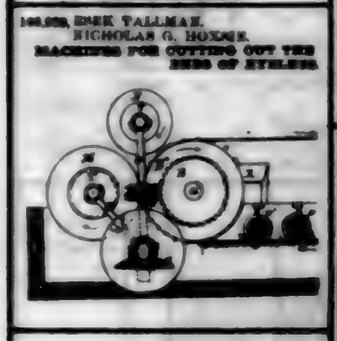


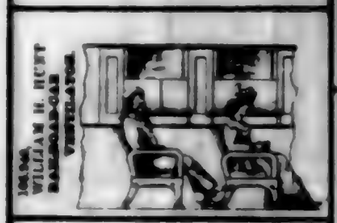
106,942, THOMAS A. HARRIS, CORSET-SPRINGS.



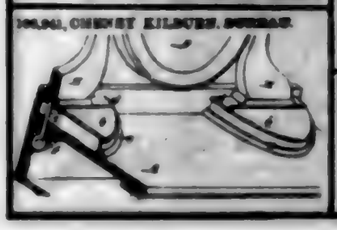


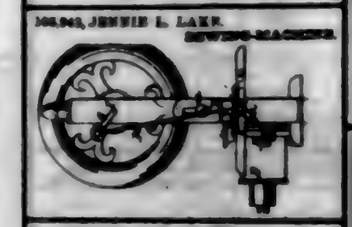
106,943, JOHN HARRIS, CHURN-DASHER.

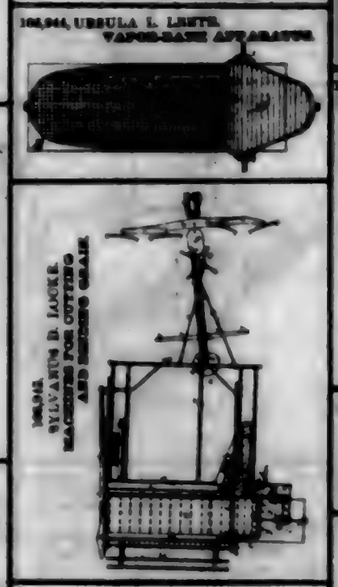


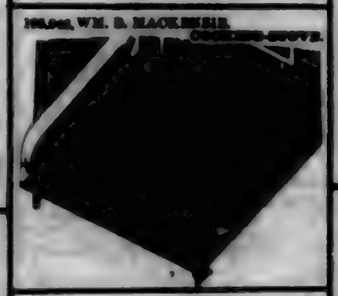


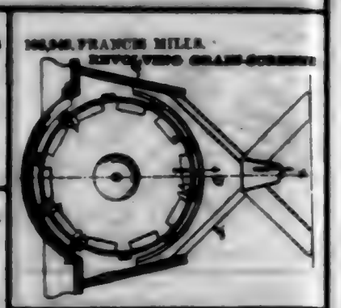
106,944, CHARLES M. HOAG, GAS-BURNER.

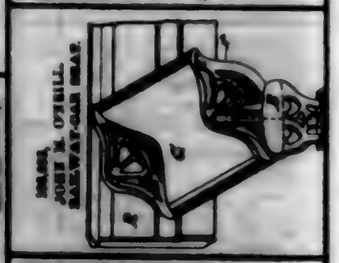


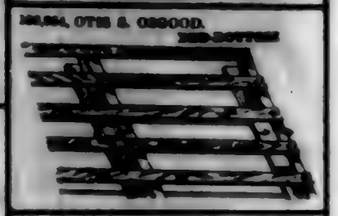


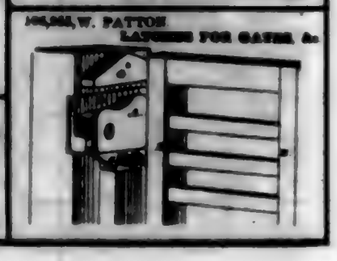


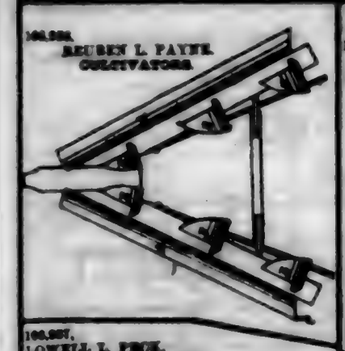


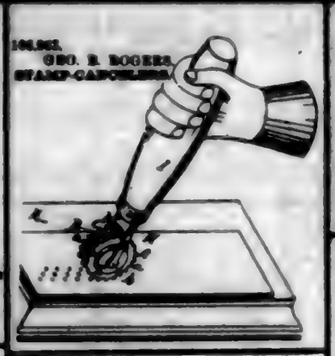


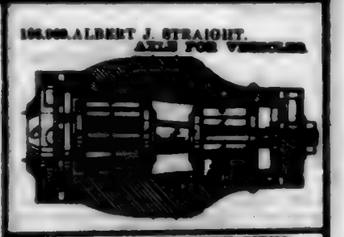


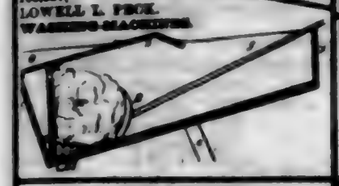


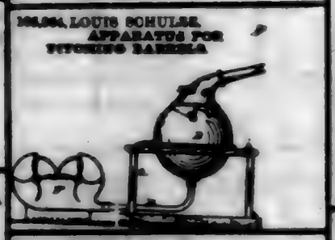


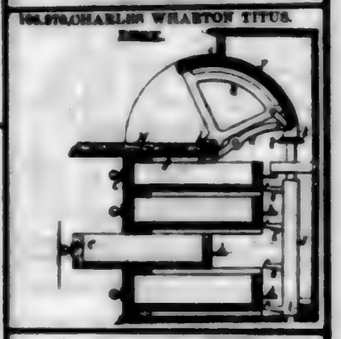


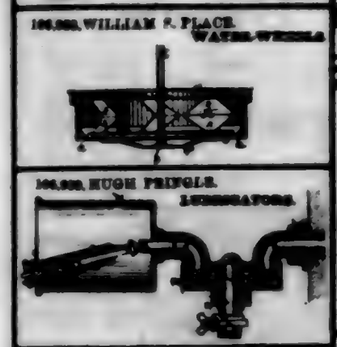


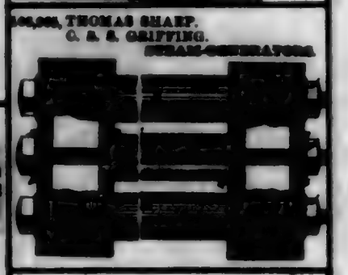


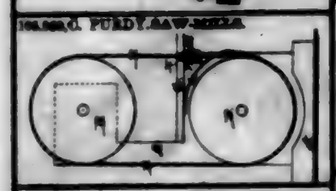


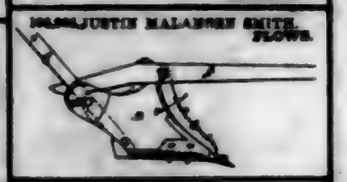


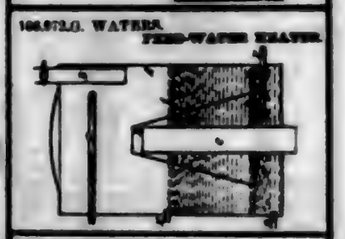


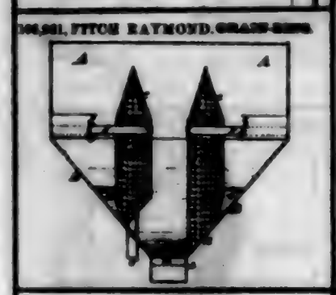


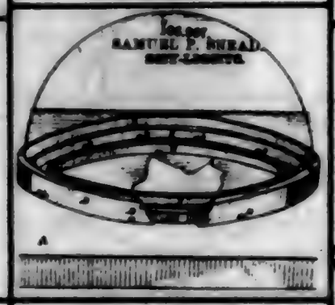


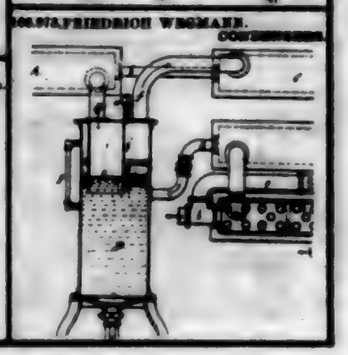


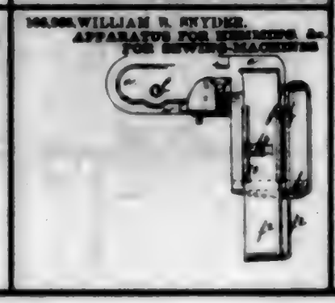


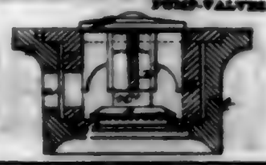


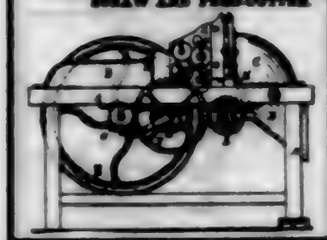


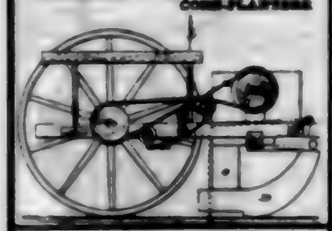






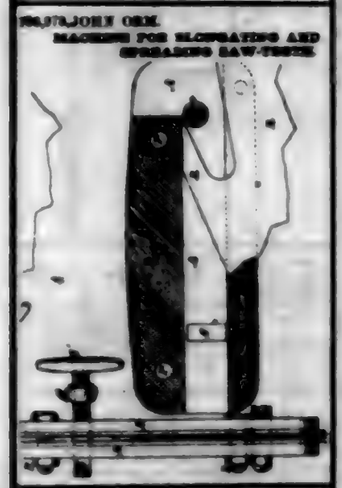




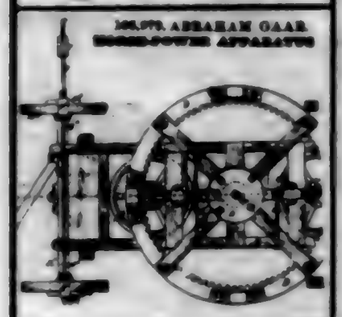


108,974. GEORGE H. WEINMAN. FEED-VALVES.

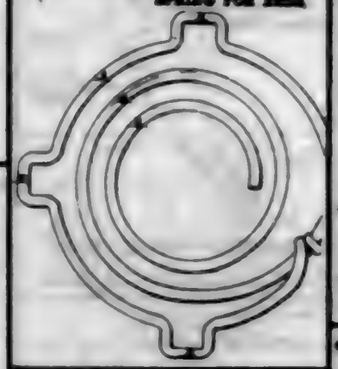
108,975. AUGUST WERNER. STRAW AND FEED-CUTTER.



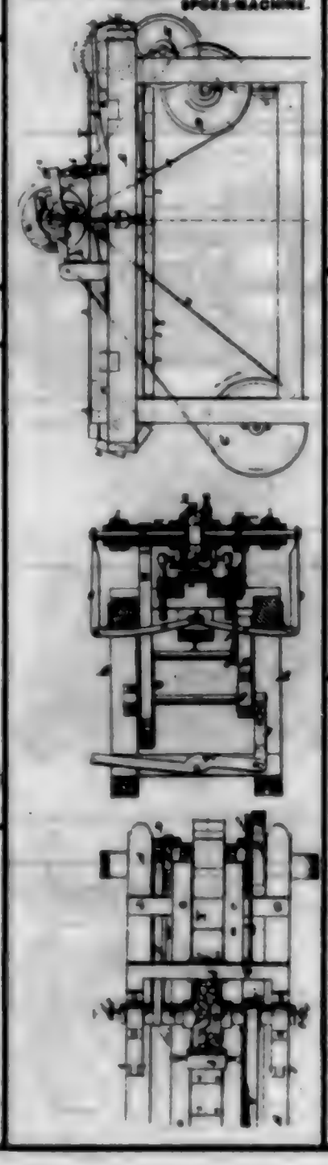
108,976. LUCIUS WINSTON. CORN-PLANTERS.



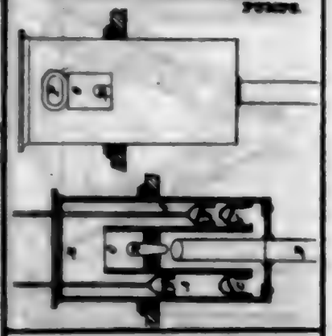
108,977. HOWELL W. WRIGHT. COATING YACHT AND BARK WITH COPPER.



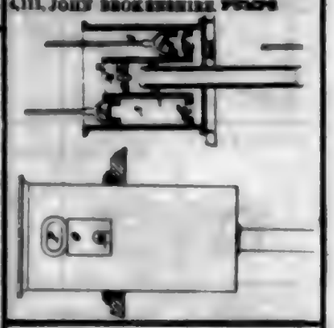
108,978. JOHN OEM. MACHINE FOR SLOPPATING AND SPREADING SAW-TEETH.



108,979. ABRAHAM OAAR. SMOKE-CONSUMING APPARATUS.

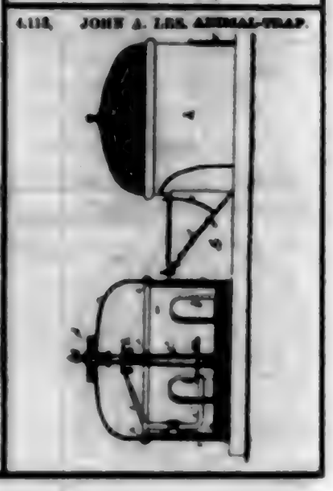


108,980. CHARLES RICH. SPRING FOR BEDS.



4,109. E. H. HOUTON. SPOKE-MACHINE.

4,110. JOHN BROKENSHIRE. PUMPS.



4,111. JOHN BROKENSHIRE. PUMPS.

4,112. JOHN JACOB LERRAU. PARING-KNIFE.

4,113. JOHN A. LEE. ANIMAL-TRAP.

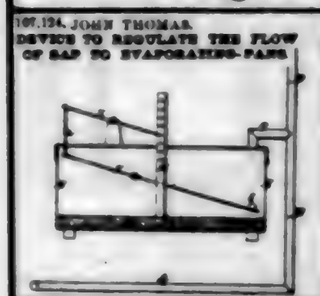
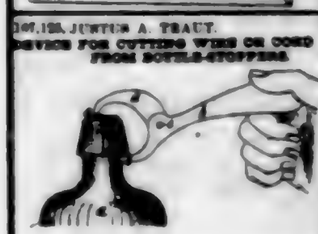
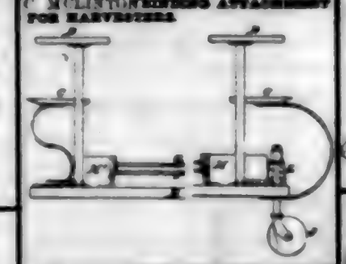
BAR-EXTRACTOR.



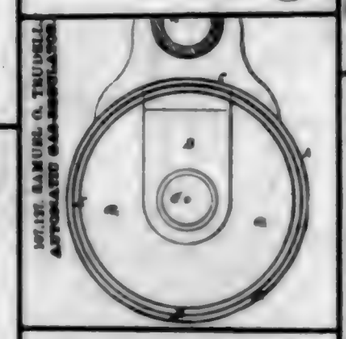
107,122. SIMEON TAYLOR.
REED-ORGAN BELLOWS-ACTION.



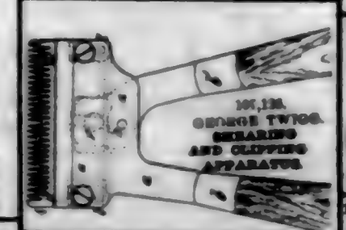
107,123. JAMES TERRY, Jr.
MORTISE-LOCKS.



107,124. JOHN THOMAS.
DEVICE TO REGULATE THE FLOW OF SAP TO EVAPORATING-PANS.



107,125. JUSTUS A. TRAUT.
DEVICE FOR CUTTING WIRE OR CORD FROM BOTTLE-STOPPERS.

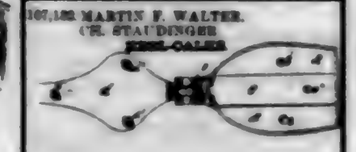


107,126. D. W. TRAVIS AND C. MCLINTON, ASSIGNORS TO ATTACHMENT FOR HARVESTERS.

107,127. SAMUEL G. TRUDELL.
APPARATUS FOR CONCENTRATING CANE-JUICE.

107,128. GEORGE TWIGG.
SHEARING AND CLIPPING APPARATUS.

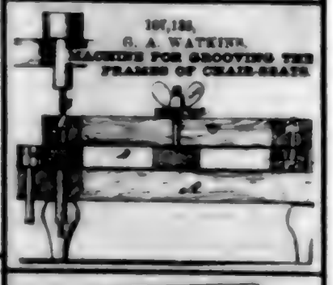
107,129. DANIEL W. VAN RIPER.
PHOTOGRAPHIC BACKGROUND.



107,130.
JOHN H. VOGT.
GEORGE DIETZEL.
HAIR-DOLLS.

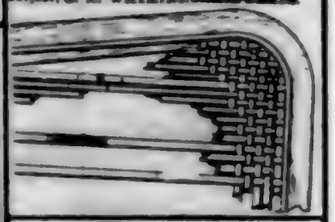
107,131. JAMES H. WAITE.

107,132. MARTIN F. WALTER, (ASSR. TO C. STAUDINGER.)
FIRE-GRATE.



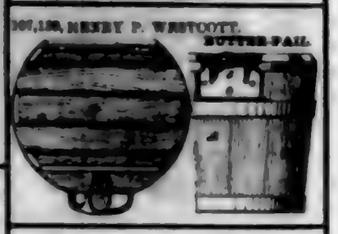
107,133. JEREMIAH W. WALTON.
WAGON-JACKS.

107,134. LORENZO R. WARD.
BREAST-STRAP PROTECTOR FOR HARNESS.

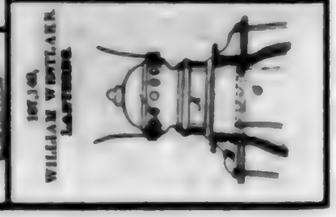


107,135. G. A. WATKINS.
MACHINE FOR GROOVING THE FRAMES OF CHAIR-SEATS.

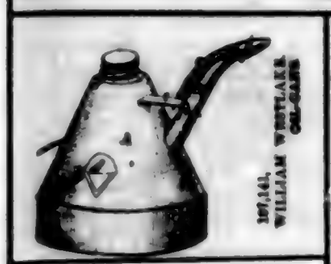
107,136. G. A. WATKINS.
CHAIR-SEAT.



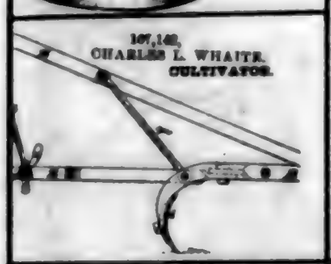
107,137. G. A. WATKINS. CHAIR-SEAT.



107,138. THOMAS H. WEAVER.
CHURN-DASHER.



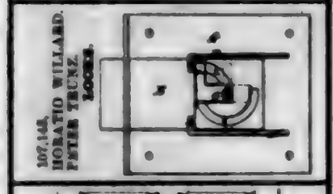
107,139. HENRY P. WESTCOTT.
BUTTER-PAIL.



107,140. WILLIAM WESTLAKE, (ASSR. TO HIMSELF.)
LANTERNS.

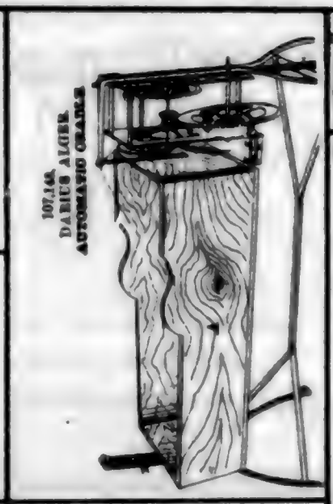
107,140. WILLIAM WESTLAKE, (ASSR. TO HIMSELF.)
LANTERNS.

107,141. CHARLES L. WHAITE.
CULTIVATOR.

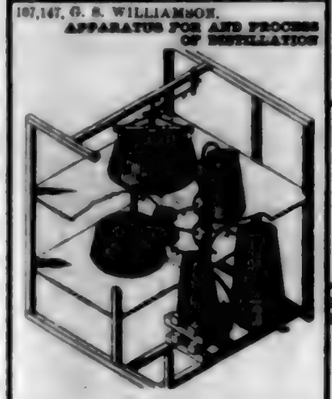


107,142. L. H. WHITNEY.
SCREW FOR SOLES AND HEELS OF SHOES.

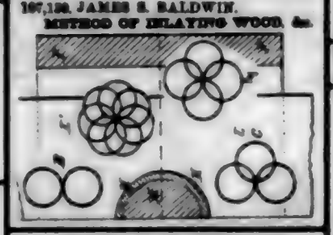
107,143. FREDERICK M. WILDMAN.
GALLETS.



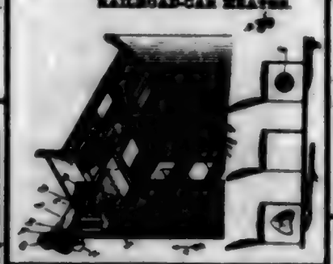
107,144. HORATIO WILLARD, (ASSR. TO PETER TRUNZ.)
LOCKS.



107,145. THOMAS S. WINN.
DRAWING-FRAME.



107,146. DARIUS ALGER.
AUTOMATIC GEARS.

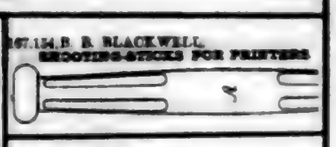


107,147. G. S. WILLIAMSON.
APPARATUS FOR AND PROCESS OF DISTILLATION.

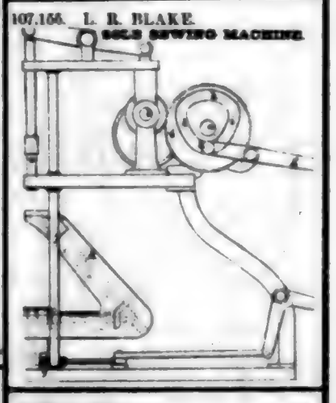
107,148. JAMES S. BALDWIN.
METHOD OF INLAYING WOOD, &c.

107,149. J. G. ALLEN.
RAILROAD-CAR HEATER.

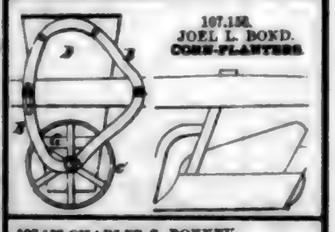
107,150. CHARLES G. BANKER.
ALEXANDER PURDY.
WASHING-MACHINE.



107,151. ALBERT BETTELEY.
WOOD-PAVEMENT.



107,152. DANIEL M. RUSSELL.
JEWELERS' TOOLS.



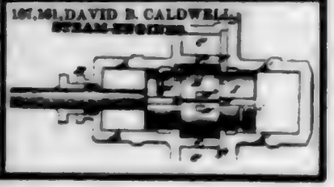
107,153. S. B. BLACKWELL.
SHOOTING-STICKS FOR PRINTERS.

107,154. L. R. BLAKE.
SOLE SEWING MACHINE.

107,155. JOEL L. BOND.
CORN-PLANTERS.

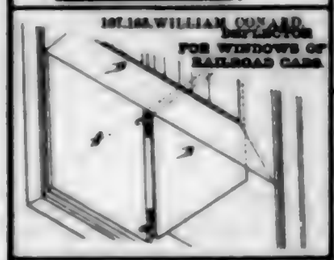
107,156. CHARLES S. BONNEY.
BASE-HOLDERS.

107,157. GUST. BOURGADE.
THE MANUFACTURE OF ALBUMEN.

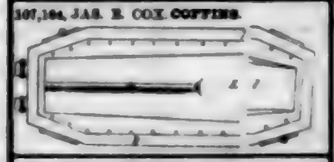


107,158. THOMAS H. BREED.
FLOOD-GATES.

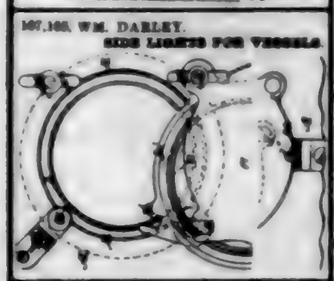
107,159. FRED. BRUSO.
DIES FOR HEADING BOLTS.



107,160. DAVID R. CALDWELL.
STEAM-ENGINES.

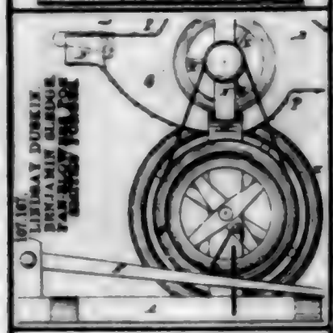


107,162. GEORGE CHAMBERLIN.
CULTIVATING-PLOWS.

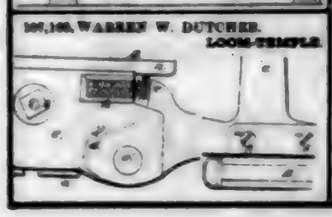


107,163. WILLIAM CONARD.
DEFLECTOR
FOR WINDOWS OF
RAILROAD CARS.

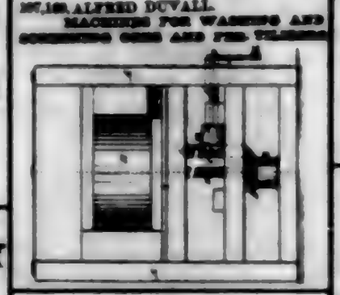
107,164. JAS. R. COX. COFFINS.



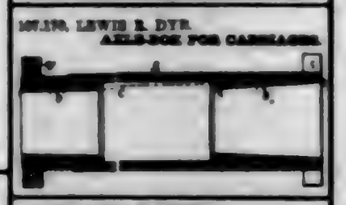
107,165. WM. DARLEY.
SIDE LIGHTS FOR VESSELS.



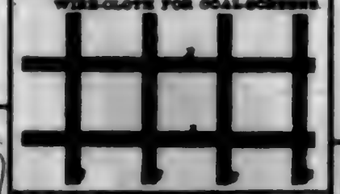
107,166. HIRAM C. DAVIS. ENVELOPES.



107,167. LIBERTY DUNKIN.
BENJAMIN SLEDGE.
PAPER-FILE.

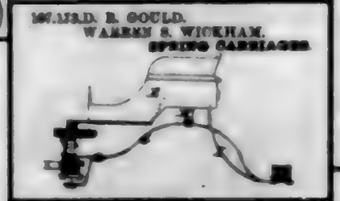


107,168. WARREN W. DUTCHER.
LOOM-TEMPLE.

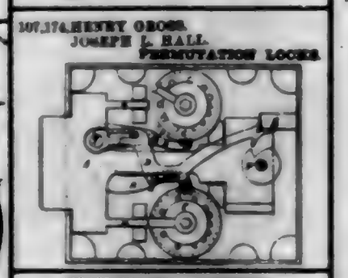


107,169. ALFRED DUVALL.
MACHINES FOR WASHING AND
SCOURING ORES AND FOR TEMPERING

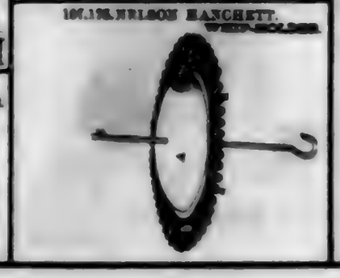
107,170. LEWIS R. DYE.
AXLE-BOX FOR CARRIAGES.



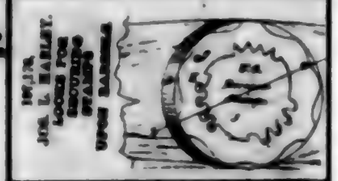
107,171. JACOB G. FRICK.
WIRE-CLOTH FOR COAL-SCREENS.



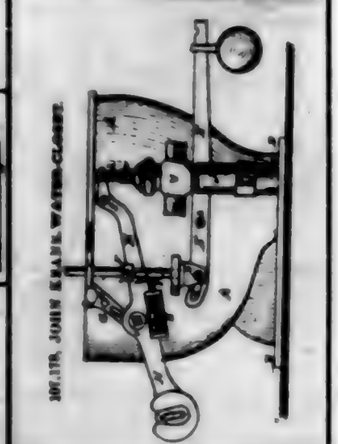
107,172. SAMUEL GAMWELL.
PRUNING-TOOL.



107,173. D. B. GOULD.
WARREN S. WICKHAM.
SPRING CARRIAGES.

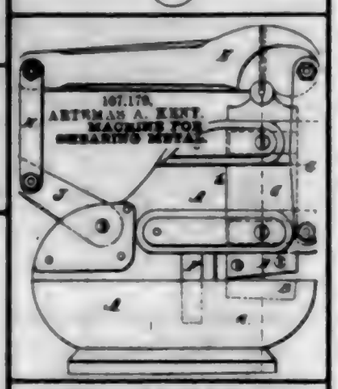


107,174. HENRY GROSS.
JOSEPH L. HALL.
PERMUTATION LOCKS.

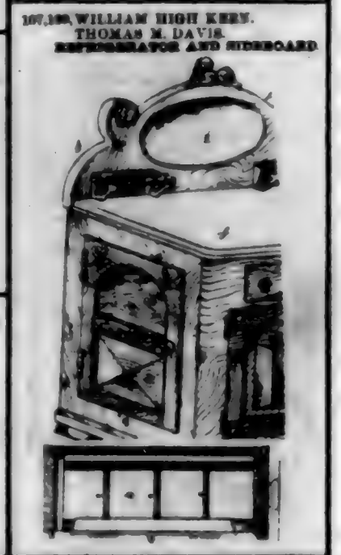


107,175. NELSON HANCHETT.
SPEED-MOTOR.

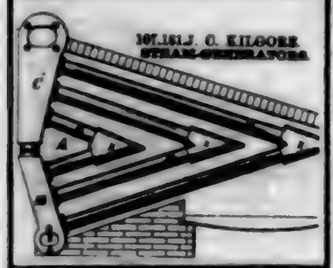
107,176. JOS. L. HARLEY.
LOOMS FOR
SECURING
PILE
WIRE.



107,177. CLARENCE L. JENKINS.
TANNING LEATHER.

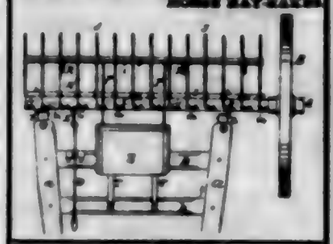


107,178. JOHN KRAUL. WATER-CLOSET.

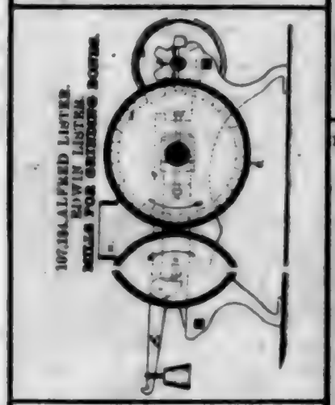


107,179. ARTEMAS A. KENT.
MACHINE FOR
SHEARING METAL.

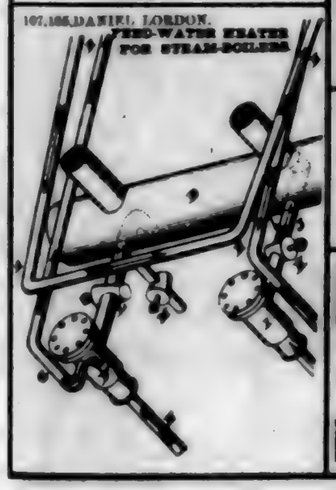
107,180. WILLIAM HIGH KERR.
THOMAS M. DAVIS.
REFRIGERATOR AND SIDEBOARD.



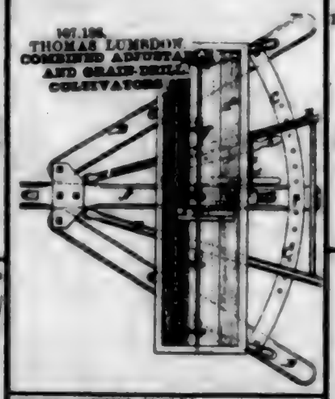
107,181. J. C. KILGORE.
STEAM-GENERATORS.



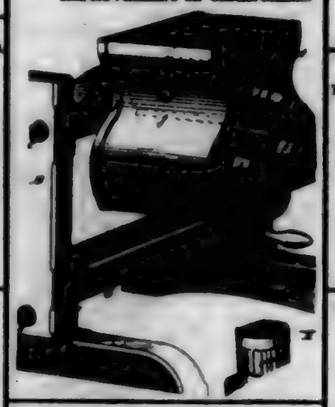
107,182. GEO. W. KING.
BALANCES.



107,183. G. O. LACKEY.
HORSE HAY-RAKES.

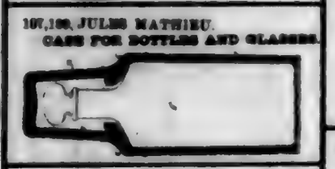


107,184. ALFRED LISTER.
IMPROVED LISTER-
AND LIGHTNING
GUIDE FOR CULTIVATING CORN.

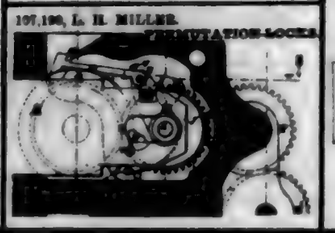


107,185. DANIEL LORDON.
FEED-WATER HEATER
FOR STEAM-BOILERS.

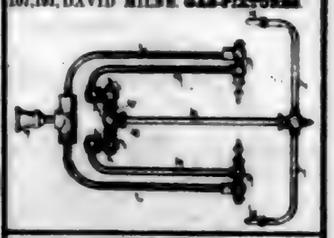
107,186. THOMAS LUMSDON.
COMBINED ADJUSTABLE
AND GRAIN-DRILL
CULTIVATORS.



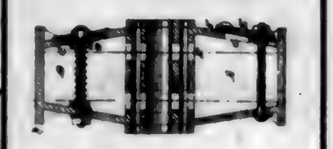
107,187. SAMUEL MALES.
IMPROVEMENT IN CIDER-MILLS.



107,188. SAMUEL MALES. PRESS.

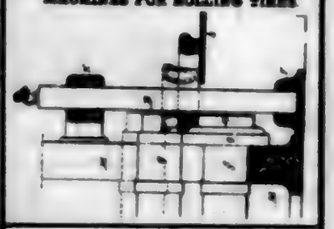


107,189. JULES MATHIEU.
CASE FOR BOTTLES AND GLASSES.

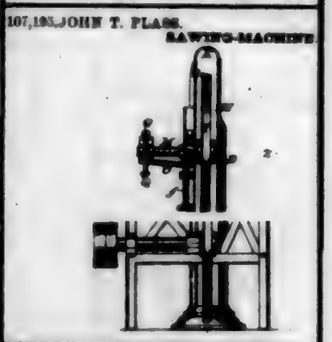


107,190. L. H. MILLER.
PERMUTATION-LOCKS.

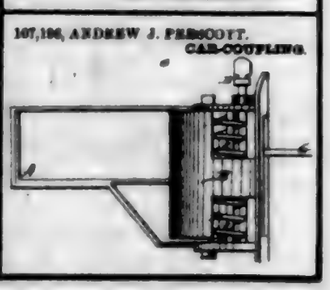
107,191. DAVID MILNE. GAS-FIXTURES.



107,192. THOMAS J. MOORES.
LUBRICATORS.



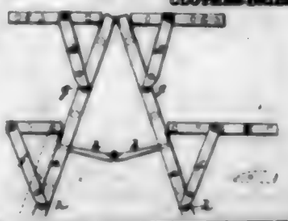
107,193. HALVOR H. NESTESTU.
HARVESTERS.



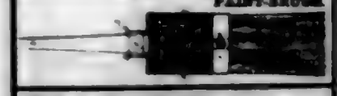
107,194. HIPPOLYTE ULYSSE PETIN.
MACHINES FOR ROLLING TIRES.

107,195. JOHN T. PLAGE.
SAWING-MACHINE.

107,196. ANDREW J. PRESCOTT.
CAR-COUPLING.

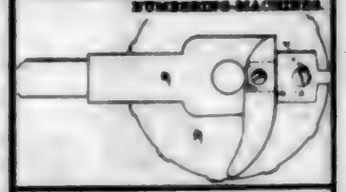


107,197, WILLIAM QUAY.
EZRA M. RITSDALE.
STOVE-GRATE.

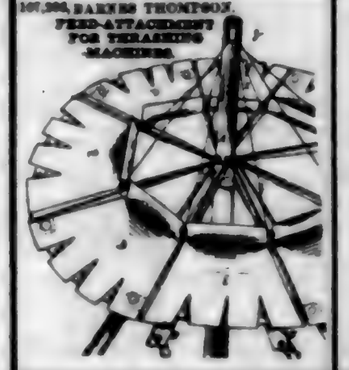


107,198, EZRA RANSOM.
PACKED ROTATING VALVE-STEM.

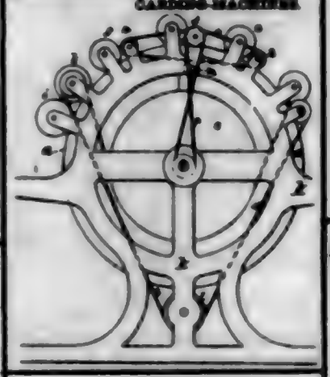
107,199, GEORGE W. RICHARDSON.
CLOTHES-DRYER.



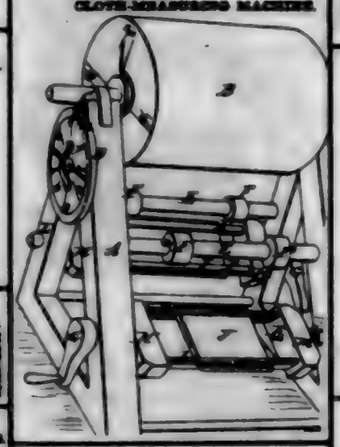
107,200, GEORGE L. SHUTTLEWORTH.
PAINT-BRUSH.



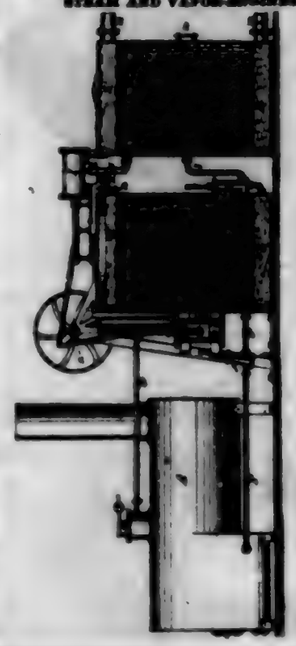
107,201, H. JULIUS SMITH.
TORPEDOES FOR OIL-WELLS.



107,202, JAMES D. SMITH.
RUMBERING-MACHINES.

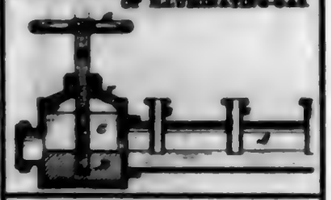


107,203, BARNES THOMPSON.
FEED-ATTACHMENT FOR THRASHING-MACHINES.



107,204, GEORGE THRESH.
CARDING-MACHINES.

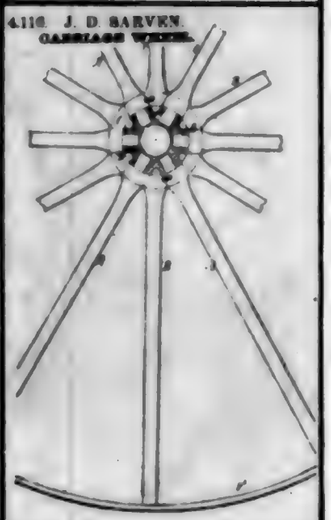
107,205, THOMAS WEEDEN.
THOMAS TRIBE.
CLOTH-MEASURING MACHINES.



107,206, P. A. MORLEY.
STEAM AND VAPOR-ENGINES.

107,207, SAMUEL C. WEDDINGTON.
COMBINED LOCK AND LATCH.

107,208, HENRY G. LUDLOW.
APPARATUS FOR THE MANUFACTURE OF ILLUMINATING-GAS.



4,114, MATTW ANDREW.
ATTACHING KNOBS TO SPINDLES.

4,115, DANIEL B. LACY.
THOMAS T. LACY.
ISAAC A. LACY.
T. T. LACY.
WEIGHTS FOR SASHES, CLOCKS, &c.

4,116, J. D. SARVEN.
CARRIAGE WHEEL.

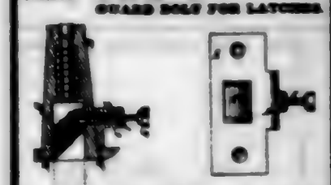
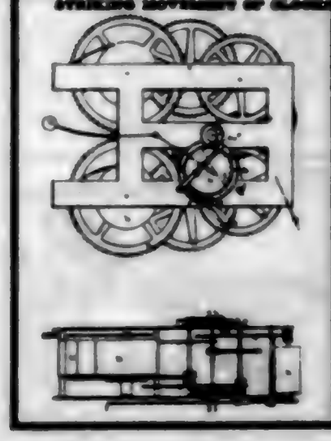
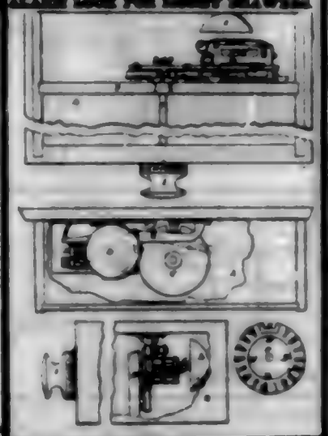
108,369. S. A. JEFFERSON. SHAFT ADJUSTABLE ROTARY COTTON CROPPER.



108,370. H. KAHN. GUN CHARGER.



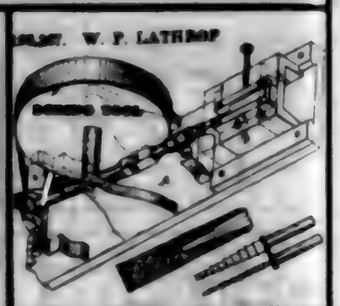
108,371. F. B. KALKBRENNER. COMBINATION LOCK.



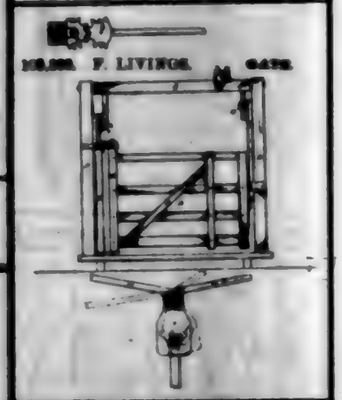
108,372. R. H. KENT. GUARD BOLT FOR LATCHES.

108,373. F. KIENAST. STRIKING MOVEMENT OF CLOCKS.

108,374. G. KIMBALL. ADJUSTABLE BRACE FOR SECRET DRAWERS.



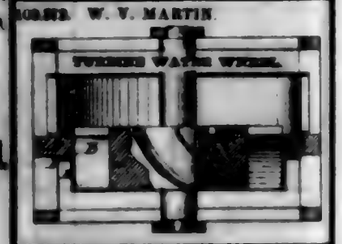
108,375. W. E. KLINE. [illegible] AND CORRUGATED HEAD.



108,376. A. KNIGHT.

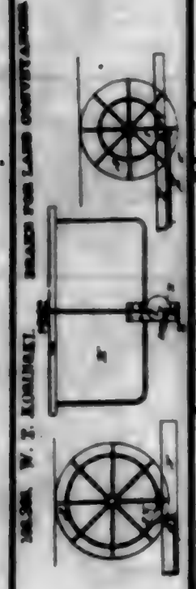
108,377. W. F. LATHROP. [illegible].

108,378. F. LIVINGS. GATE.

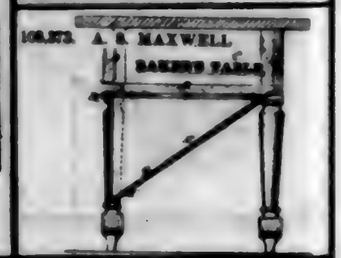


108,379. J. M. LOWENSTEIN. FIRE-KINDLING COMPOUND.

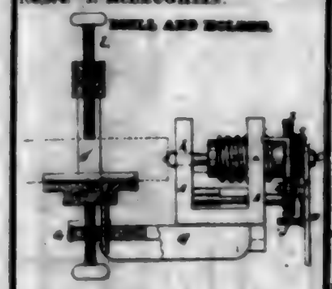
108,380. C. W. LOMBARD. SAWING MACHINE.



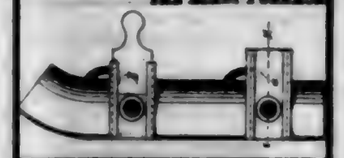
108,381. J. D. LOVE. MEDICAL COMPOUND OR LINIMENT.



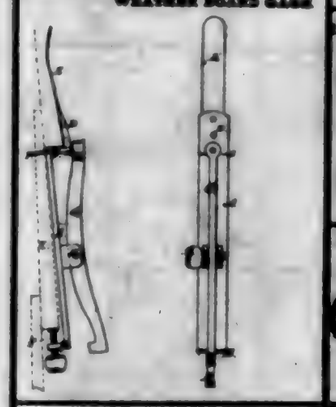
108,382. W. V. MARTIN. TURBINE WATER WHEEL.



108,383. W. F. KOMINAT. BRACE FOR LAID CONVEYANCE.

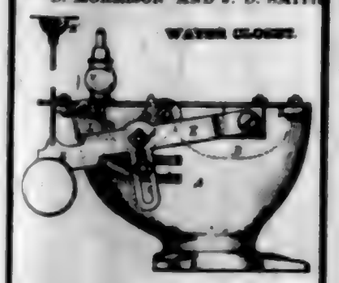


108,384. A. S. MAXWELL. BAKERS PANS.

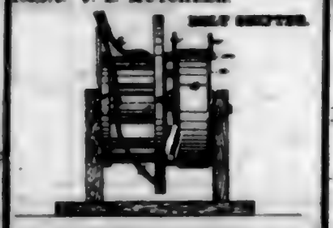


108,374. J. McLAUGHLIN. [illegible] AND BOLSTER.

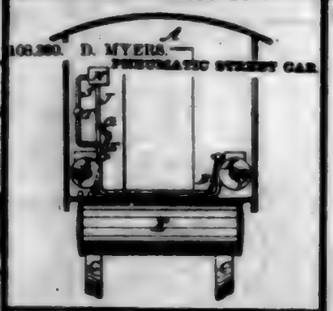
108,375. J. W. MIDDLETON. PRODUCING CASTINGS DIRECT FROM THE BLAST FURNACE.



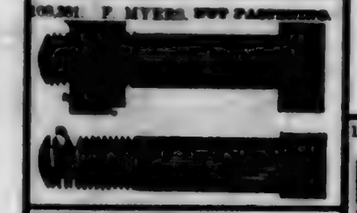
108,376. J. M. MILHOLLIN. WEATHER BOARD GAGE.



108,377. H. MILLER. COMBINED TOOL.

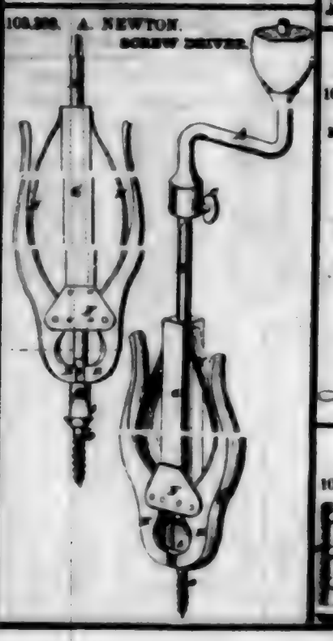


108,378. D. MORRISON AND J. D. SMITH. WATER CLOSET.

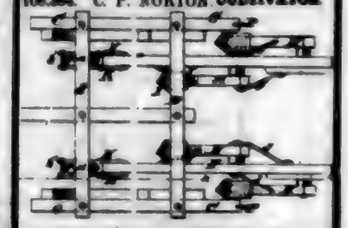


108,379. J. B. MUTCHLER. BELT SHIFTER.

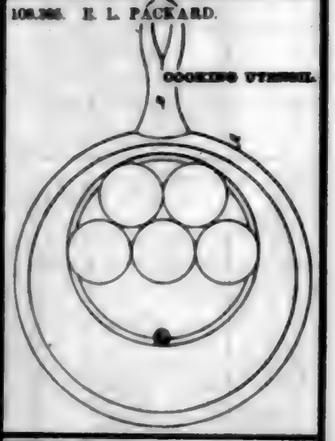
108,380. D. MYERS. PNEUMATIC STREET CAR.



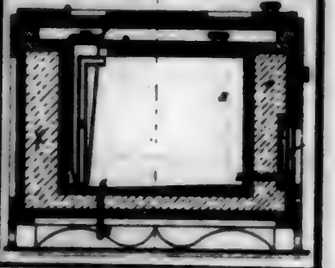
108,381. F. MYERS. NUT FASTENING.



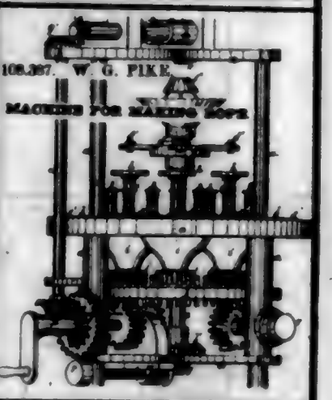
108,382. F. MYERS. NUT FASTENING.



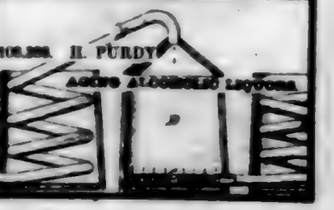
108,383. A. NEWTON. SCREW DRIVER.



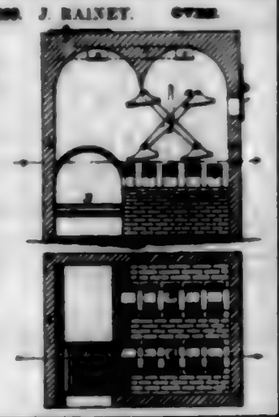
108,384. C. P. NORTON. CULTIVATOR.



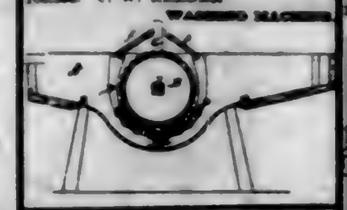
108,385. E. L. PACKARD. COOKING UTENSIL.



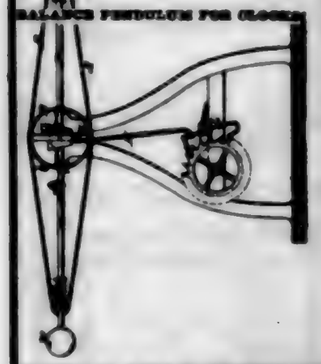
108,386. A. H. PHELPS. REFRIGERATOR.



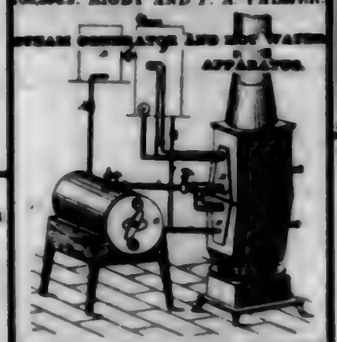
108,387. W. G. PIKE. MACHINE FOR MAKING HOOPS.



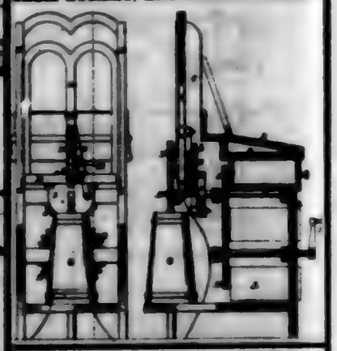
108,388. H. PURDY. AGING ALCOHOLIC LIQUORS.



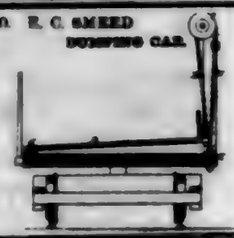
108,399. J. RAINEY. OVEN.



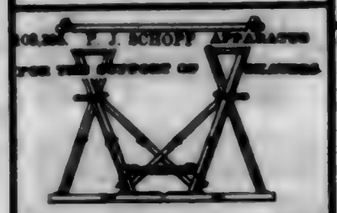
108,400. C. W. REEDER. WASHING MACHINE.



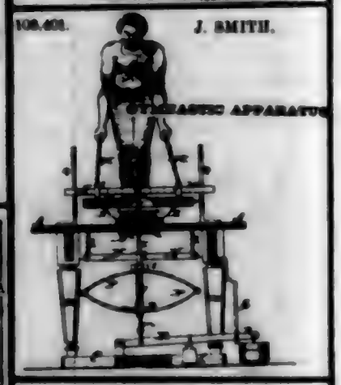
108,401. R. R. RAMSDELL AND C. A. WHITCOMB. BALANCE PENDULUM FOR CLOCKS.



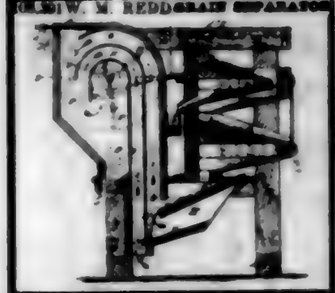
108,402. J. RIGBY AND P. A. PALMER. STEAM GENERATOR AND HOT WATER APPARATUS.



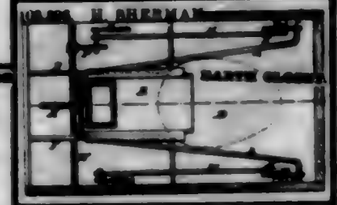
108,403. J. J. SLATER. DRIER, BURNER, AND GRINDER POWER.



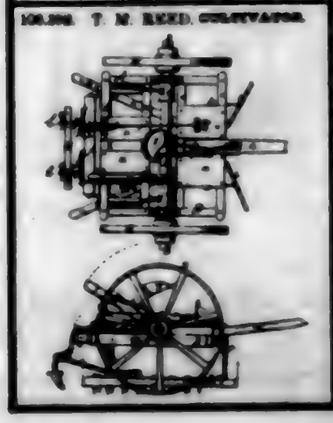
108,404. E. C. SMEED. DUMPING CAR.



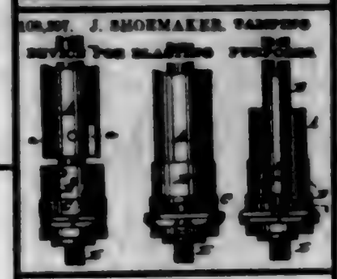
108,405. P. J. SCHOFF. APPARATUS FOR THE MANUFACTURE OF GAS.



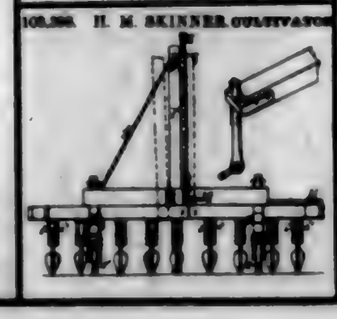
108,406. J. SMITH. GYMNASTIC APPARATUS.



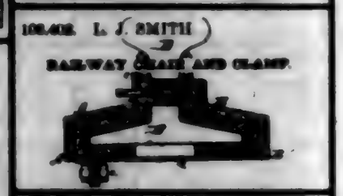
108,407. W. M. REDDGRAVE. SEPARATOR.



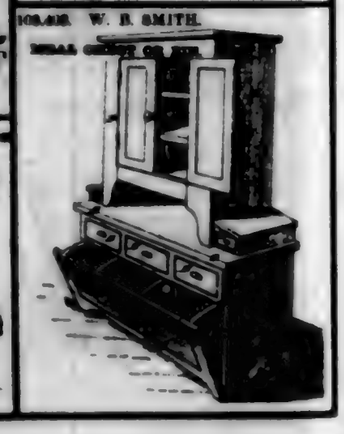
108,408. H. SHERMAN. EARTH CLEANER.



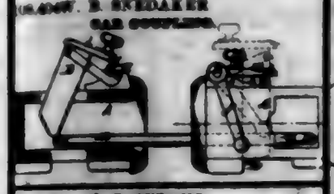
108,409. T. M. REED. CULTIVATOR.



108,410. J. SHOEMAKER. FASTENING FOR THE PLATFORM PANELS OF CARS.

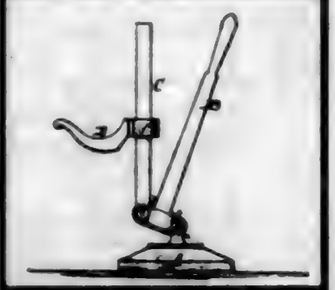


108,411. H. M. SKINNER. CULTIVATOR.

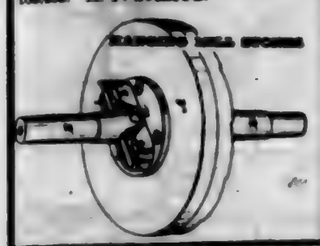


108,412. L. J. SMITH. RAILWAY CHAIR AND CLAMP.

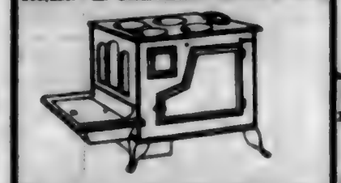
108,413. W. B. SMITH. SEWING CHAIR.



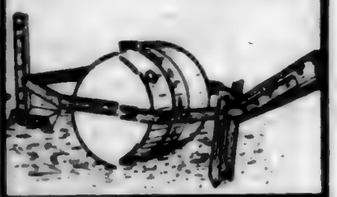
108,414. W. B. SNEDAKER. CAR COUPLING.



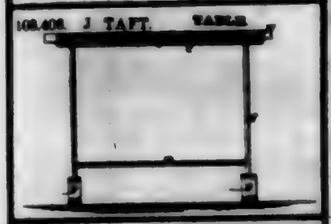
108,415. H. E. TOWLE. SEWING.



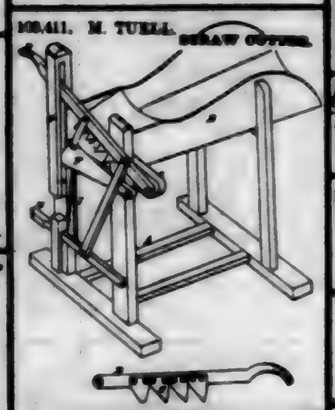
108,416. L. D. WARREN. MOWING MACHINE.



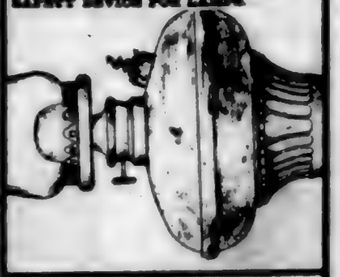
108,417. H. P. STRAUB. HARVESTING MILL STONES.



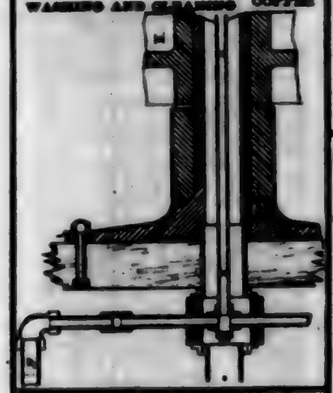
108,418. A. TRAVER. COOKING STOVE.



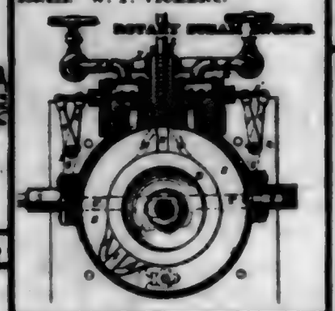
108,419. B. H. WASHINGTON. PLANTER AND FERTILIZING COTTON DISTRIBUTER.



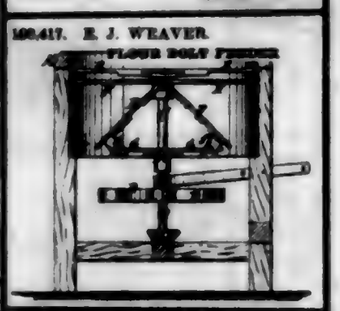
108,420. J. TAFT. TABLE.



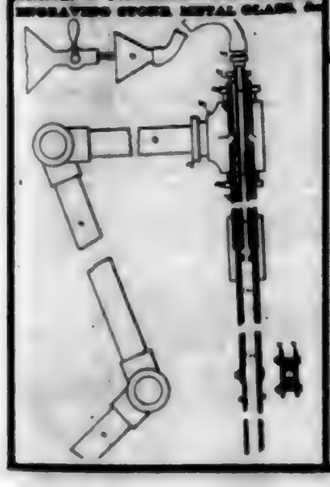
108,421. M. TUELL. STRAW CUTTER.



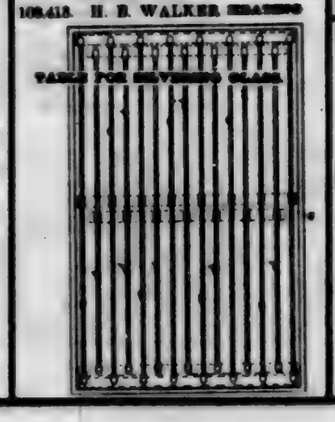
108,422. H. W. M. WASHINGTON. SAFETY DEVICE FOR LAMPS.



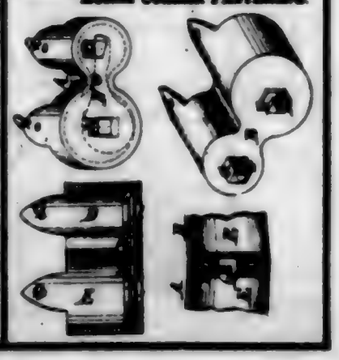
108,423. S. THOMPSON. MACHINE FOR WASHING AND CLEANING COTTON.



108,424. W. P. VICKERY. ROTARY ENGINE.

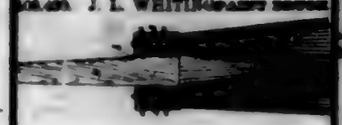


108,425. E. J. WEAVER. FLOUR BOLT FRAME.

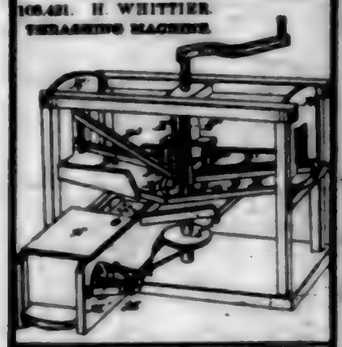


108,426. O. TILGHMAN. CUTTING AND ENGRAVING STONE, METAL, GLASS, &c.

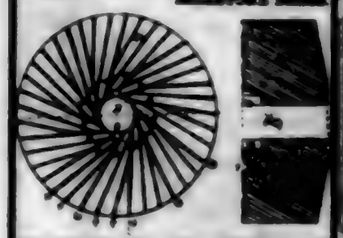
108,427. H. B. WALKER. HEATING VALVE FOR REVERSING GEARS.



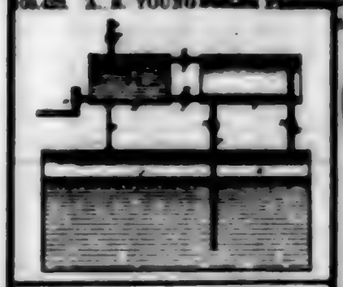
108,428. E. I. WELBOURN. SPRING COLLAR FASTENING.



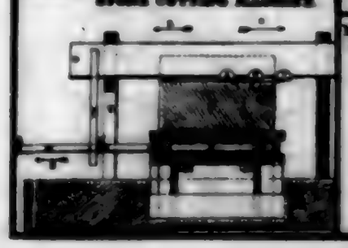
108,429. J. W. WEST. WAGON.



108,430. J. L. WHITLINGER. [illegible]

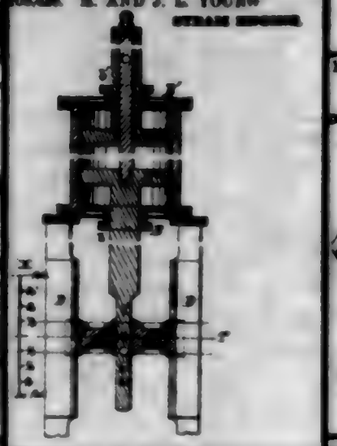


108,431. H. WHITTIER. THRASHING MACHINE.

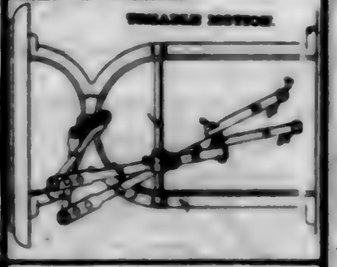


108,432. J. P. H. WOHLENBERG. [illegible]

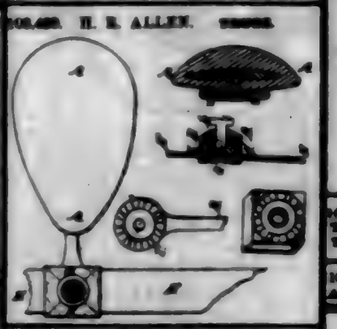
108,433. A. B. YOUNG. [illegible]



108,434. H. AND J. L. YOUNG. STONE CUTTING MACHINE.

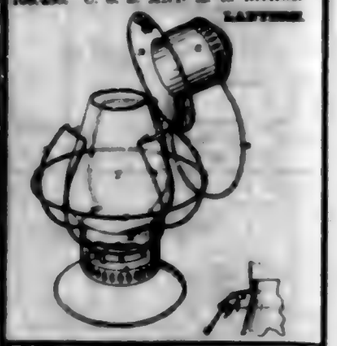


108,435. H. AND J. L. YOUNG. TOOL FOR CUTTING STONE.

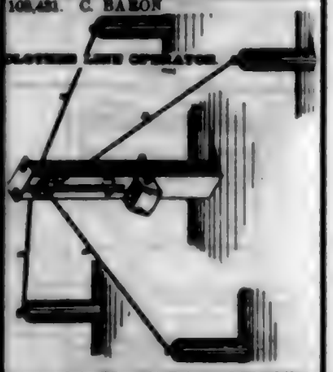


108,436. H. AND J. L. YOUNG. STRAM ENGINE.

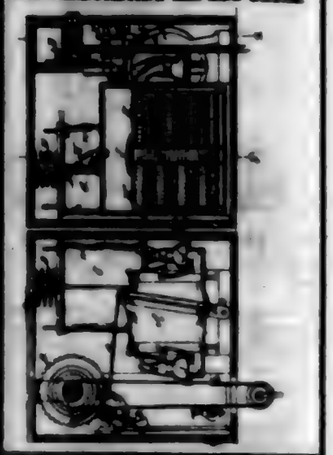
108,437. A. M. ALLEN. THRASH BOTTOM.



108,438. H. B. ALLEN. [illegible]

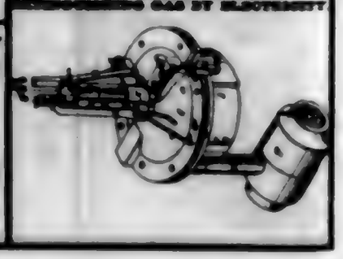


108,439. J. ARMSTRONG. METHOD OF FORMING EDUCATING RIMS OF RAILWAY CHECKING.

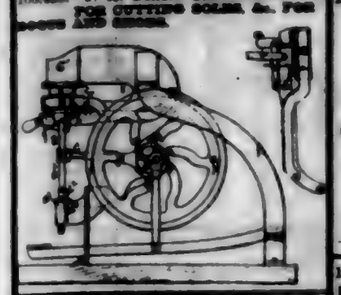


108,440. C. & S. AND A. L. BARON. LANTERN.

108,441. C. BARON. [illegible] AND OPERATION.



108,442. A. BARTHOLF. APPARATUS FOR CARBURETTING AIR AND GASES.

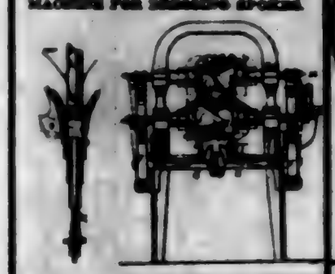


108,443. E. O. BARTLETT. TREATING THE ORES OF LEAD AND ZINC FOR THE MANUFACTURE OF PIGMENTS &c.

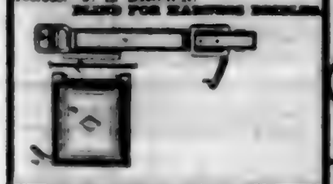
108,444. P. BEAN. APPARATUS FOR MEASURING AND [illegible] GAS BY ELECTRICITY.

108,435. J. H. BEAN. MACHINE FOR CUTTING SOLES, &c. FOR [illegible] AND HEELS.

108,436. E. B. BEARDSLEY. TURBINE WATER WHEEL.

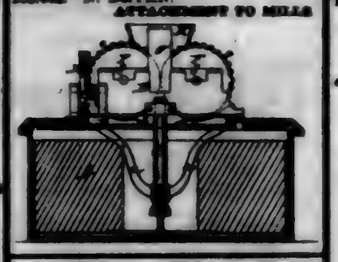


108,437. W. BERRI, Jr. MANUFACTURE OF OIL CLOTH.



108,438. G. W. BISHOP. GASH BOILER.

108,439. R. H. AND H. S. BOYNTON. MACHINE FOR BENDING SPOKES.

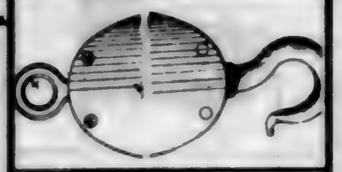


108,440. J. L. BROWN. HEAD FOR HARVING MACHINE.

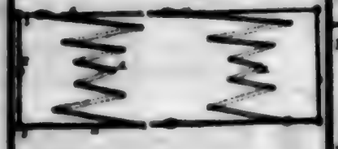
108,441. S. BRYAN. HUB FOR CARRIAGES.

108,442. S. BRYAN. ATTACHMENT TO MILLS.

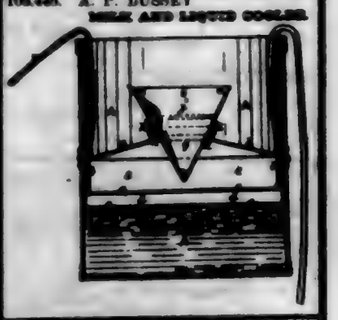
108,443. T. BULLIVANT. WINDOW.



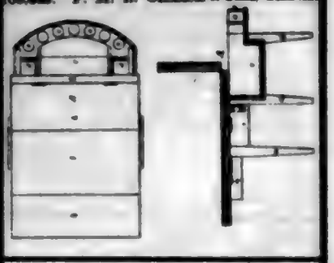
108,444. W. T. BUNN. PLOW.



108,445. M. S. BURNS. COTTON SEED PLANTER.



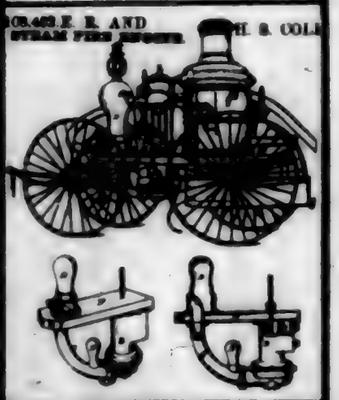
108,446. J. A. BURROUGHS. BLOCK.



108,447. R. L. BUSHNELL. BED BOTTOM.

108,448. A. P. BUSSEY. MILK AND LIQUID COOLER.

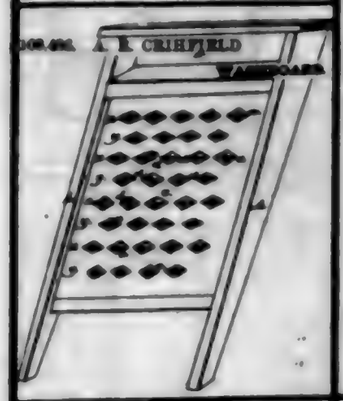
108,449. F. M. B. CLARK. WORK TABLE.



108,450 M. B. CLARK. COTTON BALE TIE.

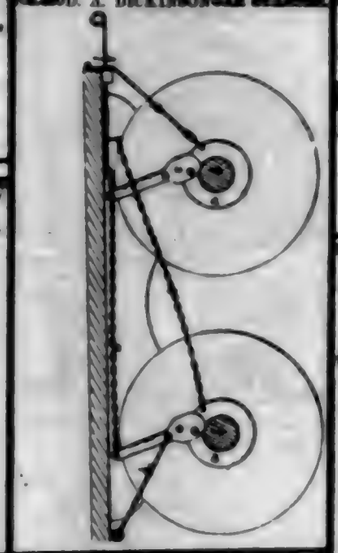
108,451. A. F. CLOUDMAN AND G. W. COFFIN. COMPOSING STICK.

108,452. F. R. AND [illegible] H. S. COLE. STEAM FIRE ENGINE.

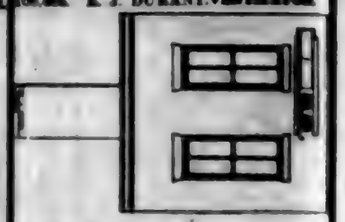


108,453. T. L. COTTEN. MEDICAL COMPOUND FOR HOG CHOLERA.

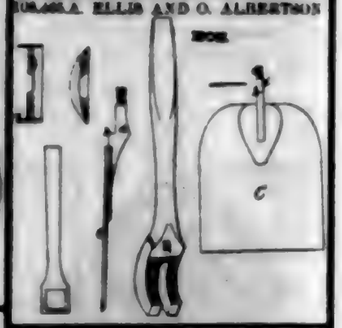
108,454. J. C. COTTINGHAM. BOAT DETACHING APPARATUS.



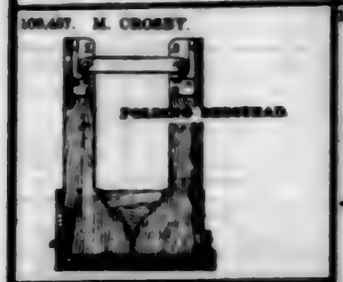
108,468. O. CRANDELL. [illegible]



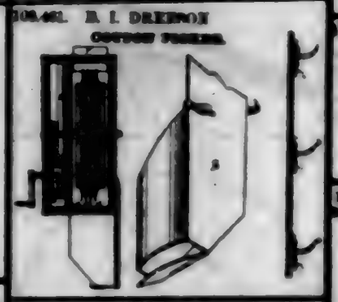
108,469. A. R. CRISFIELD. WASHBOARD.



108,470. D. A. DICKINSON. CAR STARTER.

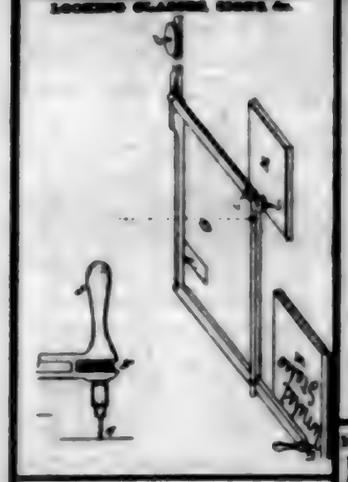


108,471. R. J. DURANT. VENTILATOR.

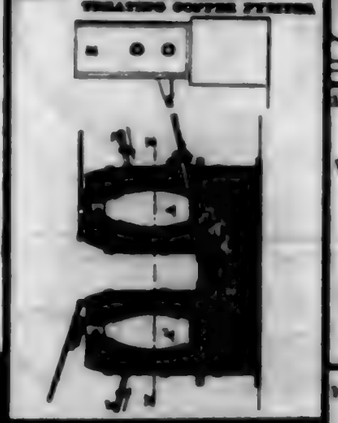


108,472. A. ELLIS AND O. ALBERTSON. [illegible]

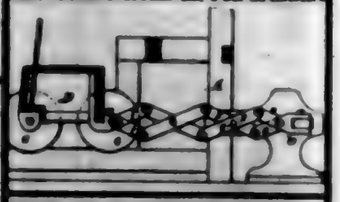
108,473. M. CROSBY. [illegible]



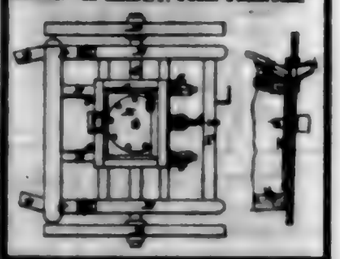
108,474. B. I. DREPSON. [illegible]



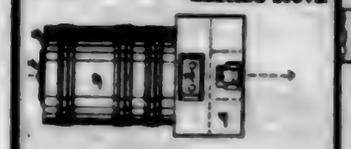
108,475. H. H. ELWELL. [illegible]



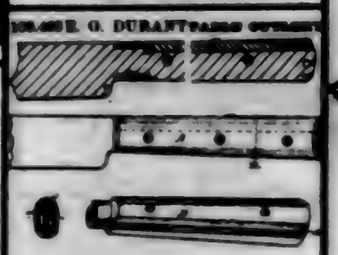
108,476. W. M. DAVIS. MACHINE FOR [illegible]



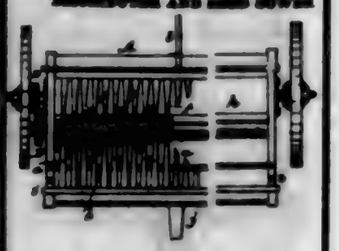
108,477. C. M. T. DU MOTAY. [illegible]



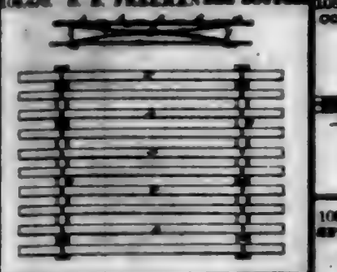
108,478. J. ENTWISTLE. [illegible]



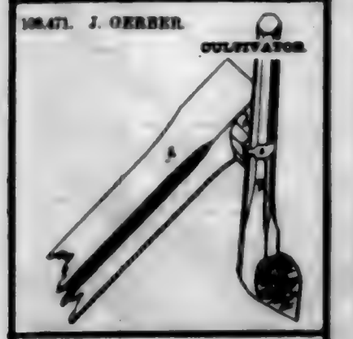
108,479. R. HERDLY. CORN PLANTER.



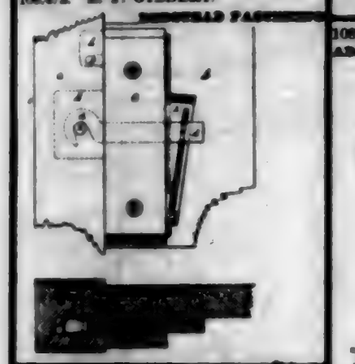
108,480. I. DE HAVEN. [illegible]



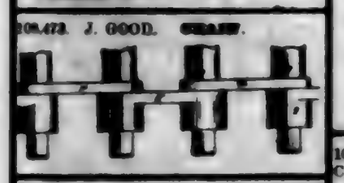
108,481. E. G. DURANT. [illegible]



108,482. S. L. FRASER. MACHINE [illegible]



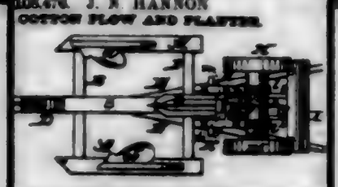
108,470. S. B. FREEMAN. [illegible]



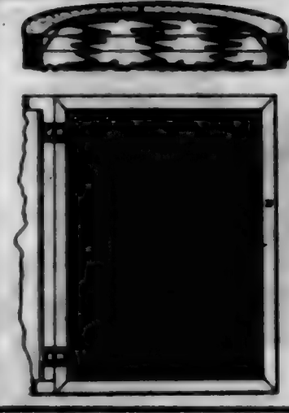
108,471. J. GERBER. CULTIVATOR.

108,472. E. F. GILBERT. [illegible]

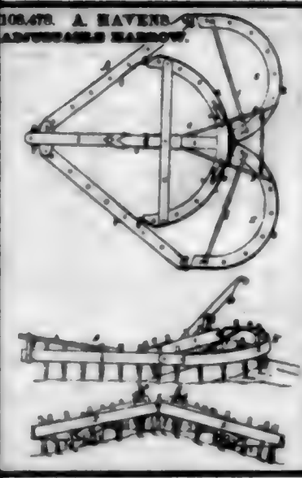
108,473. J. GOOD. [illegible]



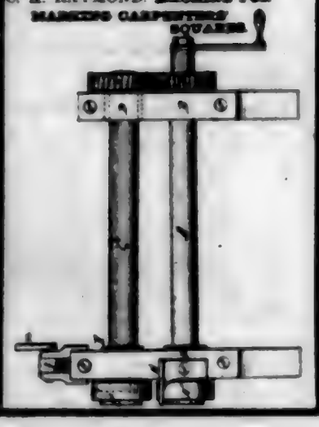
108,474. F. GRIFFIN AND R. TARRY. [illegible]



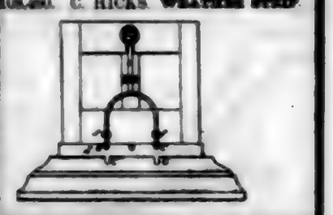
108,475. J. HAMILTON AND G. F. MORSE. [illegible]



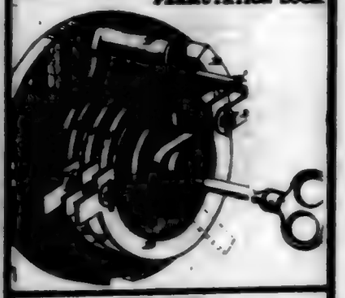
108,476. J. N. HANNON. COTTON PLOW AND PLANTER.



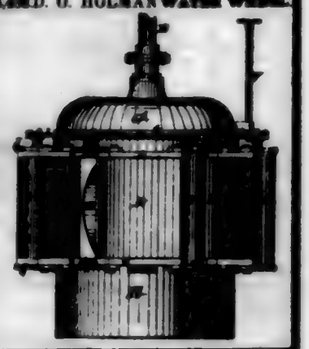
108,477. W. B. HATCH. SPRING CUSHION FOR CAR SEATS.



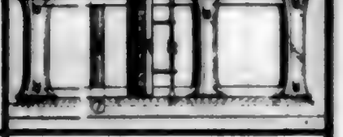
108,478. A. HAVENS. ADJUSTABLE HARROW.



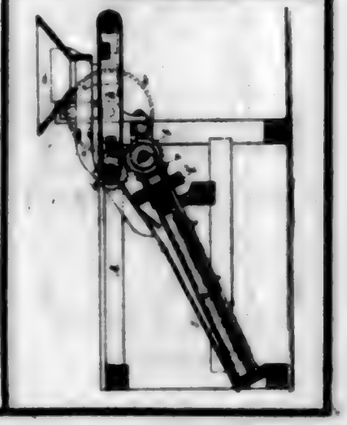
108,479. A. M. HEALY AND C. H. RAYMOND. MACHINE FOR MARKING CARPENTERS' SQUARES.



108,480. C. HICKS. WEATHER STRIP.

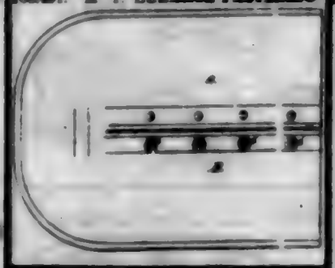


108,481. J. C. HINTZ, Jr. PERMUTATION LOCK.



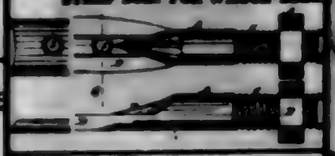
108,482. D. O. HOLMAN. WATER WHEEL.

108,483. J. HUGHES. [illegible]

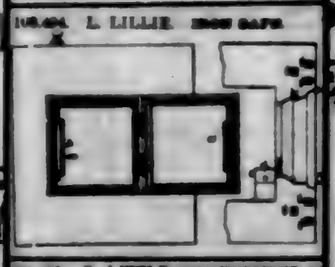


108,484. M. C. JEFFERS. CORN HUSKING MACHINE.

108,488 J. H. JOHNSON SUBSOIL PLOW

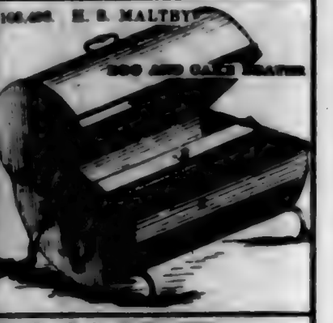


108,491. H. T. LEESIDE FASTENING

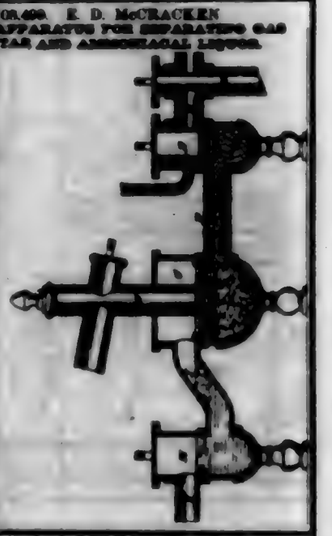


108,492. A. M. LESLIE
RUFFLER FOR SEWING MACHINES.

108,493. W. J. LEWIS AND H. W. OLIVER, Jr.
STRAP BOLT FOR WAGON BOXES



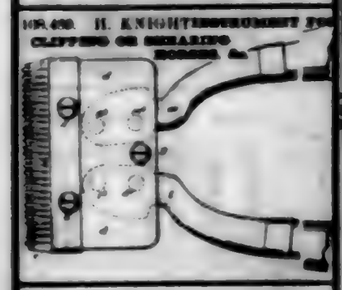
108,494. L. LILLIE SAFE



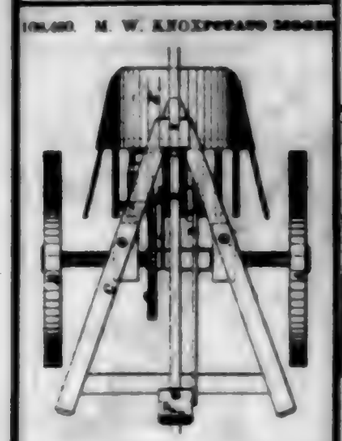
108,495. E. K. MALTBY WASH PROTECTOR

108,497. E. S. MALTBY
SAFE AND CASH BOX

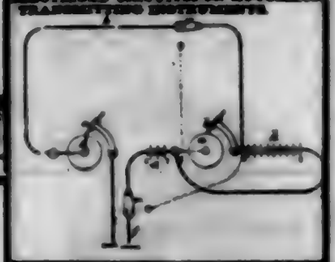
108,498. E. D. McCRACKEN
APPARATUS FOR SEPARATING GAS TAR AND AMMONIACAL LIQUOR.



108,496. M. L. KEEN.
MANUFACTURE OF PAPER STOCK

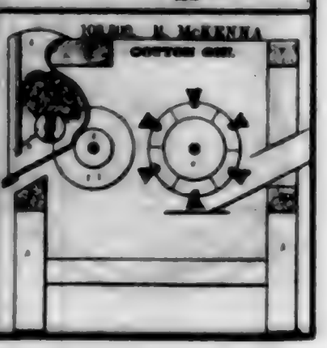


108,499. H. M. KEITH, Jr. PLOW.

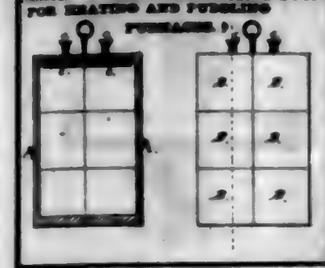


108,500. H. KNIGHTENHUMMET FOR CLIPPING OR SHEARING HORSES.

108,501. M. W. KNOX AND [illegible]

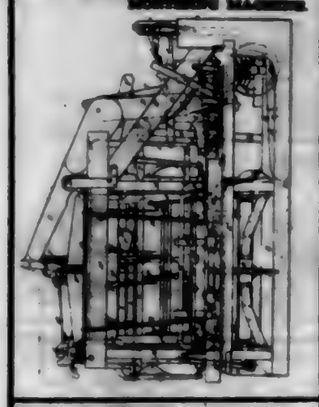


108,502. G. LITTLE ARRANGEMENT OF ELECTRICAL CIRCUITS FOR AUTOMATIC TRANSMITTING INSTRUMENTS



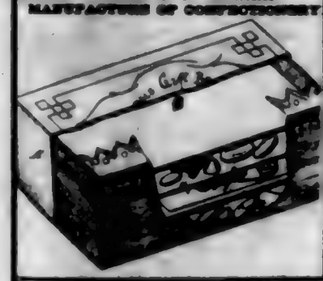
108,503. G. LITTLE.
CHEMICAL TELEGRAPH

108,504. M. McKENNA
COTTON GIN.

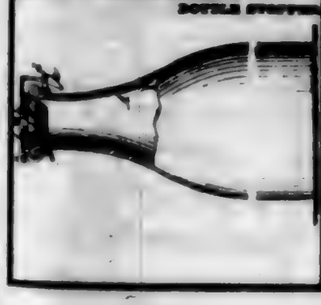


108,507. S. McLAUGHLIN SLIDE DOOR FOR HEATING AND PUDDLING FURNACES.

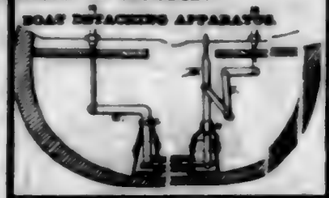
108,508. T. MEIKLE
DIE FOR SWAGING WHEELS.



108,509. L. G. MERRILL
MORTISING MACHINE.

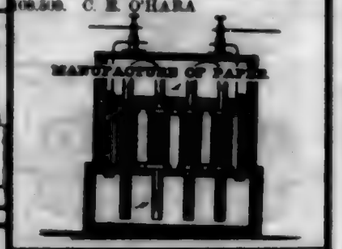


108,504. E. MILLER. MINNOW.

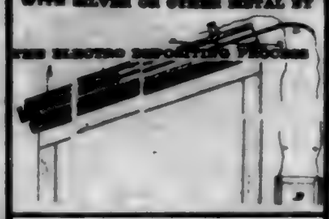


108,506. G. AND C. B. MILLER
MANUFACTURE OF CONFECTIONERY

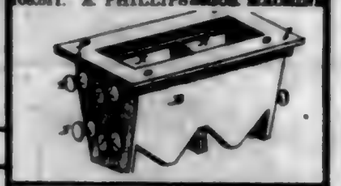
108,506. W. MOROENSTERN
DOUBLE STOPPER.



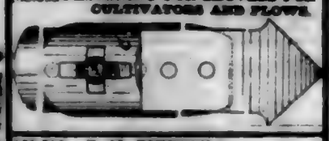
108,507. M. V. NOBLES
BOAT DETACHING APPARATUS.



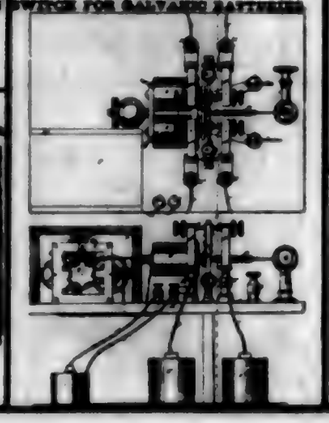
108,508. W. W. OGLESBY
MEDICAL COMPOUND



108,509. C. E. O'HARA
MANUFACTURE OF PAPER



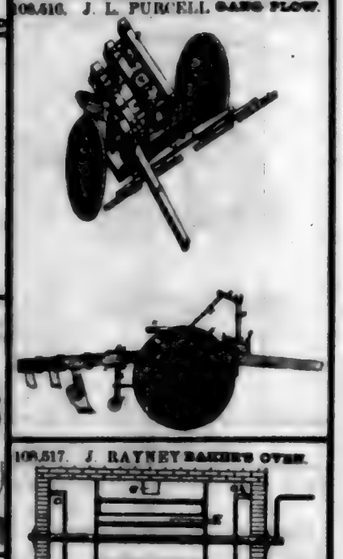
108,510. D. D. PARMELEE, COATING THE INTERIOR OF PIPES, TUBES &c. WITH SILVER OR OTHER METAL BY THE ELECTRO DEPOSITING PROCESS



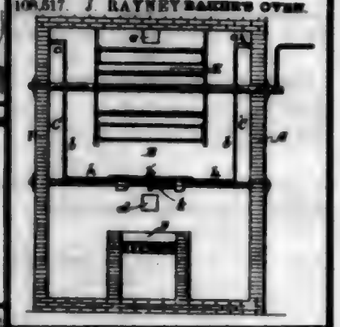
108,511. E. PHILLIPS BRICK MACHINE

J. PIERPONT AND S. S. TUTTLE
108,512 FASTENING FOR SHOVELS FOR CULTIVATORS AND PLOWS.

108,513. E. M. PIERSON
DYNAMO FOR GALVANIC BATTERIES

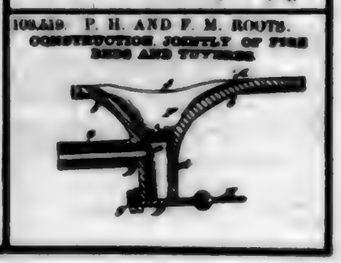


108,514. J. POEY
MANUFACTURE OF SUGAR

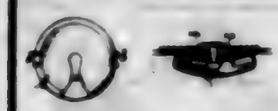


108,515. J. L. POST
RACE LASH FOR MILL GRAZING

108,516. J. L. PURCELL. GANG PLOW.

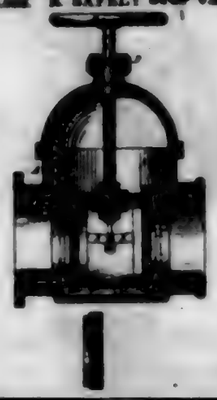


108,517. J. RAYNEY BAKER'S OVEN.



108,518. M. REED
COTTON AND CORN CULTIVATOR

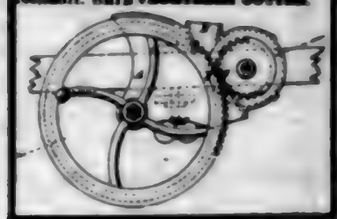
108,519. P. H. AND F. M. ROOTS.
CONSTRUCTION, JOINTLY OF FIRE BRICK AND TUYERES



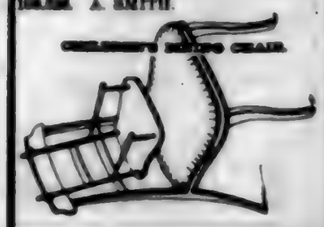
108,530. W. SACKERMANN
BROOCH FASTENING.

108,531. C. SACRE, S. PERKINS, AND W. SMELLIE.
MANUFACTURE OF WROUGHT IRON.

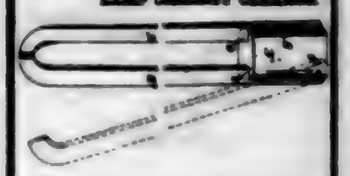
108,532. R. SAFELY STOP VALVE.



108,533. W. W. SANBORN
STRING WOOLLEN GOODS.



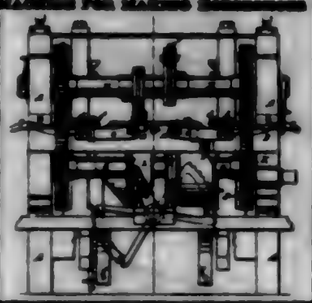
108,534 W. B. SCAIFE



108,535. SHIP VEGETABLE CUTTER.

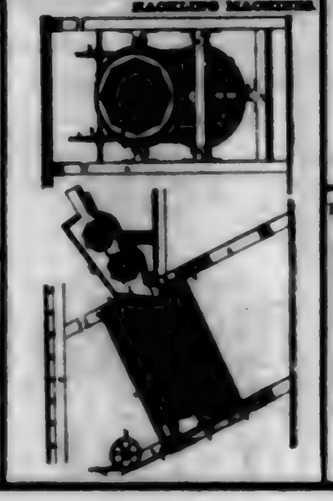
108,536. A. SMITH.
CHILDREN'S RIDING CHAIR.

108,537. A. D. SMITH
LAND CROCKET CLEANER.



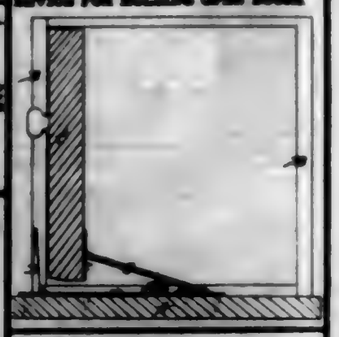
108,538. C. E. SMITH.
VAPOR BURNER.

108,539. I. W. SNYDER. WATER WHEEL.



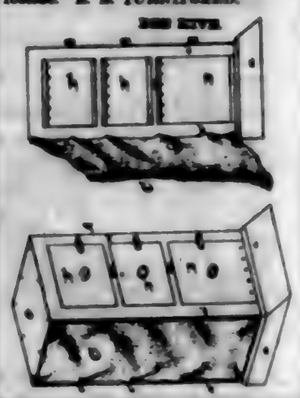
108,540. J. H. SNYDER.
MACHINE FOR MAKING HORSESHOES.

108,541. D. E. AND F. C. SOMER.



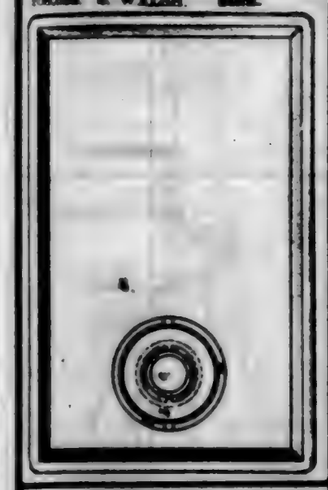
108,542. G. B. STACY.
SEPARATING ATTACHMENT FOR HUSK MACHINES.

108,543. J. STOVER, PERSONS PUBLIST.

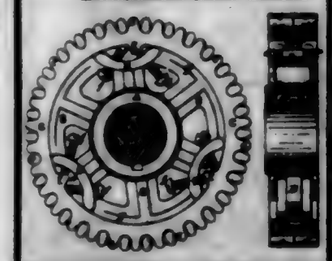


108,544. J. B. SWEETLAND.
DEVICE FOR HOLDING OPEN DOORS.

108,545. J. F. THOMAS. SHOVEL.

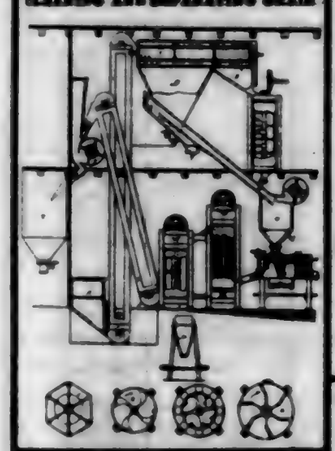


108,546. R. R. TURNIPSEED.
SEED DRILL.



108,547. N. VANDENBURGH
POTATO DIGGER.

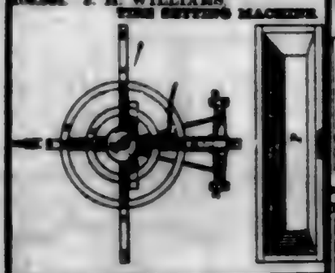
108,539. S. WALSH. SHOE.



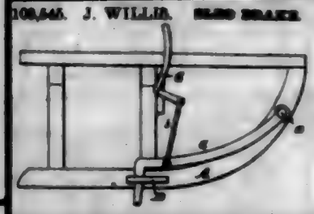
108,540. W. H. WARD.
ADJUSTABLE GEAR WHEEL.

108,541. A. WARFIELD
MANUFACTURE OF SOAP.

108,541. F. WEGMANN MACHINE FOR CLEANING AND SEPARATING GRAIN.

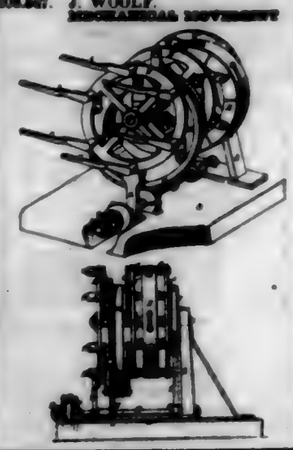


108,542. C. S. WELLS, MANUFACTURE OF BOXES, CARTRIDGE CASES, &c.

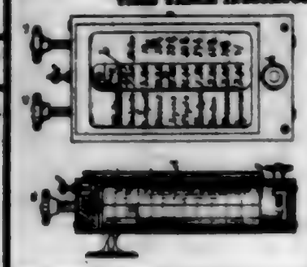


108,543. D. E. WILLIAMS, CARTRIDGE.

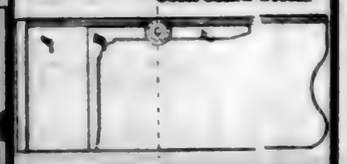
108,544. J. H. WILLIAMS.
TIRE SETTING MACHINE.



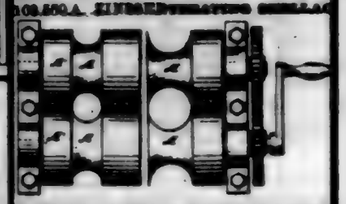
108,545. J. WILLIS. SLED BRAKE.



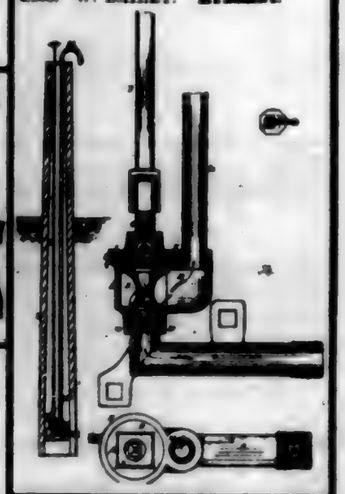
108,546. A. WISSLER, SEPARATOR OF THRASHING MACHINES.



108,547. J. WOOLF.
MECHANICAL MOVEMENT.

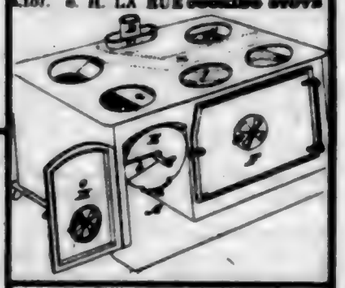


108,548. L. WRIGHT.
TIRE TAPER INDICATOR.



108,549. R. C. YOUNG
COMPOSING STICK.

108,550. A. ZINSER, OPERATING SHELLAC



4,135. W. BAILEY. HYDRANT.

4,136. W. A. IVES. AWNING.

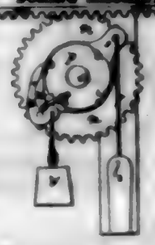
4,137. S. H. LA RUE COOKING STOVE

4,138. J. L. SAMUELS.
PRESERVING AND HARDENING WOOD.

4,139. D. S. WOOD
SCREEN FOR PAINTS.

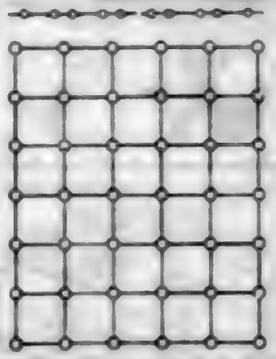
ILLUSTRATIONS OF PATENTS

ISSUED FROM

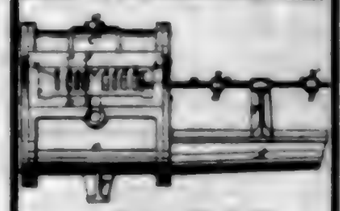


THE UNITED STATES PATENT OFFICE

OCTOBER 25, 1870.

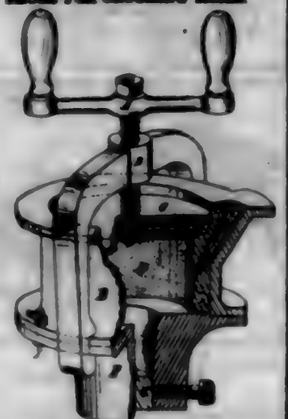


108,551 C. N. BALDWIN
HORSE HAY FORK.

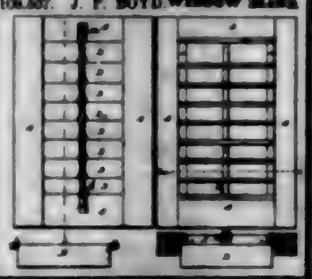


108,552 C. N. BALDWIN
BORING MACHINE

108,553 W. BECK
METALLIC TYRE FOR &c.



108,554 O. P. BLAKE STEAM PUMP.



108,555 J. BLOMGREN
CROSSARM FOR MINING

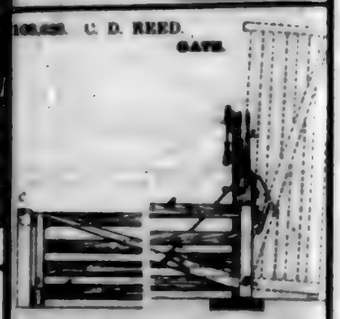
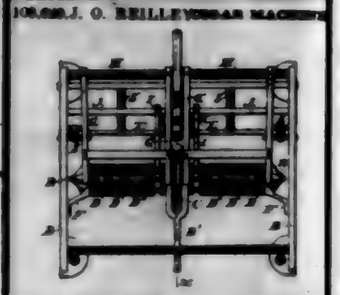
108,624 E. W. PHELPS. MACHINE FOR BRUSHING HAIR.

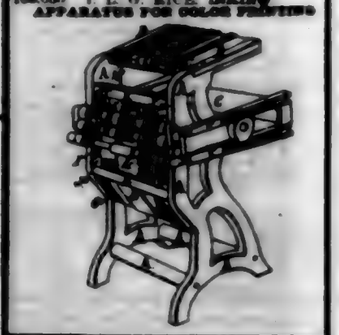
108,625 W. F. PHELPS. MAP STAND.



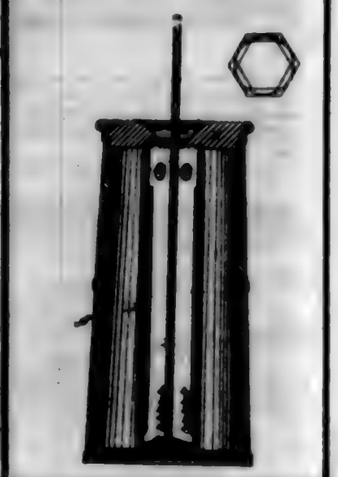
108,626 J. W. POST. PADDLE WHEEL.



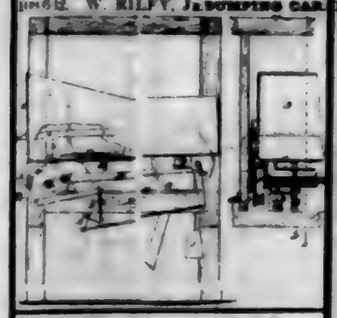
108,627 E. L. RANSOME. GROOVING SOLUBLE SALTS FROM ARTIFICIAL STONE.



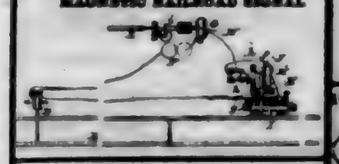
108,628 C. D. REED. GATE.



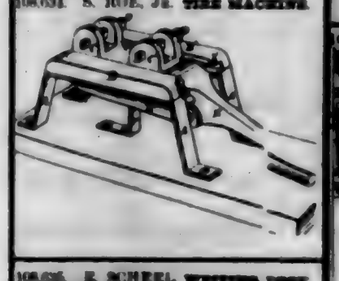
108,629 J. O. REILLEY[illegible] MACHINE.



108,630 I. L. O. RICE. DECIMAL APPARATUS FOR COLOR PRINTING.



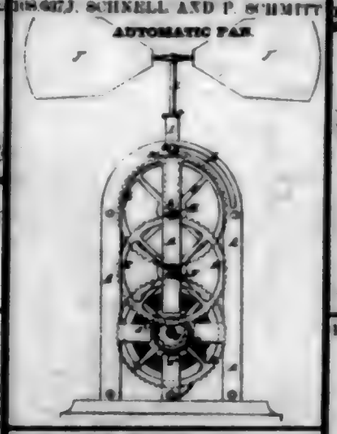
108,631 J. C. RICHARDSON AND L. TAYLOR. CHURN.



108,632 W. RILEY, Jr. DUMPING CAR.

108,633 W. ROBINSON. ELECTRO MAGNETIC RAILROAD SIGNAL.

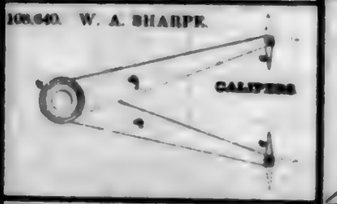
108,634 S. ROE, Jr. TIRE MACHINE.



108,635 E. SCHEEL. WRITING DESK.

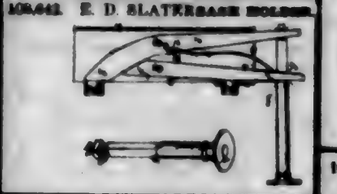
108,636 J. M. SCHMIDT. SPRING.

108,637 J. SCHNELL AND P. SCHMITT. AUTOMATIC FAN.



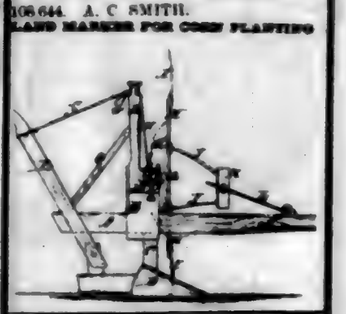
108,638 F. B. SCOTT. REED HOLDER.

108,639 J. G. SERT AND C. L. SCHURR. AWNING.

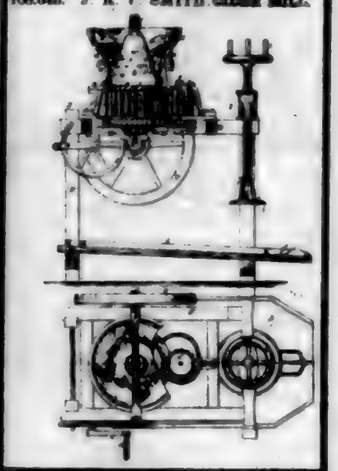


108,640 W. A. SHARPE. CALIPERS.

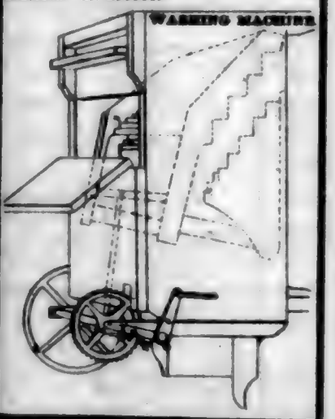
108,641 W. H. SINGER. PLATE AND BAR FOR CONSTRUCTION OF PLOWS, CULTIVATOR TEETH, &c.



108,642 E. D. SLATERBACK. HOLDER.

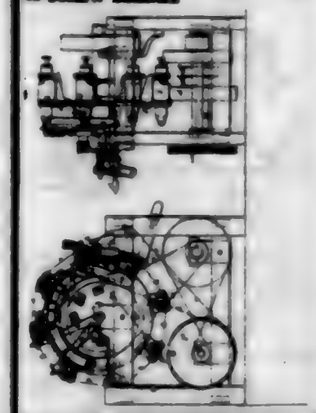


108,643 A. C. SMITH. COTTON SEED PLANTER.



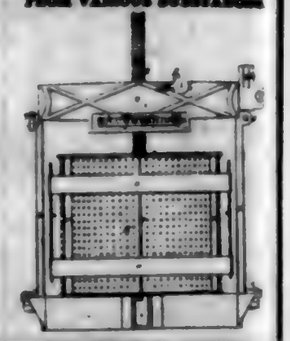
108,644 A. C. SMITH. LAND MARKER FOR CORN PLANTING.

108,645 J. K. P. SMITH. CIDER MILL.

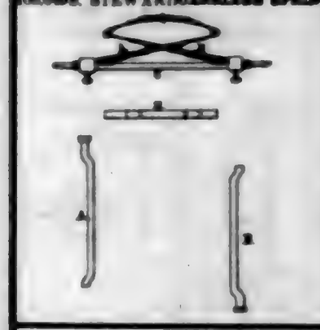


108,646 S. M. SMITH. WASHING MACHINE.

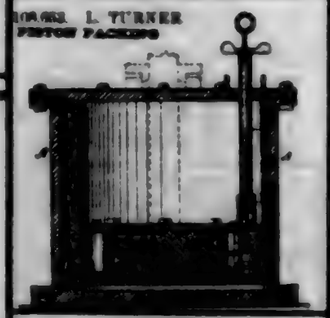
108,647 W. SMITH. MOLDING PIPE.



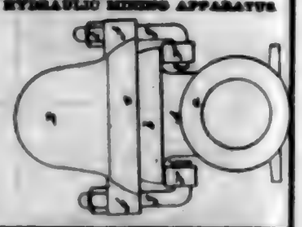
108,666. J. F. STARRETT
MACHINE FOR SHAVING THE SHANK OF SCREW BLANKS



108,667. T. J. TRAPP. PUMP SUPPORT.

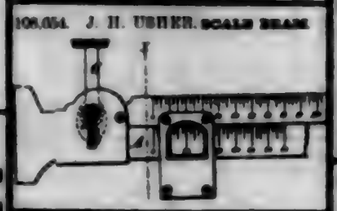


108,668. J. WATKINS PIPES FOR REMOVING LIQUID MATTER FROM VARIOUS SUBSTANCES

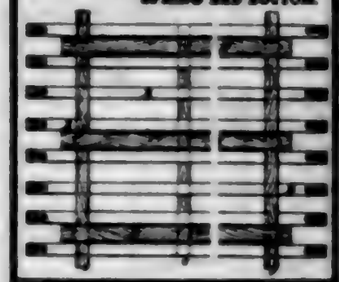


108,669. STEWART AND GLASS SPRING

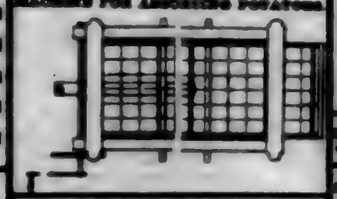
108,670. L. TURNER
PISTON PACKING



108,671. T. WATSON
HYDRAULIC MINING APPARATUS



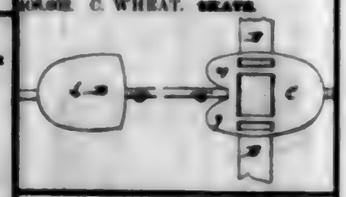
108,672. E. WEBB. PRESERVING WOOD



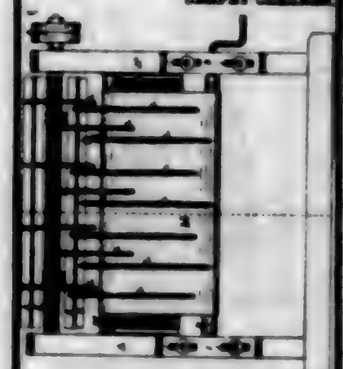
108,673. J. H. USHER. SCALE BEAM

108,674. P. STOVALL.
SPRING BED BOTTOM.

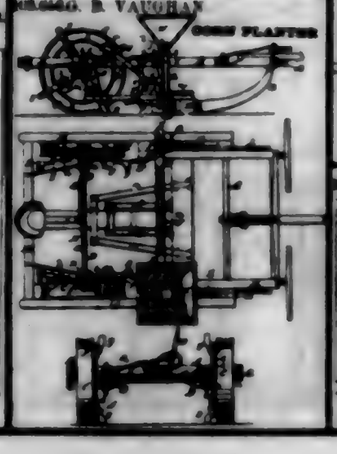
108,675. D. AND D. A. VANDERVORT AND T. DENISE.
MACHINE FOR ASCERTAINING POTATOES.



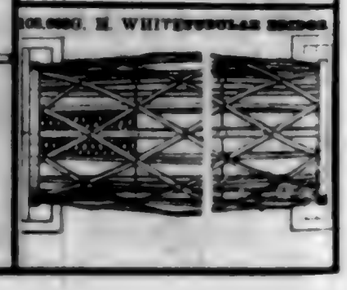
108,676. W. M. WELLING
BED FOR HOLDING BUTTONS



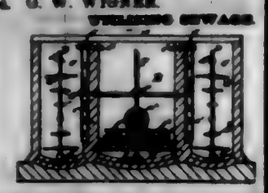
108,677. H. M. WESTMANCOAT FOR COATING AND PROTECTING WOOD.



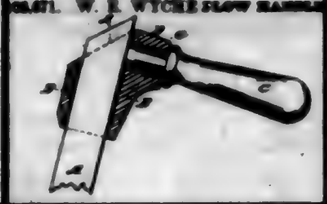
108,678. C. WHEAT. SEATS.



108,679. R. TERRY AND F. W. HAFKENSCHEID
CARPET CLEANER.

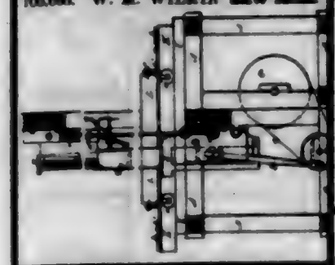


108,680. B. VAUGHAN
CORN PLANTER

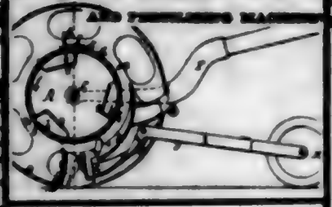


108,680. H. WHITEHOUSE. BRIDGE

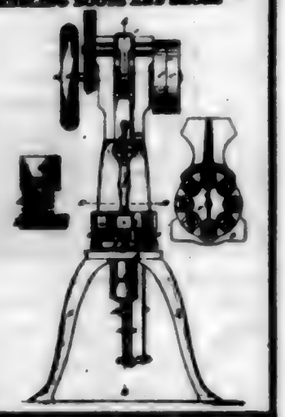
108,664. G. W. WIGNER
WEIGHING SEWAGE.



108,671. W. R. WYCHE. SLAW MACHINE.

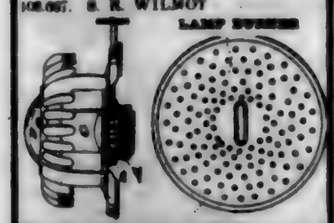


108,670. S. A. REMIS, A. E. POTH AND J. W. GOODRICH. PAPER CUTT.

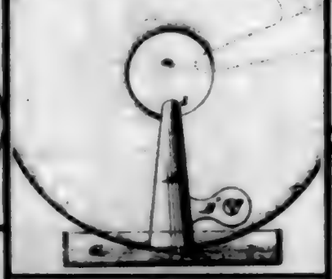


108,665. W. M. WILKIN. SAW MILL.

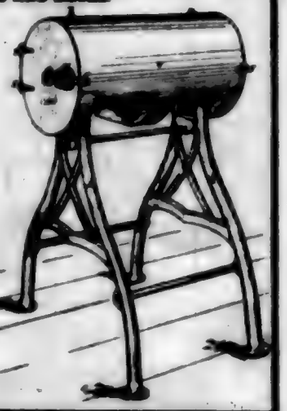
108,672. S. L. ALLEN. PLANTING AND FURROWING MACHINE.



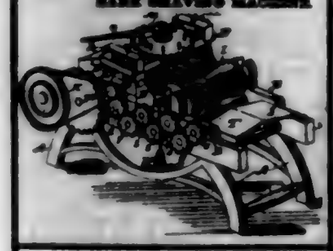
108,677. H. H. BIGELOW. MACHINE FOR MOULDING DOORS AND SHOES.



108,666. J. T. WILKINSON
ROOFING CEMENT.



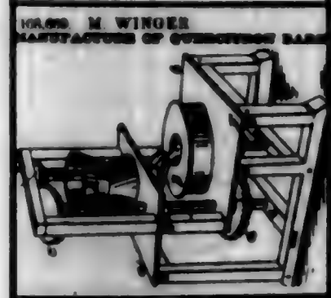
108,667. S. R. WILMOT
LAMP BURNER.



108,672. W. ARMSTRONG
LUBRICATING DEVICE FOR SOLE PRESSING MACHINES.

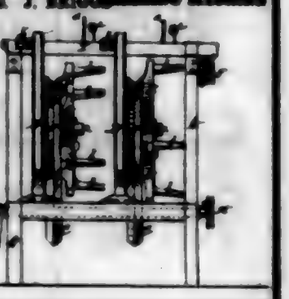
108,678. H. H. BIGELOW
MACHINE FOR FINISHING EDGES OF DOORS AND SHOES.

108,668. M. WINGER
BARK SHAVING MACHINE.

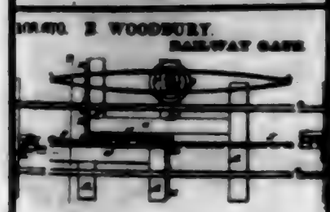


108,674. R. G. W. BARTLETT
WEIGHING MACHINE.

108,679. P. BOYDEN
BRACKARDT SHOVEL WORK.

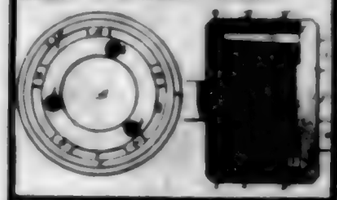


108,669. M. WINGER
MANUFACTURE OF CURRYCOMB BACK

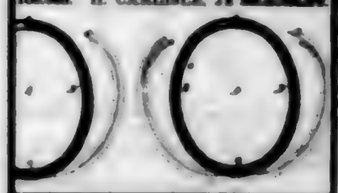


108,675. H. J. BEARD.
MACHINE FOR PEELING TIMBER.

108,680. J. BRIGGS. BRIDGE MACHINE



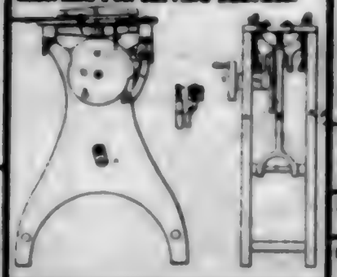
108,670. E. WOODBURY.
RAILWAY GATE.



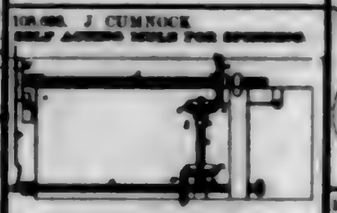
108,691 O. BRUECK. FAN.

108,692 I. D. BUCK. PISTON.

108,693 H. CARLISLE, Jr. SEAMLESS

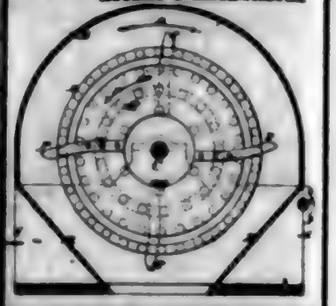


108,694 J. K. CHRISTOPHER



108,695 T. J. AND G. M. CLARKSTON APPARATUS FOR HARVESTING

108,696 J. P. CROOKS MACHINE FOR SEWING LEATHER



108,697 J. CUMNOCK SELF ADJUSTING BUILD FOR STUDDING

108,698 E. DAVIS WASHING MACHINE

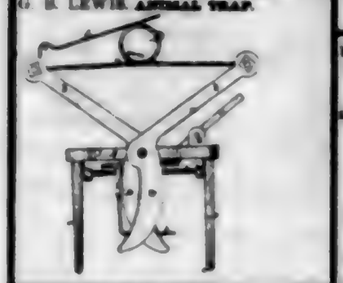
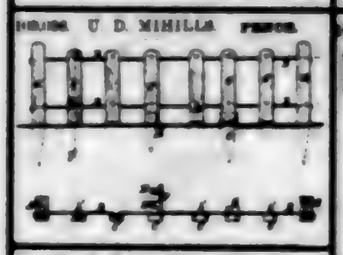
HORSE HAY FORK

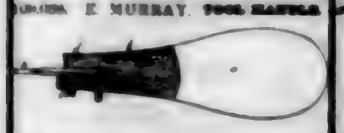


109,033. A. W. McKOWN. SPRING FOR WAGONS.

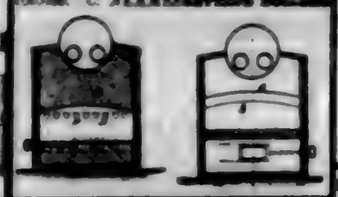


109,034. W. MENDHAM AND C. CHAMBERS Jr. RIDGE MACHINE.

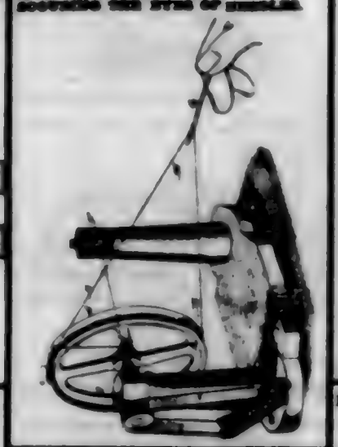
109,035. J. B. MERRIMAN AND G. B. LEWIS. ANIMAL TRAP.



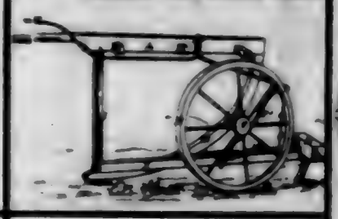
109,036. U. D. MIHILLS. FENCE.



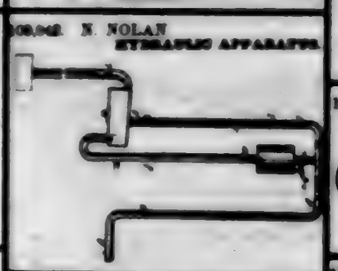
109,037. E. H. MORRIS. PLANE.



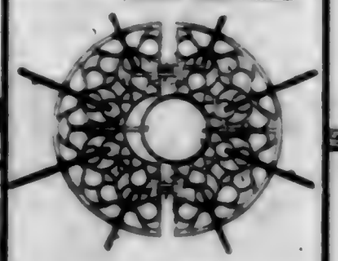
109,038. E. MURRAY. TOOL HANDLE.



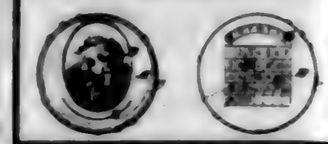
109,039. C. NEAME. SPINNING DOUBLER.



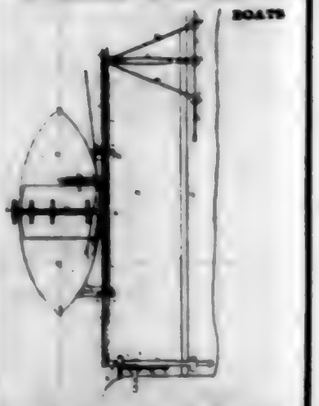
109,040. H. A. NETTLETON AND E. R. LAWTON. MACHINE FOR SQUARING THE ENDS OF SPOOLS.



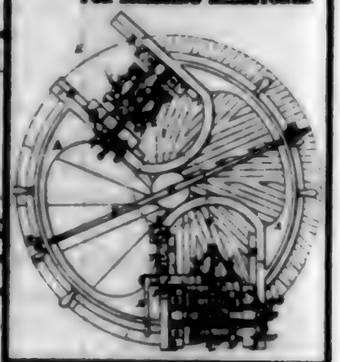
109,041. A. M. NEWLAND. CORRUGATED HARROW AND TURNED SHELL.



109,042. N. NOLAN. STERILIZING APPARATUS.

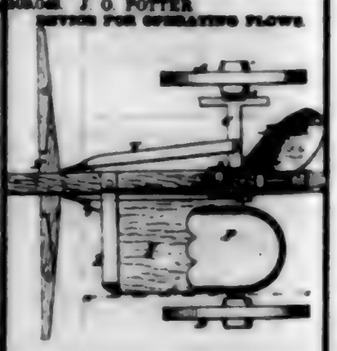


109,043. J. O'MALLEY. GROVE PIPE GRADE.

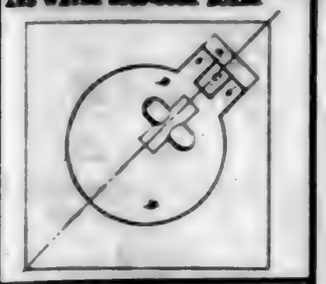


109,044. M. ORSBREE. FIRE CUSHION.

109,045. S. W. AND J. F. PALMER. APPARATUS FOR TOWING CANAL BOATS.

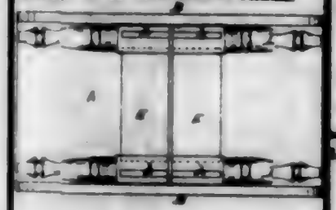


109,046. J. PEPPLER. MACHINE FOR RUBBING BELLOWS.

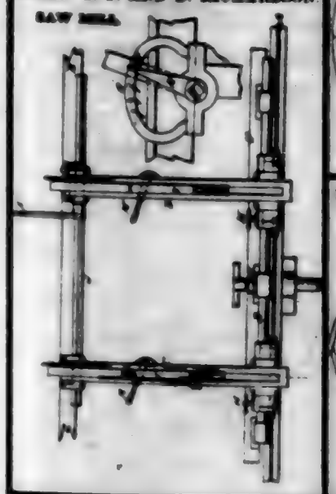


109,047. C. N. PERKINS. PITMAN.

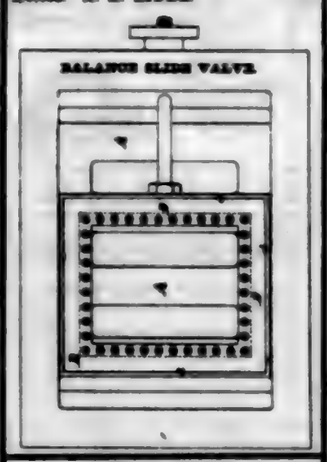
109,048. J. O. POTTER. DEVICE FOR OPERATING FLOWS.



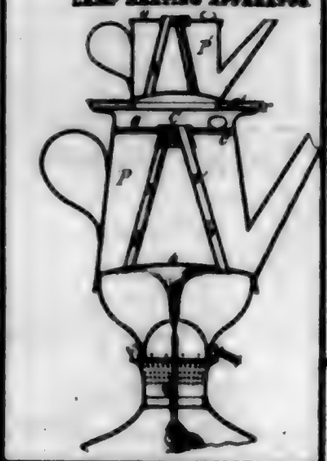
109,049. W. W. PULLIN. TOP OF GAS AND WATER HOOD-DOOR BOXES.



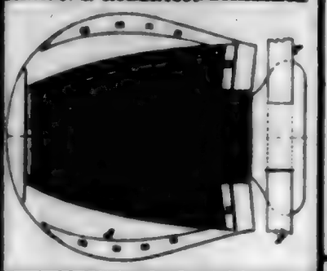
109,050. D. M. REYNOLDS. PORTABLE CRADLE OR COT.



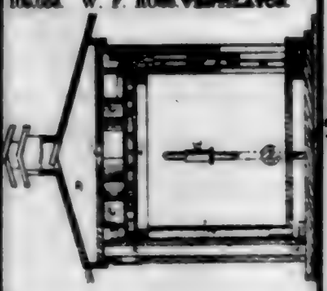
109,051. D. M. REYNOLDS. TABLE.



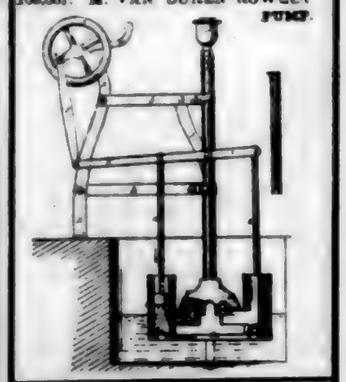
109,052. B. F. AND D. RICHARDSON. SAW MILL.



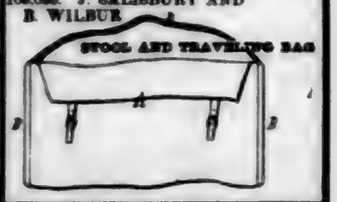
109,053. A. K. RIDER. BALANCE SLIDE VALVE.



109,054. A. RITTENHOUSE. LAMP HEATING APPARATUS.

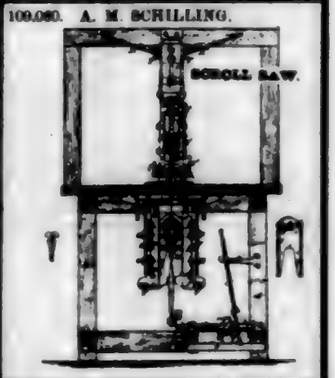


109,055. J. S. ROBERTSON. BOOKBINDER.

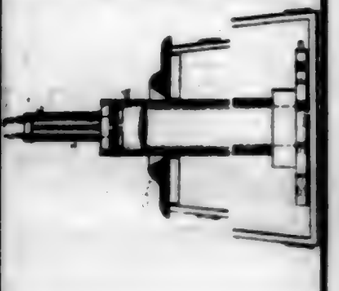


109,056. W. F. ROSS. VENTILATOR.

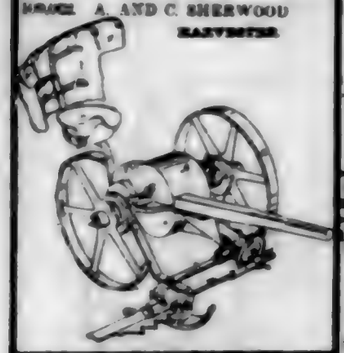
109,057. M. VAN BUREN ROWLEY. PUMP.



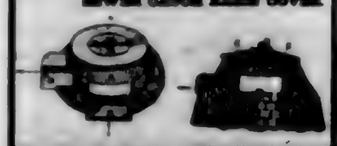
109,058. J. SALISBURY AND B. WILBUR. STOOL AND TRAVELING BAG.



109,059. T. SAMPSON. DYE TUB.

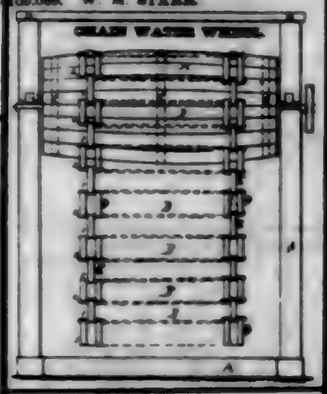


109,060. A. M. SCHILLING. SCROLL SAW.

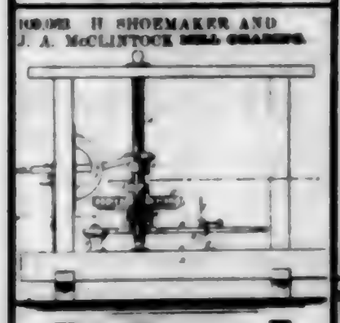


109,061. I. SCOTT. CHURN DASHER.

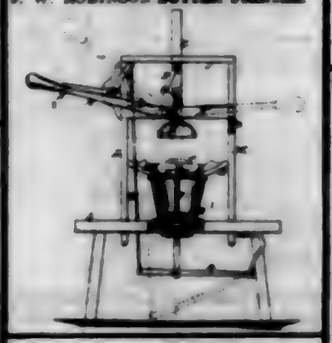
109,065. A. AND C. SHERWOOD
HARVESTER.



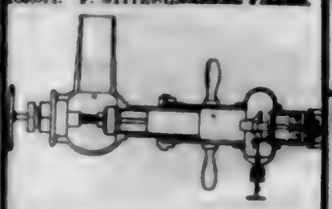
109,066. H. SMITH, Jr.
SEWER GAUGE BASIN COVER.



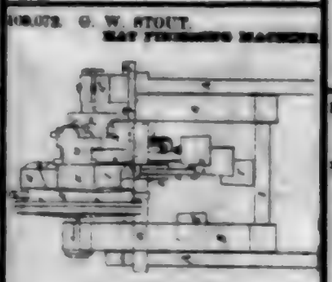
109,067. M. P. SMITH.
DRYING AND PRESERVING APPLES.



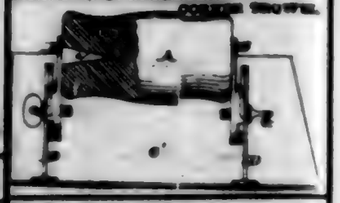
109,068. W. M. STARR.
CHAIN WATER WHEEL.



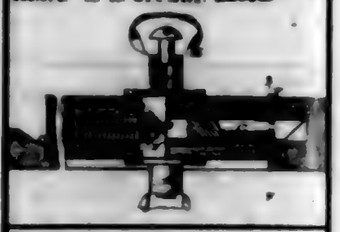
109,069. H. SHOEMAKER AND J. A. McCLINTOCK. MILL GRADING.



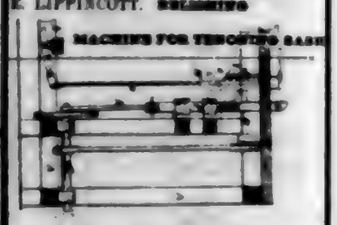
109,070. W. C. STERN AND J. W. ROBINSON. BUTTER PRINTER.



109,071. F. STITZEL. BARREL FILLER.

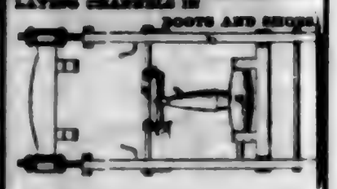


109,072. G. W. STOUT.
HAT FINISHING MACHINE.

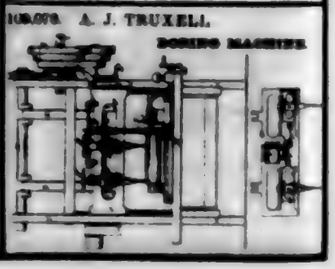


109,073. S. F. STREETER.
CORDING TROUSE.

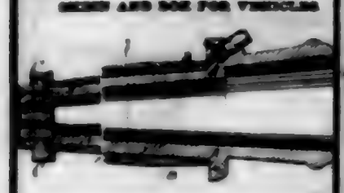
109,074. A. A. STUART. LASTS.



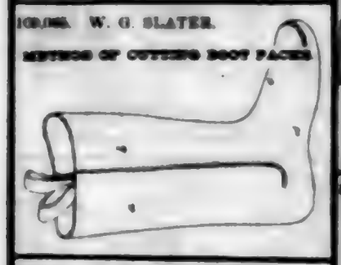
109,075. O. L. SULLIVAN AND E. LIPPINCOTT. SHINGLING
MACHINE FOR TEMPERING SAWS.



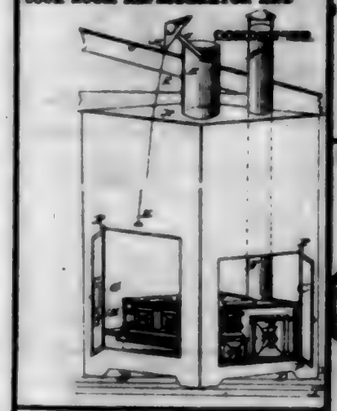
109,076. G. P. SWEEZY.
ADJUSTABLE COAT PATTERN.



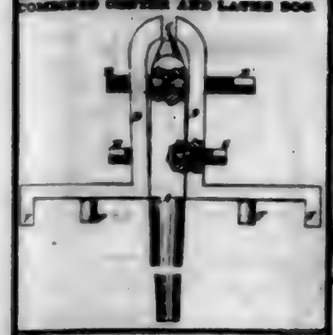
109,077. S. D. TRIPP. MACHINE FOR LAYING CHANNELS IN
BOOTS AND SHOES.



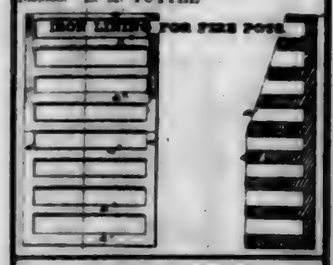
109,078. A. J. TRUXELL.
BOXING MACHINE.



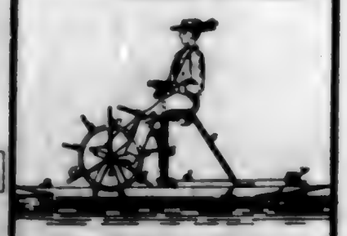
109,079. T. SMART, Jr. WHEELS
HUBS AND BOX FOR VEHICLES.



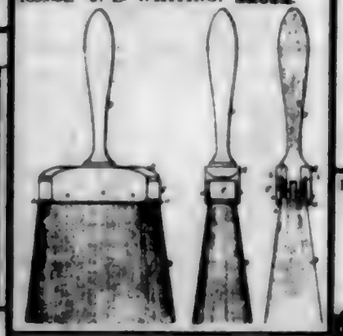
109,080. W. G. SLATER.
METHOD OF CUTTING BOOT FACES.



109,081. P. D. VAN DEVENTER.
COOK ROOM REFRIGERATOR AND CONDENSER.

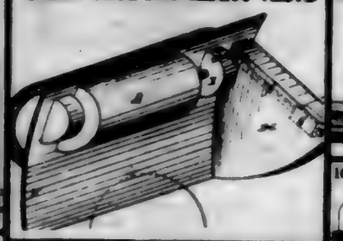


109,082. A. J. TRUXELL.
CONDENSED CHIPPER AND LASTING BOX.

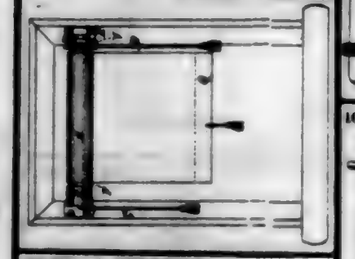


109,083. E. A. TUTTLE
IRON LINING FOR FIRE POTS.

109,084. C. O. WEDERKINCH AND A. STARKWEATHER.
FLOATING VELOCIPEDE.

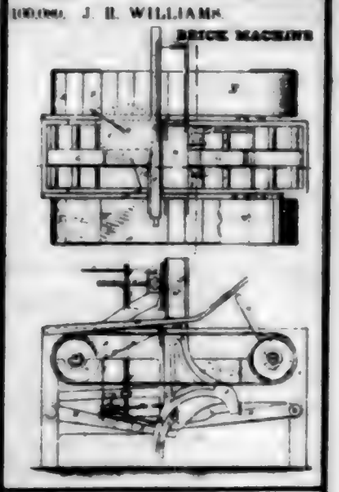


109,085. J. L. WHITING. BRUSH.

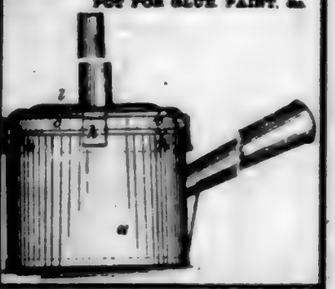


109,086. F. W. WHITNEY. PAPER FILE.

109,086. I. N. WHITTELSEY.
STEAM GAGE AND SAFETY VALVE.

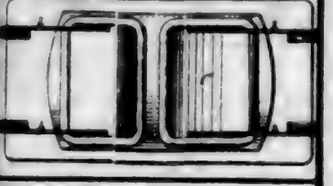


109,087. J. H. WILHELM.
CURTAIN FIXTURE.

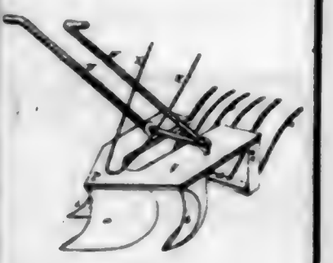


109,088. I. WILLIAMS.
DEVICE FOR UNLOADING WAGONS.

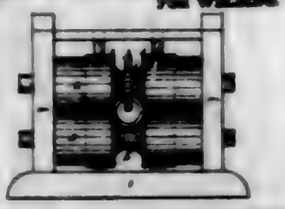
109,089. J. H. WILLIAMS.
BRICK MACHINE.



109,090. J. J. WILSON.
POT FOR GLUE, PAINT, &c.

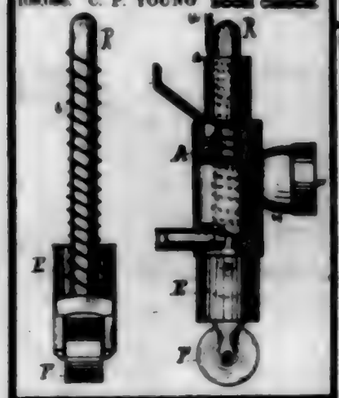


109,091. H. A. WINTER.
SPOOLING AND GRADING MACHINE.

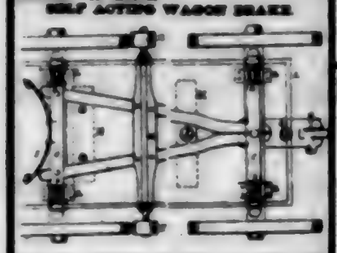


109,092. J. WISE. MACHINE FOR BOOKING TOBACCO LEAVES.

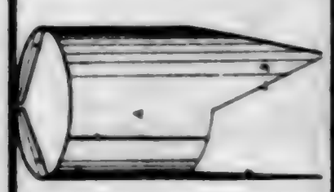
109,093. A. B. WIXOM. POTATO HOOER.



109,094 E. G. WOODWORTH, J. HRAWDY AND F. MERITHEW. MACHINES FOR BENDING HOOP PIPE FOR WELLING.

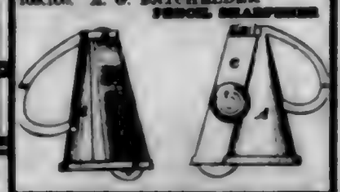


109,095 E. WRIGHT SPRING FOR VEHICLES.

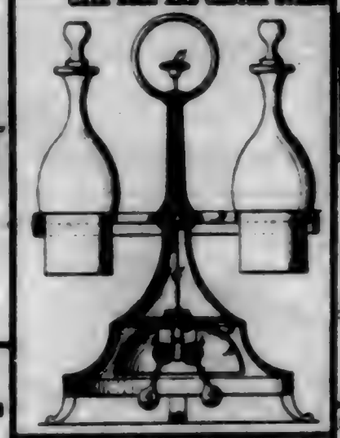


109,096 C. P. YOUNG HOOK CHOCK.

109,097 A. ZINK SELF ACTING WAGON BRAKE.

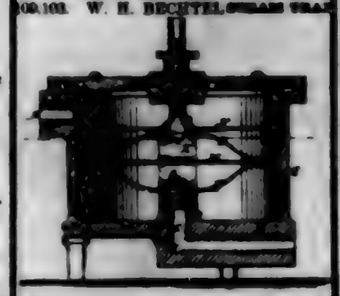


109,098 A. S. ADAMS TREE PROTECTOR.

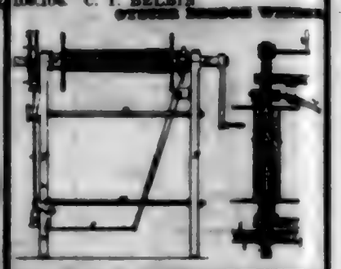


109,099 E. J. BARBER WAGON WHEEL.

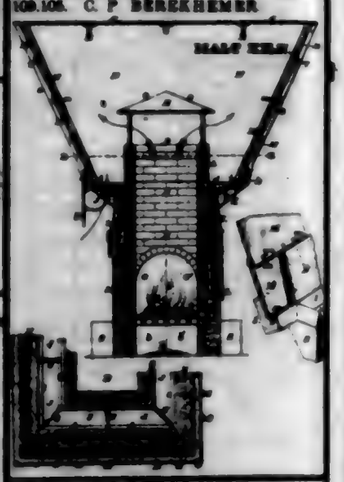
109,100 A. G. BATCHELDER PENCIL SHARPENER.



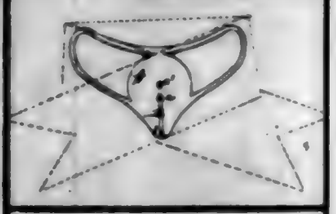
109,101 P. A. BLATTERLIEK CALL BELL AND GASTER STAND.



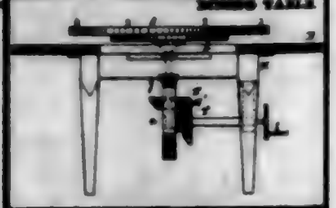
109,102 S. W. BEACH, CLAMPING MOVABLE SHAFE FOR CARRIAGES.



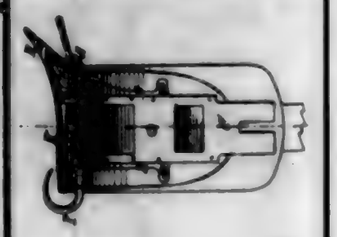
109,103 W. H. BECHTEL, STEAM TRAP.



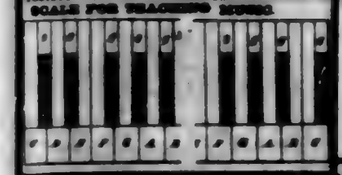
109,104 C. T. BELBIN OYSTER TONGUE WHEEL.



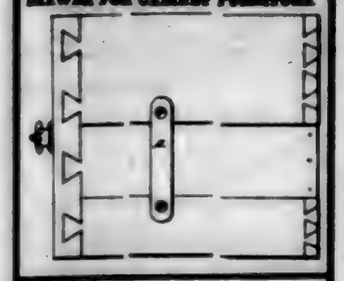
109,105 C. P. BEREKHEMER HALF TURN.



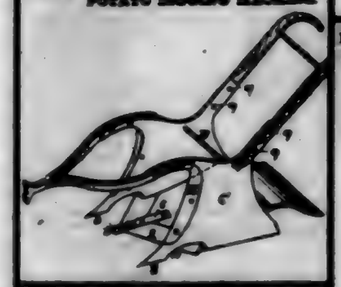
109,106 G. W. BISHOP. HOOK TIE FASTENING.



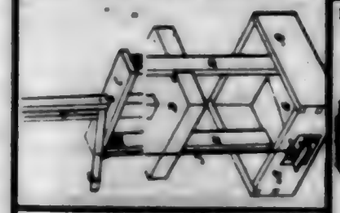
109,107 D. BOARDMAN. SEWING TABLE.



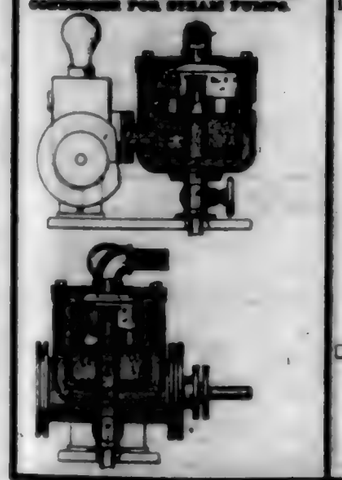
109,108 V. BORST. HANGING SADDLE.



109,109 P. G. BRYAN. TRANSPARENT SCALE FOR TEACHING MUSIC.

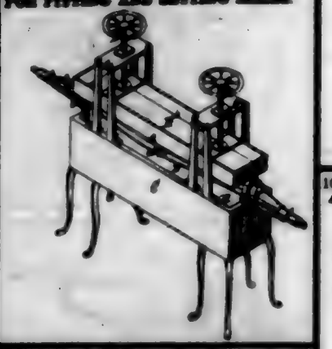


109,110 L. BURNELL. DRAWER FOR CARRYING FURNITURE.

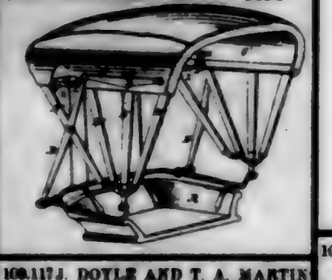


109,111 L. COCHRAN POTATO DIGGING MACHINE.

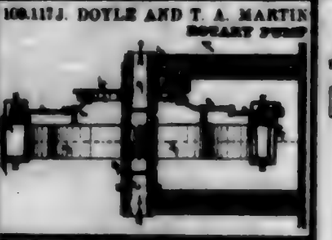
109,112 J. COSOLOWSKY ANIMAL TRAP.



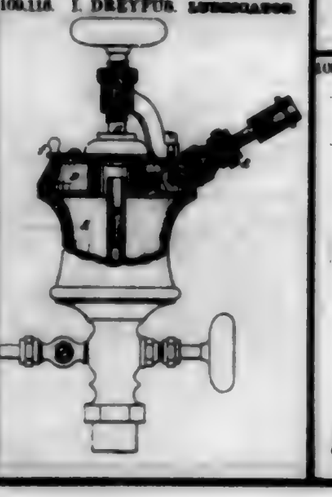
109,113 W. CRAIG AND H. L. BREVOORT CONDENSER FOR STEAM PUMPS.



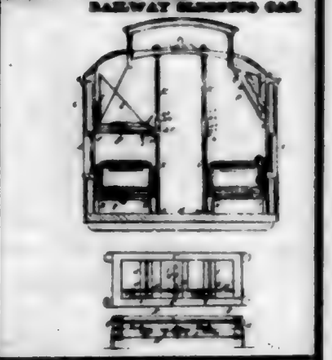
109,114 R. W. CROUSE HORSE POWER.



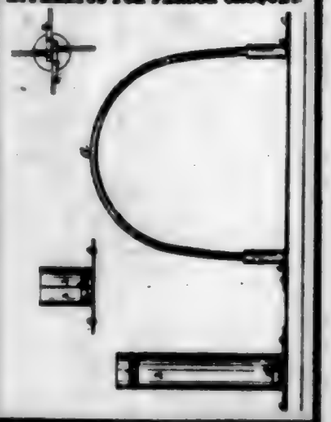
109,115 J. CUNNINGHAM APPARATUS FOR PITCHING AND SETTING AXLES.



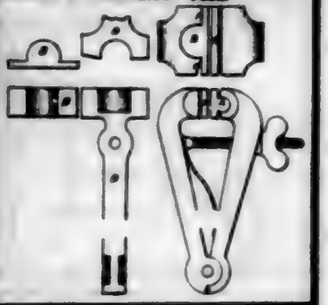
109,116 A. DOM SUPPORTING FRAME FOR FOLDING BUGGY TOPS.



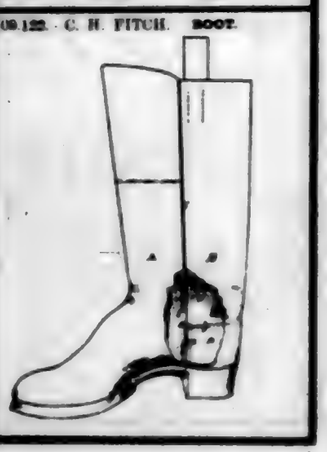
109,117 J. DOYLE AND T. A. MARTIN ROTARY PUMP.



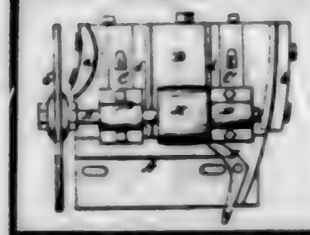
109,118 I. DREYFUS. LUBRICATOR.



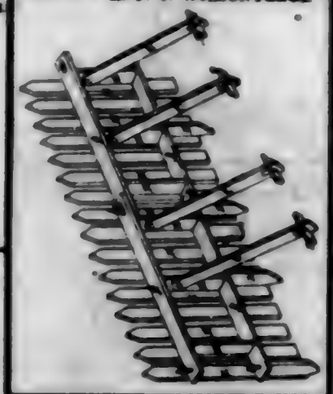
109,119 J. S. DU BOIS RAILWAY SLEEPING CAR.



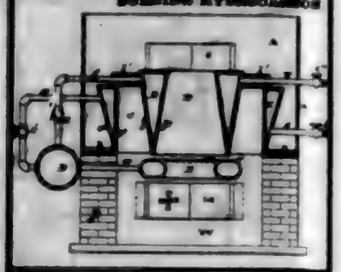
109,120 A. P. EASTMAN. APPARATUS FOR PARLOR CROQUET.



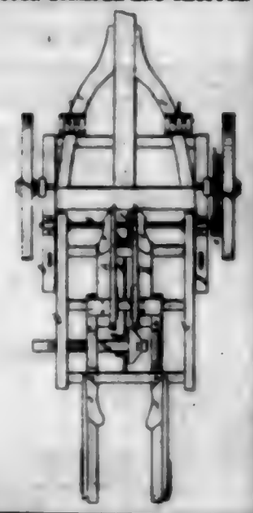
109,121 J. FINDLAY. VISE.



109,122 C. H. FITCH. BOOT.



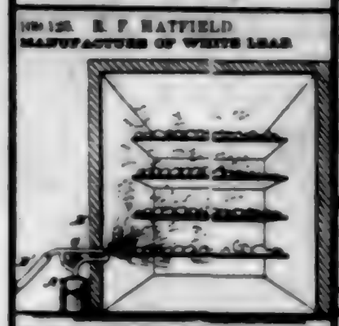
109,128. C. A. GRIFFIN AND J. W. WILKINS
COVERLESS MACHINE.



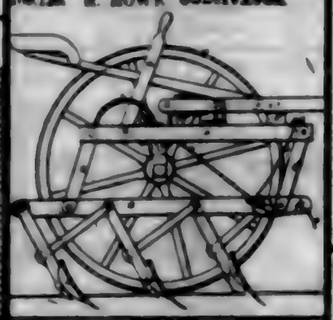
109,127. C. N. HITCHCOCK AND H. P. T. WILSON FENCE.

109,131. I. KENDRICK
BURNING HYDROCARBON

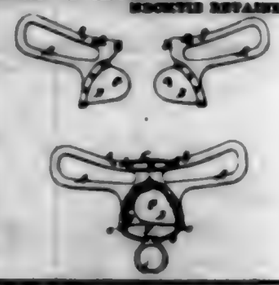
109,129. N. M. HALE.
COTTON SCRAPER AND CHOPPER.



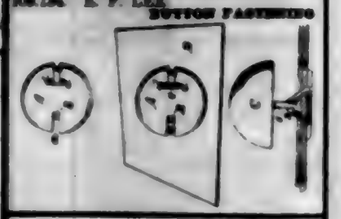
109,126. C. B. HOLDEN GUN LOCK.



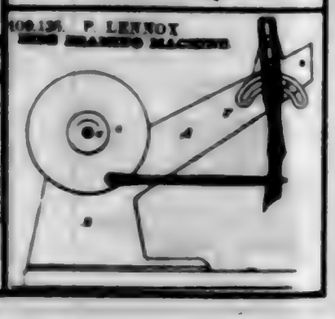
109,132. O. P. KNIFFIN
EXCAVATING SCOOP.



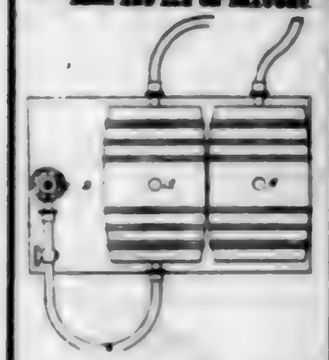
109,125. R. P. HATFIELD
MANUFACTURE OF WHITE LEAD.



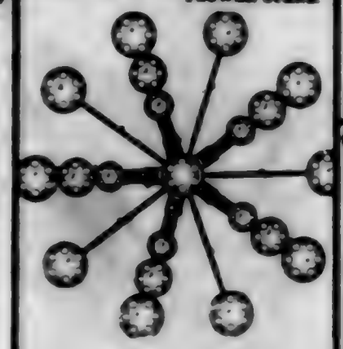
109,124. H. HOWE CULTIVATOR.



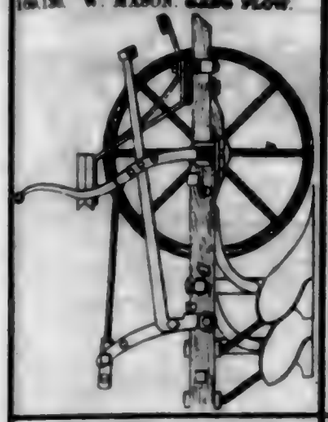
109,133. H. LAURENCE
BUCKTAIL RETAINER.



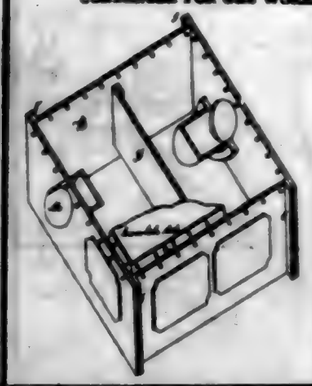
109,134. E. P. LEE
BUTTON FASTENING



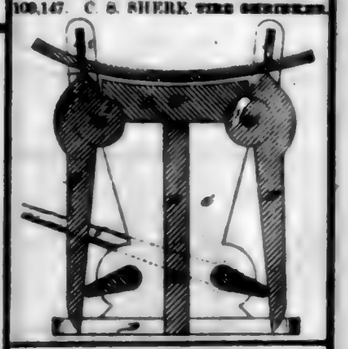
109,135. P. LENNOX
[illegible] MACHINE.



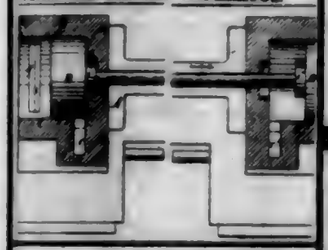
109,136. C. E. HAYNES PRESERVING [illegible] AND ALE OR BEATONIC.



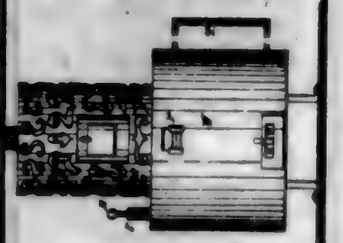
109,130. H. H. KENDRICK
FLOWER STAND.



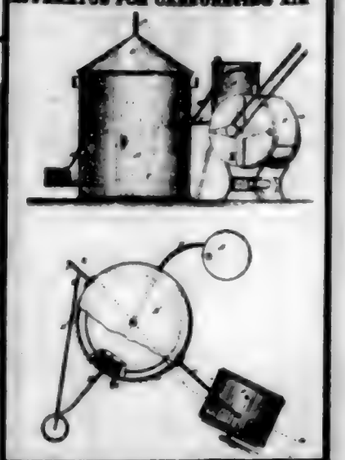
109,138. W. MASON. SAND FLOW.



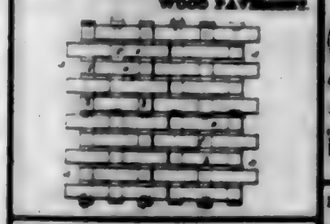
109,142. P. MUNZINGER
CONDENSER FOR GAS WORKS.



109,147. C. S. SHERK. FIRE SKIRMER.

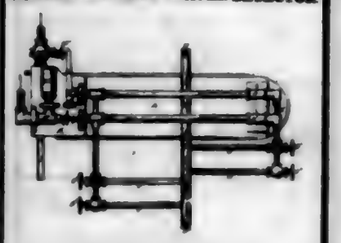


109,137. T. MAY
VARIABLE CUT-OFF APPARATUS.



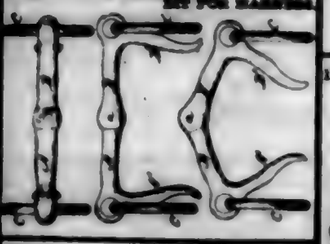
109,143. J. OLIPHANT
RAILROAD CAR STOVE.

109,148. J. D. SPANG
APPARATUS FOR CARBURETING AIR.

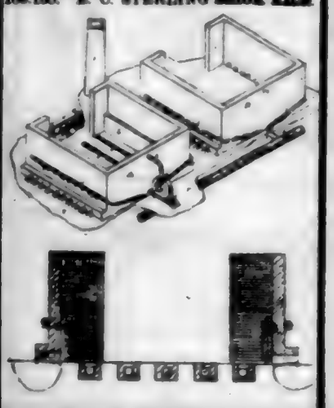


109,139. D. McKENZIE
WOOD PAVEMENT.

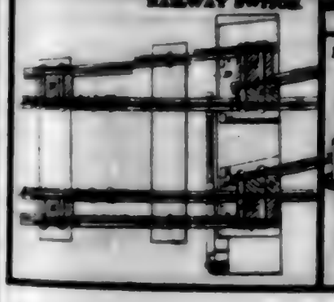
109,144. J. PUSEY NUT CRACKER.



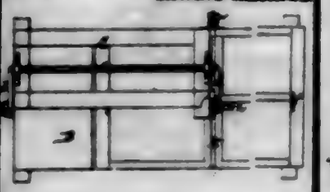
109,149. J. L. STARKEY. BOILER FEEDER AND LOW WATER DETECTOR.



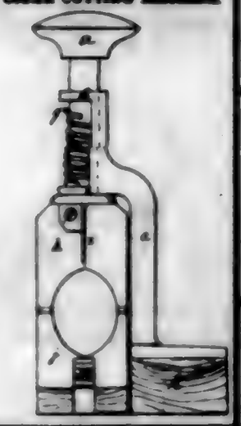
109,140. H. W. MILLAR [illegible] VALVE.



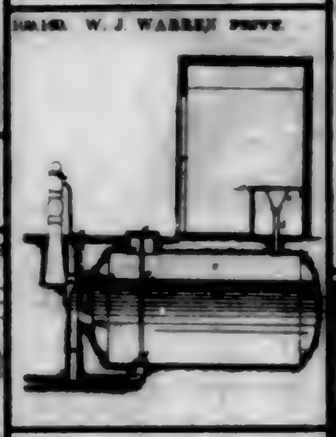
109,145. R. S. ROBERTS
SET FOR HARVESTER.



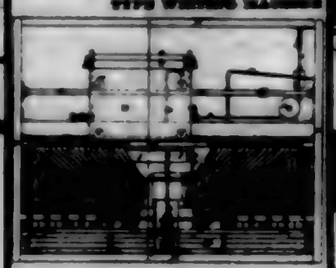
109,150. E. C. STERLING BRICK KILN.



109,141. J. MINER AND S. MERRICK
RAILWAY SWITCH.

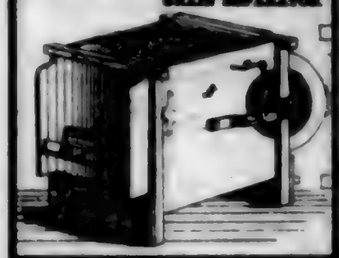


109,146. D. S. SHANABROOK
SAWING MACHINE.

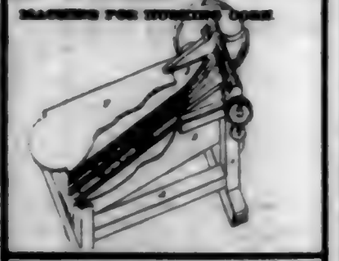


109,169. L. S. STIMSON, dec'd.
H. N. STIMSON administratrix.
CIGAR CUTTING MACHINE.

109,170. W. J. WARREN PRUYN.

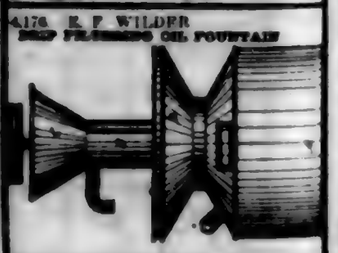


109,171. C. A. WASHBURN
PIPE WELDING MACHINE.



109,172. B. VAN CAMPEN TAYLOR.
GARMENT HOLDER.

109,173. F. SWIFT AND M. STANDISH.
GRAIN SEPARATOR.

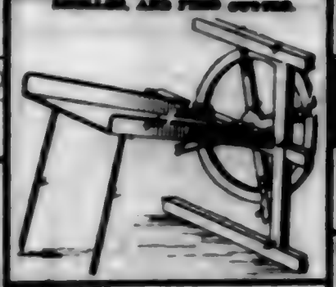


109,174. L. A. ASPINWALL.
MACHINE FOR HOOPING CASKS.

4,175. A. H. LA RUE.
HEATING STOVE.

109,175. E. F. WILDER.
SELF FEEDING OIL FOUNTAIN.

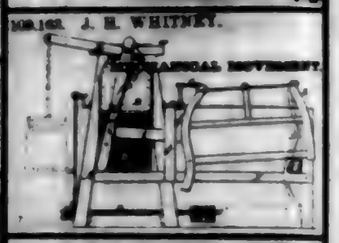
109,176. L. WINSTON. SWING.



109,177. E. VON JEINSEN.
JOURNAL BOX FOR CARS.

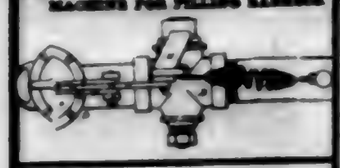
109,178. D. F. WELSH.
APPARATUS FOR REGULATING THE SUPPLY OF MOTIVE MACHINERY.

109,179. T. THOMASSON. SPRING REGULATOR AND FEED GUTTER.



109,180. J. F. STILL. COFFEE POT.

109,181. D. F. SUTTON.



109,182. J. H. WHITNEY.
CAPSTAN MOVEMENT.

109,183. J. H. WHITNEY.
STEP MOTION GEAR WHEEL.

109,184. J. S. STEWART.
MACHINE FOR FELLING BARRELS.
